Communion with Deity (Fijian).

THURSTON (HERBERT), B.A., S.J.

Joint-Editor of the Westminster Library for Priests and Students; author of the Life of St. Hugh of Lincoln, The Holy Year of Jubilee, The Stations of the tross.

Church, Doctrine of the (Roman Catholic).

Tracy (Frederick), B.A., Ph.D.
Associate-Professor of Philosophy in the University of Toronto.

Conceptualism.

TURMEL (JOSEPH).

Prêtre; ancien Professeur de Théologie au Séminaire de Rennes; auteur de Histoire de la théologie positive, Histoire du dogme de la Papanté des origines à la fin du quatrième siècle.

Concordat.

Vollers (Karl), Dr. phil.

Ehemals Professor der Semitischen Sprachen an der Universität, und Direktor des Grossherzogl. Munzkabinets zu Jena.

Calendar (Muslim).

WADDELL (L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., Lt.-Colonel, I.M.S. Late Professor of Tibetan in University Col-

lege, London; author of The Buddhism of Tibet, Lhasa and its Mysteries.

Celibacy (Tibetan), Charms and Amulets (Tibetan), Chorten.

Walshe (W. Gilbert), M.A.

London Secretary of Christian Literature
Society for China; late 'James Long' Lecturer; author of Confucius and Confuciusims.

Chastity (Chinese), China, Communion with the Dead (Chinese), Communion with Deity (Chinese).

Wenley (Robert Mark), D.Phil., Hon. LL.D. (Glasgow), D.Se. (Edinburgh), Hon. Litt.D. Hobart).

Professor of Philosophy in the University of Michigan; author of Modern Thought and the Crisis in Belief, Kant and His Philosophical Revolution.

Casuistry.

WHITTUCK (CHARLES AUGUSTUS), M.A. (Oxon.). Vicar of St. Mary-the-Virgin, Oxford; late Fellow of Brasenose College, Oxford; author of The Church of England and Recent Religious Thought.

Clericalism and Anti-Clericalism.

Williams (Hugh), M.A., D.D. (Glasgow).

Professor of Ecclesiastical History in the
Theological College, Bala; editor of Gildas,
De Eccidio; author of Christianity in
Early Britain.

Church (British).

WOODHOUSE (WILLIAM J.), M.A. Professor of Greek in the University of Sydney,

New South Wales. Charity (Greek), Cimmerians.

Woods (Francis Henry), M.A., B.D. Rector of Bainton, Yorkshire; late Fellow and Theological Lecturer of St. John's College, Oxford.

Calendar (Hebrew).

Worrell (William Hoyt), A.B., B.D., Ph.D. Professor in Hartford Theological Seminary. Charms and Amulets (Abyssinian).

WÜNSCH (RICHARD), Dr.phil.

Ordentlicher Professor der Klassischen Philologie an der Universität zu Königsberg. Charms and Amulets (Roman).

Youngson (John W.). Of the Church of Scotland Mission, Poona. Chuhras.

#### 111. FOR THE LITERATURE

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = Beiträge zur sem. Religionsgesch., 1888. Baldwin = Dict. of I 3 vols, 1901-1905. Philosophy and Psychology,

Barth = Nominalbildung in den sem. Sprachen, 2 vols. 1889, 1891 (21894).

Benzinger = Heb. Archaologic, 1894.

Brockelmann = Gesch. d. orab. Litteratur, 2 vols. 1897-1962.

Brnus - Sachan = Syr. - Rom. Rechtsbuch aus dem fünften Jahrhundert, 1880.

Budge = Gods of the Egyptians, 2 vols. 1903. Daremberg-Saglio = Diet. des ant. yrec. et rom., 1886 - 90.

De la Sanssaye = Lehrbuch der Religionsgesch.8, 1905. Denssen = Die Philos. d. Upanishads, 1899 [Eng. tr., 1906].

Doughty=Arabia Deserta, 2 vols. 1888. Grimm=Deutsche Mythologie<sup>4</sup>, 3 vols. 1875-1878, Eng. tr. Teutonic Mythology, 4 vols. 1882–1888. Hamburger = Realencyclopadie fur Bibel u. Talmud, i. 1870 (\*1892), ii. 1883, suppl. 1886, 1891 f., 1897. Holder = Atteeltischer Sprachschatz, 1891 ff.

Holtzmann-Zöpffel = Lexicon f. Theol. u. Kirchen-

wesen", 1895. Howitt = Native Tribes of S. E. Australia, 1904. Jastrow = Die Religion Babyloniens u. Assyriens, 2 vols, 1902-1905.

Jubainville = Cours de Litt. celtique, i.-xii., 1883 ff. Lagrange = Études sur les religions sémitiques 2, 1904. Lane = An Arabic-English Dictionary, 1863 ff. Lang = Myth, Ritual and Religion<sup>2</sup>, 2 vols. 1899.

Lepsius = Denkmaler aus Ægypten u. Æthiopien,

1849-1860. Lichtenberger = Encyc. des sciences religiouses, 1876. Lidzbarski = Handbuch der nordsem. Epigraphik,

1898. McCurdy = History, Prophecy, and the Monuments, 2 vols. 1894-1896.

Muir = Sanskrit Texts, 1858-1872.

Muss-Arnolt = A Concise Dict. of the Assyrian Language, 1894 ff.

Nowack = Lehrbueh d. heb. Archaologie, 2 vols.

1894 Pauly-Wissowa = Realencyc. der classischen Altertumswissenschaft, 1893-1895.

Perrot-Chipiez = Hist. de l'Art dans l'Antiquité, 1881 ff.

Preller = Römische Mythologie, 1858.

Réville = Religion des peuples non-civilisés, 1883. Riehm = Handwörterbuch d. bibl. Altertums 2, 1893-1894.

Robinson = Biblical Researches in Palestine 2, 1856. Roscher = Lex. d. gr. u. röm. Mythologic, 1884. Schaff-Herzog = The New Schaff-Herzog Encyclopedia of Relig. Knowledge, 1908 ff.

Schenkel = Bibel-Lexicon, 5 vols. 1869-1875. Schürer =  $GJV^3$ , 3 vols. 1898–1901 [HJP, 5 vols.

1890 ff.]. Schwally = Leben nach dem Tode, 1892. Siegfried-Stade = Heb. Wörterbuch zum AT, 1893. Smend = Lehrbuch der alttest. Religionsgesch.<sup>2</sup>, 1899. Smith (G. A.)= Historical Geography of the Holy Land 1, 1896. Smith (W. R.)= Religion of the Semites 2, 1894.

Spencer (H.) = Principles of Sociology<sup>3</sup>, 1885-1896. Spencer-Gillen = Native Tribes of Central Australia,

1899.Spencer-Gillen b = Northern Tribes of Central Australia, 1904.

Swete = The OT in Greek, 3 vols. 1893 ff.
Tylor (E. B.) = Primitive Culture<sup>3</sup>, 1891 [41903]. Ueberweg = Hist. of Philosophy, Eng. tr., 2 vols.

1872-1874. Weber = Jüdische Theologie auf Grund des Talmud

u. verwandten Schriften<sup>2</sup>, 1897.
Wiedemann = Die Religion der alten Ægypter,
1890 [Eng. tr., revised, Religion of the anr. Egyptians, 1897].

Wilkinson = Manners and Customs of the Ancient Egyptians, 3 vols. 1878.

Zunz = Die gottesdienstlichen Vortrage der Juden 2, 1892.

#### 2. Periodicals, Dictionaries, Encyclopædias, and other standard works frequently cited.

AA = Archiv für Anthropologie. AAOJ = American Antiquarian and Oriental Journal.

ABAW = Abhandlungen d. Berliner Akad. d. Wissenschaften.

AE=Archiv für Ethnographie.

AEG=Assyr, and Eng. Glossary (Johns Hopkins University).

AGG=Abhandlungen d. Göttinger Gesellschaft der Wissenschaften.

AGPh = Archiv für Geschichte der Philosophie. AHR = American Historical Review.

AHT = Ancient Hebrew Tradition (Homnel). AJPh = American Journal of Philosophy,

AJPs = American Journal of Psychology. AJRPE = American Journal of Religious Psycho-

logy and Education.

BURIAL.—See DEATH AND DISPOSAL OF THE so large a following, are contained in a voluminous DEAD.

BURIATS.—I. Language and population.— The Buriats form a branch of the Eastern Mongols, and speak a dialect of the Mongolian language which differs both from the spoken tongue of the true Mongols of Khalkas and from the language of Mongolian literature. The Buriat language is distinct also from the Kalmuk. The groups of the Mongol language has not yet been clearly defined, and, indeed, no thorough study of all the Mongol dialects has yet been made.

Mongol dialects has yet been made.

Speaking generally, the Buriats are found within the following territorial limits, viz. the Baikal Basin and the upper course of the river Angara from Irkutsk to the point where the river Ilin flows into the Angara; but a number of them—the Aga Buriats—live about the tributaries of the rivers of the Annar Basin—the Onon, Ingoda, and Argun — while in Mongolia itself, along the Russian frontier, a small tribe—the Bargu Buriats—is found. Further, Buriats are met with in other places within the limits of the Russian Empire, viz. on the upper tributaries of the Vitin, which is a right tributary of the Lena, and also on the upper left tributaries of the Lena itself. All the above-mentioned homes of the Buriats are within the boundaries of the two administrative territorial divisions of Eastern Siberia, viz. the Irkutsk Province and the Trans-Baikal Region. According to data obtained in 1831, the Buriats were estimated in all at 152,000 souls. Castrén reckons them as being about 190,000, but at the present time their number may be fixed at 250,000.

2. Lamaism and Shamanism.—According to their religious beliefs, the Buriats may be divided into two groups—the Southern and the Northern. The Southern Buriats, who dwell on the confines of Mongolia, are zealous Buddhists, and belong to the Yellow-hat men, or Lamaists, followers of Tson-ka-pa, the well-known Tibetan reformer of Northern Buddhism, and founder of the abovementioned seet. This seet has a predominating influence in Tibet, and prevails, without any division, over Mongolia. Its doctrines, which have

VOL. 111, -1

literature and require no special examination, seeing that Buriat Lamaism does not differ in any way from the Mongolo-Tibetan Lamaism. The Buriat Lamaist studies under the Mongolian and Tibetan Lamas, and he finds his religious literature in the sacred Tibetan language. Lamaism did not reach the Buriats earlier than the end of the 17th cent., viz. at the time of and after the Djungar wars, when, as is known, a multitude of peaceful people (amongst whom, of course, were Buddhist people (amongst whom, or course, were Buddhist teachers) sought a quiet refuge amongst the Buriats. Buddhism, therefore, is a comparatively new factor in the religious life of the Buriats. Animated, as it has been, by a very tolerant spirit, this religious teaching, in crossing over from India into Tibet, not only brought with it a host of non-Buddhist beliefs, but also incorporated a whole body of local ones in Tibet, and a great many still more extraneous ones in Mongolia. And it was in this condition that it finally reached the Buriat plains. Now Lamaism is the predominating belief among the Buriats dwelling to the south of Lake Baikal. An exception is furnished only by the Buriats living at the mouth of the river Selenga; but these do not belong to the original inhabitants of Trans-Baikalia, being colonists from the northern shores of Lake Baikal, who migrated southwards in the first half of the 18th century. Further, we must note that about the north-eastern extremity of Baikal, among the Bargudji Buriats, who are kinsmen of the Bargu Buriats living in Mongolia, there is, along with Buddhism, an extensive cult of Shamanism. Until recently, our investigators, among whom was the author of this article, thought that there could not be any room for the adherents of the old religion in the southern part of Trans-Baikalia among the zealous Lamaists, who were under the influence of their teachers, and many of whom had received their religious education in Urga—the residence of the first enlightener of Mongolia, Djebtsun-damba-kutukta (see LAMAISM) -and some in Lhasa. But this opinion was due only to our insufficient acquaintance with the religious life of the Buriats. A young investigator, Djamtsaranoff, himself a native Buriat, in the year 1903 discovered in his native district, viz. in the valley of the river Aga, worshippers of the

old faith along with their priests, the so-called Shamans. And he asserts that the Buddhist Buriats of the Alar district are semi-Shamanists, and that their Lamas perform many Shaman (For the sake of completeness, it should be mentioned that the Russian Mongolian scholar Professor Pozdneyell discovered genuine Buriat Shamanists among the Chakars, living to the north of Kalgan on the southern frontier of Gobi.) the west and north of Lake Baikal, Lamaism is by no means wide-spread. It is met with to the southwest of the Baikal, in the valley of the river Tunka, along the Irkut, the Oka, and the White River, and on the small rivers Alar and Golnmet. According to the traditions of the inhabitants, both the Tunka and the Alar Buriats are settlers from Mongolia. The rest of the Buriats of the Irkutsk Province profess the religion common to the whole north of Asia and to the non-Arvan north-east of Enrope—a religion which is well known in scientific literature under the name of Shamanism  $(q, v_*)$ .

This term, originally employed only for the beliefs of the north-cast of Europe and of Asia, have in comparatively recent times received an extended signification, which has been adhered to in the work of the Mescow scholar Mikhailovski on this subject—a work which, unfortunately, has not been completed. Taking a general, ethnological point of view, he includes as Shamanism the beliefs of the American Indians and the abrajenes of Africa, Polymeska, etc. Without here entering into venience' sake and to be strictly methodical, we shall speak of Shamanism only in the restricted sense of the word. We do not dispute that in the New World and in southern countries we meet with forces of belief at the same stage of development as contemporary Shamanism; but, indeed, we also know that monothesian does not prevent their differing from one nother in their conceptions shout the Deity and His relations to men and to the world, in ritual, forms of worship, and ideas about the destiny of mankind, etc. One must not lose sight of the fact that in the various beliefs of the Sherina tribes a very close connexion is noticeable, and, likewise, there can be observed an and in their rites, even extending as far as the nomenclature—all of which gives one the right to suppose that these beliefs are the result of the joint work of the intellectual activity of the whole north of Asia. The Buriat Shamanism is one of the most highly developed forms, but, in order to elucidate certain rites and beliefs, we must draw parallels from other Shaman beliefs.

3. Religious development.—In determining the

3. Religious development.—In determining the degree of development of the religious belief of the Buriat Shamanists, we must assert that, like some other Shamanist modes of worship among the more enlightened Siberian tribes, such as the Yakuts and the South Siberian Turks, it has reached Yaknts and the South Stocker a degree of somewhat advanced polytheism, reminding one of the Homeric polytheism. Shamanists have their own Olympus, while among the Yakuts and Turks, who come more into contact with Christianity, there is noticeable a tendency to hierarchical monotheism. The supreme deity of the Altaians-Ulghen, or, as he is called in some places, Khormusta-Tengri (the Uyun-artoyen of the Yaknts)-stands far higher and farther removed from mortals than the thunder-bearing Zeus. These deities are freer from human weaknesses and stand on a more mattainable height, in comparison with the minor gods and genii, than Olympic Zeus. Buriat Shamanism has not evolved from itself such a Supreme Deity; it has, however, a whole assembly of heaven-dwellers (Tengris), some of whom are well-disposed to mankind, and some hostile. To some of them sacrifices are offered regularly, to others only on rare occasions. The Buriats have a whole series of thundergods.

The influence of Buddhism in its later form, with its numerous Buddhas—Buddhas of nonearthly origin, Dhyani-Buddhas, and deities-has obscured the monotheistic tendency. Amongst almost all Shamanists we see a cosmogony peramore an summans we see a cosmogon, per-vaded with dualism, a complex doctrine of the soul, and a conception about a future life and about requital. The priestly hierarchy remains in a primitive form, out of which caste has not yet been evolved; one must take into consideration that such evolution can be effected only in a more advanced and developed social state, to which the Buriats have never attained, although the hierarchy of the Shamau, as we shall see, has already been elaborated somewhat distinctly. In Homer we often see Agamemnon, Ulysses, and Achilles offering sacrifices to the gods. Here leaders and chiefs of clans enter into direct relations with the gods, but in Shamanism this has now almost disappeared. On important occasions they always resort to the Shaman.

One constantly hear it stated that, in Shamanism, there are to be found, logether with polytheistic heliefs, examples of animism, tetishism, the worshipping of animals, of trees, and of hills, and other lower forms of religious helief. We can answer to this, that, owing to the conservatism of mankind and to their lack of initiative, primitive habits of life and clafashioned beliefs very seldom disappear altogether. Many longistic of the Green teachings, a whole served the state survivals in the shape of prejudices, superstitions rites, and so on. The folk-tales and traditions collected by the brothers Grimm still live among the people. The German folk-lorists still continue to collect a rich harvest of living antiquity in Bavaria and the Tirol. Slavonic countries are full of dual heliefs in which paganism envives in Christian form. In Russia, especially society, rationalism often flourishes along with the helief in fortune-tellers and socreers, and belief in the production of miracles. What are the spiritualism and occultism, by which between the survival of the area of the production of miracles. What are the spiritualism and occultism, by which between the survival of the area of the production of miracles. What are the spiritualism and occultism, by which before an extensive survival of the Tartost times? The determining of the average level of the religious times? The determining of the average level of the religious content avariety in the character of its development as a more highly civilized people. We may take it then for granted that the majority of the Birats profess a polytheistic religion in the shape of Shamanism. It is at least the predominating feature of their present-day belief.

In comparison with the more studied and more highly elaborated polytheism of the classical peoples, the Buriat polytheism must be characterized as immature, and, in a sense, chaotic. The anthropomorphization of even the highest divinities of the Buriat pantheon has been by no means completed; throughout it there is apparent a simple worshipping of the phenomena of Nature. Individualization into separate personages has only been aimed at. There is no need to look here for such plastic images as we see in Zeus, Phœbus, Pallas Athene, Aphrodite, and so on. The Buriats and Mongols possess neither the poems of Homer, nor odes, nor hymns; they have not the  $R\bar{a}m\bar{a}yana$  or even the Finnish Kalevala. They possess only a series of detached narratives, incantations, and prayers, in which is represented to us, with very indistinct features, the theography of this nomad people, who had only here and there adopted a settled mode of life, being at the same time occupied with hunting and trapping wild animals, not by way of sport, but as an indispensable element of their economic existence.

4. Tengris or heaven gods.—The higher heaven dwelling deities among the Buriats are called by the name of 'Tengris.' Tengri, tegri, tiger, tangara in all the Turco-Mongolian dialects signifies 'the heavens.' One of the leading experts in Mongol-Buriat mythology, Dordji Banzarofi, in his book, Black Faith, or Shamanism (St. Petersburg, 1892), adduces a whole series of proofs of the existence of the worship of the heavens among the Mongol races. Mongolian official documents usually begin with the formule, munku tengriin khutzun dor, 'by the power of the eternal heavens'; tengri chi midnya, 'heaven, know thou'; tengri chi shitegehuy, 'heaven, know thou'; tengri chi shitegehuy, 'heaven, be thou judge'; which are common expressions among the Mongols. They assert also that Jenghiz-Khan appeared by the command of Heaven. The worship of the heavens does not in itself present anything exceptional among pastoral peoples; but

took place in this worship. Instead of one single eternal heaven, they acknowledge 99 different Tengris, of which 55 are Western and 44 Eastern. The sharply defined dualism, peculiar to the whole Siberian Shamanism, honours in the Western Tengris the divinities or forces that are well-disposed to mankind, in the Eastern the forces that are destructive and hostile to man. Everywhere else where Shamanism is professed these hostile forces are placed, not in any part of the heavens, but in the lower regions, notwithstanding the fact that the eosmogony, about which we shall speak further on, testifies that once upon a time Father Ena. Erlik-Khan, or Erlen-Khan, lived in the heavens, whence, after a struggle with the spirit of light, he was cast down with his servants into the lower world. His assistants appear upon the earth and work evil there, but in heaven there earth and work ever there, out in heaven there is no place for them. Agapitoff and Khangaloff (of whom the latter is still actively investigating the Shamanism of his native country), being firm believers in the theory of the atmo-spheric explanation of myths, in their first work, Materials for the Study of Shamanism in Siberia (Irkutsk, 1883), were of the opinion that, in the 99 Tengris, the heavens in their various states are personified: in a quiet, a clear, a dull state, during storms, gales, winter snow-storms, wind, etc. But the Tengris not only control the atmospherie phenomena — they bring about diseases, they bestow happiness upon mankind, protect particular tribes, trades, etc., and perform a number of other acts.

One must not lose sight of the fact that there is, indeed, another name for 'heaven'—oktorgoi—viz. the physical heaven (the sky), with its phenomena; and the word tengri among the Mongols has a double signification, viz. heavens, and the particular beings inhabiting the heights beyond the clouds of the worldly mountain Sumera, with their leader Khormusta-Tengri. The Tengris have their antagonists in the Asseuris-beings living under the mountain Sumeru. The Tengris are holy and benevolent; the Asseuris are spiteful and quarrelsome. Between them a constant war is carried on. It does not seem to us improbable that the division of the Buriat Tengris into two hostile camps is inspired partly by this idea about the Tengris and Asseuris, borrowed from the Buddhist mythology. We shall meet with similar examples more than once in our discussion of the subject. It appears almost superfluous to mention that the Tengris, at any rate those about whom we have fuller information, in their life appear as genuine Buriat nomads. They, just like the Buriats, possess flocks and herds acquired from sacrifices, and betake themselves to the Shamans in circumstances of difficulty. All about whom we possess any information have families, and their children for the most part occupy a position inferior to that of the Tengris in the Buriat mythology, and hear the title of Khan.

The Buriats who live along the river Kuda, a tributary of the Angara, regard Zayan-Sagan-Tengri, the white deity of the Tengris, as the relight, the white terry of the Pengris, as the eldest among the Tengris. (Among the Balagans, instead of Zayan-Sagan-Tengri, stands Khan Tiurmes-Tengri, who has three sons, Zasa, Isykhur, and Akha.) Merchen-Tomeh, the second one, came down to earth to save people (the Balagan Buriats call him Abay-Glicsser-Bogdo), and the third, Erkhe-Bashatey (the great wise man), wrote laws for the government of nations. Here, under the influence of the written Tibetan narratives, the old local names have partly given way to foreign ones. Khan Tiurmes, as the Russian folk-lorist Potanin has proved by numerous comparisons

and parallels, is identical with Khormusta-Tengri. Abay-Ghesser-Khan, in the well-known heroic tale, is the second son of Khormusta, viz. Ulu-Butugekhchi (the accomplisher of works) (see the Mongol text of this tale, published by the Russian Academician Schmidt). He comes down to this world to cradicate the sources of the ten

The most popular among the Western Tengris, who is constantly mentioned in the Shaman incantations and the narratives of the Buriats, is Esseghe-Malan-Tengri. According to some narratives, he is one of the sons of the Monkhon Tengri. This name Agapitoff and Khangaloff translate by the words 'heaven—bottom of the vessel.' We prefer to leave the word tengri untranslated, since it has a double signification, meaning at the same time the heavens, as an object of worship, and an anthropomorphized being dwelling in the heavens. Other narratives affirm that Esseghe-Malan was a man, who lived on the earth and promised certain nine deities to build a palace up to the sky, on condition that, in the event of his carrying out the undertaking, the nine gods should come down to earth to mankind and give up to him their place in heaven. Esseche-Malan earried out the proposed undertaking, the gods took up their abode on earth, and he in heaven. In the Buriat narratives Esseghe-Malan sometimes lives not in beaven, but on earth, somewhere beyond a high mountain. He often appears in these narratives as a simple-minded Buriat; in the story 'Girgulai-Mergen,' the sister of the hero Agu-Nogon-Abakhai, the maiden Vatiaz, in order to resuscitate a brother who had been killed, and to obtain a bride for him, goes as a suitor to seek the hand of the three daughters of Esseghe-Malan-Tengri; she vanquishes the other claimants for marriage with the daughters of Esseghe, in all warlike sports and exercises. Esseghe-Malan is prepared to give his daughters to the victor, but the Shamans warn the god that he is giving them in marriage to a woman; yet the god, notwithstanding this, gives his daughters. The clever girl-heroine makes the daughters of Esseghe-Malan bring her dead brother to life, and afterwards gives them in marriage to In the tale about the old man Khoridai, the hero does not fulfil the orders of Esseghe-Malan. and the enraged Buriat thunder-bearer prepares to strike him with lightning. The old man Khori-dai appeases the wrath of the god by a sacrifice, and excuses himself for his transgressions with somewhat tlat excuses and sophisms. In heaven Esseghe-Malan has a box with round stones; by throwing them on the earth he produces thunder and lightning. One clever Buriat, during a period of drought on earth, made his way to heaven, and, taking advantage of the absence of the person who was entrusted with the box containing the stones, began to throw them down of his own accord, and produced a storm and rain-shower on earth, Esseghe-Malan has a somewhat large family and an extensive household. His wife, Ekhe-Urani, is mentioned in all ritual offerings to the Tengri, although she herselt appears as rather a colourless person. This couple have nine daughters, according to the incantations of the Shamans, but only three according to the narratives of the Buriats, These have the power of making the poor rich and bringing the dead to life. The eldest of them (according to the Buriat accounts) steps over the bones of the deceased person, spits on them, waves a black handkerchief, and the skeleton is put together; the second one, having executed same manipulations, completely restores the phy-

<sup>1</sup> Records of the East-Siberian Section of the Imp. Russ. Geog. Soc., Section of Ethnography, vol. i. pt. i., 'Buriat Tales and Superstitions,' Irkutsk, 1889, pp. 33-43.

sical outline of the deceased; the third one gives life. In addition to his daughters, Esseghe-Malan has three sons. The eldest of these is regarded as ruler of the large island of Olkhon on Lake Baikal; but, by other accounts, the lord of Olkhon is Oren, who will be referred to more fully in describing animal-worship; the second son appears before the Tengris as the principal representative of the elder earthly gods (children and kinsfolk of the Tengris); the youngest son is the patron of Kiakhta (a trading station on the frontier of China), and lord of the red goat. Besides children, Esseghe-Malan possesses also three shepherds, the first of whom, Makita-Mangi, acts as intermediary between the Tengris and mankind, and is the patron of the Shamans, whom he protects from the evil Tengris, hostile gods, and genii. The second, Badshindai, having been present at the creation of man, protects people from diseases sent upon them by the hostile Eastern Tengris. Debetsoi, the third, is the patron-shepherd of tlocks and herds; he rides on horseback with a quiver, a bow, and lasso in his hands.

Besides the ihunder-bearer, Esseghe-Malan, there are others, both Eastern and Western, who control atmospheric phenomena, such as, for example, Mundur-Tengri (mundur=hail), the god of hail, bond thunder, and lightning; Gatta-Ulan-Tengri (the fire-red Tengri), the god of heat and drought and storm-lightning causing conflagrations. In some places the Buriats assert that from this Tengri people received lire; but, generally, the principal lord of storms and lightning is considered to be Zayan-Sagan-Tengri. He sends forth storms against unclean and cvil spirits, and he hurls upon earth suchiligate budave—stones from heaven causing lightning. Such a stone was found by the white Shanan of Unga, Barnak-Rhognuyev, and is preserved as a relie by his descend-

ants. There are, further, a whole body of Tengris who throw stones upon the earth. Some of these cast down special red stones, the zada, by means of which storms can be caused at will. There are Southern winds, Tengris of gentle, warm rain, and of cold rain. As to the family position and actions of these Tengris we have no information; it is evident that here anthropomorphization has scarcely yet commenced. Of the remaining Tengris we shall mention only those whom it is necessary to notice in giving an account of other beliefs of the Buriats; for example, Seglien-Tengri, who, it is said, was the cause of the dissensions between the Western and Eastern Tengris. He had a beautiful daughter, for the possession of whom rivalry sprang up among the heaven-dwellers, Dolon-Khukhu-Tengri (the seven blue Tengris). They are the bestowers of rain: but when rain is required, one does not apply directly to them, but offers sacrifices to the Ukhan Khans, the water divinities, and asks for their mediation with the seven blue Tengris. Shara-Khasar-Tengri (the yellow-cheeked one) has been in-directly connected with the legends about the origin of the Buriats. His three daughters, dressed in swans' skins, came down to earth to bathe in a lake, and there they took off the swan's dress; the Buriat Khoridai was watching them, and he hid the dress of one of them, Kholoshi-Khatun. The heavenly maiden could not fly up to heaven without the wings of the swan's dress. Khoridai, having seized her, married her, and had children by her, from whom sprang the Buriat tribes Khanghin and Sharat. Subsequently the wife of Khoridai discovered her swan's dress and flew off to heaven in it, leaving her husband and children behind. Budurga-SaganTengri deserves mention, as being the progenitor of many persons who play a foremost part in the Buriat mythology—his cldest son, Ukha-Solben, being the patron of horses. This Ukha-Solben had two wives of heavenly origin, but his third was snatched by him from earth. Whilst she, as a Buriat bride, was being conducted to her bride groom, Ukha-Solben sent down a storm, during which he seized the maiden. The second son of Budurga-Sagan Tengri is Bukha-Noin-Baobai (father-master-ox), the hero of a whole series of narratives. No less significance have the third son of the above-mentioned Tengri, Sakhidai-Noin, and his wife, Sakhala-Khatun, the rulers of

5. Folklore of the smith.—In many primitive religions, a divine origin is ascribed not only to fire and domestic animals, but to various handicrafts. The lame god Vulcan, the wise cripple, son of Juppiter and Hera, is not the sole instance of a blacksmith god, a god-artisan. But the blacksmith is regarded in two ways: the Hellene, with his bright intellect and his artistic creativeness, saw in him a divinity favourable to mankind, the teacher of the artist; among many other peoples the blacksmith is a magician, living and working amid fire and smoke and covered with soot. He, in an incomprehensible manner, works iron out of stone. He is acquainted with the dark forces of Nature. He is wise and yet terrible. Such a view might easily establish itself where the blacksmith's handicraft was borrowed from some immigrant foreign people; and this view prevails also among the Siberian natives. There traditions have been preserved about one-legged men, dwarfs dressed in skins, living in caves, and possessors of various mineral treasures and precious metals. In the Buriat mythology both views about blacksmiths have been maintained at one and the same time. They have both white and black smiths, just as there are white and black Shamans: the former are favourable and well-disposed to men, the latter are malicious and hostile towards them. The patron of the white smiths is considered to be the Western Tengri, Daiban-Khukhu-Tengri, who, by command of all the Western Tengris, sent on earth his smith The latter descended on the Tunka Bointoi. mountains, to the south-west of Lake Baikal, and began to teach people bis trade. The patron and progenitor of the black smiths is an Eastern Tengri.

1 G. In concluding our discussion of the Western Tengris it is necessary to refer to a special act of benevolence which several of them perform. During rain and storms they send down from heaven to the houses of their favourites, in the shape of a small cloud, urak, thick cow's milk. This is collected and preserved when it comes down in visible manner; when unseen, the gift is made known by the results. The possessor of the urak becomes successful in everything—he grows rich, his children thrive well, his cattle multiply. This urak appears in the shape of a seum which forms on the puddles during heavy showers.

puddles during heavy showers.

7. Hostile Tengris.—The Eastern Tengris inhabit the castern half of the heavens. They are hostile to man, or, speaking more accurately, they are in general wicked, iraseible, exacting. They afflict people with infections diseases, storms, and misfortunes. They are the patrons of the black Shamans, who often punish people and steal their sonls, and of the black smiths, who, at one and the same time, are master-artisans and magicians who ruin people. In the Eastern Tengris is personited, as it were, the negative principle of evil, which carries on an irreconcilable struggle with good and light; but in the Buriat Shamanism this struggle has become obscured, and it has not such a definite,

BURLATS

permanent character as among the other followers of Shamanism.

According to the cosmogony of the Shamanists, the enmity hetween good and coil begins with the Creation. Here this antagonsm is preached with the same consistency and inexorability as in the ancient teachings of Iran and in the dualistic bility as in the ancient teachings of Iran and in the dualistic Christian seeds. Erlik-Khan carries on an implacable struggle with the spirit of light, Ulghen, or the Khan Turmes of the Altaians, the Kudai of the South Venisei Turks. Erlik once lived in heaven, but for his impiety and struggle against good was thrown into the nethermost parts. At one time the Eastern and the Western Tengris lived at peace with one another, but the murrelled after a while: then they become reconsided they quarrelled after a while; then they became recondied and even entered into relationship with one another. Thus a daughter of a Western Tengri was given in narriage to an Eastern, and her father endowed her with a chestnut steed and a red and her father endowed her with a chestinit steed and a red
ow. In homour of this occasion the Kinda Buriats consecrate
to the Eastern Gujir-lagglo-Tengri a chestinit steed and a
red cow. Alterwards, however, the feath was negain renewed.
As edest among the Eastern Tengris we find not Erilk-Kinan, as
one would have expected, but only some little-known personages; among the Ealagan Buriats inhabiting the district round
the town Balagansk, Ata-Chan-Tengri, and, among the Kinda,
Khimkhir-Boglo-Tengri, Ehik-Khan is not even to be found
among the Tengris; this Satan and Ahman of Shananism is
here degraded from his high position to that of a Khan, I he
speak more in detail about him when we reach the subject of
into groups. Almong these a prominent place is occupied by the
Yushun-Shukhan-Tengris, nine bloodthirsty Tengris—the cause
of destructive halistorus and of bloody rain; they are also the
patrons of the Eastern Khans. In the exorcism consecrated to
'Red blood is (our) beverage
Food consists of human firsh

Food consists of human flesh Black wine is our knowledge (wisdom, inspiration)

Black is (our) kettle

Back when soft know-eage (wission), inspiration)
Back when soft know-eage (wission), inspiration)
Food black as tar.

After these bloodblirsty heaven-dwellers come 13 Assaranghi
Tengris, the nighty patrons of the blacksmiths, of the black
Shamans. Among these Assaranghis, Khara-Bargadchi-Tengri (= the
Tengri of black rain), by order of the others taught a man
mand Khopir the blacksmith's hamberach, and the sex-ten sons of
laught us by Boron-Khara-Tengri, one of the 44 Eastern Tengris;
he it was who placed in our hands the magic art. Some
Shamans consider certain Tengris of darkness and Tengris on
uniticoloured mists as teachers of the blacksmiths. The
invocation addressed to them says: 'From the dark Tengris,
Tengris of the mists, Tengris of the mist, and the sex-tengris of the mists, and
Tengris of the mists, and the coloured mists as a
grave maladies, as frenzy or insanity, on people, and epidemies
on cattle. Cattle being the chief source of livelihood, some of
the incantations against pelgodies are especially touching this, on cattle. Cattle being the chief source of livelihood, some of the incantations against epizzotics are especially tonehing; thus, in the exordism of the Trans-Paikal Burnats, taken down by the writer upon the occasion of an epizzotic, it is not the originator of the misfortune, Uchin-Booum-Tengri, but his father Gujir-Tengri, who is thus addressed: 'Thou, owner of 400 milk-cows and 40 buils, thou, bellowing Tengri, who possessed 99 cattle-yards, 13 fences, and 13 lassos, deliver us from troubles and maladies, and do flour restrain Chin-Poorm-Tengri'. And too, mistrees Almoshi (bis wife)... Such is the approximate characteristic of the higher aristocracy of the Buriat Olympus; and this aristocracy is only the recent in the Shananish plantheon. and this aristocracy is quite recent in the Shananist panthems, which has been largely renovated by borrowing from Buddhism. which has been largely renovated by borrowing from Buddhism. In Trans-Baikalia, among the Shamanists of the mouth of the river Sciengs, there appears, as the progenitor of some Tengris, a purely Endhist personner, not kina Trames, whose identity with the other tengrish before established by approximation, the control of the person of th In Trans-Baikalia, among the Shamanists of the mouth of the Eastern Khans.

8. Origin of strife among the Tengris. -Once upon a time men led a peaceful, happy life on earth, lived to an advanced age, and died, after having enjoyed life to the full, peacefully and without regret, like the patriarchs of the Bible. Such a life, free from cares, was led by the Western

Teneris: but the Eastern Teneris did not slumber. and propagated diseases among mankind. (Here also one cannot help noticing an echo of Buddhist traditions.) The Western Tengris once happened to open the window through which they probably not very frequently east glances down upon earth, and noticed the frightful devastation which was being cansed by their rivals. They decided to send down the Tengri Shargai-Noin, distinguished for his intellectual and physical powers, who used to beat the Eastern Tengris at all warlike sports, and who successfully brought about the marriage of a maiden of the Western Tengris with an Eastern Tengri. Shargai-Noin, however, could not alone overcome the malicions Tengris and their representatives on earth, so he was reinforced by Bukha-Noin, and finally a third associate was sent, and then only were they able to subdue the fury of the enemies of mankind. According to some accounts, Bukha-Noin, the son of one of the Western Tengris fanother tradition reckons them as Eastern Tengris], is transformed into a young bull, having been born of one of the cows belonging to Esseghe-Malan's son (see above), and descends to earth. He is followed thither by Esseghe-Malan's son; his father calls him back, since he has no one to talk to during the son's absence. 'You can talk to the son of the Tengri Jenghiz-Khan,' rejoined the son of Esseghe-Malan, and he remained on earth. chief episode in the history of Bukha-Noin is his struggle with another beast of divine origin. Eastern Tengri Cojir transforms himself into a speckled bull in the herd of Taidji-Khan on the southern shore of Lake Baikal, and challenges other bulls to fight him. Bukha-Noin from the northern shore hears the bellowing, swims across the lake, and accepts the challenge; the combat lasts several days. Bukha-Noin fights with his adversary, and, from time to time transforming himself into a handsome young man, makes love to Taidji-Khan's daughter, who, as the result of this liaison, gives birth to a son. The father is indignant with his daughter. Bukha-Noin places his son in an iron cradle and throws him over the Baikal; then he himself swims across the waters and nurses his son. Two childless Shaman women, wishing to have children, sacrifice to Bukha-Noin. He gives his son to the Shaman woman Assukhan as her child. The infant is named Bulagat. He grows up and runs about playing on the shore of lake Baikal. From the water a boy emerges, and plays with him. The Shaman women, hearing of this, give their boy some well-cooked food (ben). with the intention that his playmate may partake of it also. The children, having played, partake of the nice dish and fall asleep. The Shaman women come to the shore and carry the sleeping boys away with them; thus the second Shaman woman also came into possession of a son, who was named Ikhirat. From these boys originated the two Buriat tribes Bulagat and Ikhirat. Tradition also asserts that Bukha-Noin, during the time of his struggle with the bull, Bukha-Mul, journeyed along the mountains Khukhu-Mundurgu (the Tunka Alps to the south-west of Lake Baikal); at the places through which Bukha-Noin passed, there grew up juniper bushes (Juniperus communis) and pitch pines (. thies sibirica). These plants are considered sacred, and are used for incense at the sacrificial rites. 9. The Khans, - Among the Western Khans,

according to the traditions of the Kuda Buriats, are reckoned the nine sons of Bukha Noin. These per ons are accounted lords of different localities in the Province of Irkntsk, as, for instance, the mouth of the Angara, the source of the river Irkut, Kiakhta in Trans-Baikalia, etc. Among the Balagan Buriats, whose traditions and beliefs have,

in general, borrowed largely from the Buddhist mythology, we again find Khan Shargai-Tengri as founder on earth of the Western Khanate; but the tradition concerning him is a repetition of the tale about Bogdo-Ghesser-Khan descending upon earth, with the sole difference that he appears here not as a son, but as a grandson of Khormusta-Tengri, the chief of the 33 Tengris inhabiting Mount Sumeru. Among the Balagan Buriats also we tind the same Khans-lords of various localities, as among the Kuda Buriats, but under different names. New personages are also to be found here, as, for instance, the Khans-protectors of wedlock, and of young children, of both the male and the female sex. Among the Trans-Baikalian Shamanists, the Eastern Khans are specially respected. we think, is due, not to any special strongly developed worship of the terrible gods, but to the fact that local gods, lords of various regions lying to the East, far away from the dwelling-places of the Idgins on the northern side of Lake Baikal, were turned into Khans. Of these ldgins there is an infinite number, and, as far as their rôle is concerned, they are often completely identical with the Khans. The difference is often a purely exthe Khans. In the difference is often a partery sternal one. The majority of the ldgins are deified human beings,—the Khans are the children of celestials. Similar in character to the enlt of these ldgins is the worship of the Water Khans. These latter, Ukban-Khat (khat = plural of khan), like the various terrestrial Khans, came down from heaven, having made for themselves bridges out of rays of light—some of red, others of yellow, and others, again, of blue rays. By means of these bridges they first descended upon Mount Sumeru, and afterwards into the water. A fourth party, however, came down from the heavens on the wings of a blue eagle. In the invocation to the Water Khans, 12 Western Tengris, or heavens, are mentioned, whence the Water Khans descended. Here the Tengris have positively a dual character; they may be regarded both as personalities and as divers divisions of the heavens. In the Shamanist cosmography, e.g. among the Altaians, there are 13 heavens covering each other like concentrie envelopes, and over each heaven presides its own enveropes, and over each neaven presides its own peculiar deity. There the anthropomorphization is more sharply pronounced than in the Buriat Shamanism. Agapitoff states positively that in the different personages of the Ukhan Khans the various properties of water are personified: its glitter, its mobility, its faculty of being agitated, and so on. Being in possession of but scanty materials—only a single prayer addressed to the Ilbhan khans we sent tradetale to see here. Ukhan Khans—we cannot undertake to say how far the personality of the deity is here separated from the element itself which he controls.

tar the per-sonality of the deity is here separated from the clement itself which he controls.

The subsequent stages of the settlement of the Water Khans in their new surroundings are as follows. In the sea they became kings of the fishes; after that they travelled along the bronn of the sea, where among their ratendants was the bronn of the sea, where among their attendants was the Ukha-Lobsan-Khao, the eldest of the Water Khans, whence they flew away by the soucke-outlet, transforming themselves into a whole series of new beings, which we do not enumerate. Here we shall make one remark: the designation the eldest among the Water Khans—Ukha-Lobsan,' as Agapitoff and Khallagaloff (sie it, seems to us incorrect. This passage proname would be explicable—Lu, Lus meaning a water-dragon, name would be explicable—Lu, Lus meaning a water-dragon, name would be explicable—Lu, Lus meaning a water-dragon, had be a substantial to the seas among the Chinese and Mongol Buddhists, whereas Lobsan is simply a proper name borrowed from the Thetaa, and has no relation whatever to the element of water. Io a prayer to the Ukhan Khans, mention is nade of their possess of the seas among the Chinese and the season of the lock of the control of the lock of t

In describing the water kings, one is involuntarily confronted by the question: What about the Khan-king of the great Baikal? Does he exist? If there are lords of the river-sources

and of insignificant tracts of land, can it be then that the Baikal has no king of its own? Agapitoff in 1883 expressed himself as certain of the existence of one, and probably, wherever the Buriat Shamans in their prayers mention the sea, take Baikal is really meant. The writer in 1883 succeeded in recording among the Buriats living on the shores of Lake Baikal, at the mouth of the river Selenga, invocations to several delities connected with the lake. The shortest of them is uttered by people starting on a voyage or fishing expedition in the season starting on a voyage or fishing expedition in the season back water-dragous (Lu-see above) and of the eight black Belkites (the Shaman could not explain of what kind these water beings were), we pray to thee. \*\*. Then follows the exposition of the request, according to the needs of the supplicant—for mild, quick weather in the case of coastang, for a lair wind in the case of distant voyages, for success in lishing, and so on. In an invocation addressed to Khagat-Noin, one of the Laster Khaus, the following is sung: "hou, O son of the Laster Charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, O son of the laster charas, the following is sung: "hou, A sharing in the sung is the sung in the laster charaster charas, the following is sung: "hou, O son of the laster charaster character character charaster character character character charaster character character character character character character character character char

Mongois, from tamer anager-tai-aou, from the sacrett put and a harry mother, and from the thirtees (Malkhases. Thy distant relatives are the seven Dokshids (terrible Buddhist detice) and lords of the Dalai-Lama and the Bogdo-Gegen. The name of Bogdo-Gegee is usually given to the regenerator of the famous Buddhist teacher in Thet, the historian of Buddhisu, Taranatha. He became incarnate in the person of a saint of Urga, in Mongolia. There is another prayer (to the lord of the black in Mougolia. There is another prayer (to the lord of the black ram) in which there is also a reference to domination over the Baikal and its transference from the Baikal to the river

Here we discern an indication of the Mongolian and non-Here we discern an indication or the Mongolian and non-buriat origin of one of the gods; but there are several of them. With regard to the water kings, it has already been noticed that their cult was established by Unukhui's son from Uriankhai. The connexion between the Buriat Shananism and the Sha-Line industrial in tween the guards. Sandadassis and the Sandatas to the sandatas and the sandatas and the sandatas to the dead, the Burdat Sandan in his prayers often mentions the Sandans of the Karagasse (a small tribe inhabiting the Eastern Sayan mountains), and especially those of the Tunguses. In the prayer to the ford of the black ram, mention is made of his pulling up a larch tree and making a scourge of it; also of his subsequently entering into relationship with the 99 and the 77 Orotchons— Eastern Trans-Baikal Tunguses.

10. Tea-gods.-Side by side with the Khans, descendants of the Western Tengris, a peculiar, as yet little known, worship of 'tea-gods, also well-disposed to mankind, like the Western Khans, is gradually being elucidated; but nothing beyond a few names is known concerning it. In this cult the name of Bejin-Khatun, 'self-created mistress Bejin,' demands particular attention. From the fragments of exorcisms which have been written down, one observes only indications concerning palaces of the watery sea; these are described as having drawn up before them 90 black steeds, and 90 grey ones, their saddles covered with eostly fur cloaks. Together with the sea-palaces, a palace of the Dalai-Lama is mentioned; it has been introduced into the exorcism probably for no other reason than the temptation presented by the word dalai, 'sea.'

Mention is made in this prayer of 50 burning candles (a novelty borrowed from Christians or Buddhists), and of 99 mallets for the Shamans' tam-bourines. The deities dealt with here are called teu-gods because no bloody sacrifices are offered to them, and libations are made not in wine, but in tea. This cult is developed among the Buriats living along the river Kuda, a tributary of the Angara. They have also a certain other cult—that of the Western, white gods, favourable to These are not descended from the Tengris, but have them as protectors. Side by side with the tea-burkhans (-gods) there is to be found among the Kuda and Balagan Buriats a cult of similar beings, favourable to men—khorduts. The only thing that is known concerning them is that they are under the protection of Oer-Sagan-Tengri, and

that their daughters and sons have at various times been great Shumanesses and Shumans,

11. Erlik-Khan.—The Eastern Khans, children and relatives of the 44 terrible Tengris, are as ferocious as their celestial progenitors. The first place among them is occupied by Erlen-Khan or Erlik-Khan, the judge and overseer of the subterranean dungeons. He has children, sons-in-law, and other relatives. It is remarkable that the court and numerous retinue of Erlik present, in regard to their organization, an exact copy of Russian judicial and administrative institutions. Erlik-Khan has his own chancelleries, his own functionaries for special missions, couriers, etc. One of these, Som-Sagan-Noin, in executing the Khan's instructions, is in the habit of riding in a eart, which flies through the air without wheels or horses. The functionaries of the Siberian viceroys and governors boasted of the speed with which they moved from one place to another. Besides that Som-Sagan-Noin tries law-suits. The Buriats who have litigation or suits pending in the Russian courts offer sacrifice to Som-Sagan-Noin. As most of the Siberian functionaries have subordinates, of the Siberian functionaries have subordinates, assistants, factotums, so Som-Sagan-Noin has two such assistants: Ukha-Tolegor-Khovduiell of the black Shamans, and Khan-Khormo-Noin, whose origin is not clear. They are commissioned by Erik-Khan to preside at various tribunals. Besides these, Erik-Khan has yet another important official, Khurmen-Edjin, overseer of 88 prisons, to which again hundreds of clerks and other functionaries are attached. They are all engaged in examining the affairs of men, whilst evil spirits are busy eatching the souls of the guilty; men do not, however, die on that account, but only sieken. The sonls remain in these prisons until their earthly possessors die. Powerful Shamans are able to deliver a soul from its prison, but with great difficulty. There are also other prisons whence a Shaman can deliver a soul only with the help of the ancestors of the Shamans. There are some from which souls cannot be freed. The world is full of evil—hence, besides Erlik-Khan, there are others who, in the opinion of some Buriats, are even more terrible than Erlik himself : such are Albin-Khan and Kharlak-Khan, who also have their tribunals. Albin-Khan is remarkable for the extraordinary swiftness of his movements and actions. The Buriats have a saying, 'to drive like Albin,' i.e. very fast.

If in other Buriat deities we see true Buriat nomads and hunters possessing supernatural powers, as far as Erlik is concerned, we have before us a real 'culte moderne.' In the transformation of Erlik from the spirit of darkness, Ahriman, to the judge of the dead, Minos, a Lamaist influence may be discerned, but his attributes are certainly modern. The Erlik-Khan of the Shamans does not even make use of a mirror to see the deeds of a deceased person. Erlik-Khan has become a judge, an official, a governor-general sent by the celestial gods. Wishing to depict the sufferings of the sinful soul, the Buriat could think of nothing more terrible and unrelenting than Russian redtapeism and the Russian prison system. The image of Erlik obscured the more ancient idea of retribution in another world for the deeds committed in this one. We shall enlarge on these things in examining the question of Animism and its part in the beliefs of the Buriats. Other Eastern Khans harm man in various ways, by destroying his cattle (see above), or by inflicting maladies, especially infectious ones. Smallpox, typhoid fever, syphilis, measles, cancer, and other

malignant diseases have their own lords.

12. Deified human beings.—The Buriat pantheon, as we have described it, presents a suffi-

ciently familiar picture of a dualistic religion at its polytheistic stage; but it is not yet complete. Defited human beings, Shamans, and, in general, prominent persons who have attained to the rank of zayans (deities) and profectors of various localitics, must be included in it. According to some narratives, Esseghe-Malan himself was a man who had migrated to heaven, and there became a Tengri; Jenghiz-Khan also is looked upon as a Tengri. The process of canonization has not been completed up to the present time, and we have contemporary examples of it.

A retired major in the Russian army, Yefim Pavlovich Sefykh, a poor solitary wretch, settled on the river Selenga in the village of Fofanowa; he was in the halti of taking a walk every Sunday up a hill standed near the village. For five and the village of Fofanowa; he was in the halti of taking a walk every Sunday up a hill standed near the village. For his major walk every Sunday up a hill standed near the village. For his major walk every Sunday and the set of the se

13. Idgins.—Idgins, i.e. lords, protectors of localities and of the phenomena of nature, originating from posthumonsly deflied human beings, are very numerons. The famous Shamans of old are mostly looked upon as protectors of their own tribesmen, of certain localities, and even of particular animals. Every triga (a primeval forest thicket) has its lord. Often, when hunting has been unsuccessful in a certain place, one hears that the lord of the trigae has lost his squirrels, subles, etc., to the master of a neighbouring trigae at eards. The multitude of these lords will become quite comprehensible when we leave the regions of polytheism and come down to the more ancient strata of Buriat beliefs.

14. Animism.—Here, above all, we encounter a widely developed Animism.—Instories, a hero, when encountering his adversary, especially if the latter is a monster, a multi-headed semi-snake, or semiman (mengus), often hears the following question: 'What is that standing behind thee?—thy soul or the soul of thy steed?'

Not men only, but also certain objects and animals, have souls-not such, however, as men have, but of a lower sort. In answer to the question whether all objects possess a sunresum, a soul of inferior quality, a Kudara Shaman said 'No!' It appeared from questioning that only self-moving objects possess a suncssun, or such as, although incapable of moving themselves, appear to have the power of manifesting or producing motion, as, for instance, a gun or a bow. An arrow, according to Buriat stories, is certainly endowed not only with a suncessun, but even with traces of a rational soul. A discharged arrow gives chase to Here we come its fleeing victim; it threatens it. into contact with the question of the complexity of the soul. This idea, extremely wide-spread as it is among uncivilized nations, is a further step in the development of primeyal Animism. Believing that everything in nature has a spirit, man nevertheless observes that the capabilities and sphere of action of different beings are not identical, and that their faculties also are different. Evidently in many of these, besides an 'animus,' and besides a breath, similar to a breeze or atmosphere, there is also a whole series of other capabilities; consequently in them the soul also is different. In man, and in the higher animals also, capabilities are not at once developed; consequently they do not acquire a complete soul immediately,

The destrine concerning the complexity of the soul, and the existence of several kinds of souls, has long since been noticed by European and American ethnologists among almost all the Indians of North America. Its existence among the Eskimos has been demonstrated by Kranz, among the Polynesians by Ellis, and among the West Africans by M. H. Kingsley, while this belief among the ancient Egyptians is too well known to Shamanists, and especially the Burists, are concerned, this subject was first broached by Podgorbunski, a priest, who based his researches on materials previously collected by Khamagioff, Shashkoff, and Potanin. His article, "Conceptions about the soul, the next world, and the life hereafter, among the Shamanist European, was published in the Records of the Eastern Siberian Later, the same thing was brought to light by Trost-bansky among the Yakuts, and by Shvetsoff among the Altaians.

Among some Buriats a belief exists that a child acquires a soul only at the age of four years. The Olkhonian Buriats, according to observations of the young Buriat investigator Diamtsaranoff, consider that man has three souls: the least important one rests on the bones, and the intermediate one flies in the air, and after death becomes a ' Dakhul (see below). We have already mentioned that the souls languish in Erlik-Khan's prisons, but their possessors do not die, they only sicken; and a good Shaman may deliver the soul. Shashkoff ('Shamanism in Siberia.' Rec. of the Imp. Russ. Geog. Soc., 1864, i.) tells us why the Shamans of the present day do not possess the same power as their predecessors. The son of a rich man had fallen ill. A wise Shaman guessed that the invalid's soul had been taken and was in the possession of the highest amongst the gods. The Shaman went to him and saw that the soul in question was kept by the god in an empty bottle, which he had closed with his finger. The Shaman transformed himself into a vicious fly, and bit the god so painfully in the cheek that he pulled his finger out of the bottle and grasped his check; the captive soul jumped out of the bottle, and the Shaman took it and brought it back to the invalid. After this unpleasant incident the god thought fit to limit the power of the Shamans. Sometimes the Tengris take human souls to themselves, and if they are pleased with them they call the souls up a number of times. Such attention on the part of the higher beings is not particularly flattering to the Buriats, the chosen persons having to pay for the favour by sacrificing their longevity. The Buriat scholar sacrificing their longevity. The Buriat scholar Dordji Banzaroff, in his book The Black Faith (2nd

ed., St. Petersburg, 1893), has already shown that the souls of the wicked remain zaklavre-ben, or occupy the middle part between heaven and earth. The more circumstantial information of which we are now in possession goes to explain that the soul which neither has been stolen nor has accidentally departed from the body, but has been removed only by way of natural death, cannot at first comprehend the change in its situation, and does not know what to do. It suspects that something unusual has happened, on noticing that its feet leave no traces behind them on the as-hes of the hearth, and that walking through woods or over grass does not make the shrubs bend beneath its weight or the grass to appear trampled.

As these wandering sonls often injure the living, it happens that among many Shamanist tribes the remaining members of the family in which death has taken place migrate to other localities. The influence of this fear of the defunct is very great. In Mongolia the writer has seen Buddhists, in the case of someone's death in a house late in the autumn, move their winter camp away from places where they had already collected large stores of fuel—attling by no means easy either to obtain or to keep there—to other places, while their former neighbours were afraid to make use of the neglected inel and other winter stores collected by the fugitives.

15. Souls of the dead .- The Buriats, like many other semi-civilized peoples, believe in the existence of several categories of souls that after death become injurious to the living. The best known of them are the Dakhuls, Mu-Shubu, Bokholdoys, and Adas. The 'Dakhuls' mostly spring from the souls of the poor, both men and women. Every Buriat hamlet has its Dakhul; but it is injurious only to little children. Adults treat them with indifference. Children of the gods themselves also suffer Dakhuls. Ukha-Solbon-Tengri, having married a common Buriat woman, thereby offended the goddess of the sea, and she transformed herself into a Dakhul and attacked Ukha-Solbon's son. The Tengri sought the help of two Shamans, the second of whom managed to save the semidivine child from his sickness. The Alar Buriats have another enemy of children, a human bloodsucker of the vampire kind; this little creature, called Aniukha, has never been seen by any one. It sucks up the life blood of an infant. In these cases the help of a Shaman is sought.

The souls of deceased young women or girls are transformed into creatures called 'Mu-Shubu'—a bad or injurious bird—if their father puts tinder with them into the grave. A Mu-Shubu has the appearance of a woman, but its lips project like a bird's beak; it can transform itself into various animals, but its leak remains unchanged. It always carries tinder under its right armpit; if the tinder is taken away from it, it cries, 'Look in your hand'; if the person does so, the tinder turns into worms; if he does not, the tinder is preserved, and by means of it one may become rich. Beyond trilling annoyances, the Mu-Shubu cannot do people any harm. Souls of the dead sometimes take the shape of more injurious beings, such as the so-called 'Bokholdoys,' which steal human souls.

In the story Upite! Khibbun (=" orphan") (Records of the East-Siberian Section of the Imp. Russ. Geogl. Soc., Ellinog. Section, vol. i. pt. 2nd., Iratusk., 1890, the hero, who understands the caccordingly presents himself before the Khan, cures the latter's son, and, having been rewarded, departs. On his way he meets a number of Bokholdoys dragging away the stolen soul of the king's son, and enters into conversation with the kidnappers. He asis them what the Bokholdoys are afraid of. It appears that they are most afraid of prickly shribs. The Bokholdoys, the short of the story of the short of the story of the short of the

you were alive?" It turns out that he was most afraid of fat you were alive? It turns out that he was most atraid of fat meat. He then asks them to teach him how to stead soils. 'Come and just earry this soul,' reply the Bokholdovs, but the enuming Bariat, having got held of the soul, hides humself with it in a thicket of thorny shrubs. The Bokholdovs, in order to compel the man to give up the soul, throw pieces of fat meat at him. He sercams terribly, but does not part with the soul. In the end the Bokholdov depart without baving king's son and thus completes his cure.

"The A what was the souls of the souls of the soul in the soul to the sing's son and thus completes his cure.

The 'Adas' are the sonls of dead children. They look like miniature human beings, but their mouth is situated under the lower jaw, and opens not upwards and downwards, but to the right and left. On meeting people they hide the lower part of their face in their sleeves in order to avoid being recognized. People often see the Adas, particularly the Shamans. The Adas greatly fear horned owls, and in houses where there are children the skin of one of these birds is hung up. The Adas are injurious to children, drink up the milk in the yartas, eat up the food, and spoil things. When the Adas become too troublesome to a family, a Shaman is summoned. One Shaman forced thirteen Adas into a cauldron, shut them in with the lid, and burnt them over the The Adas can be killed. When dead they resemble a little animal. Besides evil Adas there are also good ones that keep watch over dwellings and chard them from thieves. If a thief or an unknown person takes anything belonging to the owner of the house, the Adas will not give it up, and shont: 'Manai, manai!' ('Ours,

ours!').

Like most other semi-civilized and primitive tribes, the Buriats have no marked boundary between life and death. The heroes in their stories rise up from their graves, and not only they but the monsters—the Mangkhatais—slain by them do so too. To prevent a slain Mangkhatai from returning to life, it is necessary to scatter its bones and reduce its flesh to ashes. Notwithstanding the wide-spread cult of snakes, we do not consider that of the Mangkhatais to be merely a local Buriat one. Agreeing with Podgorbunski, we consider it to have been brought from the South. The Mangkhatais are absolutely identical with the Mongolian Mangus and the Raksasas of India; the same must be said of the winged snakes. But let us now return to the question about life and death. Besides the idea of life after death, retribution also is not unknown to the Bariats. Among the Records of the East Siberian Section of the Geographical Society, which have so often been quoted, there are in the section relating to the ethnography of the Buriats characteristic data on the above question.

In the story about Mu-Monto, the hero set out for the other in the story about Mu-Monto, the hero set, out for the other world in order to induce his grandfather to give him a horse and a saddle which the father of Mu-Monto had promised him. He got to the other world by hobling on to a fox's tail. There he saw a drove of horses pasturing on bare stones, and yet, they were very fat; farther on he saw a hard of lean domestic they were very fat; farther on he saw a herd of lean domestic cattle on a splendid pasture-ground. After that he came across some women sewn together in pairs by their mouths; then he encountered shamans and officials being boiled in conditions, knotty stumps of wood. In another place farther on he saw women apparently not possessing anything at all, but living in plenty; and finally, starving ones surrounded by riches. At last he found his grandfather, who gave to the hero the coveted horse and saddle, and explained to him everything he had seen. The fat horses fattening on the stomes belonged during had seen. The fat horses fattening on the stones belonged during heir lifetime to a good master, the lean eathet to a lad one. The women sewn together by their mouths were shanderers and gossip-mongers; the women embracing stungs were in the halit of leading an immeral life; the officials and shannans were being boiled in a cauthon for opposesing the people; the contented-looking women were compassionate to the poor. In another story the hero goes to the Sun's mother, and on his way meets with three women; one handing on a horr, another the production of the story of the story of the story of ladies to them, the third would not give even water.

The great draw the people and prove a plate of their row.

this chief becomes transformed into a pelvis, which must be burnt.

9

16. Worship of ancestors. - Having to deal with uch a widely developed Animism, one is involuntarily confronted by the question of the worship of ancestors. Among the materials hitherto collected there are few data relating to this subject. Only distinguished persons are venerated. Here perhaps the very ancient custom of depriving old cople of their lives did not pass away without leaving a certain lasting influence. Aged men and women were dressed in their very best clothes, were scated in the place of honour among the circle of their relatives and friends, and, after conversation and libations of wine, were made to swallow a long strip of fat. This, of course, resulted in their death from suffocation. The custom, according to tradition, was dropped by order of Esseghe-Malan-Tengri himself; but, not withstanding this, we heard of a Buriat who drove away with his feeble grandfather and left him to die in the forest. Stories full of examples of parents causing the destruction of their children for fear of being maltreated by them are not rare. At the same time, between brothers and sisters we find again and again examples of tender affection and self-denial. Young women are distinguished for their perspicuity, their supernatural knowledge, their bravery, strength, and proficiency in the use of weapons. Such heroines often vanquish the most famous warriors and monsters

17. Worship of animals.—From the example of the above-mentioned horses (§ 15) we have seen that animals also pass over into the world beyond the grave, and live there after death. So it should be, for a horse is the clo-est friend of its master. The knight and his steed are inseparable. When a hero is born in a family, a rare and heroic horse is born for him too. Each hero speaks of himself as 1, So-and-so, rider of a chestnut, or a black, or a steed of some other colour.' The horse gives his master advice, extricates him from calamities, and dies defending his rider. In Bukha-Noin-Baobai, the bull that subsequently became one of the Western Khans, a Tengri's son and progenitor of two Buriat tribes, are clearly seen the germs of totensism, the only difference being the fact that Bukka-Noin the only discretize height for that that Bukkar-Nomis not claimed as the protector of any particular clan, but is worshipped by all Buriats. Not less honoured is the cagle. In the Mongolian history of Sanan-Sezen-Khan (of Ordos) it is mentioned that the Buriats presented an eagle to Jenghiz-Khan in token of submission. The eagle is looked The eagle is sooned upon as the son of Khagat-Noin, Khormusta-Tengris son. The eagle was born without feathers, and went to the Western Tengris, who stuck feathers over the right half of its body; the other side was covered with feathers by the Eastern Tengris. The eagle was the first Shaman; but, being unable to communicate with men, it requested that its duties should be transferred to a man, and a human son was born to it; this son became the first Shaman in human form. Considerable respect by reason of its wisdom is enjoyed by the hedgehog, concerning which many legends are enrrent

One of them relates that the lord of the earth, Pubia Sagas One of them relates that the lord of the earth, Isbis Sagan-Noin, whilst using Rhomansta-Tenra, as-do the letter bounke ham a present of the rays of the sun end noon. Rhomansta was puzzled. To crises his guest's reprot of word in each of grafty if meant to deprace mankind of held. The newter of the earth took his departure, that shore jo vere his vengenance on mankind for the violation of the robes of hespitality. Rhomansta, wishing to save man from each a calamity, tried to cately the rays of the sun and wood, but did not showed. A compil of all the Fengers was considered, and the heldeshing was connected at the fengers was convoiced, and the fredgeing was inside to them, the third would not give even water.

The souls of the dead have a chief of their own over them who has only one eye. He can be killed by shooting him in the eye. After being killed offerer and went hours. Khermusta seni spies after it to listen in case the animal on its vay might talk to itself. (In all the legents the hedgehog shows an inclination to express its thoughts abouth. The hetgehog on its way home was, indeed, talking to itself. "To eatch the rays of the sun and moon is impossible," it was saying; "the ord of the earth must be compelled to withdraw his demand, the continuous to visit him, and ask of him as a present, here the means the word and an arrow made of an echo, the lord of the earth word in unable to precure them." This speech, overheard by spies, was communicated to Khormusta-Tengri, who acted on the hedgehog's advice, and in this way extricated himself from the difficulty and saved the human race from misfortune.

The wise hedgehog is often subjected to ridicule; but it also takes revenge. Once, while it was passing by a herd of oxen, and, later on, some horses, the animals laughed at it. The hedgehog cursed them, and declared that they should be men's slaves. After that people began to domesticate oxen and horses and to make them work. On another occasion, when a bridegroom, after taking up his abode in his bride's house (this was a Tengri wedding), soon left his wife, the hedgehog said that the bride ought to be sent to the bridegroom, because a bride would not leave her husband's house, whereas a husband is prone to escape at the first favourable opportunity from his father-inlaw's house. After this both the Tengris and mankind discarded the old custom and followed the hedgehog's advice. Swans are also highly honoured, since in their form the Tengris' daughters frequently appear. Swans have their lord and protector. Any one killing a swan is doomed to die soon afterwards; the same is affirmed by the Buriats respecting ravens and kites. The fox, too, in Eastern lands, retains the traits of cunning Reynard; but they are not so malicious as those of his Western brother. Neither on the wolf nor on the bear does he play his malicious tricks. The fox more frequently plays the part of protector, of simpleton, and helps them on in the world. In one story two swans get the better of the fox in eunning, and almost drown that animal in the sea.

The Buriats, being a race of cattle-breeders, and at the same time hunters, have an immense number of legends about various animals, of which

many have their Idgins (lords).

Besides that of the Mangkhatais, or monsters, there exists also a snake-cult widely spread over the whole Shamanist world. Ribbons, straps, and twisted thongs over the Shaman's vestments represent snakes or their souls. Even the world of lower animals is not forgotten: these are supposed to possess an organization similar to that of human society. Ants have their king - Sharagoldgifield-caterpillars and worms are also divided into communities governed by chiefs, who in their turn are under kings. All the animal kingdoms have their sovereigns: the birds have Khan Garideh, a mythical bird of the Indian tales; the beasts-Arslan-Zon, the lion; the snakes-Abyrga-Mogoi, the snake: Abarga-Ekhe-Za-gassun, the great fish, ranks as king of the fishes; it has 13 fins. The bat alone is not subject to any one, it being neither bird, nor beast, nor fish, nor insect. The bear, which is so prominent in the cult of other Shamanists, does not play an important part in the beliefs of the Buriats.

18. Tree-worship.—The vegetable world also has its sacred trees, with their corresponding Idgins (lords). A sacred tree must have red pith; it is known by the name of Gan-mod, the firetee. If used for building houses, it will be warm in winter, but it is insecure in cases of fire and lightning. In woods, along footpaths, at fords, and on the highest points of mountain-passes, trees decorated with ribbons (iren) are often met with. It does not, however, follow that such sacrifices are offered to the tree itself. More frequently they are intended for the lord of the mountain-pass, ford, or forest. Only trees of a

strange and uncommon aspect are considered worthy of worship. Some plants, according to the belief of the Buriats and other Shamanists, cause rain and thunderstorms, if dug out; such is the root of the Statice gnetlini. Others, such as the Juniperus communis, Piera sibirica, Thymus serpyllum, Betala alba, and Betala daurica are considered pure and sacred, and are used in religious rites. Along with these there exist also unclean trees, such as the aspen tree (Populus trenulans). Wicked black Shamans of both sexes sometimes drive even gentle and peaceful Buriats to the most extreme degree of exasperation and even to murder. But to kill a Shaman does not mean to have got rid of him. To deprive the corpse of the power of working harm, it must be fixed down in the grave with aspen poles and covered over with aspen logs.

19. Nature-worship.—In inorganic Nature also namanists find objects of worship. We refer here Shamanists find objects of worship. We refer here to mountain summits, cliffs, etc., which have their own lords or Idgins, one of the most terrible of whom is the lord of a cliff at the source of the river Angara. At this spot runs a range of submerged rocks, and amongst them rises a high and steep eliff, past which the stream rushes with incredible rapidity, the high foaming waves un-ceasingly hurling their spray at the rocky ramparts. In former times Buriats suspected of great crimes were sworn in before this rock. The Russian Government, however, has been specially requested by them to put an end to this practice, as it frightened not only the accused but also those who had to administer the oath. 'An ungodly man even there, at that awful spot, would not be afraid of lying, whilst believers and god-fearing men do not dare to disturb the terrible zayan even in a right eause, and, however innocent, rather take the guilt upon themselves' (see Samokvasoff, The Law of Custom among the Siberian Aborigines). According to the Altaians, the lords of mountains quarrel with one another, enter into relationship, get married, and form alliances.

20. Fetishism .- In the part dealing with the Tengris we mentioned the stones cast down by them from heaven-the buman shulun and zada. Here we have already real fetishes, possessing magic properties similar to a magnet, which has the property of attracting iron. The Shamanist Turks do not stop here: every strange-looking little stone is regarded as a saat and tehaat tash (saat and zada reveal the common origin of the names). Such stones are often worn on the girdle, together with their knife and tinder, by the Uriankhai Sojots. In localities which abound in ancient archæological monuments, tumuli, and statues of stone, these are called tchaa tas, and to some of them even sacrifices are offered. According to tradition, Jenghiz-Khan was in possession of a very powerful magic stone, and in a decisive battle with the Naimans, after which the Mongol conqueror acquired a powerful influence over Eastern polities, he made use of his stone, causing a terrible snowstorm to arise against his enemies and thus putting them to flight.

21. Earth-worship. — Among the Buriats and Mongols earth-worship exists, but it assumed different forms among the two. To the Mongols, according to Banzaroff, the earth appears as a female principle, and heaven as a male one. This ancient belief has, according to Banzaroff's statement, been observed by older travellers among the Kumans who inhabited the steppes of South Russia, and in ancient Russian historical documents were known under the name of Polovtsi, as well as among an earlier people that lived in the present Northern Mongolia—the Tukin, according to the Chinese transcription, and Turks, according to

ancient runes, like lapidary inscriptions, first deciphered in 1893 by the Danish scholar Thomsen. The name of the goddess of the earth was Etngen: by the Mongols she is more often called Teleglen-Edzen, the master or mistress of the surface of the earth. In the higher style on Mongolian documents the earth is called Altan-telgey (the golden surface). Banzaroff's remarks lead one to believe that the word Etugen was also used in the collective sense of the 77 Etugens as a 'pendant' to the 99 Tengris. The indications relating to the existence of this cult among the Kumans and the Tukiu, the ancient Turks, and the number 77, which is a favourite with the Siberian Turks. instead of the multiple of 9, which is usual among the Mongols, make one suspect the non-Mongolian origin of the cult. Simpler, more original, and more exact is the conception concerning the lord of the earth among the Balagan Buriats. His name is Daban-Sagan-Noin, he is an old man with white hair; his wife is a grey-haired old woman called Deleyte-Sagan-Khatun. The Olkhonian Buriats, living as they do in the midst of the Baikal, offer sacrifice to the mistress of the sea-Aba-Khatun - whilst as lord of the whole earth we find here Bukha-Noin, with whom we have already acquainted the reader. Sacrifices to the lord of the earth are made when the agricultural season is over

22. The cult of the heavenly bodies.—This is but slightly developed in the Buriat Shamanism. The sun is said to have its Idgin-a woman to whom it is the custom to sacrifice a ram. former investigator, Shashkoff, saw ongons of the sun and moon in the shape of discs covered with red stuff; but Khangaloff and Agapitoff could find no trace of them; thus one may perhaps agree with Agapitoff that this cult is passing into oblivion. The moon is better remembered : according to Shashkoff, it is sometimes the cause of a woman's pregnancy. In the short Mongolian annals, Altan Tobchi (golden button), it is mentioned that one of Jenghiz-Khan's ancestors was conceived of a moon's ray. A legend about a mali-cious woman and her step-daughter, whom a wolf wanted to devour, but who was saved by the sun and the moon, is wide-spread among all the Shamanist tribes. The sun and the moon descended and carried off the persecuted girl to the heavens, together with the pail she was using to get water with, and the shrub by which she held herself whilst coming down to the water's edge. The moon prevailed upon the sun to leave the girl to him, because of his feeling lonely on his tedions nightly rounds, In the spots which appear on the moon's surface the Buriats and other Shamanists discern a girl with a pail and a shrnb in her hands. We have already mentioned Venns-Ukha-Solbon, the evening star, which is considered a Tengri's son. The conceptions concerning heavenly bodies are probably very ancient ones. The Great Bear is called by the Buriats and the Mongols 'seven old men,' and sometimes 'seven Tengris.' Banzaroff tells us that, in the book of sacrifices, or the veneration of the stars and gods, there is a prayer to seven Tengris, but he does not quote it. The Turks of Siberia call the Great Bear Djity Kudai, 'seven gods,' and also Djity Khyz, 'seven maidens.' The common name is here an indication of ancient origin. In the constellation of Orion every one can see three marals (Crrcus maral) chased by a huntsman and three dogs. The star with a reddish tint has been wounded by the hunter's arrow. We have heard that this hunter is the son-in-law of Erlik-Khan. The dogs in time will overtake the marals, and that will be the end of the world. The Polar star along with the two bright stars of the Little Bear group is called the picket, to which two lassord horses are tethered and around which they move. We have already spoken of the fact that certain occupations (e.g. the fisherman's and the blacksmith's) have their protectors.

11

23. Fire-worship.—There are also gods of the base and of the household, as 'Udeshi-Burkhat,' the doorkeepers; but the Tengri of fire, the brother of Ukha-Solbon—Sakhidai-Noin—stands above all and commands the greatest respect; his wife is known by the name of Sakhala-Khatun. The master of fire is called in incantations the maker of happiness; he sits by the hearth nodding his head, and with his tinder strikes fire and kindles a flame. His wife sits swinging to and fro like a person in a state of intoxication (depicting the dancing flame on the hearth). Just as among the Indo-European nations, fire has a sacred importance to the Mongols and Buriats. 'His fire portance to the Mongols and burnars. This fire is out,' one says of the head of an extinct or ruined family. The Mongols, when selling a person's property for debt, close up his dwelling and son's property lot deby, close up his dwelling and extinguish the fire by pouring water down the smoke-outlet. A bride, in taking leave of the paternal house in the company of her friends, walks round the fire. On entering her husband's house she bows before the fire, arranges the firewood, and, by way of sacrifice, throws pieces of mutton grease on to the hearth. Among many Shamanists, tinder, being the means of procuring fire, is never placed with the deceased. The explanation of this is twofold: a corpse is considered unclean, and tinder may not be placed alongside of one, as it is the symbol of fire, the all-cleansing element. Likewise a deceased person, as he may perhaps show hostility towards the living, must not be given the dangerous implement possessing the mysterious power of creating fire.

24. Cosmogony.—The cosmogony of the Buriats is not distinguished by originality. Other Shamanists have more elaborate cosmogonies: from the very beginning they evolve in regular sequence the idea of two principles of good and evil. In the four Buriat variations known to us we discover only fragments, retained in the memory of the people, of an entire epic which has been preserved in the greatest detail in the Altai tales. The Buriats say that formerly there was nothing except water; then the god Somboy-Burkhan, or (according to others) three gods or Burkhans, Esseghe-Burkhan, Maidari-Burkhan, and Shibegeni-Burkhan (in the last two are clearly seen the Buddhist Maitreya and Sakyamuni), met a bird, Anghir (Anas rutila), that swam on the waters, and compelled it to dive to the bottom of the sea and fetch up from there some earth, brought up some black earth in its beak, and on its fect some red clay. Thereupon God, or the gods, threw both the black and the red earth round about, and thus hard soil was formed, upon which grew up both trees and a variety of grass. Afterwards the gods created man (man and woman) eovered with wool, and in order to decide to whom should fall the honour of giving life to the couple so created, they agreed to place each a candle in a vessel and to retire to rest. He whose candle should burn till morning and in whose vessel a flower should blossom was to give life to men. Shibegeni awoke before the others, and observing that only Maidari's candle was still burning, and that there was also a flower grown, whereas his own candle was already extinguished and there was no flower in his vessel, hastened to change candles with Maidari and to transplant his flower into his own pot. When the others woke up and found the flower and burning candle in Shibegeni's vessel, they decided that he was to give life to men. Maidari, however, in virtue of his capability of knowing everything, was aware of the deception

perpetrated, and said to Shibegeni: 'Thou hast deceived us, and consequently the men given life by thee will be deceivers.' Thereupon the two deceived us, and consequence. Thereupon the two by thee will be deceivers. Thereupon the two Burkhaus flew up to heaven, and Shibegeni gave life to men, and set a dog to watch them. there appears on the scene a new person, Shitkur (devil), who promised to feed the dog and give it a hair covering to ward off the attacks of winter frosts, it the dog permitted his approach to men (the dog was created naked, without any hair). The dog was tempted by this promise of food and hair, and admitted Shitkur to men; the latter were spat upon, and the dog got covered with coarse hair. Shibegeni thereupon came down to earth and cursed the dog, saying that notwithstanding its hair it would suffer from frosts in winter, and would be enslaved by man; it would get beaten, and to satisfy its hunger it would have to gnaw bones and to devour excrement. As to man, Shibegeni shaved off all his hair, excepting that on the head, so that now man became naked, and only here and there, when he is grown, does he get some hair on his body. According to this legend men were created by a deceiver. In the Altai version, over the waters there appear the god of light and his assistant Erlik-Khan. The latter plunges down to get earth, but on handing it to the god he keeps back a part of it; it grows in his mouth, and he is compelled to pray to God to be delivered from this infliction. The earth taken out of the mouth of Erlik forms, later on, mountains and stones. Between the two principles a struggle is carried on, until at last the giant of the god of light, Mandy-goshun, precipitates Erlik-Khan into the abyss. At the present time, according to the Altai cosmology, the god of light, Ulghen the Good, governs the world, but his goodness prevents him from persecuting and punishing men for their faults. He only deprives them of his protection; then it is Erlik who assumes his right to torture men. Having suffered his infliction, men improve again, and re-

turn to Ulghen. The god of light restrains Erlik.
25. Ongons.—Turning now to the material and ritual side of the cult, we shall first treat of the ongons. The Turks of Yenisci call the ongon tyus, whereas among the Altaians it is named kurmes. On the one hand, it is an image of God, and, on the other, God himself, a fetish possessed of his own power. The tyus, or ongon, reminds us of the rôle which among some Christian peoples is

filled by the images of saints.

In the teaching of the Church the icon is a representation of some saint, and has for its object to call up in believers pious some saint, and has for its object to call up in believers pious some saint, and has for its object to call up in believers pious some saint, and has for its object to call up in believers pious of the constant of the const

found mostly among newly married couples. On a small piece of broade or silken material are designed a few coarsely made human figures, the trunk being represented by a straight line, launan figures, the trunk being represented by a straight line, as also the hands and legs, while the eyes are made of glass beads sewn on, over the head being fixed the feathers of an owl; from the upper side of the ends of the piece with the above designs ribbons hang down; on the breast of every image are suspended little figures made of tim. Among the artiquities found on the Iral Mountains in the Government of Pern, one frequently meets with bronze figures of brids with their wings outstretched, and of human bethes with small human figures on their breasts. A probable explanation of these little figures on their breasts, A probable explanation of these little figures and their names vary in different localities. The number of figures and their names vary in different localities. The mountain ongons are not kept inside the gurda, but in the yard, and more frequently in the neighbourhood of the winter quarters. A ongons are not kept inside the purta, but in the yard, and more frequently in the neighbourhood of the winter quarters. A niche is cut out in a column, and therein is placed an ongon, which is first deposited in a wooden case or a felt hag, in which, partial and to be a considered with the partial of the wedding, when the couple are moving into their own noise, and the variety of figures on the ongons and of their names, seem to point to their representing local, specially venerated, household delities. Each of these ongons serres only for its particular owner; after his death the ongon is hurnt, and the new master calls in a Shaman to consecrate a new one and place new master calls in a Shaman to consecrate a new one and place it in position. Among some Shamanists, as, for example, those of Altat, the ongon is fixed for a time only. They make ongons of hares' skins and keep them for seven years only, after which period they are replaced by new ones. The ongons which are kept inside the purtos are divided into men's and women's; the former are kept on the left-hand side of the entrance, or inashand's part; the latter on the right-hand side, which is destined for women and their special belongings. Speaking of destined for women and their special belongings. Speaking of men's ongons, Agapitof mentions a very ancient one among the Balagan Buriats, which was brought from Mongolia by a more thorough a speaking of the properties of the pro-pagation of the properties of the properties of the and had iron rattles round the neck. It was called Bord, Judging from the name, it may represent an ancient, semi-nythical ancestor of Jenghiz-Khan, Burte-Chono. Its Mongo-lian origin is correborated by the lact also that devotions before it are performed in the same way as the Buriat Lamaists how before their Buddhas. Although the ongon spirits are accounted before their Buddhas. Although the ongon spirits are accounted as lower detities, the ongon pictures are sometimes representations also of the highest personages of the Buriat Olympus. The son of a Energit, the good of fire, Sakinlai-Noin, and Sakinlai-Runner accepted with red cloth. Such an ancient corgon Agapitof saw in the house of a Buriat fitty years old, who told him that it belonged to his grandfather, i.e. to the period of the expedition of Pallas and of Georgy. Some ongons of fire seen by Agapitoff were evidently of a more recent, common origin (ongons zurubkinza - ongons with designs on them), on comparison with the above described, the peculiarity that, besides the pictures of men, on the unper part of the picer of on comparison with the above described, the peculiarity that, besides the pictures of nen, on the upper part of the piece of staff there is a line representing heaven, the human figures are drawn in two rows, one henath the other, and under the lower row there are representations of the camel, the snake, and the fog. On many ongous which are to be seen in the Russian frog. On many ongois which are to be seen in the Russian Museum of the Emperor Alexander in, over the human heads and above the line roughly representing heaven, a number of points stand for the stars. Among the latter one can alway distinguish the constellation of the Great Bear; other stars are also indicated, but their arrangement has not the slightest cloud in the sky is represented on the ongons by curved line.

The ongons are very numerous, and would almost require an article to themselves. It will suffice here to mention only a few of them. Women's ongous, placed on the right-hand of the entrance, are generally considered as protectors of children, but there are also some which protect child-hearing. Ongons of the lords of animals, such as the ferret, the ermine, ard the marten, are also met with. As lord of the ferret is considered a famous ancient Shauman Ollengha, who came from Mongolia, learned Shaumanism in Pekin, and travelled not on horsehack, but on a ferret. This Shaman, according to tradition, lived at the time when the Buriats were subjugated by Russia, and was the first pay tribute to the White Cara. The distinguishing teature of control of the composition of the design. The Bakiad Buriats have an ongon with a human figure representing a Shauman with a tambourine. This ongon was known to George, but we have little information about it. Agaptioff albrus that, according to the accounts of the Buriats, it is a representation of an ancient Shauman. There are also ongons of diseases. The one which is considered helpful in cases of swellings and holds consists of a bit of shepsini. Extremely complicated is the Bakagan khekhho ongon. It is detected to fifty-eight personages among whom are included both acceted to fifty-eight personages among whom are included both

Ukha-Solbon and the nine daughters of Esseghe-Malan and Gaizu-Ukha-Solbon and the nine daughters of Pseeghe-Malan and Gaizshim—two girls who had died in winter of cold and hunger, and who are invoked in the places at the estuary of the Selenga in cases of influenza (see above)—and the ford of the moon and sun. But all the Khotkho ongous seen by the writer had less than fifty-eight pictures. The most complete ongon, which is preserved in the Museum of the East Siberian section of the Geographical Society, has only thirty-eight pictures.

The ongons of the white sniths—the sons of Bojntoi—stand quite apart. They, it is asserted, came down from heaven, and each one held some snith's implement in his hand. Their ongons reperts in their hands.

ments in their hands

with the organs should be mentioned also the so-called zyaWith the ongois should be mentioned also the so-called 12/d.
If a person desires to destroy his enemy, he draws a figure of him on a bit of cloth-stuff or paper, and, with adjurations, hides it in, or somewhere near, the house of his victim. This is a very dangerous thing, especially if one with the help of a black Stanan. The victim begins to siecken, and his only sately is to Shaman. The victim begins to sicken, and ms omy satety is be found in calling in a good Shaman, who finds the zya and burns it.

26. Dedication of animals.-Alongside of the ongons, there is a custom among Shamanists of dedicating to their gods domestic animals. The even at the time when an ongon or tyus is being prepared, frequently deem it necessary to dedicate to the ongon some animal possessed of certain definite marks. The process of dedication consists in fumigating the animal with the smoke of a burning Juniperus communis, in sprinkling it with wine, and hanging colonred ribbon on it, whilst the Shaman chants his adjurations. The colour of the ribbon depends on the ongon and the god to whom the animal is consecrated. The consecrated animal is then sent to the herd, and becomes something like a Polynesian tabu. It must not be ridden (if it be an animal for riding) by any one but its own master; a married woman may not touch it, and it must not be used for any heavy work. An animal may be so consecrated either for a time or for life. These animals are called by the Turks of Yenisei Jazykh, by the Sojots adykh, by the Mongols setertey. All these words denote both the dedication and the tabu. This custom prevails also among the Mongolian Buddhists. In Pozdneveff's book, The Life of the Buddhist Monks in Mongolia (St. Petersburg, 1894), there is a table showing the colour which horses must have when they are dedicated to certain Buddhas and Bodhisuttvas. Evidently Buddhism, in its toleration of religious superstition among its followers, whilst spreading over Mongolia, adopted the ancient custom of dedieating animals to the higher beings, but changed the ancient Shamanist names of the deities into the new Buddhist ones. These animals may be considered as living ongons up to a certain point, although there is a substantial difference between the two. The ongon, be it what it may, is at all events a god, but the *sciertey* is merely an animal dedicated to God, and is frequently adopted as an addition to the ongon. To every ongon offerings are made of wine, meat, incense, etc. In the writer's work on the tyuses (ongons) of the South Yenisei Turks, the order of offering sacrifices to them is given in detail. The sacrifices are extremely varied. An animal dedicated only to a god is earefully kept, but no offerings are made to it. The Buriats also have the same custom. Georgy, in his time, saw a horse dedicated to a god. Bukha-Noin is dedicated a grey uncastrated ox; to the Water Khans, a red breeding-ox, and sometimes also fish or cels; to the Shaman ttzerkel-Aiakhanzaieff, a piebald horse; to the lord of the black horse and his wife, a dark bay horse, and, in sacrifice, a raven-black one; to the Eastern Tengris are dedicated a chestnut horse and a cow of the same colour. To some deities are also dedicated wild animals or birds: for example, to the lord of the island of Olkhon, a pigeon. Among the Buriats' neighbours—the Karagals—the traces of totemism are clear. According to their traditions,

their people sprang from four brothers-the mole, the bear, the eclout, and man. A totem of the mole—the eldest brother—is to be found in the gurta of almost every Karagal; but these people are dying out, for in 1888 there were only 300 of them, and now there are not more than 150. They are dying both physically and morally, as may be seen in their forgetting of their traditions and customs.

27. Imitative dances .- An interesting phenomenon is presented in the so-called nudan ongoner (= merry-making ongons). At the evening parties of young people a Shaman is frequently invited to enliven the company. Before entering the assembly, he stops at the door and takes off his boots and girdle (i.e. he follows the customary proceeding when deities are to be invoked), takes into his hands the conjuring wands (morini-kharba = horsestaves; see p. 166), and begins his invocation to the zayans (gods). Having finished his invocation, he calls forth one of the deities, and thereupon turns himself into that deity, and plays the part of the latter. The themes vary greatly. Sometimes be plays the part of Batya-ubugun-an old man who complains of the infidelity of his wife, tells stories of her scandalous on-goings, and seeks her among those present. Thereupon the woman herself comes forth, and enlivens the young people by her cynical sallies. Afterwards Ukha-Solbon, with his three wives, is invoked. The most popular personages are the belted ongon and the joking orgon. Sometimes a scene of taming a horse is played. But more frequently the Shaman induces the young people to dance, to go through different gymnastie tricks, and awkward persons he jokingly re-wards with blows from his staff. The Shaman wards with blows from his staff. The Shaman also plays the part of the bear, ox (Bukha ongon), wolf, pig, and, among the Kuda Buriats, also of Zarya - Asarghi, i.e. the porcupine. In all these roles the Shaman initates the personages whom he represents. The funny nature of these displays does not obscure their signification. Here we may see the origin of those masquerades which have a sacred meaning, and in which the youth of Polynesia still participate; there, not one person only, but a whole assembly or club, a secret society, participate in the mystery. With fearful masks of ghouls on their faces, they terrify the spectators (see Schurtz, Urgeschichte der Kultur, Leipzig, 1900, and his more detailed work, Altersklassen und Mannerbinde, Berlin, 1902). Masks are by no means unknown to the Shamanists. Formerly the Shamans used to wear leather and metallic masks on their faces; nowadays they have plaits which fall down from their hats over their faces. complete costume of a Buriat or Tungus Shaman, by its numerous projections, imitates a human skeleton whose toes are provided with claws. At sacrifices, especially great ones, the Shaman carries on dialogues consecutively with different deities. Not infrequently he performs the ceremony with assistants. In Shamanism, however, the dramatization of religious rites stopped short in the primary stage, but it became highly developed in Northern Buddhism, in Tibet, also here and there in Mongolia, and partly among the Buriat Lamaists. In Tibet they represent whole dramas and mysteries from the life of Sakyamuni in his former transmigrations (see Waddell, Buddhism of Tibet, London, 1895, p. 515).

28. As regards the rites of Buriat Shamanism, the presence of a Shanran is by no means required in all of them. The feeding of ongons is done by the master of a house; even some women's ongons are made by women themselves, without the participation of a Shaman. When crossing a monntain, there is hardly a Shamanist who would not jump off his horse to east tarasun (wine of milk) before the lord of the pass, and a person of import-

ance ties a piece of ribbon and horse's hair to a tree on the pass, near a heap of stones which has been collected by the faithful. Banzaroff, in his time. noticed that even public sacrifices were not all celebrated in the presence, and with the participation, of a Shaman. The Turks of Yenisei, in summer, celebrate the so-called mountain sacrifices (tag-tai) and heavenly sacrifices (tiger-tai), the latter being performed by the oldest of the tribe but not by a Shaman. Certain sacrifices, on the occasion of the birth of a child, and also of its passing from childhood to adolescence, are made without the assistance of a Shaman, just as on the above-mentioned occasions. Here everything is done by the eldest of a family, and, in case the rites and the prayers are forgotten by him, he is helped by some experienced person acting as a prompter. Divination and foretelling the future are done also by ordinary competent people. The future is guessed by the sound of the string of a bow, but the most popular way of divination is by means of a sheep's shoulder-blade burnt on the fire. This has been known from the times of Attila, and in Mongolia a large literature exists on the subject. Divination is practised also during the sacrifices to the Water Klians, and consists of pouring melted tin into water: if the tin comes out entire at once, without being separated into parts, it is regarded as a favourable sign. If the tin poured out does not form a regular figure, the latter is examined with a view to determining the future accordingly. Divination is also practised by arrows, for the discovery of missing things. A thick arrow is taken, placed on the hand, and the direction towards which it inclines is followed. This kind of divination is now practised by some Buriat Lamas, although every indication points to its Shamanist origin. It probably stands in connexion with the stories about divining arrows which of themselves seek out the object aimed at.

29. Sacrifice. - In their form the Buriat sacrifices may be divided into private (kirik) and public (tailgan).

Indispensable adjuncts of every sacrifice are sprinkling with wine, milk, sometimes tea, and libations. These are the simplest forms of offerings, and are made almost daily. Ecfore a Buriat drinks a cup of wine, he throws some drops of it into the fire upwards and round about. Further, in more complished that the sum of the sum of the fire the sum of in which the presence of some deity is expected. By far the most common and frequent occasion for sacrifices is supplied by diseases. For that reason, the Shaman is considered by many rather as a physician and diviner than as a priest. The simplest diseases. For that reason, the Shaman is considered by many rather as a physician and diviner than as a priest. The simplest form of exoreism against an illness consists in the sick person's being seated with his hat on near the fire, when a cup of wine is banded to him; by his side a Shaman takes his stand, fungiasts being seated to him; by his side a Shaman takes his stand, fungiasts being seated to him; by his side a Shaman takes his stand, fungiasts in the stands of the white heat, rubs his foot on it, and places it over the diseased

Sometimes, but rarely, the water- and fire-tarims follow one

Sometimes, but rarely, the water- and the-tarims follow one another, i.e. first the water cure is applied, and then the fire. Very interesting are the cures consisting in the substitution for a sick man of another person or animal. An astonishing historical example of this was shown in the sickness of a Mon-Very interesting are the cures consisting in the sitestitation for a sick main of another person or animal. An astonishing listorical example of this was shown in the sickness of a Monferical example of this was shown in the sickness of a Monferical example of this was shown in the sickness of a Monferical example of the kinar's seal, the souls of a hundred of his subjects who inhabited the woodlands of the Mongolian mountain chain, 'dhentey,' were presented to the evil spirit Shikkur. The details of this remarkable rito are not known to us; but evidently the bargain was struck, since the Khan recovered; and yet the people offered to the devil remanned alive also. This Khan and his successors did not dare and also the Begolo-Gegen of Urga to transfer them to himself. The Bogdo-Gegen himself is the incarnation of a deity, and he has no fear of the devil. This small group of the inhabitants of Northern Mongolia is known even now under the name of 'the devil's subjects.' People shun them, and avoid any relationship with them as unclean. The only obligation which they have to perform consists in supplying a yearly tribute of game to the Bogdo-Gegen, of wid boars, wid goats, and zerens (Anti-Ake of this tribute : he distributes is in presents. The Burtata, however, have no means to pay to the devil's subject to the tribute is distributed in presents. The Burtata, however, have no means to pay to the devil's such costly ransoms, and they manage to disjense therewith by a simple device. Should a child suffer from dysentery, the women of the family and the proper of the control of the coldest women in the neighbourhood, they place these of the oldest women in the neighbourhood, they place these of the oldest women in the neighbourhood, they place these of the oldest women in the neighbourhood, they place these of the oldest women in the neighbourhood, they place these of the oldest women in the neighbourhood, they place these of the oldest women in the neighbourhood of the point of the carcle in burning, it denotes a f was given to the cricking piece will use. In Carrying or this rite, neither the Shaman nor men generally take any part; everything is done by child loving mothers and experienced neighbours. At a mother appetrice, dolon of blacketh-like witches the control of t

sacrifice in this rite does not denote a substitute for the soul sacrince in this rite does not denote a substitute for the soul of the sick man, but is rather a propitiatory offering. Generally domestic animals are sacrificed, and only in rare cases fish. The selection of an animal for the sacrifice, as well as the enumeration of its signs and peculiarities, is left to the Shamans. In kirik we can distinguish three chief moments of action. The first is devoted to the consecration of the disters and beverages first is devoted to the consecration of the dishes and beverages prepared for the sacrifice, viz. milk-wine and sour milk. The invited Shaman fumigates them with the smoke of the fir bark; then he walks out of the yurta, followed by men carrying the prepared food; outside, the Shaman begins to sing a hymn to prepared lood; outside, the Shaman begins to sing a lyvinn to the invoked apan (deity), three of those present sing with him, whilst the others arrange the food, previously prepared at a spot which is called turghe, and light the fire under the pot in which the sacrificial meat is to be boiled. The consecration of the victim goes on, the Shaman reads a prayer and sprinkles wine. This sprinkling may be considered as a distinct moment; it is called snatif barokhu (= to make snatil, i.e. a lbation). This rite is an essential feature and an invariable adjunct of all sacrificial offerings when a Shaman is present, as well as a shortened form of a sacrifice which every one offers almost dady. When snatic is over, the arimal is killed, its skin is taken off with the head to ever the arimal is killed, its skin is taken of with the head to ever the arimal is killed with straw, and birch branches are stock in the nostrils; on the forehead, by means of a small stick, is fixed abit of the bark of Picca sibiried called jido; afterwards the skin is hung on a birch tree, full of branches, previously set in the a bit of the bark of Picca sibiriae called jidb; afterwards the skin is hung on a birch tree, full of branches, previously set in the ground, care being taken that the animal's head shall look in the direction where, in the opinion of the participants, the invoked zayan (deity) resides. The boiled meat is separated from the bones, the latter being scraped for the removal of the adhering flesh, and the whole is placed in a wooden vessel; part of the contents is burnt later on, but the greater portion is consumed. The Shaman, who during the performance of the rites above described is seated with his hosts and drinks tarasam, stands up after the sacrificial mounted skin has been hung, and begins his invocations to the zayan. The latter makes his approach, and after die sacriacia profinet sein his een hung, and region in the Shaman termbles, feeling the breath of the deity, be now goes up to the latter, now springs back from him, under the miltenee of fear; it lats, getting into a most cestatic state, he suddenly changes his manner; the deity has entered into him, and in a tone of authority begins to talk within him. The nim, and in a cone of animoral vegus to da within limit are zayam, having entered the Silaman, relates his whole history, his exploits, and forciells the future. Having accomplished what he was invoked for, the zayam comes out of the Shaman, and the latter at that moment groams, cries loudly, shivers; he undergoes a very painful process; the deity forsakes him, the

light and the power which were in him disappear, move away light and the power which were in him disappear, move away from him; he feels weak; round about him is darkness; his thoughts get confused, and sometimes he falls down in a fit, or centimes standing as if hypotized; it is only by degrees, and as if awakening from a deep sleep, that he returns to his usual node of life. Such is the description of his state given to the writer by a young and popular Turkish Shaman. The tollopun is a public searchice, performed on hehalf of a whole community, the sacrificien arising supplied by several households, according to their means; but the meat after the sacrifice is divided equally amongst the participants. The

several households, according to their means; but the ineat after the sacrifice is divided equally amongst the participants. The tailgan, at the same time, is ecjoyed as a popular festival, at which the youths engage in wrestling and jumping, whilst in olden times there was arrow-shooting. The tailgans dedicated to the various sugma are performed at certain definite seasons sponds to the Yakutek spring festival called phapekh; that to the Water Khans is in summer, and to the mother-earth at the end of the summer season. All the tailgans have a general character of the delites invoked. The most widely-spread and common form of the rithal is that which is practised at the searchiese into the fields and select there a fine commoditious space at the foot of a hill. In this festivity only men and girls take part; married women and wislows have to stay at home. The utensits, wine, and sour milk are funigated with pine bark, before starting for the selected spot, by one of the men (cf. 4xik). The gracking with the search provides the tailgan, where the others also assemble and take part in the tailgan, where the others also assemble and take part in the rite. On an appointed spot utensits with provisions are arranged in a row from west to cast, whereas the participants take their seast towards the south; the place where they sit is called turple; in front of the utensits are stuck birch branches, which also called turple; in front of the utensits are stuck birch branches, which are leaded to the proper of the provision are reto the sample. When everything is arranged, birch trees are stuck into the ground on which later on are hung the skins of the sacrificed animals; there also are steaming the hig kettles for bonning mean everything is arranged, birch trees are stuck into the ground, birch trees are stuck into the ground, birch trees are stuck into the grounds; everything is arranged, birch trees are stock into the ground, on which later on are hung the skins of the sacrificed animals; thereupon every participant has to supply a white rope of hair intertwined with white and black ribbons, which each one prepares beforehand. These ropes are tied together, and to them is saftixed a white hare skin. By means of this rope they bind the tops of the hirch trees; the latter are placed in an inclined position and are supported with pegs. After the trees have been fixed and their tops united with the rope, the Shaman reads a prayer, and the participants, having cups filled to the brin in their hands, at the command of the Shaman, 'Sey' from the trees the state of libations are further repeated, but previously the Shanan places in every cup a bracch of the Picca (pido). Afterwards sour nilki is offered to the sacrificial animals. Among classical peoples it was also a custom to offer drink to the sacrificial animals before they were killed. Afterwards the sacrificial animals are killed, and their skins and meat are treated as has been already described at the kirik. The bones of the animals, each one separately, are collected on little tables made of birch sticks and burnt; the ends of the intestines of the animals are burnt on a separate fire. The principal rite is performed are burns on a separate nre. The principal rite is performed after the ceremony. Every one takes a pail, in which meat is put, and stands up; the Shaman invokes the Western zayans; they come in turns and relate their own stories, until it is the turn of Bukha-Noin-Baobai. The Shaman then stands on all fours, turn of Bukha-Noin-Baobai. The Shaman then stands on all fours, bellows like a bull, butts those present as if with horns, and attempts to upset the birch trees tied with white rope, whilst several men keep them in position. After his unsuccessful attempts at upsetting the trees, Bukha-Noin goes away, bellowing the lord of fire the principal part is done in the yurta, since the sacrifice is offered to the lord of the domestic hearth; the sacrince is offered to the form of the domestic nearth; the tatigan to the Water Khans is arranged at a river, the participants drinking the water thereof, and divining not by means of throwing down the cups, but by pouring melted tin upon the water. The Shaman here does not but with his horns, but

water. The Snaman nere toos not but with his horns, but tries to throw himself into the river. At the domestic sacrifices of the blacksmiths, the master heats the iron and strikes it with a hanner, whilst the Shaman reads the prayers. Striking the heated iron enters also into the ritual of the tailgan to the Eastern Klaus.

30. The Shaman. - In all the religious ceremonies the Shaman is the principal actor. No people nowadays call their priests by that name. Banzaroff derived the word 'Shanan' from a Manchu root. A Samoyed would call a Shaman Taibey; a Lapp, Noyda; a Siberian Tatar, Kam; a Buriat and Mongolian, Boo. Banzaroff Acar, a Banat and Nongolian, Book. Danazaton assures us that the word 'Shaman' is met with in Chinese writings of the 7th cent., when Northern Mongolia was dominated by Yuan-Yuan, a people

of Tungus-Manchu origin. But, generally speaking, the most ancient mention of Shamanism may be found in Herodotus's reference to priests who used to divine by means of rods. In his works we find also that the way of killing animals by means of compressing the aorta is exactly the same as that which is made use of by the Shaman at sacrifices (iv. 60, 67). The Shamans of the Buriats believe in their origin from the eagle, the son of a Tengri. and many of the black and white Shamans boast of long pedigrees; they have also many a quarrel and reckoning amongst themselves. cestors of many became zayans, whose memory is honoured by sacrifices. A real Shaman has to possess many qualifications. First of all, his organism has to be sensitive, full of nerve, and receptive. He must have a good memory to remember the manifold formulas and conjurations necessary for him to repeat by heart; he has also to make extempore prayers for certain occasions, and consequently must be able to give rhythmical form to his speech. Above all, he must not doubt his own calling and abilities, and has to be sineere. Many of the Shamans are capable of sincere. Many of the Smannan are capable of most sincerely and devotedly giving themselves up to the rôle they have to fill. When a nervous child cries in its sleep or is inclined to hallu-cinations, the aborigines say he is troubled by spirits and must become a Shaman. It must also be mentioned that the native races in Siberia are very liable to suffer from nervous diseases. Young girls, during their monthly periods, frequently fall into a temporary aberration; the young men also suffer from aimless yearning, which drives many to suicide. All this, of course, may account also for the Shamans' disposition and hallneinations. Among some tribes there are epileptic Shamans, who murmur disjointed words during the services; such Shamans are provided with assistant interpreters. We have not, however, seen such Shamans among the Buriats. Although among them any man who shows certain qualifications may become a Shaman, yet, his abilities notwithstanding, he would find himself in an unfavourable position in comparison with others who had a Shaman's origin and a whole series of Shaman ancestors; these help him and mediate for their client, even before Erlik-Khan himself. It is possible, however, to note even among the Buriats the commencement of an evolution of hereditary priesthood, which keeps up not only the education of the people, but also the memory of the achievements of their ancestors. The black Shamans of the Buriats have gone still further: they conceal from the crowd the secret of their mysterions lore. They monopolize it in order to keep ordinary mortals in fear. It is owing to this circumstance that the efforts of native investigators, and of persons closely connected with the Buriats, are so barren of results in respect of knowledge of the servants of the awe-inspiring Tengris. There are some cases of grown-up and even aged people becoming Shamans; but these are exceptional. Generally it is a child of Shaman origin who begins almost from infancy to learn his business. The writer saw among the Uriankhis a boy of ten years old singing the conjurations with his mother during Shamanic attendance on a

The future Shaman visits the tailgans and the kiriks, watches The future Shaman visits the tatigons and the kirits, watches the proceedings attentively, learns of experienced elders how to sing prayers and conjunctions; but, whilst preparing, he frequency to be a superparent of the property of the p 16 BURIATS

them with the good spirits. (3) It a rich man should call thee in, proceed to him or an ox (only the poor make use of sich energy and can be not chain much for thy trouble. (4) It a rich man significance and do not chain much for the problem of the property of the property of the problem of the property of the instructions imparted to him.

After the purification, in a few days, follows the first conservation. There are in all nine of them; but there appear to be no longer any Shamans who have undergone all these. In the first place, every consecration requires some expenditure; in the second place, the persecutions and extranoons hindrances to which all non-thristian religions are subjected make the native races avoid and shum all public ceremonies. At the first Shaman, goes about the houses to collect the means for defraying the expenses of the exemony. Afterwards the father-Shaman, his nine sons, and the consecrated one proceed into solitude to hold a nine days fast, their food consisting only of tea and toasted flour. To keep away evil spirits from the yirta, or rude hat, in which the fasters reade, it is itself there times round with toasted flour. To keep away evil spirits from the yurta, or rude hut, in which the fasters reside, it is tied three times round with that, in which the fasters resuce, it is that three times round what a rope of hair, and some wooden organisms having a symbolical meaning are here and there attached to it. On the eye of consecration a Shaman arrives, and along with those fasting sings a hymn to the zayans. For the day of consecration the secration a Shanan arrives, and along with those fasting sings a hyun to the xugans. For the day of consecration the following preparations are made. (1) A birch tree is planted in the yuria of the Shanan, the top of the tree being passed through the upper aperture of the yuria. This tree is called through the upper aperture of the yuria. This tree is called to the Shanan. (2) A birch tree decreated with colour of hibons —rea and yellow if a black Shanan is being consecrated, white and blue if it he a white Shanan, or all four colours if the Shanan is going to serve both the black and the white xugans— is also placed in position. (3) A birch tree (xtaxnih scripte) to which is tied a small bell and a swerfficial horse. (4) &&&c.d. sides, so that the Shanan can aspire to the sides of the colour of the sides of the is also placed in position. (3) A birch tree (Azarchi sexpla) to which is tied a small hell and a sacrifical horse. (4) Ebbe-sharing (i.e. the large yellow free) with incisions made on it in the middle of the property of t pared on the spot. After the consecration of the implements a fresh invocation to the Tengris commences, in which the neophyte also takes part. Thereupon they all proceed from the purta outside, and here, as at the purification with water, bot water is prepared and mixed with the blood of the sacriheld goat; with one is a marked with the thood of the sacra-ble goat; with one is a marked with the thood of the sacra-cars of the neophyte, who is then again abble set; and these of the birch on the bare body, the instructions given him at the preceding purification by water being repeated. The new Shanan, with the staves and the khes' in his hands, chants along with the others the adjunctions, above all to the lord of solong with the others the adjunctions of the manufacture of the pole-cat, who established the rites of consecration, what he learned Shaman who brought to Baikal from Pekin the seience of Shamanism. The Shaman then climbs up the birth tree to the very top, followed by the others. Such, at least, is the assertion of Agapitoff and Khangadoff. According to others, assertion of Agapitoff and Khangadoff. According to other, only to the life land of the first consecration, springs up only to the life land of the first consecration, springs up only to the distribution of the second notion. Every new consecration gives the Shaman new privileges, e.g. to add new strips—and to hang new rattles on his costume. After the fifth consecration he acquires the right to carry the shiri, i.e. a loc of low rices, the sakes of which are filled with representation he acquires the right to carry the shiri, i.e. a loc of low rices, the sakes of which are filled with representation he acquires the right of the shirie good increasing. This statement, however, cannot now be verified, since there

are no longer such multi-consecrated Shanans to be found, more especially, as the custom of carrying the *shire* has been preserved only among the pooreer of the other fariats. Be that the consecration of t

A consecrated Shaman, like the ministers of other religions, is distinguished from ordinary mortals by special outward attributes, besides having obligations of service to the gods and natural characteristics of his own. As the most essential implement of a Buriat Shaman must be considered the horse-staves—morini-khorbo; without them he cannot perform any of the principal rites. The staff is about 80 centimetres in length; the upper end is bent, and out of it is cut the figure of a horse's head; at some distance from the upper end the staff forms a small knot; in the middle part the staff is thicker (the knee-joints of the horse), and on the lower end a hoof is ent ont. On the upper half of the staff are fixed miniature stirrups, little bells, conical weights of iron (shamshorgo), and coloured ribbons. The staves are cut, for the newly consecrated Shaman, from a live birch tree standing in a forest where Shamans lie buried. It is considered desirable to cut off the pieces for the staff in such a manner that the tree shall not perish, otherwise it is of bad omen for the Shaman. A Shaman who has already had five consecrations may provide himself with iron horsestaves. Their signification can be gathered from the description: they are the horses on which Shamans fly to heaven and to the earthly zayans. As to the tambourine (khesé), it is but little known among the Buriats, although among the Mongol Shamanists and Mongolized Uriankhis it is in use. At great Shaman ceremonies, in which a Shaman and his nine sons take part, and some of which the writer witnessed at the estuary of the river Selenga, among the Kuda Buriats, one of the assistants holds in his hands a small tambourine; but neither the meaning of the tambourine, nor the rôle of the assistant, is quite clear. Next, as an appurtenance of a Shaman may be considered the khur, a tuning-fork, with a wire tongue between the sides (see above), an implement largely in use among Shamanists. It may be met with from the sources of the Amur to the Ural, and from the Arctic Ocean down to Tashkent. Here and there it is merely a musical instrument. The Shaman's mantle (orgoy) is now in some parts put on only after death, for burial; with the white Shamans it is of white stuff, and among the black Shamans of a blue colour. One no longer hears about the Shaman's boots, or about the metal diadem, consisting of an iron ring with two convex arches, also of iron, crossing one another at right angles, and with a long jointed chain, which hangs down from the nape of the neck to the heels -we know of them only from the descriptions of travellers, and from specimens preserved in a few museums. The old-fashioned orgoy was shorter than the orgoy of the present day. In front, over the chest part, there used to be sewn at the sides thin iron plates, and on these were hung iron figures of single- and double-headed birds, with pictures of small lishes and animals. The whole of the back part was covered with twisted strips of iron, which represented snakes and their rattles (shamshorgo). On the back also were suspended two planehets, with a whole row of little bells and tambourine-bells. On the chest, above the thin plates, used to hang little copper planchets with radii. On the sleeves were also lung thin iron plates, in imitation of the shoulder, forearm, and

ray bones (os radialis). On the shoes there were also sewn thin plates in imitation of the tibia, and toes of iron with claws. This prompted Gmelin to assert that two Shamans who came to him from Nizhne-udinsk resembled chained devils. About the Anzine-mansk resembled chained devils. About the masks on the faces we have spoken above. Sometimes the Buriat Shaman has, besides, a whip with bells. A proper explanation of all the parts of a Shaman's costume has still to be given. The existing accounts are extremely contradictory, since the old travellers were so little prepared for the study of Shamanism at the period of its development.

31. Thus equipped, the priest enters upon his difficult calling. If he be a white Shaman and his lirst efforts are successful, he is beloved and received by all. But if he be a black (or a female) Shaman, he (or she) is feared rather than loved. Cases of murdering female and male Shamans, simply on their being suspected of having stolen souls, spread disease, or caused drought and other misfortunes, are not infrequent. Shamans are rarely well-to-do or possessed of means; they are unpractical people, and sometimes, when their work is hard, they have recourse to stimulants. which shatter still more their disordered nervous system. The writer saw a big Shaman the day after he had worked throughout the night. He was lying utterly exhausted and could scarcely breathe. We offered him a glass of brandy, in the hope that it would refresh him, and that he would take food to strengthen him; but instead of taking food he at once jumped off his bed, snatched his tambourine, and, in token of gratitude, wished to entreat the gods to grant a favourable issue to our travels; but the excitement soon passed off, and he fell down and went to sleep. We had to leave the place without his blessing, as we could not wait until he awoke. Nearing the end of his earthly travels, when there no longer remains any hope of recovery, notwithstanding all the efforts of his brethren, the Shaman begins to foretell his own future, what Tengris he will serve, promises to take care of his own people, and names the horse which should be despatched with him. A dead Shaman's body is kept in the yarta for three days, dressed in a new costume, over which his orgoy is put. The young people, his nine sons, compose and sing hymns to his memory, and fumigate his body with sacred herbs. Thereupon the body is put on the back of the horse named by the deceased, one of those present sitting with the body and supporting it on the horse's back. When the horse has been led three times round the yurta, the dead body is taken into a wood, to the cemetery for Shamans. relatives and clients accompany the dead man, making libations, and at a place halfway to the cemetery they set a table with eatables. On arrival at the grave, the dead body is placed upon a felt matting, and the ninth arrow is discharged in the direction of the house, the remaining eight, with quiver and bow, being placed with the body to enable the deceased to defend good people from evil spirits. All the other marks of the Shaman's calling are either broken or burnt. A pyre is then erected, they set the body on fire, kill the horse, and return home. On the third day they return to collect the Shaman's bones, put them into a sack, and, having made a hole in a thick pine, put the sack into it, cover the hole, and plaster it over. Sometimes the Shamans' bodies are not burnt, but placed upon a scaffolding erected for the purpose in a wood. This kind of burial is also practised by the Yenisei Uriankhis.

32. The present decay of Shamanism is to be explained not so much by persecutions as by the fact that under the influence of Buddhism and Christianity the religious horizon of the people has expanded to a great extent. The religious

missionary polemicists saw in the Shaman nothing but a cheat and a conjurer, a man morally deprayed. His religion was unhesitatingly pronounced to be the worship of the evil spirit. One of the most enlightened and impartial Russian missionaries, who has done a very great deal for the study of Shamanism in the Altai, the Archpriest Basil Verbitzky, asserted that in some of the mysteries of the Shamans one could not deny the participation of the spirit of darkness.

Let us conclude this sketch by the words of another authority on Shamanism, the academician Radloff, taken from his Aus Sibirian, 1884: 'It is perfectly comprehensible when a minister of a certain religion and a missionary, preaching and glorifying his own teaching, criticizes what he considers to be a delusion; but it is absurd to be obliged to read and to hear such asseverations as that the Shamanist religion is the worship of the spirit of falsehood and of evil, whereas the most important of the Shamanist rites-the worship of the god of light, Ulghen (among the Altaians)-consists entirely of prayers and entreaties for protection against the enemy of mankind-the evil spirit! This dirty, half-savage Shaman, illiterate inhabitant of the forest-ignorant and poor man as he is-after all appears as a propagator of the idea of truth. goodness, and mercy in the midst of his country-men, who are ignored by the civilized world.'

The works above enumerated form part of a series of his works edited by Schiefner and published by the St. Petersburg Academy of Sciences under the general title of 'Alexander Castren, Reisen und Furschungen'); Shasikoff, Shamanism in Siberia, in Revords of Jun Russ. Gen. Sec. 1884. Shamanism (Bernalin and Part this work the Buriat Shamanism is referred to; but the author has worked upon literary sources, and has no original observations); G. N. Potanin, 'Sketches of North-West Mongolia, vols, ii. and iv, publ. of the Imp. Russ, Geog. Soc. 1882, 1885 (this work contains a great quantity of materials regarding Shamanism, obtained both from personal observations and from literary sources. It is an indispensable aid to students of Shamanism, including Buriat Shamanism. The fundamental sources for the latter are Nos. 12 to 17 inclusive. Nos. 1 to 7 are important for details concerning the material side of the worship).

DEMETRIUS KLEMENTZ.

BURMA .- In order to arrive at definite ideas on the religious notions of the population of a country like Burma, which is a meeting-point of distinct varieties of mankind and distinct civilizations, its geographical, ethnological, linguistic, and historical positions and the resultant ethics have all to be taken into consideration.

1. Geography.—Geographically the country known as Burma lies cast of India, south of China. and west of Siam and modern Indo-China; and the population has been deeply affected by all the surrounding religious influences. Politically it is divided into Upper and Lower Burma—divisions

VOL. 111.-2

that do not at all affect religious considerations. Upper Burma is a fairly compact area, roughly between 92° and 101° E. longitude, and between 28° and 20° N. latitude in its extreme limits. Lower Burma is a very long-drawn-out and straggling area along the N.E. and E. coasts of the Bay of Bengal, stretching from about 20° N. a long way down the Malay Peninsula as far as 10° N. The whole country, therefore, covers a large irregular space, within which dwells an apparently heterogeneous population of some ten and a half million people, of many nationalities, and certainly pre-senting a great variety of appearance and civilization.

II. ETHNOLOGY. - The whole of the existing indigenous, i.e. non-immigrant, population of Burma belongs to the general Indo-Chinese type of mankind in one form or another. Ethnologically it was, nevertheless, originally an immigrant population from the North, migrating from Western China—probably from between the upper courses of the Yangtse Kiang and Hoang Ho rivers— which in very early times entered the area now known as Burma in three main waves. These invasions are represented at the present time by the three chief races inhabiting the country—the Talaings, the Shans, and the Burmese-spreading over it in that order. Belonging ethnologically to these races, themselves all considerably civilized. there are a great many lesser tribes in every stage of civil development from practical savagery up-wards. These crop up all over the country, which is mainly mountainous. They have been left in the wilder parts as backwaters in the rolling stream of invasion. The congeners of these tribes are to be found all about the long frontiers of Burma, in Tibet and the Northern borders of India, in isolated patches in India itself to the westwards, eastward all over the Indo-China of to-day as far as the shores of the ocean, and beyond doubt in many parts of Southern China as well. The foundations of the religious notions of the whole people must be sought, therefore, in those of the aboriginal Indo-Chinese races.

I. The Talaings. -Of the principal races now inhabiting Burma, the Talaings, as the Burmese and Europeans call them, or Peguans, as they are known to Enropeans particularly, or Mons, as they still call themselves in their own language, are the remains of the earliest irruption (Mon-Annam or Mon-Khmer) of the Indo-Chinese into the S.E. corner of Asia, which once presumably covered the great area between the Khāsi Hills of Assam and the Pacific Ocean. Although newadays, as the result of conquest by the Burmans as late as the inddle of the 18th cent., the Talaings are almost altogether absorbed by the predominating Burman, they always before that exercised an enormous influence on the population generally as a ruling race; and their religious ideas have consequently greatly coloured those of the other

consequently greatly consists of the country.

2. The Shans.—The Shans, as they are known to the Burmese, or Tai, as they call themselves, represent what may be termed the mid-irruption (Siamese Chinese) from the North-this time, so far as there is acceptable evidence, from S.W. China. Deyond the Eastern borders of Burma their best known representatives are the Laos and the Siamese, while to the West they became powerful as the Ahoms (q, r) of Assam. In fact, they have at some time or other extended from the Brahmaputra to the Gulf of Tongking, and even into the islands of the China Sea. They, too, have been a ruling race in many parts of Burma, and have exercised a great influence on the religious notions of the people.

3. The Burmese.—The Bamā (written Mramma),

whom we call the Burmese, constitute the results of the latest of the great expansions of the Indo-Chinese, which took place in comparatively recent times, southwards into Burma and the Eastern borders of India, and westwards into Tibet, where they formed respectively the chief divisions of a great Tibeto-Burman race represented by themselves and a number of allied tribes in all stages of civilization, from the Western Himālayas down to the southernmost portion of Burma. After a long and varying struggle for supremacy, the Burman has succeeded in the land of his adoption in attaining an overwhelming influence, which is still increasing owing to the beaten races seeking to merge their nationality where they can in that of the conqueror.

4. Classification of allied tribes. - In a country where the population is practically of one ultimate stock, language plays the most important part of all considerations in relation to internal classification and to establishing local affinities and differences. It must obviously have a great influence over the religions professed by the people. In Burma, consciously or unconsciously, students of ethnology have almost invariably tended to classify race by language, and language no doubt in that country is the snrest criterion of difference.

5. Burman tribes. - Adopting the above method now, it may be stated that attached to the Burmans proper are eighteen minor tribes and divisions. of these the Maghs or Arakanese, on the Bengal borders to the S.W., and strongly influenced by situation, form the chief civilized division; while the Lihsaw wild tribes, living among the Shans on the Chinese frontier to the N.E., are the principal

representatives of the lower culture.

6. The Kachins .- Then follows, in many petty subdivisions, the important race of the Kachins, also known as Chingpaws and Singhphos. These auso known as Chingpaws and Singaphos. These are a specially interesting people as relies of a post-Mon-Auman irruption of Tibeto Burmans left behind in the Northern Hills of Burma, after the branches that subsequently became the Tibetans, Nagās, Burmans, and Kuki-Chins had passed Their most interesting feature is that onwards. they are still following the ancient instinct of the main race and spreading steadily southwards, showing all the old fight and turbulence that no doubt served to bring success to their ancestors in their emigrations of long ago. Though minutely subdivided, they are all one people. All the chiefs are considered to be of one family, and a Szi Kaehin, for instance, settling under a Maran chief becomes a Maran.

7. The Kuki-Chins.—All along the western frontier of Burma, and spreading far into the Assam hills to the West, lies the Tibeto-Burman race of the Kuki-Chins in eighteen tribes, known race of the Kuki-Chinis in eighteen tribes, known under a bewildering variety of synonyms, according as they have been reported on by Assamese or Burnese officials. This people in its still existing wild condition probably preserves to the present day many of the customs once prevalent among the whole Burnan race, before the civilizing influences of Buddhism acted on that nationality. On this ground the Chins are of special interest to the student of the religions prevailing in Burma.

8. Shan divisions.—Turning to the minor congeners of the Shans, we find them spread about the country as widely as the Burmans from N. to S., but chiefly round by the East. Of the Shans proper we have the Southern Shans with Siamese influence, and the Northern Shans with the older Chinese and Ahom (ancient Assamese) influence.

9. The Karens.-For our present purpose the Karens are perhaps the most interesting and valuable division of the Siamese Chinese race. They are now spread, in fifteen tribes, over the

19

S.E. frontier and the Talaing area, and are also wedged in between the Shans and Burmans proper in Upper Burma. The Karen undoubtedly had his original home in China, and his speech belongs to the Siamese-Chinese sub-family; but his ethnic peculiarities are many, and he is not readily to be identified with the other races among whom he dwells, and with whom his affinities lie. A striking modern characteristic is his readiness to adopt the

teachings of Christianity.

10. Talaing divisions .- As in the case of the other two main races in Burma, the Mon-Annam tribes allied to the Talaings are to be found scattered about the country, chiefly on the N.E. frontiers of the Shan States, and even in the centre of Upper Burma, sometimes in a very primitive condition. The Talaings themselves may be referred to the Northern Cambodian people, and the allied tribes, numbering a dozen, may be called the Wa-Palaung group. Of these the Wild Was' are chielly known, ontside their habitat, for head-hunting on religious ceremonial principles, though their close relations, the Palaungs, are peaceful and industrious Buddhist traders of some education.

11. Relative strength of the races. -By language the Census of 1901 returned roughly 771 per cent of the indigenous population as speaking Burmese, of the langemons population as speaking burnese, 5 per cent Tibeto-Burmese, 17 per cent Siamese. Chinese, \(\frac{1}{2}\) per cent Mon-Khiner. The extent to which the Burman is absorbing the other races, as shown by domination of language, may be stated thus, so far as it is possible to co-ordinate the Census statements on this point; of the indigenous population the Burmass a port of the magentus population the Burmass 4 per cent, the other Tibeto-Burmans 4 per cent, the Siamese-Chinese 26 per cent, and the Mon-Khmer 1 per cent.

12. Minute subdivisions.—One cause of the enormous number of subdivisions of the hill peoples especially is well illustrated by the remarks made in the Upper Burma Gazetteer, pt. i. vol. i. p. 592, when speaking of the Akhās (also Akhōs, Kaws, Hka-Kaws), a remote Lihsaw tribe of the higher hill-in the Shan State of Kengtung on the Chinese border. They have strong Chinese leanings, and are of a simple, timid, unresourceful nature. Akhā girls will marry any stranger.

girls with marry any stranger.

One often finds half a dozen Chinamen with Akhâ wives living in an Akhâ village. Akhâ settlements, in which a good proportion of the male inhabitants are Chinese, or in which the inhabitants are of mixed Chinese and Akhâ descent, style themselves Khochâ, or Communities of Guests. It is as well to record this fact, because the word will certainly become corrunted and unintelligible before long, and the people will have a distinctive type of feature, which may well puzzle the ethnographer of the future.

Such communities will have also a confused mixture of Chinese ancestral and Burmese animistic worship. Such must also be the case with the offspring of the numerous marriages permitted between free men and Kachin and Chin female

slaves.

13. List of tribes.—The locally recognized divisions of the people are usually spoken of as if their names and ethnical reference were well known. and in describing superstitions and customs it is difficult to avoid making references to small sub-tribes. It is necessary, therefore, to give here a list of those more commonly spoken of under their best known names, grouped together according to the ethnology above adopted.

## INDO-CHINESE TRIBES. I. TIBETO-BURMAN RACE.

(a) Rormese Group.

Burmese, Arakanese, Tavoyan, Yaw, Chaungthā, Yabein, Inthā,
Taungyo, Kadū, Mro, Hjon.
Libsaw Sub-group.

Lihsaw, Lahu, Akha, Akho.

(b) Kachin Group. Chingpaw, Singhpho, Kauri, Szi, Lashi, Maru, Maingtha. (c) Kuki-Chia Group.

(c) Ruke-Chen Group.
Northern: Thadō, Sokte, Syam.
Central: Tashon, Lai, Shorishe, Kyaw.

Talaing.

(b) Wa-Palaung Group.

Ilka Muk, Lemet, Palaung, Wa, Tai I. Mong Lwe, Hka La, Son, Riang, Danaw.

111. HISTORY.-The history of Burma, so far as the present purpose is concerned, is that of a struggle for supremacy among the Burmans, the Shans, and the Talaings, lasting through all historical times, with practically no intervention on the part of alien races until the arrival of the English in 1824. The story is a veritable tangle of successive conquests and re-conquests of the whole or part of the country by these races, whose influence as such may be said to have been paramount roughly in the following regions: the Burmans in the valleys of the Irrawaddy and Sittang Rivers above Prome and Toungoo; the Talaings in the deltas of these two rivers below those points, and in that of the Salween and what is now the Province of Tenasserim; and the Shans in all the country in the hills to the East and North. considerable periods each of these races has been supreme over the whole area, the last to rule being the Burmans after the middle of the 18th cent. A.D.

Taking as comprehensive a view of the situation as is possible in the face of the kaleidoscopic changes presented to us, we may say that there were Burman dynasties at Tagaung in the North at any rate in the early cents, A.D., followed by a dynasty connected with them at Prome, succeeded in its turn by another at Pagan, which lasted till This last gave way to two contemporary Shan dynasties at Pinya and Sagaing up to 1364. while a Burman dynasty was set up at Toungoo from 1313 to 1540. Contemporaneously there was an ancient Talaing dynasty at Thaton and Pegu from 573 to 1050, which then became tributary to the Burmans of Pagan till 1287, at which date a Shan dynasty was set up at Pegn till it was onsted by the Burman line of Toungoo mentioned above, which then became the Burman dynasty of Pegu in 1540.

In 1364 the Shan lines of Pinyā and Sagaing became merged in the Burman dynasty of Ava, and this in its turn was upset by the Burman line of Pegu in 1551. This general dynasty of Pegu and Ava lasted, with a good many Shan irruptions from Siam, as regards Pegu, till 1740, when for 17 years a second Shan line was established at Pegu, giving way finally to the Alompra dynasty of Shwebo, Ava, Amarapura, and Mandalay till 1886, when the whole country came under the domination of the English. The English had in the meantime taken Arakan and Tenasserim in 1826, and all Burma as far north as Thayetmyo and Toungoo in 1852,

All this time there had been an independent State in Arakan from early times with varying capitals, the last of which was Myanku (Myohaung, the Old City), near Akyab, until it was conquered by the Alompia dynasty in 1782.

The main point to grasp in all this confusion of struggle is that the conquerors for the time being

usurped the chief influence over the population, and did their best to destroy the individuality of the conquered, with varying success almost up to the point of extinction, as in the case of the Talaings by the Burmans after 1757. And so the result has been thoroughly to mix up the ethical ideas of the people subjected to so much change of influence

The capitals of the various dynasties have existed all over the country as centres of religious influence. Taganng and Shwebo are to the North. Then come Ava, Sagaing, Myinzaing, Pinya, Amarapura, and Mandalay, all close together. Some distance to the South lie Pagan, Toungoo, and Prome. The rest, Martaban, Thaton, Pegu, and Rangoon, are all in the deltas near the sea. Rangoen, however, though containing the most important Buddhist shrine in the East, the Shwedagon Pagoda, was never a native capital. Arakan was always a district apart, and in Tenasserim proper there was never an important town

The religious history of Burma, apart from the indigenous influences created by the conflicts of the native population, has been materially affected by the introduction of Buddhism from India and the consequent Indian modifications of the ethics of the people. The history of that introduction is still a controversial subject, but it may be generally stated thus: The Northern (Mahayana), or debased ritualistic School of Buddhism, was the first to come into Burma from the North, and also among the Talaings in the South with a considerable admixture of pure Hinduism. This brought with it a perceptible leaven of Hindu and Indian animistic ceremony. In the early centuries A.D. the Southern (Hinayana), or purer School of Buddhism from Ceylon, began to have influence in the Talaing country, and was introduced into Burma proper by the conqueror Anawrahtā of Pagān in the 11th cent. wherever he had power, There was then a further overwhelming revival of the same school in the 15th cent., again among the Talaings, under the whilom monk, King Dammazēdi or Vāzādibadi of the Kalyāni Inscriptions at Pegu. This has spread all over Burma, and has so wiped out the Northern School that the very existence of the latter in the country at any time is denied by the orthodox natives of the present day.

IV. ETHICS AND RELIGION.—It will be clear that the basis of the religious notions and ethics of the people new inhabiting Burma must lie in those of the general Indo-Chinese race, as preserved in the three great branches thereof that have spread themselves over the land. The superstructure must be the result of such variations as partial isolation, caused by local antipathies covering a very long period, has brought about in the case of individual tribes and associations, and of such accretions and modifications as contact with surrounding aliens has produced in the course of migrations

I. Buddhism .- The professed religion of Burma is Buddhism (see next art.). It counts among its adherents, according to the Census of 1901, practically the whole indigenous population; but the Census returns are in reality entirely misleading, as will be explained below (§ 3).

2. Alien religions .- Of the other great religions,

professed chiefly by alien immigrants and temporary residents, the representatives are insignifi-cant in numbers. There are about 300,000 Hindus. mostly foreigners; some 340,000 Muhammadans; and about 150,000 Christians, many of whom belong to the native population. All the natives professing these religions present interesting phenomena to the student. There are also a few lews, Jains, Sikhs, and Farsis, who need not be considered here.

(1) Mindy Animists—Among the Hindus are some 50,000 Parityans and Malas representing the loweraste variable of the Malars Presidency. The interest attaching to these classes in Burma is that they are regarded as Hindus, and are likely to increase largely in immigrant numbers. In reality, however, they go to swell the ranks of the unditted Aujmists in the they go to swell the ranks of the undilited Animists in the country. In their Indian homes they are classified as followers of the Saiva form of the Hindu religion, but they are neverthe-less 'Devil-worshippers,' i.e. Animists, just as the great majority of the inhabitants of Barma are Animists at heart, as will be

shown later on.
(2) Manipuri Hindus.—There is in Upper Burma, and spread (2) Manipuri Hindus.—There is in Upper Burma, and spread in families over many parts of the country, a considerable community of Manipuris from Assam, across the hills on the Western borders. They were originally Hindu captives from Manipur, brought over in the 18th and early 19th cents, and settled about Upper Burma. The lower classes of these forced estitled about Upper Burma. The lower classes of these forced Pointas. The former bave mostly become Buddhists, while retaining many of their old Hindu enshors, but the latter have exercised a great influence as priests and astrologers over all classes of their conquerors from the former Royal Cornt downwards, and have no doubt had much to do with the existing unorthodox practices and beliefs of the professedly Buddhist (Plungh), though very few could have had any claim to be such in their own homes before capture.

in their own homes before capture.
(3) Muhammadans.—Among the Muhammadans there are (3) Muhammadans.—Ainong the Muhammadans there are in Burma two native communities which attract considerable general attention—the Zairbidis or Pathis, and the Panthays. The Zairbidis are in various ways descendants of Indian Muhammadans, who acquired a Burmese domicile and reared families by local wives. They have, except in the case of the pro-ducts of recent intermarriages in Arakan, thoroughly mixed with the weadle and in amengance, manner, and costume are not. the people, and in appearance, manner, and costume are not easily distinguishable from the ordinary Burman. They are apt easily distinguishable from the ordinary Burman. They are apt to be fanatical Muhammadans, with an admixture of belief and custom adopted from their surroundings. For instance, their women have the same extreme freedom of movement as the other indigenous women enjoy. No doubt it would repay the student to give the Zairbadis a cleser examination than has hitherto been accorded them. The Pauthays are the well-known Muhammadan Chinese of Yunuan, of mixed alien oilitary and native descent, who until quite recently rinled there. Some of them are settled on the extreme North-Eastern horders, and numbers wander about the country as traders, but they can hardly be said to influence the religion of the people.

hardly be said to influence the religion of the people.

(4) The Chinese.—There are altogether some 65,000 Chinese in Burma, chiefly from the Southern parts of China, who were all returned at the Cenass of 1901 as Animists, except such as definitely called themselves Christians, Muhammadans, or Baddenitely called themselves Christians, Muhammadans, or Baddenitely called themselves Christians, Muhammadans, or Baddenitely Christians and Confucianism differ that little in their essence from the national worship of the people of Burma.

(5) The Schutze.—In the Mergui Archipelago off the coast of Tenasserim is a small race of 'Wild Malays', known as the Sclutze, who are prinditive Animists, but do not properly belong to Burma and its civilization at all.

Schutze the schutze of the schutzer o

(a) Catalogue — and the population is purely a question of missionary effort. The Protestants compare with Roman Catholics as 90 to 36, and of the Protestants, the Laptists (American) compare with the rest as 67 to 23, the great bulk

(2) The 'Christian' sec.—In addition to these there were no fewer than 18,000 persons, or over 11 per cent of the whole com-munity, that returned themselves in 1901 merely as 'Chris-tians'. They largely represent a secession from the Baptists, which is of interest as illustrating the manner in which sects can arise in obscure and nnexpected places. In ISS4, certain members of the American Baptist Church at Lamadaw, Ranmembers of the American Baptist Church at Lamadaw, Kan-goon, bad a dispute with their missionary and were formally excommunicated, a proceeding acutely felt in an isolated com-munity such as any body of Christians must be in a country like Barma. Among these people were some who held prom-nent official and other positions, and they formed themselves into a sect labelled merely "Christian" without any qualifica-tion. They elected pastors of their own, and created their own ritual and literature, all printed in Burmese at Rangoon and elsewhere.

elsewhere. (S) Christianity among the Karens.—Christianity among the wilder converts, as in the case of the Karens, of whom whole villages are now reckoned as Paylate Christians (American), is largely tinged with the old Animism. The mental attitude of these people towards religion is still best lillustrated by a legend recorded in Sucation's Loyal Karens of Burma, p. 184, often quoted because it so clearly explains so many phenomena of

religious practice in general, and because it admirably describes the whole spirit of compromise in which rude uncultured minds regard new faiths that appeal more to the reason than to the institute—that heritage of an immensional part (\*Curaus Report, 1901, 1). 21). The story relates that some children, along with a litter of pigs, had been left by their parents on a high platform, onto the words by the property of the sound of t religious practice in general, and because it admirably describes their father come. Their nations led the tiger from text, rold their cars were eagerly listening for the twang of their father's bowstring, which would send the arrow quivering into the tiger's heart. And so, say the Karens, 'although we have to make sacrifices to the demons, our hearts are still true to God. We must throw sops to the foul demons who afflict us, but our bearts are ever looking for God.'

3. Animism: Nat-worship,-It is now a recognized fact that, whatever the profession of faith may be, the practical everyday religion of the whole of the Burmese peoples is Animism, called generally in Burmese 'Nat-worship,' nat being the generic term for all kinds of supernatural beings.

generic term for all kinds of supernatural beings. The term and is probably not derived from the Indian imported word  $natha_0$  'lord,' though that term has precisely the same scope and sense. Its use to describe the indigenous spirits, and also those adopted from India, is possibly the result of its happening exactly to translate such Indian terms a  $d^2cd$ ,  $d^2cath_0$ , and the like, denoting subordinate gods, so far as the Burman is concerned with then.

To the Burman Buddhists, even among the members of the late Royal Court and the pongyis (Buddhist monks and teachers) themselves, the propitiation of the Nats (called also by the Karens Las, and by the Talaings Kaluks) is a matter of daily concern, and in this they are followed by the Buddhist Shans and Talaings. Meanwhile, as Sir J. G. Scott says, the formal exercise of their professed religion need only 'be set about in a businesslike way and at proper and convenient seasons. In daily life, from birth to marriage and death, all the rites and forms observed are Animistic in origin, the spirit-worshipper's object being to avert or mitigate calamity. Nat-worship is the most important and the most pervading thing in religious life. Even the Buddhist monasteries are protected by the Nats, the spirit-shrines (natkun, natsin, usually tr. 'nat-houses') stand beside pagodas, and the Buddhist monks themselves take part in Animistic rites and act as experts in astrology and fortune-telling.
The forman has much more faith in ascertaining lucky and

The furman has much more tauth in ascertaining mean and unflucky days and in the deductions from his boroscope than in the virtue of alms (to Buddhast monks) and the efficacy of worship at the pagoda' (Thrty-Seven Nats, p. 2).

At the extremity of every village (yuāson) there is a natsin for the guardian nats of the neighbourhood, in whose honour feasts are held at regulated seasons. Certain feasts in honour of the Nats were also formally recognized by the former Burmese Court. Ministers of State, and even the King himself, who was the religious as well as the secular chief, attended them in their official capaeity: while the ritual to be observed was carefully set forth in the Lawka Byūhā, the Shwe Ponnidān, and other treatises on Court etiquette and duties. A highly educated Talaing has thus described (Thirty-Seven Nats, p. 2) the prevailing feeling:

(Thirty-Seven Nats, p. 2) the prevailing feeling:
'Not only has every human being, but also every conspicuous
object and every article of utility, a guardian spirit. When
people die, it is said that they become spiritual bedies requiring spiritual food; and in order that these spiritual bedies requiring spiritual food; and in order that these spirits or nats may
not harm the living, they make certain eastomary offerings to
them. Some persons who have familiar spirits make amount
offerings to the nats.' He then goes no to say that the great
Buddhist, reforming comporer in Burma, Anawahth, in the
Buddhist, reforming comporer in Burma, Anawahth, in the
result that, 'when the people came to hear about the order
of the king directing the destruction of their mat-houses, they
obeyed it, but they hung up a ecceant in their houses to
represent them, and as an offering to the dispossessed nats.'

In Natt-worship, as practised at the present day,

In Nat-worship, as practised at the present day, we have, in fact, presented to us a composite faith, the result of all the influences which have through

the ages been brought to bear on the modern inhabitant of Burma. Perhaps the best way to define the Nats is as supernatural beings derived from three separate sources; (t) The Intelary spirits that fill the earth and all that is thereon, man himself and all the creatures, objects, and places among which he lives and moves and has his being-springing out of the ancient indigenous Animistic beliefs of the people. (2) The ghosts and spirits of the departed—the ancestor-worship of the Chinese and Indo-Chinese races to the North and East. (3) The supernatural beings of the Buddhists, celestial, terrestrial, and infernal imported with the professed faith, derived westward from the old Brähmanic cosmogony of India, and indicating in its terminology and form the sources of importation. The Nats and their worship represent, indeed, a mixture of three distinet cults—nature-worship, ancestor-worship, and demon-worship. The comparatively recent imports from India are not yet, however, completely assimilated in the minds of the Burmese with their indigenous spirits. They more or less clearly distinguish between them, and keep the ancestors and the spirits of nature distinct from the demons and godlings that have come to them from across the western borders.

The multiple origin of the modern Nat-worship accounts for the long-established attitude of the educated and the late Royal classes towards the cult of the Nats, in that it has made them accept in its entirety the demonolatry accompanying the importation of Buddhism, and reject the grosser forms of nature-worship inherited from their forelears. It also accounts for the opposite attitude of the unedneated classes, who have accepted in a confused way the Indian demonolatry, and have at the same time adhered to the old mixed nature- and ancestor-worship of their inheritance as their chief cult. Among the wild tribes, the further they are removed from civilization the more surely do their beliefs and practices accord with their descent or

with their environment.

This mixture of variant indigenous Animistic in-Unences and Indian Brahmanic demondatry with Buddhist modifications thereof pervades all the religion and ethics of the civilized Burmans, Shans, and Talaings, and colours all their customs, ceremonies, beliefs, and superstitions, and the practices resulting therefrom. It is by no means absent from those of the uncultured peoples, and even wild tribes, who have come and are steadily coming year by year in greater numbers, under the influence of Buddhism, and in the case of the Karens both under Buddhism and Christianity. This fact should never be lost sight of by any one who wishes to describe or to study the mental equipment and attitude of the peoples of Burma.

Edecticism in Burma.—A confused intermingling of everything around them is often observable in the religious idea of the more meritivated trinses of mixed origin, or discussed the more meritivated trinses of mixed origin, or discussed the results of the second origin, or discussed the results of the second origin of the results of the second origin or discussion of the Labora or Mulesa (called also Labuna, Laborate, Prince Louis of Orleans, Eans d'Anty, and other Franch observers. The Labus are a Thiele-Burman tribe of the Burmose group and Libraw sub-group, living among the Shuus and Waston the N.E. frontier bordering on thins. Their traditions and Chinese Buddhism, and Burmese practices, with an admixture of Confucianism. They worship toward, guardinas of houses, villages, the flood, the fell, and so on, or the ordinary type, and also a great general skeyspirit, Near. They had princist charge in charge of shrines (pulmay), under a satisty, or high principal and the second or the confusion of Eclecticism in Burma,-A confused intermingling of everysurmes are called multicently townin (Barmese) or futing (Chinese), and are decorated with Chinese inscriptions. Their chief festivals (wavelong and wavenin) are held at the Chinese New Year (the these of the Libaws generally), with Chinese and Indo-Chinese characteristics.

BURMA ดด

4. Attitude towards Divinity,-There is no doubt that the idea of a single universal God is foreign to the Indo-Chinese mind as developed in Burma. There is no tendency towards a belief in God, or in idols or priests, as the symbols or interpreters of Divinity, or towards the adoration of stocks and etomos

The nearest approach to an apprehension of the idea of God-head is among the Kachins, who in one series of legends refer to Chinum Way Slum. He is said to have existed before the formation of the world, and to have created all the Kats. But, under the name Ka, he is also the Spirit of the Tilth.

Nevertheless, there has always been much made of the pos-session by the Karens of traditions concerning God and of etbics session by the narress of trautions concerning cool and of concerning of a distinct Unividual Uppe before 1283, when the existing nounced Christian and Judaistic tone of these traditions has naturally excited much comment, but there can be no doubt that they are imported, probably through early Roman Catholic missionaries about 1740 (Vita di Gian Maria Percoto, 1781). missionaries anout 1740 (1) at a Gain Maria Fercuto, 1781). Their strongly Jewish form has given rise to a rather vague conjecture that they were learnt from early Nestorian Christians, during the wanderings of the Karens southwards from their original Indo-Chinese home.

5. The soul.—To the Burman the soul is an in-5. The som.—To the burning the som is an independent immaterial entity, bound by special attraction to an individual body, and giving life to it. But the soul can leave the body and return to it at will, or be captured and kept away. It is, however, essential to the life of the body that the soul should be in it, and so when it wanders the person affected is thrown into an abnormal condition, and dreams and swoons, or becomes ill. In a general way these ideas are shared by the Kachins, Chins, and Karens. The soul is materialized in the form of an invisible butterfly (leippyā), which hovers a while in the neighbourhood of the corpse after death. The *leippyā* of King Mindōn Min, who died in 1878, dwelt in a small, flat, heartshaped piece of gold (thenyōn), which was suspended over his body until burial.

Siekness is caused by the wandering leippya being captured by an evil spirit or a witch. recalled by ceremonics (lcippyā-hkaw) for adults, consisting of offerings to the spirit to induce it to give up the leippyā. Infants whose mothers have died are in great danger lest the dead woman, having become a spirit, should retain the leippyā of her child. The ceremony in this case consists in propping up a mirror near the child, and dropping a film of cotton on it. If the film slips down into a kerchief placed below the mirror, it is laid on the child's breast, and thus the leippyā is saved.

Among the Kachins there is a belief that persons with the evil eye have two souls  $(numl\bar{a})$ , while all other people have only one. The evil eye is caused by the secondary soul. The Kachins say also that the spirit of a man lives in the sun, which is the universal essence (probably an echo of Indian Vedantie philosophy through Burmese Buddhism), and from it the threads of life spread out to each individual, in whom life lasts until the thread

Snaps.

The soul is so much mixed up with the idea of a spirit in the popular philosophy of all the races, that European observers have called the Karen Ia, which is really a synonym for an ordinary spirit or mat, the soul. Thus, the Sawngtung Karens, the Taungthis, and the Tungyès have a said-detypid (paddw-butterily), which is the Spirit of the Tilth. So essential is this spirit to the success of the tilth of the Karens that, when paddy is sold, a handful is always retained out of each basket, to preserve the said-detyping it of the selfers. Allied to this belief, among the Sgan and Pwo Karens, is the Spirit of Harvest, Pibiyaw, which is a cricket that lives in a crab-hole. And so the earth thrown up by crabs is used on the threshing-floor, and crickets are alaced on the voice-supports of ploughing oxen. crickets are placed on the yoke-supports of ploughing oxen.

6. The future life. - Ideas as to a future life are but feebly developed in the Indo-Chinese mind as exhibited in Burma; and, where distinct notions of heaven and hell are reported (as amongst Kauri and Szi Kachins, and amongst Siyin and other Chins), they are due to contact with Burmese Buddhists.

The Kachins generally do not go beyond consigning the spirit of the dead to a position among the Nats, or to the place where its fathers and mothers have gone, accordingly as harm does or does not befall the family or any of its members after the death. By certain ceremomes they induce the spirits of the recently dead to go away and not return, but they do not know recently dead to go away and not return, but they do not know where they go. Siyn thins after death still enjoy drinking and lumting, but in no definite place. The Haka China believe in Statistical China believe in the state of the state o the tribal guardian.

7. Benevolent spirits .- The Kachins say that Shingrawa, the man-creator of the earth, which he shaped with a hammer, is kind and good, and therefore little notice is taken of him, and shrines to him are few and neglected. This attitude towards benevolent nats is important as explaining the absence of their worship in Burma, and also the statement of most European observers that all nats and spirits are malevolent, which is not the case. The Southern Chins also have a national spirit, Kozin, who is indifferent. The house-guardian (eing-seung nat) of the Burmans and Talaings is another instance of a spirit who is described as simply indifferent.

Besides Shingrawa, the Kachins recognize as beneficent nexts: Sinlap, the giver of wisdom; Jan, the sun; and Shitta, the moon. These may be worshipped only by the chief, once a year or at the periodical national festival (manau), and then without sacrifices. Trikurat, or Kyam, is a good spirit of the forest, who fascinates the game which the hunter stalks. He is propitiated by treading on ashes from the house-hearth on return from a hunting expedition, and sprinkling the blood of the victim towards the jungle. The Spirit of the Forest himself, Chiton, is, however, of doubtful character. In some places he is represented as malignant and in others as good-natured.

The attitude of the ordinary Burman Buddhist in regard to The attitude of the ordinary Eurman Eudoniss in regard to this point is shown by an extract from the inscription in Eurmese on a bell for a village pagola: 'May the nats who well in the air and on the earth defend from evil creatures the two fat bullecks which plough the fields. May the guardian nats of the house and the village keep from barm Chit-u, our son, and little Mā Mī, our darling daughter.'

8. Nature-worship.—There is a distinct worship, or propitiation, of spirits representing Nature generally among all the tribes, in addition to that of the individual, familiar, or tribal guardians. There are everywhere national spirits of the Sky, the Sun and Moon, Rain and the Flood, of the Fell, the Forests and Trees, and of Agriculture. But the tendency to localize the national spirit is everywhere visible, and in reality the national spirit is often hardly differentiated from the tribal. Good instances of this are to be found in Uyingyi, the Spirit of the Neighbourhood, among the Talaings, and in the 'District' nat of the Burmans and Talaings, who is known as 'the Lord' (Ashingyī in Burmese, Okkayā in Talaing).

(1) Spirits of the Sky .- Mu, or Mushang, is the nat of the heavens among the Kachins. Ponphyoi of the Kachins dwells in the sky, and generally interests himself in the atlairs of mankind, and so does Upakā of the Burmans; but his interest is sinister, as he snaps up mortals. On the other hand, Sinlap, the Kachin Spirit of Wisdom, also

dwells in the sky.

(2) Spirits of the Sun and Moon are found in various places. The best instances are the Kachin Jan, the Sun, and Shitta, the Moon, already mentioned.

(3) Spirits of Rain. - The Thein nats of the Burmese are the Spirits of the Showers. They cause showers by coming out of their houses, the stars, to sport in mimic light. Thunder and lightning are the clash of their arms. (4) Spirits of the Wind .- Mbon, the Spirit of the

Wind among the Kachins, may be worshipped only

at the national harvest festival (manau), and then by the chiefs alone. The periodical winds bring the fertilizing rain; hence, no doubt, the cult and

its importance.

(5) Spirits of the Flood,-The Burmans and Talaings believe that Maung Ingvi lives in the water, and causes death by drowning. He has a feast to himself in Waso (the Buddhist Lent). The wild head-hunting Was are careful to appease Ariyuom, the Spirit of the Flood, on their expeditions after heads.

(6) Spirits of the Fell.—The Wild Was are careful also to propitiate Hkumturu, the Spirit of the

Fell, on their head-hunting expeditions.

(7) Spirits of the Forests and the Trees. - The most widely spread nature-cult of all is that of the forest and tree nuts. All the hill tribes dread them, and the most characteristic superstitions of the people of the cultivated plains are related to them. Every prominent tree, every grove, every area of jungle, besides the forest in general, has its special nat (scil:thā in Burmese), often with a specialized name. Everywhere the ordinary home of the non-personal and non-familiar nat attached to the earth is in the trees. Among all the tribes, every dark and prominent hill-coppice has a nat-shrine in it. Among the Karens and all the allied tribes, the villageguardian lives in a tree, coppice, or dense grove the Tame Was also the village nat dwells in a tree, while the Wild Was always hang the guardian heads taken in head-hunting on the avenue approaches to the villages. The general character of the forest nat is that of an evil spirit. Among the Burmans, Hmin Nat drives mad those who chance to meet him; and, despite his occasional good character, Chiton, the forest-nat of the Kachins. represents the evil principle. Wannein, or Ple, Nat of the Tanngyos is feared throughout a district which is larger than the habitat of the tribe. familiar Birnese Akathaso, Seikkaso, and Bommaso, who live respectively in the tops, trunks, and roots of trees, are, however, direct importations, names and all, from India.

The attitude of the more civilized peoples in the hills towards the forest spirits is well explained in an account of the Buddhist Palaungs in the Upper

Burma Gazetteer (i. 491):

'Their nats live in a big tree, a well marked hill, a large rock, or some such natural feature. They are male and female, and all of them have names. The most powerful is the spirit who dwells on Loi Seng Hill and is called Takati. Others of note dwells on Loi Seng Hill and is called Takâdi. Others of note are: Tarù-Rheng, who lives near the group of pagodas at Zeyân Village; Peng-Mong, who frequents the dense jungle on the west side of the big bill near Zeyân; Takhollogu sext to live close to the ruin of an old pagoda hear Payâgyî or Sêlân Village, but he was much neglected, and has been invited to bestow himself in the clump of jungle on the hillock at the east gate of Namshan, due east of the Sawbwä's (chief's) palace; the Loilan Nat lives on a hill near Myothit, and there are many more.

Palaung customs are often illuminating, and one of the most instructive is the national festival held in March on Loi Seng Hill for the worship of the 'first tea tree.' Tea is their chief form of agriculture, and the interest in this worship and annual festival is that this tree is said to have been introduced only three hundred and seventy years ago. Here we liave, then, before us the actual rise of an

Animistic ritual.

(8) Spirits of Agriculture .- These are, of course. universal, and are best dealt with generally, when disensing festivals and ceremonies. The Burmans and Talaings have Bünsadi (Indian origin) and Nagyi, Spirits of the Earth and Grain respectively. Among the Kachins, Wawm or Chinwawm can be worshipped by the chiefs alone, and only at festivals. The sabā-leippyā (paddy-butterfly), the Spirit of the Tilth among the Karens, is worshipped by sprinkling lighted distilled liquor over the ground at the time of jungle-clearing by fire (taungya !

cultivation). Often the tribal guardian and the Spirit of Agriculture are mixed up, as in the case of the Nat of Loi Maw Hill among the Karens, whose festival is in May.

9. National Festivals. - (1) Quasi-Buddhist .-The Burman has a natural talent for making his proceedings attractive and beautiful, and his national festivals have, therefore, attracted much attention, but the chief of them are now Buddhist, or so overladen with Buddhism as not to come within the present purview, the Animism in them being more or less directly Indian. Such as these are the New Year's Feast, Thingyān Pwe, a feast of offerings (to the monks), the Water Feast of Enropean observers held in Tagū (April); the illuminations in Thadingyut (October); the Tawadeinthä in Tasaungmön (November).

At the New Year's Feast, the donsing of every one met with is perhaps the most remarkable custom that the Enropean observes in the country, but it is really a reference to Indian Brahmanism, as the water represents consecrated water used for washing the sacred images. The root-idea of throwing it on human beings is to honour them by treating them as sacred. Its true ceremonial nature comes out well in the words of Sir J. G.

Scott (The Burman, ii. 51):

'The wetting is considered a compliment. A clerk comes up The weeting is considered a companion. At eark comes up to his master, shekos to him, and gravely pours the contents of a silver cup down the back of his neck, saying, "Ye kudaw mi," I will do homage to you with water."

At the Tāwadcinthā Festival, the padēthā bin, a sort of Christmas tree, representing the abode of the nats and covered with gifts of all kinds, including money, is of an Indo-Chinese type. It is, however, deposited at the pagoda or monastery, and is used for the maintenance of the place or for alms at the disposal of the enstedians (kyanng-

thugyī, kāppiyā dāyakā).

(2) Indigenous seasonal .- The majority of the indigenous festivals are seasonal feasts connected more or less directly with agriculture, and they exhibit two prominent phenomena: There is no prayer for assistance connected with them, but plenty of precaution that the spirits may not interfere, and they mostly include a drunken orgy. The root-idea of much of the ceremonial is illustrated by the great October nat-feast of the Palaungs held at Namshan, in which the nuts are simply invited to join, their arrival being signified by atmospheric changes determined by the wise man called in.

The Red Karens have a scedtime festival in April, at which the ceremony is chiefly a maypole dance round a ceremonially selected post; and before sowing, the Kachinshave six holidays, all connected sowing, the Kachins have six holidays, altronacted with agricultural operations. What the object of the Karen festival is does not appear, but that of the Kachins is distinctly to avert danger to the

coming crop.

Averting danger is also the clear object of the harvest festivals. At the Edn festival of the Red Karens (the term implying merely a 'public ceremony'), a tribal scape-goat in the shape of an image of an elephant or horse is provided. same idea runs through the harvest feast of the Talaings and Burmans, at which a straw woman, clothed in skirt (tamein), kerchief, and articles of female attire, and a quantity of kauk-hayin (sticky rice confection) are put into a cart and driven round the fields, and finally set up at the place selected for the bin. The village boys usually eat the rice, though in some fear and trembling for the vengeance of the nat. The Red Karens are not, however, satisfied with their scape-goat, but further proceed to frighten away the ghosts of friends and relatives by noise, and to appease them by small pieces of roasted bullock or pig sent in 9.1

procession to the next village, to be eaten by friends there. They thus avert danger in all the occult ways known to them.

10. Ancestor-worship. - The obvious origin of the races inhabiting Burma would argue strong proclivities towards pronounced ancestor-worship, but it is a matter of great interest and importance in the study of religion in the Far East that the facts point the other way. The further removed tribes are from the Chinese frontier and influence, the vaguer is the nature of the worship of ancestors, and the more do their spirits become mixed up with the worship of the nats in general. Thus, among the Southern Chins, as well as among the cultured Talaings, Shans, and Burmans, strongly imbued with Indian ideas, the ancestors and the general nats are all mixed up. Among the Kachins any one may, but does not necessarily, become a nat after death, and additions are constantly being made to the number of such ancestral nats, on the motion of the mediums called in when sickness occurs. The most primitive form of ancestor-worship is observable among the Hpons, a wild nomad waterways tribe of the Burmese group who worship only the dead parents, and not even the grand-parents. When there is any sickness about, food is placed at the north end of the house, perhaps indicating the origin of immigration, and the head of the family prays to his parents to help themselves and him.

On the other hand, tribes along the Eastern frontiers show strong Chinese proclivities. The recently arrived Mengs (Miaotzn) to the N.E. are practically purely ancestor-worshippers, with very vague ideas of a general over-ruling power. The Yaos, also strongly Chinese, have a particular dread of the ancestors, who are worshipped shortly after a marriage, at a special altar, which is carried into the hills and left there. The more secluded the place, the less chance have the ancestors of finding their way home. The Akhās propitiate the ancestors (miksus), who are said to live in the regions of the setting sun, in order to prevent their returning home and injuring them. They enter the house by the west door, which is tabued to males, though women may use it reverently. Similarly, the gates and great entrance arches to Akhā villages are meant to keep out the ancestors, and are closed when a sacrifice is going on. It may here be noted that among Karens and other tribes the house nats live to the west of the house. The Akhās will not talk about the ancestors, as they might avenge any derogatory remarks on the speaker. The allied Akhös believe that the ancestors dwell at a special hearth in the house tabued to all but the family. The Libsaws, who have many Chinese leanings, have a mixed worship of ancestors and nats of the forest and fell.

II. Totemism.—Totemism may be said to exist in Burma in certain indications to be found only in customs relating to eating and marriage, and doubtfully in the naming of children. The tendency throughout the country is to eat all edible living creatures, without superstitions being attached to those selected; but the tribes will sometimes eschew certain animals. Kachins except from their diet snakes, wild cats, monkeys, and usually dogs. Karens will not eat any monkeys, except dogs. Katens will not eat any monkeys, except the white-cyclid monkey. Among Kachins and Karens there is in some instances a very strict limitation of marriage to certain villages. In the Burmese Royal Family marriage between the king and his sister (half-sister preferred) was prescribed, and such marriages between the original ancestors are the rule in tales of origin. Kadū villages are divided into two factions, Amā and Apwā, which take each other's girls in marriage; the girls then belong to the faction into which they have married.

The strongest indication of a former totemism is in a custom among the Kachins by which persons of the same 'family name' are all considered to be of the same blood, and may not marry even when belonging to different tribes. The Shan and Kachin system of naming children after animal 'birthday' names, and of changing and concealing personal names in after life, has been referred to a former totemism; but this is an extremely doubtful reference, especially as the Burmese naw (Indian name) or animal name, distinguishing the birthdays of Burmans, relates solely to astrological ideas.

12. Tales of origin.—The meaning and objects

of tales of origin told by the tribes in Burma, where not directly intended to connect a tribe with some revered personage or people of a higher civilization. are obscure, and it would be difficult to trace any connexion even between tales of animal origin and totemism. Most of the tales are merely historical. or meant to be historical, as in the cases where origin is traced to a certain village (Sokte and Kweshin Chins), or in the common ascription of the birthplace of a tribe to a rock or hill with a special name, usually in remembrance apparently of some place before migration. Other tales are obviously attempts at an explanation, such as coming out of the bowels of the earth (Thudō and Yo Chins). The more civilized tales are old-world stories, partly out of their Scriptures, dished up afresh, as when the Burmans relate in a circumstantial way their descent from nine celestial beings-five men and four women. Sometimes we find incompatible origins recorded by different observers of the same tribes or groups of tribes. Thus Was are variously said, in different stories, to be descended from celestial beings, frogs, and

(a) Human origin,—Tales of buman origin generally contain a miraculous element, but not always. The White livarens say that they came from the children of a married brother and sister that quarrelled and separated. Kachins also claim descent from a married brother and sister that quarrelled and separated. Kachins also claim descent from a married brother and sister child cut up by a nat. White chins came of one generated here child cut up by a nat. White chins came of one generated here child cut up by a nat. White chins came of one generated here child cut up by a nat. White chins came of one sense of the child children of the facility of the sum of the facility of both the facility of the facility of both the facility of the facility of both the facility of both the facility of the facility of both the facility of the facility of both the facility of facility of both and a facility of both the facility of facility of both and the facility of facility of the facility

(b) Animal oriuin.—Hsenwi (Theinni) Shans are descended from tigers, and all their swehrais (chiefs) include has (tiger) in their personal name. Yokwa, Thetta, and Kapi Chins were all born of a wild goat. The ancestor of the Marū Kachins was a nat married to a monkey, and their children were the bear and the control of the control of the control of the control of the their parties.

the rainrow, and a product and sister characteristics. An enserwere nats,
(c) Tenetable origin.—According to the Kachins, the Creator, Chinun Way Shun, made the first man, Shingrawa, out of a pumplich with the aid of the nats. Shingrawa made the earth. The primeval pair of the Siyin Chins came out of a gourd that fell from heaven and split open as it fell. The Tame Was also came out of a gourd.

13. Deluge tales.—Closely connected with tales of origin, stories of a Deluge are common in Burma among Shans, Kachins, and Karens. The Kachins say that the world was destroyed by a flood, and only a brother and sister were saved in a boat, though the nats were unaffected by it. This seems to point to a partial thooding of the country at some period, as the Deluge tale of the Kengtung Shans refers directly to the time before the great lake in the Kengtung State was naturally drained off.

14. Evil spirits.—(1) General characteristics.— The root characteristic of the nats is power. They can do as they like, and the fulfilment of wishes depends on them. They are all-powerful, and BURMA 9K

irresistible so far as mankind is concerned. As to the supposed exercise of their powers, it is commonly said by observers that among the wild tribes all the spirits are maleticent (natso); but this is an obvious error, arising out of the fact that worship is almost entirely devoted to the warding off of the cvil spirits, the kindly ones being not on or the eva spiris, the kindy ones being noi usually worshipped at all. This is shown in the notable instance, inter ulu, of the Kachin belief that the ghosts of the murdered cannot trouble the murderer, as they would be too much afraid of his ghost after his death to worry him while still plive.

The general attitude of the people of Burma towards the evil spirits is well illustrated by that taken respectively by the Chins, and the Sgau and To the Chins the evil spirits are Pwo Karens. individual, and belong to everything-village, house, clan, family, person, the flood, the fell, the air, the trees, and especially the groves in the jungle. They are innumerable. In the house alone there are twenty, of whom the following six In the house

are important:

'Dwoni lives above the door of the house, and has the power Owoji lives above the door of the house, and has the power of inflicting madness. Inmal lives in the post in the front corner of the house, and can cause thorns to pierce the feet and legs. Nokpi and Nalvum live in the vernadah, and can cause women to be harren. Naono lives in the well, and causes fever and across Avaia lives above and outside the gate, and can cause hip. 473. The Sgan and bad Greans (Cipper Bernat Gastelloreta, Scholler, Na is the Sgan and bad Narrens believe that Na is incarnate in all dangerous animals, and he is ceremonially driven away from the fields and houses. The Seven Nā destroy by the tiger, old age, sickness, drowning, man, fall, and 'every other means

(2) Gho ts,—Tasē is the generic term for malignant ghosts, which are the spirits of those who have existed as human beings and are still endowed with passions and material appetites. They roam about after sunset in search of human prey. There is a great fear of the ghosts of the recently dead. This is illustrated in various ways. Thus to the Kachins deceased ancestor, and among the Red Karens no dead body may be taken through the village, or by any way but that nearest to the cemetery, even if a hole in the house wall is entailed thereby. Burmans have a modified form of the Karen idea as to carrying the dead to burial.

carrying the dead to burnal.

(a) Hauntang glasts.—To the Burnans natsein are the ghosts of persons who have died a violent death (thug) and haunt the place of death. Under Budhast influence the idea has been extended to menks and mms who break their vows.

(b) (thosts of wanen who die in childright,—In common with every part of India, all the people of Burna have a speeml dread of the ghosts of women who die in childright (hubb). Among the Red Karens (lie) a veganic composer of a woman dipic in the Red Karens (Gre) no man may neip to mry such a woman. The Kachin sucuem is a vampire, composed of a woman dying in childbirth and her child, which transmigrates into animals; but this notion is, no doubt, due to mixed Brahmanic and Buddhist

influence, from propinguity to Shans and Burmans.
(3) Forms assumed by evil spirits,—The ideas current in the most civilized parts among the Burmans as to the forms which evil spirits assume are typical of the whole country. They may beare typical of the whole country. They may come incarnate in dangerous animals, especially be contained in anything, such as a large wooden timben (low food-stand), which disappears on being touched, or a stone pillar embedded in the ground, which will rise and disappear suddenly (Mandalay District). They take terrifying forms-a leopard a black pig swelling into an enormous black shadowy figure, a white apparition rushing at its victim (Mandalay District). Hainza are the ghosts of children in the form of cats and dogs. Thoye and the hit are hideous giants with long slimy tongues, which they use as an elephant uses his trunk (borrowed from India).

(4) Discuse and death.-Disease and death are always due to the action of evil spirits. The origin

of this belief is well illustrated by the Red Karens, who say that Lu is a particularly wicked spirit, living on corpses and causing disease and death in order to supply himself with food. So among the Talaines the house quardian will cause fever, unless offerings of money, rice, eggs, sugar, and fruit are made to him, as he has to be kept well fed.

Much of the belief in the causing of disease and death by spirits is due to the idea of vengeance on the living for misfortunes that the spirits have suffered during life. The spirits of the unfortunate (tase, thaye, thabet) all cause death or epidemics. This idea has brought about a peculiar form of vengeance, inflicted by the living on the man who introduces an epidemic into a Karen village. unlucky individual incurs a perpetual debt, pay-able by his descendants until the 'value' of each life lost in consequence is wiped out. Vengcance for slights and injuries inflicted on spirits is, of Thus, fever is the natural course, expected. consequence of mocking at a spirit-shrine (natsin,

There is a mixture of the ideas of the benevolent guardian and Increase a mixture of the uceasor the networking paramara and the malignant spirit in this connexion, nodoubt due to the notion of vengcance above alluded to. This comes out clearly in the legend of Mahagiri or Māgayē Nat, one of the Thirty-seven. He was in the story a blacksmith put to a cruel death at Tagaung, tho was in the story a blacksmith put to a cruel death at Tagaung, the first capital of the Burmans, and he is also the house guardian of to-day (eiggsting) and). He causes a fatal colic, known as Tagaung colic, and recognized as such in Burmase pharmacy. Among the Kachins disease and death are caused by the action of ancestors, who have become nots, and pain by the bit to thats. In 1902 a quantity of circumstantial evidence was produced to the Land Revenue Settlement Office of Mandaday as to a number of deaths occurring in succession in consequence of cultivating certain fields of the Kanniza and Namadawa & keins (cultivated areas), all attributed to the action of the guardian nats.

15. Guardians.—The people of Burma regard guardian spirits with mixed feelings. They look to them for support and safety in all conditions of life, and at the same time consider them to be decidedly capable of infinite mischief. They occupy a place midway between the indifferent benevolent spirit and the actively malignant spirit. The predominant feeling towards the guardians is that they have to be kept in a good temper.

Guardians are, of course, infinite in their variety, as everything connected with mankind and his environment has its guardian. The propitiatory candles offered everywhere at pagodas are in the shape of the guardian not of the day on which the worshipper was born. The combination of the guardians of the birthdays of the bridal pair controls the lucky and unlucky days for marriage. All this, however, is Brāhmanic influence on a

Buddhist people.

(a) Human quardinas.—The Sgau and Pwo Karens say that every man has his guardian (ta), which may wander in his sleep or be stolen by demons, and then follow sekness and death. Sickness can be removed only by a sacribee at which every memor he stolen by definors, and then tomos scanses and death, sickness can be removed only by a sacrifice at which every mem-her of the family must be present, or it is unavailing. Incident-ally this is a cause for reductance to being baptized as a Christian.

her of the family must be present, or it is unavailing. Incidentally this is a cause for reductance to being buytized as a Christian, as refusal to join in the ceremony is booked on as committing nurder; or, on the other hand, it may lead to entire families being haptized together. A convert to Christianity is treated as dead, and the rais a mock buriat to induce bis 4to believe that the convert really is dead, so as not to miss him at the next sacrifice or restoration to health.

(b) Homse generalizes.—The converting nat, or house graviting, is regarded and treated in a girnst variety of ways. One use made of him being the converting the converting to the converting to

whenever anything goes wrong.
(c) Village and town guardians.—The terror of the house

guardian exhibited by the Wild Wa is intensified to such an extent when he contemplates Ilkum Yeng, the village guardian, that it has led to the human sacrifice and to the head-hunting for that purpose which have made him famous throughout Burna. that purpose which have made him famous throughout Burma and Indo-China and many parts of China itself. Among the Burmans and the people generally the village and town nats (I wis saung, Myoma) are regarded much in the same light as are the house nats.

(I not satung, Myonio) are regarded much in the same light as are the house nats.

(d) Tribal and national guardians.—Among the Chins the founders of claus (khun) are the guardians of all their descendants—a fact which gives a clue to the institution of tribal or State guardians generally. Sometimes the State or national State guardians generally. Sometimes the State or national extension of the State guardians generally. Sometimes the State or national attached to him. Thus left, the national gradual creation of the State guardian of the State, and Many Saga, the female nat of Yang Hya Iliu Hill at Kengtung, who is the guardian of that State, has no particular ceremonies helonging to her. This is modified usually to an annual festival, as with the Ilpons, who are said to know of no other spirit than the Great Nat (Natyri), and have the idea of the national guardian in its simplest form. Formal worship on a large scale is, however, fairly common, as with the Kachinas worship Yunun with barred head and crouching attitude. Wanuelu or Fle Nat of the Taungyos is a generic name for the guardians of gromps of villages. He is worshipped at a considerable festival held annually.

(e) Property quardians.—The guardians of objects belonging to or counceted with mankind assume an infinite variety of form. Examples are the spirit maidens (nat-them) who guarded the

to or connected with manisting assume an infinite variety of form. Examples are the spirit maintens (nat-them) who guarded the Examples are the spirit maintens (nat-them) who guarded the specially attached to each. Racing boats, and therefore the royal boats, are possessions of great value in Burna, and the whole world of the nats was called in to guard those at the Royal Palage of the late dynasty. The guardians were represented by ranke of the fate dynasty. The guardans were represented by carvings and pictures in great variety all over the hoats; squirels, tigers, fish, birds, centipedes, nats of Indian origin, men, centaurs (athamökki), crocodiles, parrots, nats of the sun and mood, and the mau-lion (manuthihā). The lake-dwellers of the mooo, and the mau-lion (manuthihā). The lake-dwellers of the Yawng Hwe Lake, the Inthäs, have copied this idea in the worship of the Hpanundau-ā, five images of Buddha, on their ancestral bargs. To this category of nates belong the oktazung, or treasure-guardians, of the Burmese, who are spirit maidens in charge of treasures buried in the carth. Sawlapaw, the late great chief of the Red Karens, had a special spirit-guarded treasury above ground (aukhāur); but this was due to Shan influence.

16. Propitiation .- (1) Ceremonies .- All propitiatory ceremonies among the wild tribes drinking and dancing, and commonly in drunken orgies. Among the Burman villagers a typical instance of the procedure at such a ceremony is that here extracted from the Upper Burma Gazetteer,

pt. i. vol. ii. p. 30:

pet extracted from the copper barma cracectory, ppt. i. vol. in. p. 30:

'The rites were performed in a stretch of thick jungle, about a quarter of a mile from the village. There were about twenty men and as many boys, but no women. Although women are most commonly the hierophants in the exorcism of nafe, they are never present at formal natt feasts. The natish (shrine) was which was connected at the back of the work of a fine padend tree, which was connected at the back of the only came to the shrine to secure the offerings. He was a jungle spirit, a hamadryad Their officiating vise man was an old Burnan of no particular position in the village. He commenced proceedings by offering a corked bottle of kanuppé (rice heer) to the skitkle (jungle a corked bottle of kanuppé (rice heer) to the skitkle (jungle a corked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (rice heer) to the skitkle (jungle acorked bottle of kanuppé (jungle acorked bottle of kan

aides. This till govern is performed by the whole village taking aides. The six is a Burnau ceremony, and its object is to ronse the three the result of the six is a Burnau ceremony, and its object is to ronse the three th

(2) Offerings and sacrifices.—The Kachins give an explanation of the objects of animal sacrifices and of the common practice of consuming the flesh of the sacrifice. They say that, when they are in trouble, their primeval mother, Chang-hko, demands the pigs and the cattle, or she will eat out their lives. So, when any one is sick, they say, 'We must cut to the nats.' The Kachins have, further, an illuminating custom of being able to promise the sacrifice ordered by the tumsa (exor-

cist) at some future time, if it be not available when first ordered. Here we seem to have the cubryo of the idea leading to the pictures and efligies, in lieu of actual sacrifice, used by the Chinese and their followers in Indo-China.

The principle of sacrifice is to give a small portion of the animal or thing sacrificed to the nats and to devour the rest, or to cat up what has temporarily been deposited as an offering. Sometimes only the useless parts of the sacrifice are offered. Thus the White Karens give up small portions only, and the Kachins a portion, cut off by the village butcher (kyang-jong), of all animals taken in hunting, to the house guardians as 'nats' flesh.' Among the Burmans the edible parts of large animals sacrificed are placed on the nats' shrine for a short time. The commoner practice, however, is to give what is useless. Burmans hang round shrines the entrails of fowls used for divination. Some Kachins give only the offal of sacrificed animals, while Red Karens deposit the head, ears, legs, and entrails, on the shrines of nats.

Absolute sacrifice, though uncommon on any considerable scale, is not unknown. In times of sickness, Red Karens give offerings of pigs, fowls, rice, and liquor, at the cemetery, to the evil spirit, Akhās offer a portion of all feasts to the ancestors, at the place where the last death occurred, or to the west of the house 'where the ancestors

live,' in a pot which is afterwards buried.

On a small scale, absolute sacrifice is common Burmans always pour out a libation yesetkya) at alms-givings and funerals. Marū Machine make a libation to the nats before drink-ing any liquor. Talaings offer the first morsel of all food to the village guardian, by holding the platter in the air. At the great national pastime, boat-racing, there is always a preliminary paddle over the course by both sides to propitiate the guardian spirits of the river; 'at the stem of each hoat a man erouches, holding with outstretched arm a bunch of plantains, some cooked rice, flowers, and betel' (Scott, The Burman, ii. 59).

The animals and food sacrificed are usually those

used for food by the people: buffaloes, pigs, fowls (Kachins, Chins, Karens); pigs and fowls (Was, Shans, Burmans, White Karens); dogs (Kachins, Chins); cows and goats (Kachins, Chins); fish and eggs (most tribes). Of vegetable foods, cooked rice is the usual offering, and also the locally made liquors. Taungthus offer annually fish (ngapein), liquor, rice, and the household stew in Kason (April-May) to the house nuts; and fish, rice, ginger, salt, and chillies in Nayon (May-June) to

the village nats.

17. Human sacrifice.—There can be no doubt that human sacrifice prevailed in Burma until recent days, both as a propitiatory and as a preventive action in reference to the unseen powers; and, in the case of the Wild Was, the extension of the practice even to the present time in the form of head-hunting is of the greatest interest, because that custom has there a direct ceremonial origin.
(1) Burmans.—When Alaunghpayā, the founder

of the last or Alempra dynasty of Burma, founded Rangoon in 1755, he sacrificed a Talaing prince, whose spirit became the Sülē Natgyī, or Guardian (Myōsadē), of Rangoon, still worshipped at the Sūlê Pagoda, a prominent shrine in the heart of the now great city. When his last great successor, Mindon Min, father of Thibaw who was deposed in 1885, founded Mandalay in 1857, he caused a pregnant woman to be slain at night on the advice of a ponna (Hindu astrologer), in order that her spirit might become the gnardian nat of the new city. Offerings of fruit and food were openly made by the king in the palace to the spirit of the dead woman, which was supposed to have taken the

shape of a snake. It should be borne in mind that the word 'Alaunghpaya' as a name means 'a coming Buddha,' and that Mindon Min was a strict Buddhist in ordinary life. In the Auglo-Burman war of 1826, the commander of the Burmese army, the Pukhan Wungyi, proposed to offer the European prisoners at Ava as a sacrifice to the nats, and sent them to the Aungbinle Lake, near Mandalay, for the purpose.

In addition to this direct evidence, there is that afforded by the stone figures, grasping clubs, as gnardians (sade), at the corners of the city walls at Mandalay, seated above jars filled with oil of various kinds. Circumstantial tales exist of human

sacrifices on the setting up of such figures both at Amarapura (1782) and at Mandalay.

The object of such human sacrifices, also attached to the foundation of the main city gates, is that the haunting ghost (nutsein) of the deceased shall hover about the place, and attack all strangers who come with evil intentions. frequent change of capital which has occurred throughout Burmese history is said by the Burmans to have been due to the loss of efficiency on the part of the guardians, as shown by the disappearance of the oil in the jars under their images, and other portents.

(2) Shans,—About a hundred years ago the boundary at Kenglaw between the Shan States of Kengtung and Kenghung, now the British and Chinese boundary, was fixed by burying two men alive, one facing north and the other south. In British times two images of Buddha were substituted, back to back, at the same place for the

same purpose.

(3) White Karens and Danaws.—White (Mepū) Karens have abandoned slavery, but, while it existed, slaves were buried alive with their masters. A small hole was left through which they could breathe, and food was supplied to them for seven days. If they could then rise unaided from their graves, they became free. The same thing is said of the Danaws.

(4) Wild Was: head-hunting,-The Wild Was expose human heads for the general propitiation of guardian spirits, the custom being one of the most instructive among those to be observed in Burma, as these people have to hunt annually for the heads they thus set up. The Wild Was own description of the origin of their head-hunting is thus given in the Asiatic Quarterly Review, Jan. 1896 -

' Ya Htawm and Ya Htai are the father and mother spirits of the Was, and of all their spirits alone were genial and benignant. The most seemly offering to them was a snow-white grinning skull. The ordinary sacrifices on special occasions were, howskull. The ordinary sacrifices on special occasions were, how-ever, to be biffaloes, bullocks, pigs, and fowls, with plentiful libations of rice spirit. The special occasions were marriage, the commencement of a war, death, and the patting up of a human skull. In addition to these meat offerings, a human skull was always desirable under exceptional circumstances, or for special objects. Thus, when a new tillage was founded, a skull was an imperative necessity. If there were a drought for special objects. Thus, when a new village was founded, a skull was an imperative necessity. If there were a drought which threatened a failure of the crops, no means would be so successful in bringing rain as the delication of a skull. If disease swept away many victims, a skull alone would stay the pettlence. But the good parential cyres expressly said it was not necessary that the villagers should slay a man in order to get his head. They might lege the skull by larter.

The regulated posting up of men's heads ensures plenty of dogs (to eat), corn, and liquor. regards his skulls as a protection against the spirits of evil. Without a skull his harvest might fail, his kine might die, the ancestral spirits might be enraged, or malignant spirits might gain entrance to the village and kill the inhabitants or drink all the liquor.

The skulls are placed on posts (tak-keng) or in an avenue approaching the village, usually under over-arching trees or dense undergrowth, after the fashion of the Kachin avenue approach, which

consists of posts ornamented with symbols and imitation weapons to keep off evil spirits.

A Wa never misses an opportunity of taking a head, because the ghost of the dead man hangs about his skull and resents the approach of other spirits. For this reason the skulls of strangers are the most valuable, for such a ghost does not know his way about, and cannot possibly wander from his earthly remains. An unprotected stranger is therefore pretty sure to lose his head if he wanders among the Wild Was, no matter what the time of the year may be. The more eminent he is, the more sure he is to die.

There is a regular season for head-hunting-in March and April-to protect the crops, and at least one new head is required annually. The head-hunting party is usually about a dozen strong, The head-Villages are never attacked, nor does the party leave its own country. They sometimes meet and attack each other for heads, but this does not provoke revenge. There is a tariff for heads when bought, according to ease in securing them. Lem are lowest; Lahu much more expensive; Chinese very expensive; ordinary Shan are rare; Burmese never secured.

When heads are brought home there is a general dance ending in drunken orgies. They are cleaned before being put up. No offerings are ever made in the avenue of skulls, and sacrifices are all made at the spirit-house in the village, while the bones, skins, horns, hoofs, and feathers are deposited there or in individual houses, never in the avenue.

One proof of the sacrificial nature of the human head-hunting lies in the treatment of buffalo heads. Each house stands apart on its own plot of nneven ground, and is usually enclosed within a slight fence. Inside this is the record of the number of buffaloes the owner has sacrificed to the spirits. For each beast he puts up a forked stick, in shape like the letter Y, and there are usually rows of these from three or four to hundreds. The heads thus represented are piled up in a heap at the end of the house, as a guarantee of good faith in the matter of the sticks.

As a consequence of this head-hunting habit, Wa villages are cleverly contrived savage fortresses; but, except in this matter, the Wild Was are harmless, unenterprising agriculturists, well behaved and industrious.

The breaking down of the custom from actual head-hunting to mere symbolism is seen from the Chinese view of the Was. They reckon the Wa's civilization by his method of bead-collecting. The most savage, the Wild Was proper, are those who take any heads, next those who take heads in lights only, who case any nears, met those who take heads in ights only, mext those who merely by theu, and the most civilized are those who substitute leads of bears, panthers, and other wild beach for human heads. There are, however, real Wild Was who ring is about the Naway Ilkeo Lake.

18. Protective action. - Apart from the employment of such agents as mediums, exorcists, and the like, with their arts, such as necromancy, magic, and so on, the peoples of Burma take protective action on their own account against the unseen powers of evil. This is roughly a residuum of the various kinds of knowledge that their 'wise men' have taught them. No part of the population is free from the resultant practices. Buddhism is quite powerless not only to restrain these practices. but even to help the people to escape from them. Orthodox Buddhist monks will not, in the more civilized parts and under the ordinary conditions of life, join in the more openly Animistic protective ceremonies, yet they will be present on sufficiently important occasions, and take, as it were, a scriptural share in them. The use of the monk at deathbeds, with which he is not professionally concerned, and which he is not always asked to attend, is that the good influence of his pions presence may keep away evil spirits. His pres-

ence is, in fact, an additional protective charm

against the nats,
in General protection.—In all Burmese houses there is kept (1) General protection.—In all Burmese houses there is kept a pot of charmed water (manuapi-3), over which an astrologer has uttered spells. This water is sprinkled about the house, as a protection against evil spirits generally. Another specific for protection against crophlesome familiar spirits is a change of name practised by Burmass and Slauss. Burmans when on a journey keep away evil spirits by tying a banch of plantians and a twig of the thinby tree to a cart or head. An offering to the nearest shrine (natisn) each time a fishing hoat is launched will prevent the natis from interfering with a han!. Hunters tie back the twigs of any large tree they meet in their way, to scare away the forest demons (tawsuung nat). At all hoat-races the back the twigs of any large tree they meet in their way, to scare away the forest demons (taresump nat). At all host-races the main object of the preliminary paddle over the course with offerings is to prevent the nats who inhabit that particular reach of the river from interfering with the race.

of the river from intertering with the race.
(2) Specific action.—(a) Protection against the spirits of the recently deceased.—The Kachins and other tribes put up entanglements to prevent the dead from entering their villages, and supply them with models of whatever they may be supposed to supply them with models of whatever they may be supposed to want. The protective nature of the death ceremonies comes out clearly in those of the Taungthis, who tie the thumbs and great toes together, and release the spirit by measuring the corpse with twisted cotton, setting food before it, taking it to the cemetery, pouring water over the face as an emblem of the division between the quick and the dead 'as a stream divides division between the quick and the dead as a stream divides countries; and setting a torch in front of the hiers of persons dying on holidays (when domestic ceremonies are impossible) to show the way. Among the Padaungs the bodies of women who die in childbirth are first beaten with sticks to ascertain death, and are then cut open, so that the infant may be buried separately. The protection here is found in the idea that the woman's spirit will hover round the infant and leave the village

alone,

(b) Protection against epidemics.—The avowed attitude of alone.

(6) Protection against epidemics.—The avowed attitude of the Karens towards eccenionials in times of distress explains to the Karens towards eccenionials in times of distress explains the process of the state of the st of consecrating water-vessels (papet-0), which contain, interalia, sticks with yellow strings wound round them. These strings are afterwards wern as prophylactic hracelets, and are also hung round the eaves of the houses in bags. The noise-making in all

round the caves of the houses in bags. The noise-making in all these ceremonies is largely copied from the Chinese. (c) Protection of houses and sucred buildings.—The Talaings suspend a coconut wrapped in yellow or red cloth in the south-east angle-post of a house, to invoke the protection of the house guardian (ringstung and), kim blagacy, one of the Thirty-seven, guardian (ringstung and), kim blagacy, one of the Thirty-seven, on the comparison of the comparison of the contraction of the protect all wooden buildings, houses, wayside rest-houses (zayāts), and bridges from the ill-luck brought by the evil spirits inhabiting the knots in the wood of the posts. The object of (2ayats), and bridges from the induce occupin by the evaluation inhabiting the knots in the wood of the posts. The object of striking the great bells on Buddhist pagoda platforms is spirit-scaring. During the foundation ceremony of a village pagoda built by a Shan, a round earthen vise, containing gold, silver, built by a Shan, a round earthen vase, containing gold, silver, and precious stones, besides rice and sweetmeats, was closed with wax, in which a lighted taper was stuck, and deposited by the builder in the south-eastern hole nade for the foundation. The builder also repeated a long prayer while earth was being filled into the hole and sprinkled with water. All this was to scare away the great serpent in whose direction the southeastern corner of the foundation pointed (Anderson, Mandatary

to Momein, 52).
(3) Transfer of evil spirits; scape-goats.—The ideas of in-(3) Transfer of evil spicits; scape-goats.—The ideas of indenic get is spirits to betake themselves elsewhere and of making scape-goats in some form or other are universal in Eurna. Red Karens have a scape-goat in the shape of an image of a horse or elephant carved on the top of a post set up at the harvest testical (edu), and surrounded by offerings of rice spirit, fruit, and flowers. The animal is supposed to carry off all evil spirits to a safe distance. Scau and Pwo Karens never forgive injuries, real or fanded, of village to village. When it is necessary, however, to combine in times of common changer, they create a scape-goat in the shape of a man chosen 'to confess the sins of the nation.' It runs off, and is captured and made to repeat each injury in turn, which is settled then and there. Burmans, on occasions the suppose of the control of t turn, which is settled then and there. Burmans, on occasions of sickness, set up small figures of clay outside the house, and draw pictures of percects and harcs (representing the spirits of the sun and more respectively) on small fans kept in the house. Small coffins, with miniature elligic of the sick persons (appl) inside them, are buried to the east or the west of the house. This ceremony (payataya) is a protection against further sickness, and the image and pictures are scape-goats for carrying away the spirits of diseas

19. Divination. - (1) Heneral methods. - In Burma, divination is left to the people by the monks, and the Deittōn (Dittharrana, The Collection of False Doctrines), the great book used by the Bédinsayās (imported Indian astrologers), is not admitted into the monasteries. The governing principle is, as elsewhere, augury from uncontrollable chance. The Kachins heat bamboos (saman) till they split, and the length of the resulting fibres settles the augury. So do the knots in torn leaves (shinna wet)—a system of angury copied by the Hpons under another name, Szi Kachins count the odd sticks in each group placed haphazard between the fingers of one hand, out of thirty-three selected bamboos. Chins go by the direction in which the blood of sacrifices flows. Burmans boil eggs hard, and judge by the whiteness: the whiter the egg, the more favourable the omen.

The most important form of divination in Burma is that of the Karens, from the bones of fowls.

This has spread far and wide, and decides everything in the Red Karen's life, even the succession to the chiefship. Any one can divine. The thigh and wing bones are scraped till holes appear, and that bone is selected in which the holes are even. Bits of bambco are placed in the holes, and the augury is taken from the slant of the bamboos; outwards, for; inwards, against. Among the Kachins the bones are kept until they are grimed with the smoke of years, as they have then acquired an established reputation. chiefs keep such old bones in carved bamboo phials, and usually store them in the roof.

Kachins use also the brains, sinews, and entrails of fowls, and the entrails of cattle and pigs. Divining from the entrails of fowls is common among the Burmans. The birds are cut open from

the tail, and the entrails are extracted and turned larger side uppermost. The longer and thicker they are, and the larger the stomach, the more favourable the omen. The White Karens extend favourable the omen. the idea to the livers of fowls and pigs; smooth, straight, or pale wins; malformed or dark loses. This augury is so trusted that it will serve to

break off a love match.

Spirit action is also brought into play for the purposes of divination. Among the Taungthus, if the offerings at the annual festival to the village guardian are insufficient for the appetites of those present, there will be a bad harvest. The heaviness of a good crop depends on the surplus after all have finished. At funerals, Kachins place heaps of rice flour at or near graves. If they are found to have been disturbed in the morning, there will be another death in the family. One kind of augury the Burmese people have in common with most of the world. Sgan and Pwo Karens place a clod of earth under the pillow, so that dreams may point out the proper site for hill-side cultivation (taungyā, forest-burning).

The Chins employ an obscure method of divination from the contents of eggs blown through a hole at each end. After the operation the shells are placed on sticks with some cock's feathers.

(2) Ordeals and oaths.—Ordeals and oaths are hardly separated in the native mind in Burma, and each is in reality a form of divination. Oaths of the native sort are in consequence much dreaded, whereas the form adopted by the English (chanza) from the Buddhists, with its Indian spiritual horrors, has not now any supernaturally terrifying effect.

(a) Ordeals.—Trial by ordeal (kabbā) was constantly in requisition in the native courts, and the treatment of witches was horrible. There were four regular kinds of judicial ordeal.

(1) Candle-burning (mi-htm). Candles are placed on an altar, and the party loses whose candle goes out first. (2) Thrusting the finger into motion lead (hthe-htm). The fore-finger is protected except at the tip; the least hurt, as decided by the flow of serum on pricking, wins. (3) Water ordeals (htm), whichever party can stay under in deep water longest wins. (1) Chewing or swallowing rice (sanwa). The guilty cannot swallow, probably through anxiety affecting the nerves. This is also a common Indian idea.
Kachins deposit stakes on each side. Rice is then boiled on a leaf; the best boiled rice wins. Among chiefs the accused puts his hand into water boiled in a bamboo ceremonally selected (1) Candle-burning (mi-htun). Candles are placed on an altar,

his hand into water boiled in a bamboo ceremonially selected by an exorcist (tunne). If the skin comes of, he losses (b) Oaths,—Among Lai Chins, the oaths most feared are drinking water which has been poured over a tiger's skull, and drinking blood mixed with liquor. Among the Northern Chins, contracting chiefs pour liquor over a cow and shoot or skult he animal, ent off the tail, and smear their faces, to an imprecatory chant. A stone is set up to mark the spot. The oath most leared by the people is to cat earth. Sgau and Pwo Karens lay hands on the sacrifice (huffalo) in settlement of claims, and divide it into portions, each party eating half his portion and burying the rest.

divide it into portions, each party eating nat ms portion and burying the resillegiance.—Among Sgau and Pwo Karens, individuals, villages, and class are bound together by drinking spirits in which the blood of the parties has been mixed. Blood-brotherhood of this nature is also known among the Burmans. Another method of swearing allegiance is to divide Durinais. Another method of swearing anegance is to divine a nox exactly in two, and every member of each contracting party eats a part of the half belonging to his party. Each side also takes an ehror so marked that they are recognized as being a pair. Production of the hora compels either party to aid the other in any circumstances. See Exormization (articl), i. 3.

(3) Astrology.—The Burman is so fettered by his horoscope (sadā) and the lucky and unlucky days for him recorded therein, which are taught him in rhymes (lingā) from childhood, that the character has been given him by strangers of alternate idleness and energy. But both are en-forced by the numerous days and seasons when he may not work without disaster to himself. Unlucky days (pyatthādanē) eanse him so much fear that he will resort to all sorts of excuses to avoid business on them. Similarly, on lucky days (yēt-yāza) he will work beyond his strength, because he is assured of success. These facts are worthy of careful attention, as it is so easy for European observers to mistake Asiatics; e.g., the character of laziness given to the Nicobarese is greatly due to their habit of holding their very frequent feasts and necromantic ceremonies all through the night,

Burmese astrology, and the superstitions on which it is based, are prima facie Indian. Many of the terms used are certainly Indian. Nevertheless, they are only partially Indian, and Chinese influence has had much to do with the development of Burmese astrology as we now find it. The astrologers of the Burmese Court were all ponnus (supposed Brähmans from Manipur), whose chief study was the Samaveda, and whose books were the Tantra, Jyoti, and Kāma Sāstras of Bengal. Their title was Belinsaya, 'learned in the Vedan-gas.' Their astronomy is purely Hindu. They worked the Royal elepsydra, calculated the incidence of the year and the intercalary months, drew up the horoscopes, calculated the lucky days, and told fortunes. But they are dying out, and at no time did they have much influence on the astrology of the country side, which followed the Hpēwān—the Shan system of the Sixty-Year Cycle, so well known in China, Siam, Cambodia, Annam, etc.-for reckoning the calendar. Shan soothsayers are considered the most learned, and all their prognostications are worked out from the  $Hp\bar{e}w\bar{a}n$ . Almost all the Burmese superstitions about the path of the dragon  $(neg\bar{a}\cdot hl\bar{e})$ , which regulates the lucky days, and the lucky rhymes (mingalā lingā) that control marriages, are taken direct from this table, which in its main lines is exactly that of Taoist fortune-tellers in China.

The Hpāwān is used to work out horoscopes, settle marriages (by the theory of hostile pairs taught in yan-pet-linga, rhymes known to every Burmese girl), partnerships, and undertakings generally; and since, in Burma, the Shans have

partially adopted the Buddhist calendar, such confusion is caused in the almanae that much practice and experience are required to work it. Hence partly its charm and power. Its influence is proved by the fact that the Buddhist monks nowadays issue annually an almanae (maha-thingān), which shows many traces of the Hpi wan.

Based on this difficult method of calculation, a very complicated astrological system has been set up, which has, however, a strong admixture of Buddhist astrological notions in it. The day of birth is one governing point, and on horoscopes the days of the week are represented by numbers and symbols of 'the presiding animal of the day. Another governing point is the position of the dragon (topai, nagā), as the great thing to aim at is to avoid facing its mouth in any transactions, especially cattle-buying. This is ascertained by the terminal syllables of the names of the days. The Hpčwān is also used to ascertain, by a simple calculation, which looks like a real puzzle to the uninitiated, what offerings to the nats are suitable on any given day.

Lucky and unlucky days are fixed according to the Shan and not the Burmese calendar; and, as they do not correspond, the Barman cannot calculate them for himself, and is thus forced to go to the astrologer. There is a long list of lucky days for building operations, picked, in eclectic fashion, out of the imported Buddhist and indigenous animals and nats; the unlucky days depend on the final syllable of the names. Lastly, a long series of days are individually unlucky for a very great variety of enterprises, practically for all the business of native life. The lucky days in the

month are in a considerable minority.

There is a curious superstition as to bleeding, which has an astrological basis. The centre of vigour in the human body is believed to shift downwards during the week : on Sunday it is in the head, Monday in the forehead, Tuesday in the shoulders, Wednesday in the mouth, chin, and cheeks, Thursday in the waist and hands, Friday in the breast and legs, Saturday in the abdomen and toes, Eleeding from any of these parts on their particular day is considered very dangerous and sinister (Upper Burma Gazetteer, pt. i. vol. ii. p. 63).

20. Necromancy.—(1) Nature of necromancy in Burma .- 'The object of the Burmans' necromancy is to acquire influence over the spirits and make is to acquire influence over the spirits and make them do their bidding. Witches and wizards are supposed to be materialized spirits or beings who can project their bodies into space and regulate their movements' (Taw Sein Ko, *Upper Burma Guartteer*, pt. i. vol. ii. p. 73). Such beings are usually women. Although the familiar spirits and spells of the Burman necromancer can be shown to be chiefly Indian in origin, his incantations are composed in Sanskrit, Pali, Burmese, Talaing, and Shan, or in an unintelligible jargon made up of one or more of these languages, thus showing both their edectic and their indigenous nature. They are used in conjunction with something to be worn or kept with a view to protection from disease or injury of a pronounced kind—gunshot wounds, famine, plague, epidemics, hydrophobia, enemics in general, and the like.

All necromaneers (wēzā, 'wise men') are mixed up in the Burman's mind, and are divided into good (mediums and exorcists) and bad (wizards and witches), and each of the two categories is divided into four classes, according to the element with which they work mercury (pyādā), iron (than), medicine (sc), magic squares (in). All this

is Indian.

Medicine, which among the Burmans is Indian in origin, is not clear of necromancy. The doctor (sethama) is a mere quack, with an empirical knowledge of leaves, barks, flowers, seeds, roots, and a few minerals. The datsaya is a dictist, and the beindawsaya is a druggist, but a doctor seldom combines both practices, and in either case is largely necronantic, professing to cure the witch-caused diseases (son) commonly believed in. The position of the moon and the stars has more to do with the cure than the medicine, and the horoscope than the diet. Cases of death or failure to cure are attributed to error in the astrological or horoscopic information supplied. In Lower Burma there is supposed to be a wizards' town at Kalē Thaungtot on the Chindwin River, with a wizard king, who can undo the effects of bewitchment in those who go on a pilgrimage there.

The methods of wild necromancy appear in the The methods of who necromancy appear in en-practice of the Kachins. Somebody wants a power-ful man to be made ill. The tumsa (exorcist, wizard) recites the special charm necessary to cause the parcicular sickness desired, and mean-while his client plants a few stalks of long grass by the side of the road leading towards the victim's house. Then either a dog or a pig is killed. and the body is wrapped in grass and placed by the road and left there, while spears are cast and shots fired in the same direction. The ceremony closes by the tumsa and each of those present taking up four or five stalks of grass and casting them similarly towards the person who is to be charmed (kumpachin khyemna) (E. C. S. George, Upper Burma Gazetteer, pt. i. vol. ii. p. 427).

(2) Alchemy and palmistry.—The Burmese are

inveterate alchemists and palmists, and their practice is a mixture of all the occult superstitions known to the people, from Indian alchemy and palmistry to Karen augury from chicken bones.

(3) Exorcism, -Evil spirits and malignant ghosts (tasē, hminzā, thayē, thabēt) are exorcized by the general public by making a loud jarring noise, by beating anything that comes in their way—walls and doors of houses, kettles, metal trays, cymbals, and so on. In cases of spirit-caused sickness the nat is sometimes simply scared away by threats; but it is usual to apply drastic measures, such as severely beating the patient and rubbing pungent substances into the eyes. The argument is that the ill-treatment falls on the spirit, and that, therefore, when it has departed, the patient will be free from any after effects. The methods of the exorcists are usually as celectic as possible; but among the Chins every spirit has its own special sacrifice, known only to the wise men and women, and will accept no other.

Every professional curer of disease-physician, priest, medium, wise man, necromancer, or wizard—is an exorcist, following practices that are hardly to be differentiated one from the other.

(a) Priests.—The blee of a priesthood is foreign to the untured Indo-Chinese unid, and a recognized priestly class does not exist among the meultivated tribes in Burma, or indeed among the more civilized population. The persons who profess to deal with supernatural matters follow in ordinary life occupations carrying no particular respect, often the reverse. The Burman, Talaing, or Shan pōngni, or Buddhist monk, is not technically a minister of religion, and the only approach to priesthood among the Kachina is the jatica, who is an exorcist (rose) practising his art for powerful chiefs (duran). Some first production of the priesthood, however, in the persons of their chiefs, who alone preschood, however, in the persons of their chiefs, who alone the resonal certain tribal and national sacrifices: and the idea of personal certain tribal and national sacrifices; and the idea of personal (a) Priests.—The idea of a priesthood is foreign to the unhowever, in the persons of their chiefs, who alone can perform occrain tribal and national sacrifices; and the idea of personal certain tribal and national sacrifices; and the idea of personal of the White Karens, at which one case of the tabits, and of the cases of the tripus, high priest chief of the Labits, and of the damadi sawbias, the hereditary priest of the nats among the Palaungs, are not to the point. The former is the result of a jumble of Chinese and Indo-Chinese ideas on the part of a tribe of Theto-Burman origin with strong Chinese proclivities, at the of these pairman origin with strong Chinese procurates, and the latter of a Mon-Annan tribe settled in the Shan country, of some education derived from Burnese sources. This last hereditary priesthood is an inaccurate adaptation of the Burnese tháthanabaina, or 'head of religion, 'whose title is usnally with equal incorrectness translated by the English term 'archbishop,' as he is merely the chief of the heads of the Monastio Order, primus inter pares. Ordinarily the priestly persona is not to be distinguished from the necromancer or exorci

is not to be distinguished from the necronancer or exorcist, and acquires his qualifications in the same way.

(b) Vise men and women.—The Burman wise men and women and diviners generally (natsaw, tumae, mittee) are merely ordinary villagers of no social standing, who act in a quasi-covered to think originity is the wise-man physician whee worsels of think no riginity is the wise-man physician whee worsels in iron '(than wize), and is a vendor of charms against injury. The female medium is known as the nat's wise (natkadaw), and retains her powers only so long as the nat possesses her and keeps her in an hysterical condition. This condition is recognized as necessary, and a formal marriage with the nat is medium and professional exortists, both male (natayad, natik, natsaw, natthunge) and female (natkadaw, natmemma), were employed to chant and pray in the proper form at the State employed to chant and pray in the proper form at the State

estivals.

(c) Qualifications.—The qualifications of an exorcist or wise (c) qualifications.—The qualifications of an express or wise man commence with none at all, as in the case of the Wild Was, who have no priests or mediums, and among whom any old man can conduct the invocations. The Red Karens require very slight qualifications, and the diviners are usually selected old nen, who carry out the national chicken-bone divination, and have charge of the village nat-shrine. But the Kachin exorist (unusa) succeeds to the office by natural selection after a volun-tary apprenticeship, and the Kachin diviner (mitne), who is a medium entirely under spirit possession, divining while in a medium entirely under spirit possession, divining while in orden to prove that he has communications with the spirit world.

ond. Among the civilized Burmans, the qualifications of the exor-ete (hmansanii) are much more sophisticated. They drink Althoug the crimzed but have sophisticated. They drink water in which ashes of scrolls containing cabalistic squares and mystic figures have been mixed, or take special medicines, or

mystic figures have been mixed, or take special medicines, or are tatued with figures of nafts, magic squares, and incantations. Some of these exorcists maintain their reputation by conjuring tricks (khontelet puce) which are regarded as miracles.

(ii) Methods.—The ordinary use of an exorcist or medium is to restore health, and the methods usually employed are magic to restore health, and the methods usually employed are magic causes cattle disease, and he is exorcized by placing a betel box and a pipe in a bag hung from a bamboo pole, and by dancing round the diseased animal, which is tied to a post. Some exorcists have a divining rod (practian), with which they thrash the possessed to drive out the witch in possession. The true chancing mediums are generally women (naturan), how limit chances, though they occasionally exorcize as well. Such women wear a distinitive garment in the shape of a red cloth wrapped dances, though they occasionally exoreize as well. Such women were a distinctive garment in the shape of a red cloth wrapped round the head. Among the Talaings the dancing medium is of importance, and is employed at the triennial national feast to the village guardians, to dance away sickness in general accostume suited to the particular spirit to be addressed or invoked is customary among Eurmans, Kachins, and others—a custom that is specially noticeable in the festivals in homour of the Thirty-seven Nate, when the dress of the medium is an essential part of the ceremonary.

the Thirty-seven Nats, when the dress of the medium is an essential part of the ceremon, the dress of the medium is an essential part of the ceremony, applicable also to the Kachins, to drive out sickness is the following: 'A bamboo altar is constructed in the house, and various offerings (holled fowls, port, plantains, coco-muts, rice, etc.) are placed on it for the nat. The exorcist (natsaya) then stands a bright copper or brass plate on ead near the altar, and begins to chant, at the same time watching for the shadow of the nat on the polished copper. When this appears, the officiant begins to dance, and gradually works hardrequently causes the patient to do the same thing, with obvious results one way or the other, especially if, as not unseldom happens, this invocation of the possessing spirit is continued for two or three days' (Upper Burma Gazetteer, pt. i. vol. ii. p. 29).

vol. ii. p. 29). Sick children are afflicted by Chaungzon Nat, the Spirit of the Junction of the Waters. Little boats, in which are placed an egg, some of the child's hair, and some sweetmeats, are made

and isometimed, by vary of providing susceptions, are made wardly after such a cerumony as that just described.

(f) Spirit possession.—The idea of spirit possession in other creatures than mediums has not been much developed in Burma ; but Burmans, possibly under Indian influence, believe that evil spirits and malignant phosts enter into alligators and tigers and cause them to destroy human life.

(4) Magie. - The object of Burmese magic (nuinsalit) is to secure hallucination in respect of the five senses, and to confer temporary invulnerability. This is achieved by potent mixtures, such as the following: equal parts of the livers of a human being, monkey, black dog, goat, cobra, and owl, and a whole lizard, pounded from midnight till dawn, and kept in a gold or silver box, and rubbed on various parts of the body. This will secure second sight, invisibility, death of an enemy, and a good many other objects of desire.

(a) Indian influence.—Certain specific kinds of magic have no doubt come from India—which accounts for the otherwise

puzzling fact that Buddhist monks (phingpis) themselves are much addicted to it. That they have drawn on native Animistic sources to enlarge the knowledge is but natural. The name, story, anchefet through an invisible agency in three ways; throw may store at a house, beating people with a stick, and hurning houses or villages. Invisible stone-throwing on the roofs of houses, attributed to rats, is a common greavance in Burman. (b) Wild tribes.—Among the wilder tribes magic takes a simpler and more directly unespointsicated form. The Sgan and the Pwo Karens, when embarking on an expedition, kill a hog or a tow, and roll up in a leaf, with some saft, a portion of the heart, liver, and entrails. This ties up the heads of the enemy. (c) Articles subjected to magic.—(i) Dants. The Great Nat (Buddhist in origin) of the Palannes visited Loi Seng Hill in Tawngpeng in a magic harge (hppung setkya). Initias, who are puzzling fact that Ruddhist monks (pongyis) themselves

Inthas, Tawngpeng in a magic barge (hpaung setkya). Inthas, wh lake-dwellers on the Yawng Hwe Lake, worship the magic u ho are lake-dwellers on the Yawng Hwe Lake, worship the magic boat (hpaung-daw) in which their original anessor came (probably of Burmess origin).—(i). Stones. At Nyaung-a there is a twisted stone, in which dwells Ape Shwe Mywin, a spirit. If the sick can lift it, they will recover; if not, they will flee. On Mandalay they will be the sign of the The main charms for invulnerability are Indian, and are con-nected with the legend of Bawithada, the miraculous leaper, which is but the Burmese pronunciation of an uncorrupted Pali form.

(5) Evil eye.—Except as the result of Hindu influence, the idea of the evil eye (lusonkya) has never developed in Burma, though it exists; and among the Kachins some people who have two souls (numla), one of which possesses the evil eye, are looked upon as dangerous, and are murdered.

(6) Tatuing .- Every self-respecting Burman is extensively tatued from the waist to the knee.

extensively tartued from the wast to the knee The practice is largely connected with magic. (a) Male tutuing.—Among Barmans the tatuing is almost always for reasons of magic. Exorcist (Imanewayi) attain their powers by being tatued with figures of nats, incantations, and cabalistic squares (in). With these also every Burnan is tatued. Being tatued with figures of nats in red, by means of tattied. Deing tattied with figures of basis in etc., by incurs of a continuous and a conti and even Buddhist inscriptions in Pali are brought into requisition.

tion. Shan military officers of rank were tatued in order to acquire the powers of deceased heroes, and the ceremony was accompanied with ecremonial cannibalism. He disarrest ratued in red with the tribal emblem of the rising sun on the small of the back, as a magic symbol. Sawugtung Karens had two black squares hereath the chin for the same reason. Was are occasion-

ally talued on the arms and breast with charms.

The tatuing of the Burman from waist to knee is nowadays a The tatning of the Borman from waist to knee is nowadays a mere enstom for 'beauty', but was beyond doubt originally a protective magical charm, as is shown by the figures ordinarily seriected, and by the incantations repeated during the operation. Shan tatuing of the same kind is more extensive, down the calves and up the back and chest, and is still more avowedly of a necromantic nature, as are all the additional figures about the bodies of some Burnaus. Tatuing with the figure of lawdithaids, the miraculous leaper, as a symbol of lighting capacity, and carried out with occult exermonies, is a notable instance of necromancy adopted originally from Indian sources. The Burnau has an interalicable belief in the efficacy of

Burman has an ineradicable belief in the efficacy of I charms. In 1881 a youth in Rangoon was tatued with a tatued charms.

tatuet charms. In 1881 a youth in Rangeon was tatued with a beging (paddy-hird) as a protection from drowing, and was thrown with his consent into the Rangoon River and was thrown with his consent into the Rangoon River and was thrown with the Latures (apply were convicted of manslaughter; but all the Burmans thought it a miscarriage of justice, as the drowning was due in their minds to some mistake in the ceremony (Scott, The Burman, i. 50).

(b) Ennale tutuine,—Among Burmans, female tatuing is rare and disreputable, and is resorted to as a love-charm—a small triangle of three red dots.

Lai Chin women are tatued in black all over the face and breast, originally probably as a means of identification if captured by outsiders. A similar custom is said to exist in the North at the sources of the Nam Ma, the extreme north-east of the Shan States. Marn Kachin women used to be tatued in a series or rings from the foot to the knee, perhaps for identification. of rings from the foot to the knee, perhaps for identification.

(c) Tatving as a badge.—Burman soldiers were taked with

the animal badge of their regiments on the small of the back-dragon, lion, rat, etc.—no doubt as a charm.

(d) Tatuing as a punishment.—Burman criminals were tatued (a) Tathing as a pinishment.—Burman eriminals were tatued with a circle on the check (pageet), or with descriptive devices on the chest, to show that they were murderers (luthut), thieves (thu-bko), or dacoits (damya, highwaymen). Sometimes the offence was tatued on them in words.

 H"itchcraft. - Brähmanie influence, through Buddhism, has had a distinct effect on the modern Burmese practice of witchcraft, which is recognized in the Burmese 'Law-Books,' wherein are instructions as to the finding of witches and as to the manner of punishing them. The Talaings consider that witches and wizards are the result of the 'devil-dances' instituted to drive away epidemics.

Witches (sõnmā) and wizards (sõn) can harm others by occult influence, and by sending out their own spirits (leippyā) to possess them. Proofs of their action in case of death used to be found by cremating the body of the person affected, and discovering pieces of hide or beef (apin) in the fire; in the case of the living, similar information is sought by placing food in a platter outside the house at nightfall, for the dogs to eat. If in the morning grass was found in the platter, the victim was under a witch's displeasure: if stones, he would recover; if earth, he would certainly die.

If a witch confessed on accusation, she was merely banished. If she would not confess, she had to go through a cruel and disgusting ordeal by water, when, if she floated, she was judged to be guilty, because she must have floated on account of the charmed empty gourd or bladder in her stomach. If she sank, she was not guilty, and had to be heavily compensated. She was not allowed to drown

Among the Kachins, some exorcists (tumsa) are also wizards, and can cause sickness by bewitching their victims (marong matsai). The 'wild' attitude generally towards witchcraft and its professors is thus well described by George in the Upper Burma Gazetteer, pt. i. vol. i. p. 427, when summarizing a case between Kachins before himself:

C, the brother of A and B, happened to die of fever, and before dying declared that D had bewitched him. Within a fertilicit A and B collected a following, attacked D's house, shot him dead, and, capturing the whole of the household and relation, some thritten in all, sold them into slavery. Even on trial A and B would not admit the possibility of C having made a mistake, and were scandalized that the British Government should interfere on the behalf of the wizard.

21. Cannibalism.—Cannibalism is persistently, but quite doubtfully, ascribed to the Wild Was, Kachins, and even Shans. It probably always existed in a ceremonial form, to obtain magical powers, among Shan military officers of distinction, while undergoing a particular form of tatuing. In 1888 the captured rebelchief Twet Ngalū was shot and buried by his guard. He had been a monk, had a great name as a sorcerer, and was elaborately tatued. The nearest Shan sawbwa (chief) dug up the corpse, and boiled down the head and other portions of the body into a notent decoction, and was with difficulty dissuaded from sending a small phial of this for the use of the British Chief Commissioner (Upper Burma Gazetteer, pt. i. vol. ii. p. 37). The existing headhunting of the Wild Was is a relic of cannibalism, as is admitted by themselves, and it has been attributed to them as long as there have been Enropeans in the East (see Camoens, Lusiadas, cant. x. 86).

22. Domestic customs.—(1) Pregnancy.—Customs connected with pregnancy are not common. Kachin women must not eat honey or porcupine flesh at that time, as they cause miscarriage. Among Shans the husband should not drive pigs, carry the dead, dig or fill in holes, or mock at

others.

(2) Birth.—Kachin customs explain the reason for the observances at birth. Normal births are under the protection of the house guardian. Abnormal births occur when the jungle nats (sawn) have driven out the guardians-a situation which the exercist ascertains by divination from bamboos

(chippawot). Therefore, by way of general propitia-tion, at all births two pots of beer are prepared: one for the general company and one named after the child immediately on its appearance, and drunk in its honour. So also it is necessary to notify the fact of the birth to the nats by sacrilices. After a normal birth the mother remains at home out of the nats' way for three days, and on the fourth she is formally protected from the nats who desire to carry off her child, by throwing a spear at a spring. At abnormal births the nats are appeased by sacrifices, and driven away by noise and the burning of foul-smelling things.

The Red Karens improve on the beer-drinking of the Kachins by turning their birth feasts into orgies of meat and drink, and teaching the infant to drink liquor while still at the breast. When the child is three or four days old, the mother takes it and a boe in her arms, and hoes a little ground, soon after which the ear-boring ceremony. usually a function at puberty, takes place, showing its protective origin. Sawngtung Karens on the birth of a child place a brass ring and a skein of white cotton on the shrine (natsin) of the house guardians. Among them, too, twins and triplets,

being spiritually dangerous, are always killed.

Spirit-scaring, combined with spirit protection, under cover of driving out evil humours—an idea acquired from Indian medicine of no very early date—is no doubt responsible for the extraordinarily cruel birth-customs of the modern Burman. Immediately after the birth of the child, the mother is rubbed over with turmerie (nā-nwin), and then heated with fire, blankets, and hot bricks  $(\delta t \ p \bar{u})$  for seven days. She is then steamed over a jar of boiling water, and finally has a cold bath. All this time she perpetually drinks sein, a secret green concoction prepared by midwives (wunzwe), and smells at samonnet (balls of the Nigella sativa).

Among Shans, and Red Karens especially, a

good many articles of food are forbidden to the mother, and even to her husband, for from seven days to a month. Impurity of the mother is recognized by the Shans for seven days, and purification is effected by exposure to the fire of any wood that does not exude milk or gum, and finally by bath-

Among Red and White Karens there are curious traces of the courade. Among the Red Karens only the father may act as midwife, and he may not speak to any one after the birth of his child. Among the White Karens (Mēpū) no one may leave the village after a birth until the umbilical cord is eut, this event being announced by bursting a bamboo by heating. This custom is said to be extended to the birth of domestic animals. No stranger may enter the house of a woman during her confinement. No customs seem to exist connected with the umbilical cord, except that the Red Karens hang up all the cords of the village in sealed bamboo receptacles (kyndeuk) on a selected tree. The Shans have a custom, borrowed from India, of bathing male infants in a bath containing articles of value

(3) Names and naming.—Kachins give a child a name immediately after birth, or the nats will give it a name that will kill it, There is a good deal of restriction in naming children. Shans, copied in this by the Kachins and White Karens, are confined to quite a small choice of names, according to the order in which the child is born, Among the Bre and Sawngtung (Red Karens) a child must be named after its maternal grandparent, according to sex-by the mother, unless the chicken bone augury is against her, when the father has the right. Burmans are named after the initial of the name of the day of the week on which they are born (Indian influence), and the

future character of the child is deduced from the name of the birthday.

There is a good deal of changing of names.

hovs, on entering on the obligatory probation in a monastery, are given a scholastic name in Indian horoscopic fashion, which is retained for life if they become monks, but may not be used if they return to lay life. But amongst Shans, if there is illness or misfortune or suspected hostile spirit influences, the name is changed, to avert evil and procure better luck, according to horoscopic rules which are Buddhist, subjected to Chinese influence. In the ease of infants, a lucky name is given by a supposed exchange of the child for something after which it is named: c.g. cloth, silver, weight, roast meat, visitor, moon, birth-marks, alms (to a monastery). A Burman, however, may change his name at any time by merely sending a packet of tea salad (lapēt) to all concerned, and announcing the fact. Among Sgau and Pwo Karens the parents change their names on the birth of a child. (4) Puberty is not much noticed domestically. Ear-boring is obligatory on all girls, but is optional with boys, among the Burmans. All Bre (Red Karen) children stain their teeth black with much ceremony at about ten years of age-no doubt in connexion with puberty.

(5) Marriage, -Marriages in Burma present an astonishing variety of practice and principle, and nearly all the methods known to mankind are there in vogue somewhere or other. The only general guide disclosed as to the mental attitude of the people towards the subject is that marriage is on the whole regarded as a purely eivil matter with which religion has very little concern—an attitude that is encouraged by the Buddhist religion, but not at all suited to the notions of Brāhmanism, or of the modern Hindu astrologers. who have introduced all the ceremony possible to

them in the conditions.

them in the conditions.

(a) Ferbidden degrees.—The rule is that marriage with parents, grandparents, children, grandchildren, brothers and sisters, is forbidden, but sometimes uncles and aunts are added (Shans). A Burman may marry his stepmother. The matriachal system of forbidden degrees is in vecus among the mother's brother, but never with the daughter of the father's or mother's sister. Likewise any one, even a stranger, with the same family name (father's side) is within the forbidden degrees, and consequently all blood-relationship runs through the females. The same idea obliges a Kachin or a Chin to marry his elder brother's widow, or in extreme cases to provide

marry his elder brother's widow, or in extreme cases to provide a substitute for her re-marriage.

A severely restricted area of marriage found among the Karens looks like a relic of totemism, but probably has quite a different explanation. Among Sgau and Pwo Karens, in times of general danger, the girls of alided villages are given in exchange as brides to become hostages for the good faith of the villagers towards each other. Hence we seem to have an explanation of some curious Karen customs. The Sawngtungs then not without the consent of the elders. The area of choice is so small that many aged enforced bachelors and spinsters exist and it results in creat irregularity of age in the married is so small that many aged enforced bachelors and spinsters exist, and it results in great irregularity of age in the married couple. This is carried to an extreme extent by the Banyoks of Banyin in Loi Seng, where the field of choice is among six families at the order of the chief official of the district (taungsā).

families at the order of the chief official of the district (tranged). It has nearly wiped out the tribe.

The Szi Kachins have a custom which looks like an instance of Indian hypergamy, but is probably really reterable to those above mentioned. They have permanently connected families, one of which gives duaghers to another, but cannot receive Malang girls may not be married to Chumlits.

(b) Freedom of choice.—Absolute freedom of action is a characteristic of the Burman woman. She has separate property, whether owned before or acquired after marriage, and she takes this property with her on divorces, if offended, without any cerepieses, and separates or divorces, if offended, without any cerepieses, and separates or divorces, if offended, without any cerepieses, and separates or divorces, if offended, without any cerepieses, and separates or divorces, if offended, without any cerepies of the divorces in all domestic matters and in purchases and sales of family property, and acts with her husband's authority in his absence,

in all domestic matters and in purchases and sales of family property, and acts with her husband's authority in his absence, where the control of the contro

purpose. A child born in consequence is a 'debt' to the girl's lather, and its father has to pay a fine or marry the girl. On the other isand, among Sawnglung Karens bors on attaining puberty must live entirely in a bachelor's lut (har) outside the village, and may not speak to a girl until marriet, except at

death-feasts and marris

ueann-reasts and marriages.

Among the Meng (Miaotzu) there is a sort of irrevocable betrothal, at which the engaged couple sing and dance and go off together at intervals for years, or until the girl is enceinte. on together at intervals for years, or until the girl is enceinte. The Yao have the same custom, but less crude—the girl remaining at home until claimed, and the singing of the couple being by way of strophe and antistrophe, while there is some remaining at home until clasiner, and the singing of the couple being by way of strophe and antistrophe, while there is some consultation of horse-opes. Karens, however, have liniant arriage, or irrevocable betrothal between children of five or six, when a feast, consisting of orgies, takes place, and another is held at the subsequent marriage. Pracch of such a beterothal is expiated by a fine.
(d) Marriage by p

is need and the suspension matrices. Each of weak a two search two search was a compared to the purchases.—Palaung girls are bought and retained for life in the husband's family. Libraw girls are bought at fixed customary prices, become their husband's projecty, and are saleable it they cannot agree with them.

(c) Marriage by apprix—Marriage by capture is a wide-spread custom among hill tribes. Kachin marriages are preceded by actual capture, after a respectable householder in the girl's village has fixed her dower. The girls are not consulted, and are bound by their parents wheles. Even the bought wives of the Librawa are actually addicted to the consulted and are bound by their parents wheles. Even the bought wives of the Librawa are actually addicted and the consulted and are bound possible to the consulted and are consulted and by their parents where the consulted and the consulted are also greatly drawn by lot in parts. The marriage is a concerted elopement, without ceremonics. Among Mahs, the pair leave the hut for the night, and in the morning inform the girl's parents.

Among Burmans, throwing stones on the roof of the bridal.

Among Burmans, throwing stones on the roof of the bridal Among Eurmans, throwing stones on the roof of the bridal pair on the marriage night, and tying a string arross the brid-groom's path in order to demand a present, are probably relus of a bygone marriage by capture. This last custom is practized also by secluded tribes on the eastern frontiers.

(f) Absence of ceremonial.—Everywhere the feeling is that narriage does not require any ceremony. There is none

(f) Absence of ceremonical.—Everywhere the feeling is that marriage does not require any ceremony. There is none amongst the Mengs, Chins, Akhās, Tanngyos, or Banyok Karens, or among Shans and Burmans in the villages.

(g) Ceremonical.—It rarely happens that anything takes place beyond public announcement to friends or a feast of rejoiring. The Red Karens and Kachins indulige in drunken orgics. Amongst educated Burmans, Shans, and others who copy them, there are sometimes ceremonics of an Indian type combunity by points, but these commons, the essential point of which is feeding each other in public. The Akhos tie the arms of the bridgh mit together. The Sgan and Pow Karens are more Kachirs have a simple ceremony, the essential point of which is feeding each other in public. The Akhos tie the arms of the bridal pair together. The Sgau and Pwo Karens are more elaborate in their ceremonies. They dench the bride with water as she enters the bridegroom's house, and the binding ceremony is the drinking of a cup of spirits by the elders representing the parties. Among Red Karens the cup is drunk by the bridal pair themselves in each other's houses. The only approach to a regular ceremony is among the Kadis. Both they and the Tanugthis ask the daughter of the house from the house nat, but the Kadis bridegroom makes a present of a bamboo. Full of tea, cural in length to the kang-best of the one amise nat, but the Radu bridegroom makes a present of a bamboo, full of tea, equal in length to the king pest of the bride's house; and small packets of lapet are suspended by a string, the whole length of the king-post. The Lands of the young couple are then joined, and they go hand in hand down the stairs and shikho to the and of the hones at the

(b) Adultery.—One hears but little of married adultery, but a good deal of connexion between the unmarried. The usual penalty is expulsion from the village among some tribes, as the Taungthus, who resent it when it results in illegitimate the connection of the con children. Among Taungyos, the mother of an child must either be married or compensated.

child must either be married or compensated. If she cannot prove the adhiation, she is turned out of the village, Savingtung Karens expel the runaway couples of their villages, but jurish elopements of their own girls with strangers by enforced suicide of the guilty parties or by hanging.

(b) Polygamia,—Polygamy is unrestricted among the Chius, and is the rule among the Akhas, It is permitted to the servant. Among the Kachins, it is the production of the control of

to Akhos.

to Akhes.

(D Dirace,—Among Burmans, Shans, and Red Karens,
(D Dirace,—Among Burmans, Shans, and Red Karens,
divorce is by mutual consent; nevertheless it is neither common nor reputable. Palaungs copy the Burmses, but adultery demands compensation merely, not divorce. Among Akhes it is essy on a money payment. It is unknown among Sawngtung and White Karens, and among Chins, whose absconding wives, if recovered, are taken back on the murder of the seducer.

(6) Death.—Throughout Burma the object of the

death ceremonies is to prevent the spirits of the dead, especially of the person just deceased, from injuring the living; and the origin of the universal wakes and feasting is to propitiate the spirits by letting them have a share in them. The ceremonies are a combined exorcism and propitiation. This is shown in the practice of postponing funerals until

the community can properly carry out the necessary ceremonies.

ceremonies.

Among Palaungs, hodies are kept unburied for some time under the control of the vidage edders, and the whole vidage is feasted in the interval. All funerals are jublic, the entire community attending. If a Red Karen dies away from hone, his funeral cannot be celebrated until his guardian sport permits it. Peasting, dancing, and noise-making go on until the spirit announces its arrival by tinkling a row-bell, when the funeral takes place over a straw edity. Here the sense of the funeral correnous exclearly comes out.

the funeral cremonies clearly comes out.

Postponement of funerals is general. A prominent example is
the often described pongriphyra, or tuneral of a respected monk
long after his death. Lishaws keep their death in a wooden
cofin surrounded by stakes, until the spirits are consulted.
Syin Chins artificially dry corpses for a vear or more hetore
burial, by smoking and sun-drying, until they are reduced to a
purater of their original size. The Kachins bury the dead at
once, without ceremony, but postpone the funeral coremonies under
the dead at the content of the dead at
in a content period. In the case of chiefs, the bedy is kept
in a coffin supported above the cartie.

Leading the property of the content of the content of the stay is kept.

Leading the content of the content

Kachins commence the funeral ceremonies (mannakhoi) by presenting the nats' portion of a sacrifice (buffalo, bullock, pig. or fowl), chosen by an exorcist (tumsa) in consultation with the spirit of the deceased (manshippawt nai), at his temporary shrine (manjang) at the back of the house, where the household nats are worshipped. The sacrifice is then devoured. Among the Akhas, the slaughter of five buffaloes and a drinking-feast are the only ceremonies, even at the death of a man of position. Wakes are universal, and are intended to be propitiatory in the sense that the spirits can join in them. The Siyin Chins commence the funeral ceremony (mithi) with a slow measured dance, with locked hands and bent heads, round a platform on which the corpse is set upright, covered with gay cloths and ornaments. They wind up with a drunken debauch, such as is common on similar occasions among Red Karens, Kachins, and of hers

The Kachin's elaborate death ceremonies, after he has propitiated the spirit of the deceased, are all designed to frighten it away. death-dance and a wild rush into the jungle to frighten the ghost and drive it away. is requested not to become a nat and worry the The reason is made clear by the belief living. that a man returns six days and a woman seven days after a funeral: therefore the temporary shrine to the deceased (manjang) is destroyed so that it may not be found, and the first thing caught in the interval is offered to the ghost with spirits, with the avowed object of inducing the ghost to keep away. There is a death-dance after the destruction of the shrine, and a general drinking bont ends the ceremonies. Red Karens fire off guns at an approaching death, and make all the noise possible at funerals, to frighten away the nats. Burmans still do the same, although the practice is discouraged by their Buddhism, and was not permitted under native rule. So great is the fear of the returning spirit that, among Sgan and Pwo Karens, widows and orphans are banished the house, lest their misfortune should prove contagious. Shans sweep the place selected for the grave, with brambles and thorns, to clear off the evil spirits.

Kachins and some Karens have disconcerting notions as to exacting compensation for injury of whatever kind, real or fancied. Deaths, and even any debts or injuries, are avenged by murder or blood-money, or by reprisal against the place or thing causing the injury, at any time thereafter as long as memory lasts. A stream (in theory its nat) will be hacked with swords (das) if any one is

drowned in it.

Both Burmans and Shans have special customs, which do not appear to be indigenous, and are due to the Brahmanism introduced with Buddhism. Of these may be mentioned placing 'ferry-money (k + lokā) between the teeth of the deceased; swing-

ing the corpse three times over the grave, and throwing in a handful of earth by each person present (utcik) before the body is lowered into the grave; allowing no marks of a burn on the wrappings of the corpse; and not allowing people who have touched the corpse to enter the village

without bathing.

(7) Disposal of the dead.—The various peoples and tribes in Burma dispose of the dead by burying the body, or burning it and burying the ashes, or by both these methods. Where burial is resorted by both these methods. Where burnar is reserted to, coffins are universal, and there is much variety as to place of burial. With different tribes there are customs of burying in formal cemeteries, in separate graves, and in lonely places in the jungle. So also there are many ways of dealing with graves—from ignoring and forgetting them to elaborate monuments, dolmens, cromlechs, and barrows. The principle determining all the ceremonies and practices seems to be the prevention of injury to the living from the spirits of the dead by haunting.

haunting.

(a) Birsah.—(i.) Burial in coneteries.—Formal public cemeteries are used by Burmans, Karens, and Chins (Lai, Siyin, Sokte, Thade, and Tashön), the last named burying their dead outside the village in structures of mid and stone erected on the surface of the ground. In the Wild Wa country, barrows are found near the villages, three feet high by three wide, and up to a hundred yards long.

(ii.) Separate burial.—Tame Was bury ioside their villages, and Wild Was at the foot of the steps leading to the home. Northern Chins (Haka, Shnnkla) bury in deep catacombs in the yard in front of the home. Among Chins also (Siyin, Sokte, Thadò, Tashōn), superior families have vantl-like structures entered by a door, and surrounded by stone pillars and tall carved posts. Chiefs are separately buried on the road leading to the villages.

the village.

(iii.) Burial in remote places.—The object of burial in remote (iii.) Burial in remote places.—The object of burial in remote and lonely places is to keep the spirit from haunting the living. The living forget the place, and the dead their way bome. The idea in an attenuated form is seen in the Shan custom of burying separately in the jungle or near the village, and in the Burman custom of putting up no stone or other mark on or near the grave. Libawa merely bury the corpus at a distance. Akhās simply bury in a lonely place without ceremonies, and forget the grave, which is made level with the earth. Yas bard in a small triangle and mark the grave by three stones blaced in a small triangle. oury in some remove spot, and mark the grave by three stones placed in a small triangle, but the poorer classes make no mark on the grave. Mengs (Miaotzu) bury in the deep jungle, and the nearest relative tends the grave for three years, after which it is forgotten. Kachins explain all these customs by their habit of burying at any spot chosen by a Chinese sootheayer (sensen) as favourable for security from the ghost of the choceased deceased.

sayer (\*\*ensen\*) as tavontable for seconicy from the gnoss of the deceased.

(iv.) Coffin.—Burial is nearly always in a coffin, but the power I was merely wrap the corpse in matting. The nearly power is a comparable of the proper. Those of the Red Karens are large and control, the purpose. Those of the Red Karens are large and control, besides the corpse, food, icothing, implements, and necessaries of life. They are decorated during life as bandsomely as the owner can afford. The Burman, on the other hand, is buried in a light coffin roughly nailed together.

(b) Cleavanton.—(l.) Objects of cremation.—Cremation is (A.) Cleavanton.—(l.) Chipets of cremation.—Cremation is a comparable of the comparable of t

eceased.

(ii.) Cremation of the respected and holy dead.—The well-nown cremation of a respected pongyi, or Buddhist monk (ii.) Cremation of the respected panging or Buddhist monk known cremation of a respected panging or Buddhist monk (pōng/hb/ah), with all its Indian Buddhist ceremonial, is in reality an indigenous ceremony. Burmans burn especially respected and aged persons as well, collect the bones, wash them, and bury them in a pot in the cemetery or near a pageda. Over the ashes they erect a small pageda without the crowning umbrella (Atb.) but over the ashes of a great pōngpi an ordinary (c) Burial at a neetfall home. In distress the state as the distributions.

(c) Burial at ancestral home.—In direct contradiction to the lonely grave, which is to be forgotten as soon as possible, there is the strong feeling, among Narens and Chins of the necessity of being buried at the ancestral home. The explanation is to be found in the Red Karen funeral ceremonies, which show the contradiction of the contradiction of the living multiple comparison to the property of the living building the state of the contradiction (c) Burial at ancestral home. - In direct contradiction to the

(d) Monuments.—The object of the ordinary monument in Burma is to provide a home for the spirit of the deceased, in the hope that it may remain there. Kachins erect a conical thatch (lup) never graves, but Szi Kachins a lup or a hut. The Chinbin Chinbin is the spirit of the spirit of the contrary type, and the Red Karens a miniature shed containing fond. In the Wild Wa country are found cronducts and collections of honders, with pointed stones in the centre which are said to honders, with pointed stones in the centre which are said to honders with pointed stones in the centre which are said to honders with pointed stones in the centre which are said to honder support to home the contract of the support to home the contract of the spirit of the deceased, or house nats, at a distance. Lai Chins creet a dolumen over the ashes of the cremated dead.

(8) Sluvery.—Slavery is almost universal among

(8) Slavery.—Slavery is almost universal among the hill tribes. It has a distinct effect on their physical development, and accounts for the great variety of form and feature, and sometimes of custom, observable where it is prevalent. Usually it is the result of raids on neighbours, but people of the same tribe and even of the same village (Kachins, Chins, Karens) and also relatives (Red Karens) may be enslaved or sold into slavery. Slavery for debt is everywhere recognized, and the general principle of legalized slavery is clearly shown by the Sgau and Pwo Karen custom of selling into slavery defaulting debrors, captives in forays, and confirmed thieves. This principle, in its extreme application common in the Far East, is visible in the Akhā custom of selling themselves into slavery when their crops fail. The Chins prefer monks (ponquis) and women as slaves, because they are the least likely to escape, and Sgau and Pwo Karens killed the men and the children in forays, but saved the women as slaves.

The custom is to treat slaves well, and not to make them work Larder than their masters, provided they give no trouble. The female slaves are not turned into concubines, and are not made to suffer indignities (Red Karens, Chins, and Kachins). They may marry free men, the master acting as father-in-law (Kachins), and slaves may marry free women (Kachins). But the abiding principle in Burmese slavery is—once a slave always a slave for all succeeding generations. All the children of slaves are slaves. It is the only idea of 'caste' that has reached the Indo-Chinese races in Burma, and it has been applied to religious uses with cruel effect. It begins with a superstition. The Sgau and Pwo Karens sell into slavery widows and widowers who cannot pay the 'price' of the deceased, and those who introduce epidemics—a principle that was extended to the tillers of the Royal lands (lamaing) in Mandalay, who were all slaves ipso facto. With the help of imported Brāhmanical ideas, the principle was further extended to the attendants at Buddhist shrines, the so-called pagoda slaves (parāgyūn). The pagoda so-carred pagoda shores (per synthetic of the slave, absolutely dedicated to the service of the could not be liberated or find a substitute, and the slavery descended for ever to all children, wives, and husbands of pagoda slaves, and to any free children they might have had on marriage. duty was to keep the pagodas in order, and the slave might be employed in no other capacity, on pain of the employer being sent to the lowest (Buddhist) hell. The pagoda slaves are, in fact, a 'low caste.' The whole idea is Indian, no doubt introduced with Buddhism from the analogy of the dedicated attendants of Hindu shrines, with the help of the indigenous practices as to slavery. So great is the stigma attached to slavery of this nature, that all the prestige and authority of the British Government have been unable materially to alter the status or means of livelihood of this unfortunate class since the emancipation granted them under British rule.

23. Palace customs.—The customs of the late Royal Court of Burma, up to the British occupation of the country in 1885, are preserved in the Lawkābyūhā Inyon volume, and in the Yāzawindaw

(Royal Chronicle) of Mandalay. They not only present a faithful picture of all the religious and superstitions ideas of the people, but are also a sort of epitome of them, whether indigenous or imported. Many of the allusions contained in the religious or quasi-religious practices of the Palace refer directly to Buddhism, or to the old Brah-manism which accompanied it, or to the modern Hinduism introduced by the Royal astrologers. The references to the indigenous Animism are also numerous, and of these the most instructive and important for the study of religion in Burma are recorded in the following account:

(1) Enthronement ceremonial.—At the enthronement of the kings of the last dynasty, a temporary palace was erected, called the Thagyanan (the Palace of Thagya, the archinat of the Thirty-seven and Buddhist 'archangel'), where the king performed the eremonial washing of his head before ascending the throne. Here was also deposited a golden casket containing some 'golden quicksilver' with the nine precious stones (Indian) with the nine precious stones (Indian) and some charmed water. After the washing the king was 'anointed' with water blessed by eight Hindu astrologers  $(p\bar{o}nn\bar{\sigma}s)$ , and presented by them with a charmed flower  $(p\sigma vitp\bar{\sigma}n)$ . After this ceremony a  $p\bar{o}nn\bar{\sigma}$  fixed the auspicious day for ascending the throne, which was made of pipal wood (the Indian sacred fig). As soon as the royal couple were scated thereon, the lucky silver gong (mingalā nawēmaung) was sounded.

(2) The king's sacred position.—The king's title was Athet-u-san-paing-than-ashin, 'Lord of the life, head, and hair of all human beings. His word was above the law and infallible. His orders were Divine communications (byā-theit). He was immeasurably above every other human being; all, even the chief queen, were obliged to treat him and all his personal property with the utmost respect as sacred, and a special honorific language

respect as sacred, and a spectal monorine language was used in his presence with respect to him.

(3) The royal vives.—The king was obliged to have eight queens and as many concubines as Chinese and Shan potentates presented to him. The neglect of Thibaw, the last king, to comply with this custom caused much, concern among his most law-abiding subjects. The chief queen was

most law-anding subjects. The enter queen was usually a half-sister, but sometimes even a sister.

(4) The Order of the 'Salvē.'—This was an Order established in the persons of those who were entitled to wear the salve, a belt of golden chains tied together by bosses, worn over the shoulder, the number of strands indicating the rank. The regulations concerning it are recorded in the Salwedin Sadan (Book of the Order of the Salwe). These show that the salwe is nothing but the Indian janeu (Brahmanical cord) turned to secular purposes.

(5) Court festivals. - In every month of the year (5) Court jesuous.—In every month of the year there was a Royal feast for the Court and the public. Some of these were national, some peculiar to Mandalay, some almost exclusively Court functions. Animistic practices were current

at many of them.

at many of them.

(a) March-April, Tagü: Hnit-thit Thigyāndaw Pree, New Year's Day and Water Feast.—On New Year's Day water from the Irrawaddy, doubly sacred from the thessing of the pönnös and the handling of the king, was used to wash the sacred images in the pagodas. The king and chief queen washed their hair in water from the hollows of sacred cotton trees growing in the villages of Bök and Kriwun, while pönnös invoked the nats of hön (fire) and gyö (planets).

(b) April-May, Rasön: Nyaungjödaw Pree, Charmed Water Feast.—Water from the Irrawaddy was formally presented to the king and chief queen, and given by them to the contiers and maids of honour to wash the sacred images within the palace walls.

palace walls.

palace walls. (c) May-June, Nayōn; Mōnāt Pūzaw (Hindu Moghanatha-pāyā), Worship of the Lord of the Clouds,—This consisted of prayers for rain (nga-payai'd) by the sadars (heads of birdhist monasteries), also known as Ngayān Min's Prayer. He was king of the murrel fish (sake-head), whose prayer when his

lagoon dried up is known all over Burma. At this ceremony pinness prayed to figures representing the nats of the rain, which are human spirits, and the nats of the water, which are the spirits of alligators, trogs, and nurrel fish. These were set up in tozamags (temporary seven-tier structures), and finally thrown into the Irrawaldy. The whole lestival has a strong resident in the second of the second of

ndan bas. (d) In the same month was held the feast of the Mingala édan Pwe, the Feast of the Lucky Ploughing, when the king, a full military costume, ploughed and harrowed a certain field Iddin Pwe, the Feast of the Lacky Ploughing, when the king, in full milliary costune, ploughed and harrowed a certain field to procure a good harvest, while poinus offered prayers to fifteen Hindin gods, and male and female necromancers natesquist, natisks, natisks, natisks, particle of the Thirty seven Nats. (c) July-Angust, Fuguany; Saydida Pwe, the Feast of the Offerings.—The king sent officials (natisks and naticins) with offerings of clothing to the strine (naticuly) of the Shwishin Nyinang Nats, two of the Thirty-seven, at Tangelyön. (f) October-November, Tasunupmön: Kateindaw Pre, the Feast of the Presentation of Robes (to the modes).—The wives

Feast of the Presentation of Robes (to the monks).—The wives of the Court officials had to perform, hetween sunset and sunrise, the whole process of making cloth for draping the most scared tmages in the Seven Nanthin Pagodas, from spin-ning to the woven material, out of raw cotton supplied by the family call really Hindu delitely, whose metal images were kept in a special building with a three-tier roof, were worshipped by the Court.

(g) At the Taraungdaing Puce, the Feast of Burning the Shrines, also held in this month, eight large pysithsets (ornamented wicker work spires) and many small banhoo models of pagedas were displayed to the king and chief queen and then

pagodas were displayed to the king and chief queen and then have been been as the construction of the cons

24. Hindu influence.-In cases where the old Brāhmanism (introduced with Buddhism) and the modern Hinduism (introduced by the Manipuri astrologers) have affected the religious ideas of the natives of Burma, the fact has been already pointed out in each instance. But there are certain other prominent examples of the influence of Hinduism which require to be considered separately.

(1) On the Royal Court .- The late Royal Court was strongly impregnated with Hindu superwas strongly impregnated with findu super-stition, which was prominently present in the punishment by the legal flogging of persons who habitually killed cows or ate beef. It came out strongly after the king had been deposed, in the doings of various persons who had been connected with the Court. A Hindu Manipurī astrologer (pōnnā) was employed by the two Chaunggwā princes in a plot against the British Government at Mandalay in 1886, though they were accompanied by a Burman Buddhist priest (põngyī). He drew their horoscopes, prophesying that the younger brother only would succeed. The party of the elder brother thereupon dissolved. The sadaw (abbot) of the Modi Monastery at Mandalay was in the plot, and during a second plot, hatched in 1888 in that Monastery, the horoscope of the prince, a charmed bullet-proof image, and a jar of sacred water were found, when the place was attacked. The jar had been used for taking the oath of allegiance to the prince, and the ceremony had consisted of drinking a cupful of the water from the jar, in which an image of Gautania Buddha, made out of wood from the Bo-tree at Bodh Gayā, had been dipped. The Indian proclivities of the Court also appear in the magie stone in the courtyard of the Shwedagon Pagoda at Rangoon, which is engraved with the hare (moon) and the peacock (sun), symbolical of the claim of the last dynasty to both 'lunar and solar' descent (Rajpūt). The wership of the White

Elephant was greatly mixed up with the Court ceremonial, and, though apparently a peculiarly Burmese and Far Eastern institution, is nevertheless an instance of Indian influence introduced with Buddhism. The Saddān, or Sinbyādaze, or White Elephant, was not white, but was an animal endowed with mystical signs and powers of so pronounced an Indian type that Hindus greatly

reverenced it.

(2) On the people.—Among the people it is perhaps natural to find, considering their source, that powers of witcheraft, sorcery, and necromancy generally should follow the typical Indian custom of running in families. Hindu influence also causes nuch confusion in belief, and nats (Burman), balās (ogres, doubtfully Burman), and pycitātā (ghosts, clearly Indian prāta) are all found nixed up in the same story as disease- and death-bringing spirits. Most of the Animistic customs of the Burmans, Talaings, and Shans are nowadays referred incorrectly to a Brāhmanic origin through Buddhism. Hindu influence, too, much affects the Burmans as to lucky and unlucky days of the week, and these in their turn exercise so great an influence on their actions, ceremonies, and medicinal dicting a seriously to interfere with daily life

dieting as seriously to interfere with daily life.

(3) Pagoda slaves and other outcasts.—The Pagoda slaves (parāgyān) [see above, 'Slavery'] are an 'outcast' caste of the true Indian type—an idea entirely foreign to the Indo-Chinese mind. There is the same feeling towards professional wandering beggars (taduangasa), who may follow no other occupation; and with these are associated lepers, the deformed and the maimed (recalling the Indian idea of the 'sin of misfortune'), conductors of funerals, makers of coffins, and diggers of graves (sandalē). The feeling was extended to the slave tillers of the government lands (tamaing), to the lictors (letyātaung thingyeing), and to those specially tatued for crime (pagwēt), who were also constables, jailors, and executioners. No one associated with them, and they were often denied burial, being thrown out along with the town offal.

(4) The Nawngtung vestals.—The marriage of four virgins every three years to Sao Kaing, the Spirit of Lake Nawngtung at Kengtung (Shan States) is Hindu in type, the influence in this case probably coming up from the South through Siam from Cambodia. There is little dedication, however, as the girls go home after the ceremony and may marry; but if one of them dies soon afterwards, the nat has 'accepted' her.

(5) Onfestivals.—Hindu influence clearly appears again at the New Year Festival at Kengtung, when an indecent figure of Lahū Nat, a frog, is carried through the town, and thrown into the

carried through the town, and thrown into the river with obscene antics, 'for the public welfare.' (6) On superstitions.—A pōnnā, by means of neeromantic dreams, successfully cultivated a field in Nāmnadawzā Kwin near Mandalay, in which dwelt a death-dealing nat, when every Burman who tried to cultivate it came to an untimely end. The posts of a house are believed to be male, female, neuter, and the ogre's (balā) respectively, or according as they are of one size throughout, or bulge at the bottom, in the middle, or at the top. Female posts are the best for building, next the male; the others must be avoided. Nat shrines in trees are connected to the trees by a bridge made of threads for the use of the nat.

(7) Serpent-worship. — The accepted Burmese tradition is that King Anawrahta (Anawrahtāzaw) of Pagān, the Buddhist reformer of the 11th cent. A.D., put an end to the nāgāt- (pronounced in Burma nāgāt), or serpent-worship then prevalent. He probably merely scotched it, as is shown by the naga images about the Shwēzigön Pagoda at

Pagān, built after his death. The cult must, however, as its name implies, have been imported from India, and the numerous legends and folktales now current of naya maidens and naya heroes may safely be referred to a form of Animism that is not indigenous in the country, or be regarded as indigenous animal fables coloured by the cosmogony received through Buddhist sources. The presentation of a monster naya to the Pagoda is still an annual ceremony at the Tawadeinthä (Buddhist) festival in Tasaungmön (November), and on either side of the Mintet Tagb, or State Staircase at the Palace at Mandalay, are four guardian images (ppawthā tayinthā) directly referable to Indian naya-worship.

(8) The Five Nats.—Burmese books lay much stress on the Five Nats, which have all Indian names combined with the native word so, meaning 'ruler.' They are all 'nature' spirits: Mekkasō, Lord of the Rain (mēgha); Bōmmasō, Lord of the Earth (bhummi); Yōkkasō, Lord of the Trees (rukhka); Akāthasō, Lord of the Sky (ākāsā); and Thārasō, Lord of the Waters (sīra, lake).

(9) The Thirty-seven Nats.—The Thirty-seven Nats, famous throughout Burma, are clearly of Buddhist origin, and represent the inhabitants of Tāwadeinthā, the tāvatimsa heaven, the abode of the Thirty-three, where dwell the ruling spirits that interfere with mankind. To the Thirty-three four have been added in modern times, making up the now orthodox number of Thirty-seven. existing spirits are not by any means, in name, form, or representation, identical with the original Thirty-three, whose images, much debased from the Indian form, are still in existence at the Shwēzīgōn Pagoda at Pagan, which was con-structed at various dates from A.D. 1094 to 1164. At the present day, the Thirty-seven are all, with one exception, national heroes or heroines, whose story or life has caught the popular fancy. Consequently there is some vagueness in the orthodox list, though there is an extraordinary unanimity, among those who profess to know the subject, as to their names, and even the order in which they should come. In their existing form they exhibit in a remarkable manner the tendency of all mankind to fasten old-world stories and attributes on popular heroes. The Thirty-seven Nats are now purely Animistic in nature. The one nat of this Order that retains his original characteristics is Thagyā Nat, who represents Indra in the form of Sakra (by Burmese phonetics Thăgyā), the primus inter pares in the heaven of the Thirty-three in Buddhism, and the Recording Angel of Burmese orthodoxy. He is the first or chief of the Thirtyseven among the Burmans, but the Talaings find no place for him, and rank the second of the Burmans, Mahāgiri or Māgayē, the house nat personified, as the first.

On analysis, the Thirty-seven Nats resolve themselves into five groups, each connected with a cycle of quasi-historical tales, an explanation of which in detail would involve an examination of the very complicated history of Burma, often in its more obscure passages. Ronghly, the five cycles of tales are all connected with royal families, including several content of the content

Each member of the Order has his or her own particular festival, and there is a well-known book, the Mahāqītā Mādanīqyān, which purports to be

a book of odes to the Thirty-seven Nats, though, strictly speaking, it contains a series of short biographical and genealogical sketches in verse for recitation under spirit possession by female mediums (nat-kadaw) at the festivals. They are by way of being moralities, and are meant to impress on the audience the sins of treason, rebellion, and assassination. The ceremonial at the festivals of the Thirty-seven Nats is distinctly Animistic in tone.

25. Superstitions.—The superstitions of Burma naturally embody tags of every kind of belief that has at one time or other attracted the attention of the people. Superstitions are apt to run through the country without regard to origin. Those of the Burmans may be looked on as common, at any rate, to the Talaings and Shans also, and to the tribes that have come in contact with them. They all have, however, some that are peculiar, more or less, to themselves. Of these superstitions some are now selected as samples:

are now selected as samples:

(1) Burmans and general.—Combings of hair and parines of nails art deal to a stone and sunk in deep water. Water called the stone and sunk in deep water. Water called the property of the property of the property of the control o (I) Burmans and general .- Combings of hair and parings of Supreme Court (Huddard, decisions were finally settled when the parties had received and eaten a packet of lapet. Appeal after that in any circumstances was a crime, punished by public from the sun and moon, howling of dogs, flight and song of birds, twitching of the cyclids or any part of the body. It a mushroom is met with at the beginning of a journey, it will succeed. Small charms (theung-beit-set) to seeme invulner-ability, up to as many as thrity, are let in under the skin; they consist of diese of gold, sirver, lead, pebbles, tortoise-shell, and horn. Charmond necklaces and bracelete are worn for the same

purpose.
(2) Shans.—Inhaling the smoke of pine-wood or taking (2) name.—unlaing the smoke of pine-wood or taking a mixture of monkey's blood and turneric prevents bleeding at the nose and mouth in lying in women. Corpses of the un-married are married to stumps by being knocked against them on the way to burial.

(3) Talaings.—It is dangerous to mention any one by name during a devil-dance held to frighten away an epidemic, as the

during a devil-dance nead to trighten away an epidemic, as the evil spirits might afflict the owner with it.

(4) Kachins.— Eclipses are caused by a dog (shittākura) swallowing the moon. The rainbow is from a crab (chikon), which lives in marshy hollows connected with a subterranean which lives in marsly bollows connected with a subterranean ocean. Thurder is the voice of Mushangt, the Nat of the Heavens. Lightning is represented by a phrase, mapt hyporphisms and shain, the cyse (of Mushangt). Earthquakes are caused by crocodiles burrowing in the earth from the subterranean ocean. The markings of the moon are due to the foliage of the rubber tree. It offends the house and if a visitor goes out at the back door. Snakes and porequipose-arose the path are unlikely; deer, hedgehog, rhimocros, and offer an index. The wild cat is doubtful, being classed both ways in different places. It is unlikely for young men to drink the beer held. The control of the co

for strength and courage, the blood of any animal bins bill, Among the Sawucting Karens no one may leave the village on the day of the birth of a child in it, and no eggs may be kept in the village while the fields are being reaped. The birst ancestor of the White Karens had a magic wishing drum. Tamgthu gloots do not walk on feetival days. (Giving away any thing at all on sowing or planting days means blight for the crop. Among the Tamgyo Karens no paddy may be taken out of the bins during Pyatho (December-January).

(Q) Bus and Patatongs—Among the Panangs, if a person dies (Q) Bus and Tatatongs—Among the January billage, Among the tree will be fire, epidemic, or nurder in the village, Among the Eas, if a tree is felled, a man dies, and so over extensive areas the people will not work hill-fields, for fear of offending the spirits. for strength and courage, the blood of any animal they kill,

LIERATURE.-In addition to the works mentioned at the end

BURMA AND ASSAM (Buddhism in). i. BURMA .- I. Origin and history .- The common assertion is that Buddhism was first established in Burma by Buddhaghoşa from Ceylon about A.D. 450. The delta lands were not even called Burma then, and the Mons or Talaings were the inhabitants, to the complete exclusion of the Burmese proper. The capital of the Burmese was then It is supposed that the fighting, which ended in the destruction of Tharekettara (the modern Prome) and the building of Pagan, was carried on by settlers from India, some of whom had come by ship to Prome, which was then on the sea, and others who had come to Northern Barma by way of Manipur. These last were certainly Mahāyanists, who followed the canon drawn up by Kanishka, at the synod held at Jalandhara in the Panjab. The Mon converts, and assumedly the Indian immigrants, were Hinayanists, who adopted the canon of Asoka, formulated by him at his synod in 250 n.c., held at Pataliputra. This canon was taken to Ceylon, where it has been followed ever since. Pagan was established about the beginning of our era, and Tharekettara, the site of which is a short distance east of the modern Prome, had been a lamous capital for something like five centuries before this,

There is no real history of Burma till the time of Anawrahtā, who succeeded to the throne of Pagan in An. 1010, and is renowned as the first Burnese national here—a sort of Alfred the Great. It is began the straggle between Burma proper and Yamanya, between the Burnese and the Mons, which did not This was also the struggle between Buddhists of the Northern canon and Buddhists of the Southern; between Sanskrit and Magadhi, as the Burmese call Pali; between the Mahāyānists and the Hinayanists, the Great Vehicle and the Little Vehicle. The doctrinal form of the conquered was imposed on the conquerors, but this came about through the personality of the

The doctrinal form of the conquered was imposed on the conquerors, but this came about through the personality of the originator of the great struggle.

On the great struggle of the control of the great struggle of the personal struggle of the personal struggle of the s

This is the common story, and it may very well represent the establishment of Buddhism of the Southern school throughout Burma; but the slow disinterment of buried cities and the study of Chinese and Tai annals seem to show that Buddhaghosa had predecessors as missionaries, and it is quite certain that there were Buddhists in Burma

quite certain that there were Buddhists in Burma proper long hefore Buddhaghosa's time.

Hitherto the assumption has heen that Buddhism firmly established itself in Burma about the time when it was beginning to disappear in local. It may be true that it was then first universally accepted in the form which it retains to the been introduced to employ the companion of the control of the control

Buddhaghoşa landed at, or near, Thaton with his volume of the Scriptures. Thaton was then certainly on the sea-coast, but Forehhammer maintained that the apostle landed, not at the modern Thaton, but at Golanagara, which lies twenty-two miles north-west of it. This is quite possibly the site of the original Thaton, for the changing of capitals was always a characteristic of the peoples of Burma, whether Burman, Mon, or Tai. There are frequent references to the struggle between Brāhmans and Buddhists in the coastwise lands before this, and it seems quite probable that there is some truth in the legend, believed by all Burmans, that king Dhamnathawka, as they call Asoka, sent two missionaries, Thawna and Ottara, to what we call Burma, after the sitting of the third great synod in 241 B.C.

Kanishka, the last and probably the greatest of the three great Buddhist monarchs of Northern India, is commonly called the Constantine of the His date is very uncertain, but the best authorities seem to agree that he ascended the throne about A.D. 120. He carried Buddhism to far-away Khotan. He defeated the armies of the emperor of China, and he beat back the attacks of the Parthians. It is possible that it was he who introduced Buddhism into China and Japan.

But the name of the Buddhist monarch best known in Burma is that of Aśoka (Dhammathawka), who was crowned in 269 B.C. and reigned till 231 B.C. He was the grandson of Chandragupta, the petty chief who founded the Maurya dynasty, the great military monarchy that held the whole of India from Patna to the Panjab. Aśoka was the greatest of these Maurya monarchs. He was converted to Buddhism, and made it the State religion of all Northern India. Kanishka is called the Constantine of the East, but Aśoka was both a Paul and a

Constantine. He sent missionaries over all the world known to him. He ordered the dedication of stūpus to the Buddha in the remotest parts. It is nearly certain that he introduced Buddhism into the Tai kingdom of Nanchao, which had its capital at Talifu, and remained there till it was overthrown

by Kublai Khan.
The Burmese Buddhists know little of Kanishka. but the name of Dhammathawka is well known and tradition eredits him with the foundation of and tradition releases him with the bones and relies of the Buddha (see art. BUDDIA in vol. ii. p. 884°f.). There are such stårpas ät Tavoy, Moulmein, Toungoo, and Thayet in Lower Burma. There are many of these shwemokthos and shwemokdaws in the Upper Province, and even farther off still, in the tributary Shan States: at Kyauksè, Sampenago, in the Bhamo District; at Pwela in the Myelat, round the Inle lake, and in many parts of the hills. They are all implicitly credited to Dhammathawka, and it can hardly be that some of them are not on the list of the 84,000 which he ordered to be built. It is perhaps significant that the Burmese royal history says that a band of ksatriyas came after the founding of Tagaung (old Pagān) and established a capital which they called Mawriya, in the neighbourhood of the present vil-

lage of Mweyen.

When the Maurya empire broke up, Buddhism did not cease to be the dominant religion of the north of India. The Questions of Milinda give us the history of the conversion of the Greek Menander and of his disputations with the sage Nagasena. The Bactrian Greeks, though they were pushed southward and farther south by the Sākya, or Hun tribes of the Scythian steppes, established a great kingdom in the l'anjāb, and Menander's empire was hardly less extensive than that of the warlike Asoka, and even included for a time the sacred Magadha. The Scythians themselves were not content with driving the Greeks across the Oxus. They pushed on and established the Kushan dynasty, and seized the Middle Land itself, the dynasty, and serzed the Middle Land Isself, the sacred heart of India. It was then that Kanishka fixed his home in the holy city of Peshawar, and it was there that he received and befriended Ynan-Ch'ang (Hinen-Tsiang), the Master of the Law, the great traveller and writer. Kanishka built a great audience-hall for the monks, and a noble relic-tower. It is not impossible that this is the shrine discovered in 1909. Kanishka also convened a great council to examine and codify all the Buddhist writings. The canon which we now have was laboriously drawn up and engraved on copper. It was buried in the relic-chamber of a pagoda, and, since the ashes of the Buddha claim to have been found after more than 2500 years, possibly this canon also will be discovered in the same neighbourhood.

With the death of Kanishka the decay of Buddhism in India begau. It seems likely that the growth of Buddhism in Burma began at least then, and probably earlier. At any rate, everything seems to show that the theory that it did not begin till five centuries later is mistaken. All the researches of the very poorly supported Archæo-logical Department in Burma tend to establish the certainty of the early connexion of Burma with India, and indeed to prove that the Burmese race came from the north-west, and not from the northeast; from the northern slopes of the Thian Shan range, and not from any part of the modern China.
The Burmese Chronicle, the Mahāuāzawin, asserts this, and all recent discoveries tend to prove that

it is right.

In the year 1908-09, excavations conducted under the direction of Taw Sein Ko at Hmawza have conclusively proved that the Northern school of Buddhism was established at Prome, the ancient Tharekettara. Votive tablets found at the Legu pagoda, and the sculpture there, are in the same style as the familiar Gupta work of Northern India. It seems, therefore, indisputable that there was communication between the kingdom of Tharekettara and Northern India, when the Guptas (A.D. 319-606) rose in Kanaui, and the term 'Pali' began to be used instead of 'Magadhi.' Magadhi declined when Magadha conquered and annexed Kosala. It may be asserted with some confidence that communications did not begin with the Guptas, and that there was comexion between Burma and India long before, and that Buddhism came much earlier than has been hitherto believed.

Neither the Mahayanists nor the Hinayanists use the tongue in which the Buddha Gautama preached, the widely diffused dialect of Kosala, or Koshala, where he was born and brought up. Meer his death Kosala was conquered, and Macadha took of the Market of t

Magadha differed from the local Magadin, or Rosan, in many little ways, because it was based on the tongue which Gautama spoke, the dialect which had been the form of speech used by Rama and his race. The literary form of Kosali was known as the Buddhist was consonical, because the Path or canon, of the Buddhist was consonical, because the Path or canon, of the Buddhist was consonical, because the Path of Compared with that which the Romance lacquages hear to Latin. Because it became the language of the Buddhist canon, Magadhi gradually came to be called Pali, and so identified itself with the reformers. Sanskrit remained the form in which the orthodox Brahmans expressed themselves. It may be noted that the people of Burma and Ceylon still prefer to use the old name people of Burma and Ceylon still prefer to use the old name former in the proposed of the first Buddhist apostles, we are as some stoney journeys of the first Buddhist apostles, we are the stoney former, as all industant or Malay is now, and the Shinhless language is, as a matter of fact, derived from Magadhi. Any note talking Pali could probably make himself understood by the people of Ceylon, just as a Yun-maese can understand a Peking Chinaman, or a Lao Shan can follow a Slanese on the one side, or a British Tai on the other.

It seems to be proved beyond reasonable doubt

It seems to be proved beyond reasonable doubt that Buddhism was established both in Southern and in Western Burna long before the hitherto accepted dates. Very probably it got no great hold on the country. It is also probable that the Mahāyānist school was much the more strongly represented until the time of Anawrahtā. It can haruly be doubted that some of Asoka's apostles visited and settled in both Upper and Lower Burna. Probably, however, the missionaries of Kanishka were much more numerous and more successful.

By the time of Kanishka, Indian Buddhism had lost the simple morality and 'agnostic idealism,' as Waddel calls it, of its founder, and had taken in much from the Bhagavad-Gida and from Saivism. It had become 'a speculative theistic system with a mysticism of sophistic nihilism in the background' (Waddel) Emblisher Tilet.

It had become 'a speculative theistic system with a mysticism of sophistic mililism in the background' (Waddell, Baddhism of Tibet, p. 10).

It is unfortunate that the age of Kanishka is very imperedly determined. We have so far records varying from the year 3 to the year 15, and the learned are at variance as to whether these are years of reign or years of an era. Fleet holds that they refer to the Samwat era, while others take them to refer to other cras with omitted hundreds. The net result is that Kanishka may be placed anywhere between 56 sc, and a b. 288-rather a wide interval for a monarch who made his influence felt from the upper reaches of the Tigris to the Great Wall of China.

It has been authoritatively asserted that the Mahavariast form of Buddhism was introduced

Mahayanist form of Buddhism was introduced into Burma by Chinese missionaries in the tit century. If for this we read Tai or Shan missionaries between the 1st and 4th cents., it will probably be much mearer the truth. Hunyanist Buddhism had probably come in a tentative way with Asoka's apostles before this, and, as is clearly established, Mahayanism penetrated even as fur as the Malay Peninsula, not at all impossibly through Burma, at the time when Buddhism is generally credited with being first planted in Burma isself.

The Northern school may certainly be called corrupted in comparison with the first teaching of the Buddha, and it was still further corrupted by the Tantra system. This was founded by Asañga, a noted monk of Peshäwar in the Panjah, and is a mixture of magic and witchcraft with Siva-worship. This was grafted on the already corrupted Buddhism, and has left many traces in Burmese Buddhism. The religion which existed in Pagan before Anawralita's rape of the king and the religions books and the people of Thaton was a medley of naga- or serpent-worship, Tantrism, and Mahāyānism, with not a few traces of Tibetan lāmaistu, which came with the 5th cent. and possibly gave the country the word pöngga, or 'monk', which may be compared with bön-yyepa, the Tibetan bon, 'mendicant.'

The professors of the Northern school of Buddhism, the Ariya of Pagán, were full of superstions, and they were workers of miracles. Burnouf had little respect for them. 'The pen,' he says, 'refuses to transcribe doctrines as miserable in respect of form as they are odious and degrading in respect of meaning.' How long they had been found in Pagán there is nothing to show. It is, however, quite certain that the autocrat Anawrahta effected the fusion of the two schools in the 11th century. He finally put an end to the Ariya, but traces of Mahayanism have ching to the outward form of Hinayanism in Burna ever since. If the religion may be said certainly to belong to the Southern school, it may no less certainly be asserted that it was moulded by the Northern. But Buddhism can hardly be called a religion. In its concrete form it is rather a sort of philosophy practised by a monastic organization like that of the Dominican or Franciscan Orders.

2. Buddhist Scriptures and religious works.—
The canons of Buddhism may have been the work of an immediate disciple of the Buddha, drawn up at the first council in the year after the Benign One's death, but it is certain that the canon of the Tripitaka was really firse settled at the council held under Asoka in the 3rd cent. B.C. From the inscriptions we may rest assured that at that time the most important part of the Buddhist canon existed, as we now have it, divided into five portions.

The miracle-mongering Mahāyānists enlarged the original canon to a huge extent by expanding the texts of the original documents, by adding material of their own, and by entering into compromises with any local form of popular superstition; but however the individuals may have allected Burmese forms, this canon was never adopted in Burma. The Buddhist of the Southern school may be a scientific freethinker, as Lillie calls him, but he maintained with great tenacity the purity of the early Buddhistic teaching. This exists in the canon of Ceylon, and it is this form which Burmese Buddhism implicitly adopts. The Burmese also recognize only the Pali, the canon language. This is as distinctively the language of the Hinayanist school as Sanskrit is of the Mahāyānist. When the natives of India began to use Sanskrit as their literary language, from the Tail cent. A.D. onwards, the people we call Bud-dhists gave up writing in Pali, though they pro-bably understood it. But the books they wrote in Buddhistic Sanskrit were new books. We find that the Buddhistic Sanskrit texts abound in wild. extravagant, and exasperating digressions. Such works as the Lalita Vistara, the Buddha Charita, and some others are based on the old myths of Asia. In these we can detect the common origin of the story of Bacchus, of Kṛṣṇa, and of many other gods and heroes.

The last census of India showed that out of

nearly nine and a half million Buddhists in the Indian Empire, all but about 300,000 are in Burma, Ceylon may be regarded as the holier place by the Buddhist, possibly even by the Burmese Buddhist, but, since very shortly after the permanent establishment of Buddhism in Pagan by Anawrahta, Burma has consistently held a very high place in the interpretation of the authentic ligh place in the interpretation of the authenne Buddhist Scriptures in the language which they call Magadhi, or the Mula-bhasa, and Western scholars call Pali. This Magadhi, or Pali, has been to the Burmese what Latin was to the mediaval scholiasts and scholars of Europe. This has been so much the ease that Burmese writings dealing with matters of religion or philosophy are as full of Magadhi terms as European scientifie phraseology is filled with classical terminology.

Since the 11th cent. there have been produced in Burma, in the Pali language, great numbers of religions works, grammatical treatises, and dis-sertations on philosophy, which have attained a reputation far beyond the limits of Burma. They have been studied in Siam and perhaps not least

in Ceylon itself.

The palm-leaf manuscripts spread so much that copies may be found both in Cevlon and in Siam, in any monastery which pretends to a respectable library; and of later years, when all the more noteworthy works of Burmese authorship have been printed at the local presses, Burmese treatises

have become still more common.

have become still more common.

The reputation is well deserved. The Burnese bhikyns, since the days of the Pagin monarchy, have been noted, not nearly for their study of the Abhishnama, but for scholarly specific their study of the Abhishnama, but for scholarly specific their study in the Abhishnama, but for scholarly specific to the Abhishnama (q.c.). For centuries months from the translated always been rich in commentaries and excesses on the Abhishnama (q.c.). Only one specimen of this literature is to be read in any Western language. The Dhamma-sahapagi was translated in the first few years of the 20th cent. by Mrs. Rhys translated in the first few years of the 20th cent. by Mrs. Rhys translated in the first few years of the 20th cent. by Mrs. Rhys translated in the first few years of the 20th cent. by Mrs. Rhys translated of the 6th abhishnama (q.c.) on the control works, but the control works, but the control works and the co

monks of Burma have long been noted for their scholarship, the Buddhist people of Burma have been no less noted for their education. The percentage of literates among the men is almost as high as it is in Ireland, and is higher than the proportion in Italy. Burma has less than a third of the population of the Madras Presidency, yet the number of literate persons is very nearly the same. The census figures of 1901 are not nearly so favourable as those of 1891, because at the latter census a much higher proportion of hill peoples were enumerated, and, besides this, the number of natives of India in the country had largely increased. Still, even on this less favourable estimate it appears that, on an average, of every five persons in Burma one individual would have been found who could read and write. The proportion of literates is much higher in the rural districts, and especially in Upper Burma, than in the delta, where the number of illiterate immigrants from India is very considerable.

The credit for the superiority of the Burman is entirely due to the monastic schools. These have existed for centuries, much as they may be seen now in country places. If the śramanas had done nothing else, they would deserve honour for the way in which they instruct the boys of the country. The theory of Buddhism is essentially selfish, or at any rate it encourages selfishness. Each individual must work out his own salvation, and no one else can help him, except by example, just as the Buddha is a model not only for the people, but for the bhikşu himself. There are no regular services held by the mendicants; no preaching of sermons at stated times; no assembling of congregations; no religious forms for burials, or births, least of all for marriages. Some energetic and zealous monks do read homilies and deliver sermons, but there is no need for them to do so, and there is no summening of the religious to attend. The one religious ceremony is the admission of the novice to the Order, when the postulant has completed his studies, has decided to put off the world and join the company of the sammera, and this is really a continuation of the teaching of the youth of the country. It enables the creature to become a human being, for no Burman can claim to have attained humanity until he has put on the yellow robe, and the ceremony of initiation is intended merely to provide that no one defective mentally or physically shall enter the Noble Order.

At the age of eight or nine every Burman hoy goes to the nonastery school, except in the towns, where the people are degenerate, and, as often as not, are half-Chinese, half Muhammadan, half-Hindu, or half-English, and go to the Government or Mission schools. In the country villages—and the Burman is not a lover of towns, but essentially a tilter of the soil—til may be taken for certain that every one sends his boys to the monastery. There they begin by learning the alphabet, shouting out the letters at the top of their voices, and copying them out with steatite pencils from the roughly made below wooden board on which the teacher-monk has right and the processing the soil of the s

written them.

made black wooden board on which the teacher-monk has written them.

As soon as the boy has learnt his alphabet thoroughly he is started on his first text. This is practically always the Minopala thut (Minopala Sutta), which may be translated, 'the bindhibis beatindes.' It is made up of twelve Pail versicles, with a short introductory preface. In the versicles, with a short introductory preface in the versicles. The production of the preface of the preface of the preface of the versicles of the preface of the versicles explained in simple language. The choice of this poem is a most admirable one, for the Pail is exceedingly simple, and the sentification and the versicles of the most elevating kind. After the text and its meaning have been thoroughly learned, the casiest rules of granumar in connexion with the Minopala-thut are explained. Time is of no object to the monk or the boy, or to the Burman of any age or nexion with the Mingata-thut are explained. Time is of no object to the monk or the boy, or to the Burman of any age or position; and the study of 'the Beatitudes' in many cases takes a year, more or less, according to the application and the intelligence of the pupil. But when he does know the text, be

intelligence of the pupil. But when he does know the text, no knows it thoroughly.

The second text taken up is generally the Nāma-kāra of Buddhaghosa, which is a short lyric, composed in a moment of inspiration by that apostle. A small treatise giving a list and description of the most excellent things is often studied instead of the Nama-kāra. These are: the Nine Excellences of the Dawlaha: the Six Succellences of the Law, and the of the Buddha; the Six Succellences of the Law, and the is in verse, as indeed is the case with by fart in greater part of the literature not merely of Burma, but of the rest of Indo-China and of India. By the time the monastery schoolhoy has got through the Mingala-thut, the Nāma-kāra, and the Book of the Excellent Characteristics of the Church and its Founder, he has acquired considerable proficiency in both reading and writing, and he is able to go on to the study of the works of Shin Sikuvanas, Shin Rathasara, and others of the poetical composers of the Burmese classics. These are the norsal noted writers, and it is only after he has mastered them

of the works of Shin Silavanasa, Shin Ratthasara, and others of the poetical composers of the Burmese classics. These are the nest noted writers, and it is only after he has mastered them that the young Burman student begins to read the Ten Great that the young Burman student was to read the Buddha, which are in prose. It is with these profess that the Western student usually begins his Fali reading.

But the monastic scholar does not merely read these easier poetical works. Step by step he continues his grammatical studies with them, and the meaning of the text, and its applications to the Buddhist religion, are exhaustively explained to exclude the scholar does not merely read these boy is taught, with an easiber. From the very beginning the boy is taught, with an of the properties of the scholar poetics and from the Commentaries, to show refi in by is taught, with man illustrative examples and stories from the Serrptures and from the Commendaries, to shun evil in the Serrptures and from the Commendaries, to shun evil in the Serrptures are stories to the server of earthly existence. He is taught to he prepared and pure, not in the hope of escaping punishment, but because of the peace of mind which rewards him. He is taught to reverence parents, wife, children, and teachers; and, above all, the duties which every Buddhist owes to the Lord, the Law, and the Assembly are impressed upon him. He is in fact educated in everything that a proper citizen owes to his country, to society, and to himself. The theory is excellent, and the education of the monasteries far surpasses the instruction of the Anglo-vernacular schools from every point of view, except that of immediate success in life and the obtaining of a post under Government. At the time when the boy is at his most impressionable stage, his mind is built up, instead of being buried in a mass of ill-digested information; and his heart is being trained instead of being ignored.

A boy whose parents can permit him to stay on in the monastery, and are willing that he should learn the literature monaster), and are wining that he should nearl the necessary of his country, instead of the science and wisdom of the Western nations, now passes on to the Parcittan, the Lankanti, the Dhammaniti, and the Rajaniti. The Parcittam, or Book of Protection, is a collection of excepts in prose and verse from

Dhamanniti, and the Roganti. The Privitium, or Book of Protection, is a collection of excerpts in prose and verse from the Tripitakus, each of which is supposed to be a safeguard against some calimity or danger; against evil spirits plagne, pestilence, and tamine, fire, battle, and marrier, scake-late, and wisdom; the Planamanti gives turther noral instruction; and the Regents is a work like The Privace of Macchacelli, compiled, to sail trends thick, by the sage Chanakus.

Many pupils stop far short of this. In the old days all parents who could afford to keep their son idle led him proceed as har as this if he had the necessary intelligence model. If the pupil continued his studies, it was usually as a samanera, or novice. The boy was dressed up in princely colors to recall Sideartha's renunciation of the world. He made the tour or the town or vilage in jubilant procession, with troops of gaily dressed maidens. He bade farewell to parents, relatives, and friends, entered the monastery, and went through the customary examination. He bade travell to parents, relatives, and friends, entered the monastery, and the yellow monkish garments, had the begging how home this Rie if he remained in the order, and remembered only as an incident if he went back to secular life.

The old-fashioned rule was that every youth should spend.

The old-fashioned rule was that every youth should spend three Lents (roughly from July to October) in the monastery three Leats (roughly from July'to October) in the monastery, and conform to all its rules including fasting after montide and going the begging round in the morning. One bend was for the father, one for the mother, and one for the estimation of the interface of the father, one for the mother, and one for the estimation himself. To spend less than one entire Leat was considered hardly decent. Western influences, however, have taught many that life is not long enough for this, and the Leat is often and down to a month, a week, or even a few days. Three days is considered the shortest period that is respectable. The novices, of course, go on with their studies. The coale of the Figura, the Buddhist Aneron Ritele, the doctrine taught in the Bighanishum, and, faulty, the spechological ethics of the Abhidhamma, are as much as the most apt are able to study before they are qualified for formal admission to the Order. before they are qualified for formal admission to the Order.

The Southern school of Buddhism has never recognized a hierarchy. There is nothing like the system of Tibet, which is so surprisingly like that of the Church of Rome, even to the practice of the confessional and the recognition of purgatory. The need for unity and the requirements of church discipline, however, call for some sort of grading, and a system of classes is recognized, which is very much the same as existed in the time of the Buddha himself.

Buddlah himself.
There is, firstly, the shin, the novice, or summera, who is not a professed member of the Order; secondly, the upusin, who, after the prescribed time, has been formally achieved to the Order, and becomes a simmana or hhikkyn; and thirdly, the pingit, or 'great glory', who, by virtue of not less than ten years stay in the monastery, has proved his steadfastness, and becomes a there. In actual practice there is a slightly extended system of grades; first, the shin, or postulant; second, the pilishin, the full member of the Order; third, the sure, the head of the monastery, who never has ever than ten Leuts; fourth, the gradies, whose control extends were groups of magnetic than the head of the forder, there are the order, in the time of the Barnesse monarchy, was appointed from among the sudders, and had a council, called the haddnung, varying in number from eight to wedver. In the Orier. In the time of the Sarmest monarchy, was pointed from among the sudars, and had a counted, called pointed from among the sudars, and had a counted, called the British Government re-emitted in formal darker at thathanopaing, chose no by the sudars, and gave him a formal patent, and it is probable that this course will be followed in the future.

Notwithstanding these ranks, however, the religion is eminently republican in character. The monasteries are open to all,-to the peasant and to the highest dignitary,-and the longest stayer has the greatest honour. Rank counts by number of Lents spent in the monastery, no matter whether the bhiksu is a provincial or merely a wandering friar, and individual dignity releases no one from the duty of the daily begging round. Nothing except the frailty of age excuses the most learned and famous suday from the morning round. The bedesman's robes are the same for the postulant and the member of the thudhamma. The monk has no obligation to bestir himself on behalf of his

fellow-monks or the laity. He is not called upon to convert the unbeliever or to reassure the doubter, All he has to do is to work out his own salvation. But he teaches the youth of the country, and this binds the entire population to his support. He not merely teaches them letters, but forms their mind and character. The nightly vespers, when the lands are chanted and all bow three times before the figure of the Buddha, and three times before the head of the monastery, are more impressive than the most cloquent sermon would be.

4. Schism .- There is very little non-conformity, to say nothing of heresies, among the Burmese Buddhists. For years there were bitter disputes as to ordination, after Anawrahta had established Hinayanism in Pagan, Chapada, the monk, had received the uprisampula ordination from the theres of the Mahavihara in Ceylon, and he loftily denied the validity of the orders conferred on the Burmese religions of the old school, called the Maramana-samula, not less than those of Purima Bhikku Sangha, who claimed apostolic sanction from Sona and Uttara, said to have been sent forth by King Asoka. These bickerings ended only with the destruction of Pacan itself, and they have never since been revived.

The sects of modern times have mostly risen out of revolt against excessive ansterity, or as a protest against reprehensible laxity. There are a few communities, called Sacris or Mans, who are anticlericals. They neither reverence the mendicants nor support the monasteries, and some do not even worship before the pagodas, but recite their prayers in the open fields instead. The doxologies which they use are the same as those repeated by the ordinary orthodox Buddhists, and the schism is unimportant. The disputes between the Mahāgandis and the Sulagandis are simply the semiternal quarrel between the ascetic and the weak of flesh, between the High Churchman and the Low, the Catholie and the Puritan, the emotional and the austere. These differences have some dignity imparted to them by the assertion of the Mahagandis that man is endowed with free will. This the Subayandis deny, claiming that a man's whole life is controlled entirely by kan (kurma), the influence of past good and evil deeds on exist-The Sulagrendis attribute all ences to come. The Sulagradis attribute all importance to the intention; the Mahāgandis think that action is sufficient and the intention immaterial.

5. Spirit-worship.-But doctrinal schisms are insignificant compared with the undoubted fact that all Barmese Buddhism is tainted with spiritworship. The Southern form of the faith triumphed, but the Northern belief in magic and devil-worship has left lasting traces on the religion of Burma, and still more on the Buddhism of the Shan States. It is not merely that they recognize the Twelve Guardian Spirits, whom they have borrowed from The nats, the spirits of the air, the the Hindus. flood, and the fell, are much more present influences to the Burman than the calm, philosophic model of the Buddha. The nots are constantly consulted and propitiated. The Buddha is, as a rule, directly addressed only on worship days. Spirit-trees sometimes intrude into the limits of the monastic grounds, and spirit-shrines are to be seen in the shadow of the pagoda, and have as many offerings as the relic-strine. And the spirits, as always, are malignant, and have to be propitiated, The World-Renowned One is long suffering and benign. Moreover, he is only a model. spuits are everywhere, and they are mulicious, and constantly active. So the Burman does his best to serve both, and has the greater bias towards the spirits.

There is a pagoda at, or near, every village in the

country, and probably also a monastery, but there is a spirit-shrine in every house, and the spirits are consulted before houses are built, marriages made, bargains struck, or journeys begun. In the times of native rule, spirit-feasts were formally recognized by the State, and the ritual was very carefully set forth in lengthy treatises. Moreover, there is a precise list of 'The Thirty-seven Nats (spirits) of Burma,' with forms of the odes to be sung to them, the dances to be performed before them, the vestments to be worn on the occasion, and the life histories of these anthropomorphic deities.

All this is written at length in the Mahāgida Medaui, and presentments of the Thirty-seven Nots are to be seen in the presentments and accessing the second of the Christyness of the Ch

Notwithstanding all this, the Burman would be greatly offended if he were called a spirit-worshipper, and genuinely believes himself to be a

most orthodox Buddhist.

The census of 1901 showed that there were 15.371 monasteries in Burma. This gives an This gives an average of over two for each village and town in the province, and implies one monastery for every ninety-three houses. In these religious houses there were 46,278 fully ordained monks and probationers, and 45,369 acolytes, wearing the yellow robe. There were thus more than 91,500 wearing the bedesman's robes, and this represents 2½ per cent of the male population of Burma.
Perhaps Burma is not so conspicuously the centre
of Buddhist religious life and learning in Indo-China as it was in the time of the Pagan dynasty, from the 10th to the 13th century. In those days fraternities came to Pagan from Cevlon, then called Sihaldipa; from the conquered Hamsavati (Pegu); from Ayuttara (Siam); from Kampoja (the Shan States); from Nepāl, and from China; and each sect or fraternity had separate quarters given in which it could live. But even now, notwithstanding the spirit-worshipping taint, Burma can claim to maintain Buddhism in a form nearer that of the Buddha's teaching than any other country.

6. Buddhist architecture.—(a) Monasteries.—The

Burmese monastery never varies in design. Some few may be built of bricks; most are of timber. In very poor neighbourhoods, they may be of bamboo, but the ground plan is always the same. The pongyi-kyaung so strongly resembles the wooden temples of Nepāl that it can hardly be doubted that the model came from there, or that both have a common origin. The whole building stands on piles, and there are technically only two rooms (if they can be called rooms). In some cases there may be partitions, but there are never any doors, so that the whole interior is practically one hall. A staircase, generally of brick and stucco, frequently embellished with dragons, leads up to the verandah. The verandah, called zingyan, is open to the sky, and runs round three sides of the building, and from this there is free entrance on all three sides to the main body of the monastery, which is really one big chamber. The flooring rises in steps. There is one grade from the verandah to the outer chamber, where lay visitors find their place ; another step up marks the entrance to the inner chamber, where the monks sit; and a third rises to the structure, always on the eastern side of the building, where the image of Gautama Buddha is enthroned. Over this is built the tiered spire, called the pyathat, shooting up in regularly diminishing, super-imposed roofs to the *kti*, or umbrella, which is placed on the top. Both the spire and the umbrella are marks of sanetity, and the spire has three, five, or seven roofs, according to the dignity of the pongyi-kyaung, or rather of

its head. The wood for a monastery is always chosen from the best and most seasoned logs available, or within the means of the pious founder. Sometimes these are excessively large. At the south-west corner there is a chamber, which is used as a store-room. On the west side there is another, which the younger members of the community use as a dormitory. The head of the house, whether sudaw, gaingok, or plain pôngyi, sheeps at the south-east corner of the building, that is to say in the part closest to the hapagakyaung, where the image of the Buddha is. The north-eastern part is used as the schoolroom and for the reception of visitors, and has the appearance of a separate room, but is not really so

Outwardly the monastery looks as if it had several storeys, but this is never the case. The national, and still more the religious, feeling against having any one's feet above the indweller's head is very strong. The outside line is broken up into apparent pavilions, with a profusion of gabled roofs, culminating in the eastern spire, all adorned with carvings, lavished on gables, ridges, eaves, finials, and balustrades, greater or less, according to the wealth of the founder. No monk, it may be remarked, can build a monastery for himself, nor can he ask to have one built for his accommodation. The monasteries are the only national buildings, now that there is no palace, which make any attempt at ornamentation.

A pongyi-kyaung is never, at any rate when it is first built, inside a village or a town. Dwellings may spring up around it later, but always at a considerable distance. The monastery always has the best and quietest site, and stands in a spacious compound, fenced in and planted with umbrageous trees and bamboos, and often with fruit trees, flowering shrubs, and rare and curious plants. The monastic library is invariably detached from the main building, to avoid danger from fire. Within a certain limit from the monastery fence, pillars mark out a boundary, inside which the taking of any kind of life is forbidden. All Buddhist visitors take off their shoes or sandals as soon as they enter the hparawaing, as the monastic curtilage is called, and carry them to the foot of the staircase, where they are left until the visit is over. Inside the monastery compound, but perhaps more frequently on a site of its own. is the thein, where monks are admitted to the holy Order. This is seldom more than a spire, rising over a lofty pillared space for the ceremony.

(b) Pagodas. — The characteristic pagoda of

(b) Pagodas.— The characteristic pagode of Burma is a solid pyramidal relie-shrine, such as is called a tope or a stipa in India. The masonry temples are almost entirely confined to Pagan. The Arakan temple, the Mahāmyatmuni of the suburbs of Mandalay, is almost the only notable example outside of that ruined city.

ame example outside of that runned city.

Pagada is almost certainly a metathesis for dagoba. The
Burnese name is zedi or hpaya. The Burnese recognize four
kinds of zedi: first, dat-daw zedi; containing relics of a Buddha
or of a rahanda; second, paribavega zedi, erected over the
clothing or utensils of a Buddha or of a sainted personage;
third, dhamma zedi; built over sacred books or texts; and
fourth, utelista zedi; containing images of the Buddha or
models of sacred buildings. The last two classes are naturally
by far the most numerous.

It is the desire of every Burman Buddhist to be known as the founder of a pagoda, and sacred texts and facsimiles of noted shrines are obviously more easily obtained than relies, or even exact models of relies. The vast majority of zedis are of brick, covered over with stucco, and whitewashed at intervals during the founder's life-time. Very rich men gild either the whole shrine or the spire.

Many of the most famous shrines, notably the Shwedagon in Rangoon, have been cased and re-cased and cased again many times. The original shrine was of quite modest dimen-

sions, and a tunnel, which was driven into the centre of the Rangoon zedi at the time of the First Burnese War, showed that it had been enlarged in this way seven times. The original pagoda is thought to have been only twenty-seven feet high and to have been creeded in 658 a.c. The present spire rises to

and to have been creeked in 888 R.C. The present spire rises to a height of three hundred and sixty-five feet.

The modern Burmese pagoda is undoubtedly the lineal descendant of the ancient Buddhist  $st\bar{u}pas$  of India, and the descename of the ancient maturities suppose to flata, and acceleration of over two thousand years. The oldest forms were massive and simple. The modern ones have fined away into slender spires, and have added a great deal, in the way of exterior adornment. They have gained in elegance, but have lost in

All the more notable pagodas have palm-leaf thamaings, or chronicles, very often containing much that is of interest in secular history. Like the monasteries, they all stand on a wide open platform, and on this there are built numbers of smaller pagodas, shrines, rest-houses, tazaung pyathats, crowded with tier upon tier of images of the Buddha, altars for offerings, and tagondaings, flag-staffs erowned with umbrella htis, metal caps, or figures of heraldic creatures. The approaches to the pagodas in very many eases are along covered ways called saungdan, the sides of which are adorned with fresco paintings, and the stairways are mostly in groups of steps of uneven numbers, just as, according to immemorial rule, the stair to a monastery must have an old number of steps.

Pagodas, as far as structure is concerned, are divided into four distinct parts. There is first the terrace. This is square, and is usually of brick or mason work. At the corners are often found the manotthiha, the curious, human-faced lions, with one head and two bodies, embellished with wings. They inevitably recall the ancient winged lions of Assyria. Upon this terrace stands the plinth, usually of an elaborate polygonal form, and with a boldly moulded, stepped contour. Above this rises the bell-shaped body of the pagoda, divided into an upper and a lower part by an ornamental band. Upon this stands the spire, which is made band. Upon this stands the spire, which is measure of a number of rings: a lotus-leaf belt, with a head moulding in the centre, and lotus leaves fringing it above and below. The spire ends in a spike-shaped cone, which is finished off with the metal-work crown, or hti. This is usually very graceful in design, made of open metal-work, very commonly gilt, and always hung with bells, sometimes of gold and silver and studded with gems. The Burniese divide important pagodas into twelve parts, most of which are symbolical subdivisions of the spire portion of the zedi.

The symbolical meaning of the different parts of the pagoda is not universally recognized by the Burmese, but it is a favourite subject of discourse with many monks, and seems to have come to Burma from the Shan States and perhaps from have come to Burma from the Shan States and perhaps from China. According to this view, the four-sided base is intended to represent the dwellings of the four great world-kings, 'Chaturiokayalas,' whose figures are enthroned within the four arched shrines, and who act as guardian spirits of the world. The eight-sided centre, called shittoung, is the tugital heaven. It is here that Arimadeya or Maitreya, the Buddha of the next world-cycle, dwells, and with him are all the other Eodhisattvas, world-cycle, dwells, and with him are all the other Bodhisativas, or Buddhas in embryo, awaiting the season when they will descend to the earth as Buddhas. The upper bell-shaped portion, above the circular moulding, called the kylerating, is intended to represent the highest heaven, where the Buddhas or attention of the buddhas of the buddhas the buddhas of the buddhas the bu insigning derivaces of the base, to stand for abound when the three five-fold division; or a triple basement recalling the three worlds of kāmatoka (sense), rāpatoka (form), and arāpatoka (shapelessness), the Bruign One, called Tilokamakita, being 'the revered of the three worlds.'

(c) Temples .- The masonry temples of Pagan are not nearly so characteristic of the country, though they are the pride of Barma. They are absolutely different from the national zcdi, and the general details may almost all be traced to Indian art, but at the same time there are notable originalities. The arches and vaults resting on their pilasters, with cornice, capital, and base, are

quite foreign to Hindu architecture, and suggest rather the Bactrian Greeks of the time of Milinda. In one sense, therefore, they are Burmesc, for nothing like them is to be found anywhere else, Unlike the pagodas, the purpose of these temples is to contain, not relies, but huge images of the Buddha. This naturally affects their plan, and budding. This naturally ancess their pian, and instead of rising in bell-shape they are constructed in gradually diminishing terraces, and are only capped by a spire of the type of the ordinary Hindu kiedleya, or perhaps more like the Jain temples of Northern India. The Thapinyu temple has only one shrine, directly below the sikra, to receive the image, but the Ananda has four, with presentments of all four Buddhas of this world-eyele, fronting to the four eardinal points of the compass. A striking feature is the narrow slit windows, so placed that a shaft of light falls full on the placid features of the Buddha.

rails rail on the placut reatures of the Suddina. Such temples have always been rare in Buddhist countries, and are foreign to the idea of Buddhism, which does not recognize idol-worship. The only example existing in India is that of the Mahahawdi at Bodh Gaya, in the charge of Hindu mahants. A model of it may be seen at Fagan, and the original is believed to date from about A.D. 500, when Mahayanism was the form of North Indian Buddhism. There Mahāyanism was the form of North Indian Buddhism. There is no similarity between the Mahābawdi and any of the Pagān is no similarity between the standardor and any of the ragic temples. Of late years a fashion has spring up, especially in the Shan States, of building temples of this kind, on the under of the Makanyatamni in Mandalay—the Arakan pagoda of the tourist, and presumably the old Bloulmein Pagoda of Rudyard Kipfling.

(d) Images.—It seems clearly established that the making of images of the World-Renowned One did not appear in Buddhism until some time after the beginning of the Christian era. They are extraordinarily abundant in Burma now. Only three forms are recognized: seated images, only three mins are evolutions are resulted standing erect, and recumbent images, called by the Burmese respectively tinbinkwe, mayat-daw, and shinbin that lyanng. They represent the Buddha in the act of meditation under the Bo-tree, where he attained to supreme wisdom; in the act of preaching; and after death, when he had attained to the blissful calm of nirvana. The seated form is by far the most common. In the Eastern Shan States, in the Lao country, and in Siam, figures which suggest the worship of Indra are not uncommonly found and worship of indra are not uncommonly found and suggest Mahāyānism. So also do the images, enthroned in vaults, under the bell-shaped pagodas, which are not uncommon in the Shan States, but are rarely, if ever, found in Burma. ii. Assam.—The Buddhism of Assam is fast

disappearing. At the time of the census of 1901 there were only 9065 Buddhists in the country, that is to say, no more than '16 of the population. At one time they held the whole, or at any rate the whole of the Brahmaputra area, which is the main portion, of Assam. The rest, even to the present day, is inhabited by hill tribes: Ching-paws, Nagas, Mishmis, and the like. In the early part of the 13th cent. the Tais invaded and occupied the country. They gave themselves, or were given, the name of Ahoms, from which the name Assam is derived. The Shans called it Wehsali-long, and the Buddhistical name of the province is Weisulf. The invaders were an army sent by Hsö Hkan-hpa, the Tai king, who founded the Möng Mao empire, which may not impossibly have been the 'kingdom of Pong.' They settled on two long islands, formed by branches of the Brahmaputra, and never returned to their Shan branmaputra, and never returned to the Sman homes. Gradually they occupied the whole of the valley, or main part of Assam, and estab-lished Buddhism everywhere except in the hills. For four hundred years they maintained themselves and Buddhism, and then in 1611 their ruler Chu-cheng-hpa (an essentially Tai name) was converted to Hinduism, and practically the whole of his subjects followed his example.

At the present day the Kalitas, as the monks of the Ahous were called, are found in only a few remote recesses of Assam, and it seems probable that even these will disappear before long, and with them Assamese Buddhism. All that will remain will be the Mongolian features which characterize a considerable proportion of the inhabitants of Assam. The Tai language is almost as much changed, where it is used at all, as the religion of the country. The few pagodas, fast crumbling away, are of the same type as the pagodas of Burma and of the Shan States, and none has any special celebrity. The monasteries of the Kalitas seem to be of the immemorial type of the Buddhist monastic buildings, which, some say, reproduce the traditional forms of ancient wooden architecture in India, Assyria, and parts of Central Asia. They may represent to us the wooden palaces of Nineveh, and hint at the architecture of King Solomon's temple, built of the cedars of Lebanon.

Buddhism has never been a propagandist religion among the Eastern peoples who have adopted it. In quite recent times, however, the faith has been adopted, chiefly in Burma, by Europeans of zeal, education, and energy, who are writing and preaching its merits and leauties. It is possible that they may revive Buddhism in Assam and plant it elsewhere, but it does not seem very prob-

able.

BUSHMEN.—See Bantu.

BUSHNELL.-I. Life.—Horace Bushnell was born on April 14th, 1802, in Litchfield, Connecticut, U.S.A. His father, Ensign Bushnell, came of a family with a Huguenot strain of mental alertness and religious sincerity. His mother, Dotha (née Bishop), had been brought up in the Episcopal Church. When the family removed to New Preston, Connecticut, in 1805, they joined the Congregational Church there. The mingling of religious traditions in his home saved Horace from being brought up in the strict and arid Calvinism of the time. He described his mother as 'rising even to a kind of sublimity in the attribute of discretion.' There was no atmosphere of 'artificial pious consciousness in the home, but stress was laid on industry, order, time, fidelity, reverence, neatness, truth, intelligence, prayer. In this way he experienced the meaning of 'Christian nurture' before he attempted to interpret it as a theory of the beginning of the religious life. Similarly, his practical education in household duties is described in the lecture on the 'Age of Homespun,' in his book, Work and Play (1864),

He entered Yale College in 1823, when he was 21 years old, and, having graduated, became Tutor in Law in 1829. He threw off his doubts and hesitations in a College revival. His own account was: 'When the preacher touches the Trinity and logic shatters it all to pieces, I am all at the four winds; but I am glad I have a heart as well as a head. My heart wants the Father; my heart wants the Son; my heart wants the Holy Ghost. and one just as much as the other' (Cheney, p. 56).

In t831 he took leave of his pupils, telling them as his parting advice: 'Be perfectly honest in forming all your opinions and principles of action; never swerve in conduct from your honest conviction. If between them both von go over Niagara, go' (ib, p. 62).

He was ordained pastor of the North Church in Hartford in 1833. In the same year (13th Sept.) he was married to Mary Apthorp, a lineal descendent of John Davenport, the first minister of

New Haven.

The main part of his life was passed in Hartford, where his public service to the town is kept in memory by the Bushnell Park. The important events of his life were the publication of his books challenging the dogmas held by the Churches of the 'standing order' (i.e. the original Congregational Churches of New England), the replies made to his challenge, and the public and private consequences of his views. He was a keen but sweettempered controversialist, and without bitterness accepted what came. He had four children, of whom two, a daughter and a son, died. Two daughters, to whom he wrote some delightful letters, survived him. Other events were his holidays in search of health, some of which were spent in California and in Europe, and his invitations to important lectureships and appointments. He lived 'till all men were at peace with him, and died at the age of 74, on 17th Feb. 1876.

2. Theology. Bushnell's life work was largely determined by the theological atmosphere in which he found himself. In his own Church there was an old and a new school, and he found himself 'daintily inserted between an acid and an alkali, having it for his task both to keep them apart and to save himself from being bitten by one or

devoured by the other.

The religious atmosphere of New England was still more heavily charged with theological animus, Bellamy, Hopkins, Emmons, the younger Edwards, Dwight, and Taylor were engaged nominally in making improvements on the Calvinism of Jonathan Edwards, really in trying to accommodate that system to the pressure of modern thought by introducing, in various degrees, a leaven of pantheism. In 1828, Dr. W. N. Taylor of New Haven had made an unqualified assertion of the self-determining power of the will. Bushnell brought into this environment both a fresh and vigorous personality and a new method. He was a builder, but on a new foundation, rejecting fundamentally the syllogisms of Calvinism, and endeavouring to interpret rationally the religious experience of the Christian heart.

Outlined against the theological background of New England Calvinistic theology, Bushnell's work may be described as the work of a mediator between old and dualistic, and new and monistic

schemes of Divine and human relations.

His eye is always on the Christian experience of spiritual things. If it be the nature of religion to deal with the things of the Spirit, Bushnell makes his impression by keeping close to nature. He is deferential to tradition but not bound by it, and frankly distrustful of all dogmatic definitions, as creating more difficulties than they allay. Although strenuously critical of the theologies which he found in possession, his aim was always con-structive, and in intention comprehensive.

(1) In Christian Nurture (1847) he criticized the revivalism which had become the popular method of recruiting the Church. He recognized that the revival movement had displaced an era of formality and brought in the demand for a genuinely supernatural experience. His criticism was that it

makes nothing of the family and the Church—organic powers which God has constituted as channels of grace. His thesis is that the child is to grow up a Christian, and never know himself as being otherwise. He repudiates baptismal re-generation as a superstition, but finds a reason for infant baptism in the organic unity of the parents with their child, 'who is taken to be regenerate presumptively on the ground of his known connexion with his parents' character, and with the Divine or church life which is the life of that Ilis conception of Christian nurture character. character. His conception of virisenal land begins with a kind of ante-natal nurture, and he looks to the Church to possess the world by the 'out-populating power of the Christian stock.'
The plea contained in the book is as one-sided in its emphasis as the religion-beginning in an explosion and ending in a torpor—against which he protests. But Bushnell gave a great truth the law of Christian growth-which has never been better expressed, a home in New England Churches. The materials for a complete synthesis between him and his opponents are only now slowly accumulating in the work of religious psychologists and in the comparative study of historic religions.

(2) The second challenge to current conceptions was an interpretation of the doctrine of the Trinity intended to get rid of a form of statement which could be eriticized as tritheistic. He found a convenient instrument for his task in his theory of language, which is described in 'A Dissertation on the Nature of Language as related to Thought and Spirit,' and forms the introduction to the volume God in Christ (1849). He regards language as essentially symbolic and pictorial, relative to the subject rather than to the object, and therefore argues that the doctrine of the Trinity might be true for man and yet not give him real information

as to the inner nature of the Godhead.

God in Christ was an outcome of 'a personal discovery of Christ and of God as represented in Him.' The change was from faith into faith-a fuller sense of the freeness of God and the ease of approach to Him-and it was associated with an experience in sleep in which he 'saw the Gospel (see Munger, p. 114). Coleridge, Madame Gayon, Upham, and Fénelon had much influenced him, Upham, and Fénelon had much influenced him, and led him to a position which he believed could mediate between the old and the new schools of thought. He accepted invitations in one year to lecture in the Divinity School at Cambridge. which was Unitarian; in the Theological School at Andover, which stood by historical Christianity; and in the Divinity School in New Haven. The permanent value of Bushnell's contribution is his insistence that the Christian 'Trinity' is a result of the fact that the revelation of God to man is by historic process. He does not deny that the Persons of the Trinity have real existence in the Godhead. He is not to be classed as a Sabellian. though this charge was made against him. The revelation of God is, in fact, historical. It is only through relations, contrasts, actions, and reactions that we come into a knowledge of God. As the norm or ideal of the race, God will 'live Himself into the acquaintance and biographic history of the world. Bushnell coins a physical to come Bushnell coins a phrase to express this, and speaks of an 'Instrumental Trinity,' and of the Persons as 'Instrumental Persons' (God in Of the Persons as 'Instrum nual tersons (trout in Christ, p. 175). In dealing with the Trinity his eye is on experience. He writes on the 'Christian Trinity a Practical Truth.' He maintains that the Trinity is necessary to satisfy the demands of the heart. On the other hand, he makes room for nothing that does not ally itself with experience.

This book led to an unsuccessful attempt to put the author on trial for heresy before the Association. or Associated Churches of the District. replied to his critics in a series of brilliant and vigorous essays. In these he approaches more nearly to the historic Christian tradition by recognizing that the Trinity has immanent and permanent existence in the Godhead, but he still regards it as necessary only for purposes of revelation and expression,

(3) His third challenge to the prevailing orthodoxy was more directly in line with the first. In Nature and the Supernatural (1858) he challenged the view of miracles which regards them as a suspension of natural law. His object is to defend miracles by regarding them as not contrary to the fundamental constitution and laws of the universe, but as exceptional illustrations of the continuous action of God immanent in the universe. He wishes 'to lind a legitimate place for the supernatural in the system of God, and show it as a necessary part of the Divine system itself.' The world was made to include Christianity. The coming of God in Christ is part of its proper and complete order; all the appointments, events, and experiences of human history are consummated in this revelation of God; and in this the final cause of the world's creation is revealed. Miracles belong to the revelation of this higher and final order. It was an essential development and final order. It was an essential development of Bushnell's teaching, that religion is man's ascent into the sphere of the liberty of the children of God. On the other hand, he gets rid of the idea of miracle as an infrincement of law. by including miracle under law, and naming the law supernatural. What ordinarily prevents man from entering into this freedom is not human nature as such, but sin. There is no hope for man or human society, under sin, save in the supernatural interposition of God' (p. 250). In the chapter on 'Miracles and Spiritual Gifts not Discontinued,' he accepts the full logical conseresponsible of his position. Criticism attacked him as a 'demolisher of nature,' but no criticism has invalidated his position as bringing the principle and law of miracles within the sphere of rational statement.

His work on the Atonement (Vicarious Sacrifice, 1865, ef. Forgiveness and Law, 1874) is noticed elsewhere (see Explation and Atonement [Chr. ]). It is mentioned here only to call attention to its essential harmony with the rest of his work. His central position is that the Vicarious Sacrifice declares the supreme law of human life, and is grounded in principles of duty and right that are universal. 'It is not goodness over-good, and yielding a surplus of merit in that manner for us, but it is just as good as it ought to be, or as the highest right required it to be, a model in that nighest right required it to be, a model in that view for us, and a power, if we can suffer it, of ingenerated life in us' (Vicarious Sacrifice, p. 32). As in parallel monistic systems of thought, Bushnell does not stop short of Patripassianism.

Apart from his work as a teligious teacher, Bushnell made great and permanent contributions to sermonic literature, and to the analysis of the function and method of preaching. His sermons rank with F. W. Robertson's as an example of insight into moral law and the spiritual order. They surpass Robertson's in wealth of poetic imagery and the use of imaginative and rhetorical statement. His sermons and essays are still alive with the frank, vivid, personal perceptions of a man intensely alive, observant of everything he saw, and led step by step by the Divine Spirit into the categories required for registering his experithe categories required for legislating his experi-ence. His daughter said of him that 'he had no unrelated facts.' His scheme of religion was large enough to include public affairs of town, State, and nation, and to include all work which made for the

education of the whole man-music, art, economics, and politics. His excursions into these subjects led to his receiving invitations to leave the ministry for other spheres, such as that of President of the University of California. On his visit to San Francisco he did actually lay out the site for the present University buildings. But he felt rightly that his own work was central, and kept to it.

Bushnell's theological work has hardly received the attention it deserves in England. His books are well known in Scotland, and his ideas are the basis of the work of many subsequent New England teachers, such as Theodore Munger, George D. Gordon, Lyman Abbott, William Newton Clarke, and others. They were introduced into English religious thought by Alexander Mackennal and Charles Berry, but, owing to want of sufficient theological training, the representatives of the monistic tradition have straved into pantheism.

DUGALD MACFADYEN.

BUSINESS .- I. 'Business' is a term used with several slight variations in meaning. Primarily it implies a man's occupation or employment, the labour by which he obtains his maintenance as contrasted with that which he expends upon pleasure. Thus the *Times* writes: 'Who and what are those 2000 athletes whose struggles we have been watching for the last two weeks? In the first place they are almost without exception business men, they are an integral part of the community that labour in their several countries.' Again, 'business' conveys the idea of attention to a man's affairs, his investments of capital or stock by the management of which, in factory, shop, or bank, he obtains his income. In Pr 2229 we read, 'Seest thou a man diligent in his business? he shall stand

before kings.'
'Business' is also used to indicate the legitimate employment of a man's powers, his right to act in certain affairs in contrast with action in other matters which would be deemed interference or meddling. St. Paul (1 Th 411) advises his Christian disciples: 'Study to be quiet, and to do your own business, and to work with your own hands.

2. Business, in the broad sense, then, implies systematic attention to those affairs and duties by which the necessaries and comforts of life are obtained, and by which the social organization is supported. It thus becomes co-extensive and practically coincident with the field of economic inquiry, i.e. the production, distribution, and exchange of wealth. Economic science has come to be regarded as 'a theory of business,' and the exposition of the principles which determine and regulate the making and sharing of wealth constitutes a scientific treatment of business, since these principles set forth the fundamental ideas and laws which underlie business phenomena and procedure.

In 1876, Walter Bagehot wrote in the Fortnightly Review: The science of political economy as we have it in England may be defined as the science of business, such as business is in large production and trading communities; it is an analysis of that world—the great commerce—by which England has become rich.' The financial and commercial policy of nations, i.e. their national and inter-

national business, is based on and embedies the economic ideas which prevail at the time. Of this the so-called Mercantilism of the 17th and 18th cents, is an example, and the change in pelicy effected in the 19th cent. by the writings of Adam

Smith further illustrates the same fact.

For the purposes of investigation of the phenomena of business, economics, according to Bagehot, has created an abstract science, that is, one which detaches the peculiar phenomena or aspects of trade and considers them in a scientific manner in isolation. It assumes that men are actuated in business affairs only by motives of business; this is the hypothesis of the 'economic man,' which regards men in matters of business as acting only from motives of gain; in buying and selling they have only this one consideration, and the market is assumed to be composed of men animated by the same force. From this abstract treatment emerge the principles which mainly determine prices, rate of interest, rent, wage-values, etc.

That men are constituted entirely in this way no one suggests; it is purely an abstraction of one aspect of life, a mental separation of certain motives from other influences in order to ascertain what are the laws which operate in the conditions of the isolation of those motives. Just as in dealing with quantities the mathematician ignores other attributes and seeks to ascertain mathematical relations, and as the physicist endeavours to isolate his phenomena so as to learn the laws of electricity, light, and heat, so the hypothesis of the 'economic man' is an attempt to study separately the effects of conduct under such influences as constitute the economic or business attitude, in order to ascertain their tendencies. Of course these tendencies are modified and counteracted in actual life by the action of other forces; but scientific knowledge consists in ascertaining the laws of each force; the method is by isolation where possible, and the economist only follows scientific method in mentally separating certain phenomena for special study. Bagehot says: 'The history of a panic is the history of a confused conflict of many causes, and unless you know what sort of an effect each cause is likely to produce you cannot explain any part of what happens: it is trying to explain the bursting of a boiler without knowing the theory of steam.

This hypothesis of the economic man has been much criticized, because it has been misunder-stood. It has been thought that economists treated the concrete or real man in such a way as to ignore the nobler and moral elements. To such objectors the 'economic man' seemed to postulate a human race governed only by selfish considerations and a universal egoism. This is entirely a misapprehension; in the first place, in business most men are engaged in providing sustenance for their families: the industrions members of society are those who strive to be self-supporting, and these by taxes and voluntary aids help in supporting many of the less industrious. No motive of gratitude, sympathy, or charity is excluded by the fact that a man's industry in business gives him a larger

means of expenditure.

Again, the science of economics advocates nothing; it only investigates and explains the manner in which certain business tendencies operate, it does not say what ought to be the case; its laws, as Marshall puts it, are in the indicative, not in the imperative. Economics deals, in fact, with those motives alone which are measurable and can be represented in terms of money-values. It is because business motives can be expressed by a common measure that explanations can be offered of the phenomena of business which can afford guidance and warning for the

BUTLER

future. Explanation and prediction are of the very essence of science, and it is in the economic rather than in the ethical aspects of conduct that

approximate measurement is attainable.

Ricardo's Economies has been much assailed on account of his abstract method: succeeding economists have, however, sufficiently demonstrated both the use of the abstract method and the inportance and necessity of inductive methods and historical investigation; modern Economics emphasizes equally the value of the abstract method and the collection of facts and statistics, and their joint application to the solution of social problems. in which also many other factors besides the economic have to be considered. This point need not here be further pursued; it is sufficient for the present purpose that the complexity of modern business has come to be recognized as a subject for scientific treatment. Principles of business, applicable alike to commerce, manufactures, transport, and public administration, can be discovered by investigation, and the varied forms of business are conducted with greater efficiency and profit by those who have made themselves acquainted with these principles and methods. Business becomes more sure, more serious, more dignified, when it is seen to be no mere matter of haphazard, rule of thumb, or personal genius, but a system capable of explanation and demonstration, and one which can be taught on scientific methods. There still remains scope for individual talent, industry, and that peculiar insight which contributes to personal success; but general education in business principles and methods contributes to public convenience, efficiency, and economy, just as scientific training does in engineering or in medicine.

3. The recognition of business as a subject for scientific treatment has taken a very practical form by its introduction into public education and University curricula. At Birmingham and the northern Universities, Faculties of Commerce have been established, in London University a Faculty of Economics. The object in all alike is the encouragement of the investigation of business phenomena and the systematic training of business men. As Professor Ashley stated in his address at Owen's College: 'The Academic teacher will interpret to the business world that world's own experience by his wider acquaintance with the field of inquiry than most men actually engaged in

trade have time to acquire.'

These new Faculties, starting with Economics, comprise in their syllabuses the whole technique of commerce-the analysis of banking and the money market, the principles of transport in all its forms, industrial and commercial history, accounting, statistics, logic and scientific method, geo-graphy commercial and regional, an account of the British constitution, public administration imperial and local, industrial and commercial law, constitutional and international law and history, principles of insurance, etc. The curriculum is sufficiently wide to allow of specialization in its final courses; at the same time it is sufficiently broad to compel a general knowledge of all the important aspects of business life, and to secure a liberal training and intellectual discipline. Cambridge has not been slow to adopt the new idea. and has instituted a Tripos in Economics and the associated branches of Political Science. America and Germany have also made provision for commercial training in their schools and Universities.

The conclusion is that business is now regarded as offering a career similar to professional and scientific pursuits, and one demanding serious equipment and special training for success. Its scientific bases are established, its methods are formulated, and are capable of exposition and acquisition. It is now accepted that matters which touch so profoundly the well-being of men cannot be left to mere empirical methods, but that the highest efficiency and progress can be attained only by scientific treatment; thus business has come to rank as a University subject with a large and varied curriculum—a proceeding which at once adds to its dienity and importance while it tends to advance civilization and comfort.

while it tends to advance civilization and comfort.

G. Armitage-Smith.

BUTLER.—1. Life.—The greatest name among English philosophical theologians—Newman said 'the greatest name in the Anglican Church'-is that of Joseph Butler, the author of the Analogy. He was born of respectable Presbyterian parents at Wantage on 18th May 1692, and was at tirst destined for the Presbyterian ministry. end, he was educated at an academy for Non-conformist theological students, which enjoyed a deservedly high repute, carried on, first at Gloucester and afterwards at Tewkesbury, by a Mr. Samuel Jones. Here, among Butler's con-temporaries, were several men who afterwards attained to eminent positions in Church and State. Secker, who became Archbishop of Canterbury, has described (in an interesting letter to Isaac Watts, 18th Nov. 1711) the severe and prolonged study which candidates for the ministry were there required to undertake. After some years, the young Butler felt that his intellectual and theological convictions called him to the service of the Established Church rather than to that of the Nonconformist bodies; and, with his father's consent, he matriculated at Oriel College, Oxford, on 17th March 1715. There was nothing remarkable, so far as we know, in his Oxford career.

so har as we know, in his Oxford career.

'We are obliged,' he wrote to Dr. S. Clarke, 'to mis-spend so much time here in attending frivolous lectures and unintelligible disputations, that I am quite tired out with such a disagreeable way of trilling.'

However, he took his degree in 1718, and in the same year was ordained deacon by Bp. Talbot at Salisbury, his ordination as priest following two months later. He was immediately appointed Preacher at the Rolls Chapel, where his famous series of Fifteen Sermons was preached. His first rectory was that of Haughton-le-Skerne, near Darlington, and in 1725 he was appointed to the wealthy benefice of Stanhope. Shortly after this he resigned the Rolls preachership; he became a prebendary of Rochester in 1733, and Clerk of the Closet to Queen Caroline in 1736. In this year he published The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature, the work by which he is best known.

Butler was a special favourite of the Queen, whose taste for Buther was a special favourite of the Queen, whose taste for learned conversation was indulged at her private parties, to which Buther was frequently bolden, in company with Hoadley, Secker, She Hook, and other divines of the then fashionable latituduarian school. An interesting account of Butter's con-versation at this period is preserved in the Journal of John Byrom, in which the future bishop is represented as urging the fallibility of thurch authority in matters of religious belief. The Doctor, says tyrom, 'takked with much middness, and myeelf with too much impeturesity.'

Butler attended the Queen in her last moments, and she took occasion to charge the King with his advancement-a recommendation which led to his 1 Letter to Clarke (Works, i. 322). References are given throughout to the edition of Butler's writings in two volumes, published by the writer of this article in 1200.

BUTLER 40

preferment to the see of Bristol, the poorest bishopric in England, in 1738. The dissatistaction, plainly expressed, of the new bishop with the provision thus made for him, was allayed by the addition of the Deanery of St. Paul's, which he held in commendam while he remained at Bristol. That he was by no means a lover of money was, however, evident throughout his career; and his private charity was as splendid as it was unostentations. While at Bristof, he published six remarkable sermons preached on public occasions, which give his views on great questions. Foreign Missions, Poor Relief, Hospitals, Primary Educa-tion, the Nature of Liberty, and the Genius of the British Constitution are their respective subjects; and they are still worthy of study. It is interesting to observe the development of Butler's thought, years went on, in the direction of a more definitely ecclesiastical position than that from which he started. Bred a Nonconformist, as we have seen, he became attracted to Anglicanism as a student. His earliest writings, the Letters to Clarke, written when he was only 21 years of age, are occupied with the deepest and most abstract of all arguments, the *a priori* arguments for the Being of God. He passed on to review the foundations of morality in his ethical discourses at the Rolls; and the last of these, on 'The Ignorance of Man, contains in germ the dominant thought of the Analogy. This great contribution to the Philosophy of Religion deals, indeed, in the Second Part, with topics peculiarly Christian; but there is little in Butler's treatment that was distinctive of his position as a member of the Church of England (unless the mention of a visible Church in Anal. ii. 1. 10 be taken to imply this). He does not mention the Sacraments at all, although the nature of his argument would readily admit of an application of it to Sacramental doctrine. But three years after the publication of the Analogy, we find him, as Bishop of Bristol, strenuously insisting on the prerogatives of his clergy; and John Wesley records in his Dietry (August 1739) that Butler wished to prevent him from preaching in the diocese of Bristol. Butler's dread of extravagance and emotionalism was, no doubt, at the root of his objection to Wesley's ministrations; and it is necessary for a bishop to follow ecclesiastical as increasing for a bishop to follow excreasing the precedent more closely than would be expected of a simple presbyter. Ent, for all that, the episode is significant. And Butler's charges to his clergy, both at Bristol 3 and at Durham, 4 are definitely assertive of the doctrines and practices of Anglicanism, in a degree for which the student of his earlier works is hardly prepared. It was said of him, indeed, both at Bristol and at Durham, that his proclivities were towards Roman Catholicism—a foolish calumny which hardly needed an answer. Butler's wide views as to the needs and oppor-

tunities of the Church abroad were markedly illustrated by the proposals which he put forward in 1750 for the appointment of bishops to rule the clergy serving in North America.<sup>5</sup> His scheme came to nothing, as political difficulties were nrged against it, and the Church in America remained without bishops of its own for a generation after Butler's death. But it was a remarkable illustra tion of his sagacity that he foresaw the necessities of the situation. In the same year (1750) he was translated to the see of Durham; but his work was nearly finished. He died at Bath on 16th June 1752, and was buried in Bristol Cathedral, where a monument with a fine inscription by Southey marks his grave. It has often been said that in 1747 he refused the Archbishopric of Canterbury. but the story is not sufficiently authenticated. Little is known of his capacity as a ruler of men; but both in regard to intellectual power and to sanctity of character he occupies a very highperhaps the highest—place in the hierarchy of the Anglican Church.

2. Writings.—Butler's position as a moralist is defined in his Fifteen Sermons and in the Dissertation on Virtue appended to the Analogu. ethical and political philosophy of Hobbes was fashionable in England during the first half of the eighteenth century, and it was mainly with the view of combating its conclusions, which Butler regarded as dangerous to public and private morals, that the Sermons were published. The first three are 'Upon Human Nature.' In Sermon i, he expounds the several constituent principles of human nature, of which self-love, benevolence, and conscience are regarded as primary. Its principal thesis—which is in direct conflict with Hobbes—is that

'there are as real and the same kind of indications in human nature, that we were made for society and to do good to our fellow-creatures; as that we were intended to take care of our own life and health and private good '(i. 5).

In Sermon ii, he argues for the supremacy of conscience, as the guide of man's higher nature, and he insists strongly on its superiority to the natural passions and instincts (a point which he found Shaftesbury to have neglected). This is further brought out in Sermon iii., where, the soul being compared to an organized constitution in which the inferior elements are subordinated to the superior. the obligation to virtue is expounded. 'Follow nature' is a reasonable rule, provided that it be recognized that the constitution of human nature is adapted to virtue as truly as the constitution of a watch is adapted to the measurement of time. The two sermons on 'Compassion' (v. and vi.) develop further his polemic against Hobbes. Not so directly controversial are the important discourses on 'Resentment' and the 'Forgiveness of Injuries' (viii. and ix.), in which the distinction between sudden anger ( $\theta v u \phi s$ ) and deliberate indignation against wrongdoing (δργή) is brought out, and the precept 'Love your enemies' is explained. Of much psychological interest are the sermons on 'Self-Deceit' (x.) and on 'Balaam' (vii.); and in those on the 'Love of our Neighbour' (xi. and xii.) there is a valuable account of the relation between pleasure and desire, where once again Hobbes psychology provokes the discussion. It is a fundamental principle with Butler (as with most modern psychologists) that desire seeks its appropriate object directly, and that it is not aroused, as Hedonism would teach, by the anticipation of its own satisfaction.

'All particular appetites and passions are towards external things themselves, distinct from the pleasure arising from them' (xi. 6).

Thus Love of our Neighbour, or Benevolence, may be described as 'disinterested'; it is a natural principle which primarily seeks its own gratification. That indirectly it ministers to personal happiness does not rob it of its disinterested character, or afford any excuse for resolving it into self-love, as the school of Hobbes would do. From this, Butler is led on to treat of the 'Love of God' in two noble and almost eloquent discourses (xiii. and xiv.), in which, with Fénelon and the mystics of every age, he defends its 'disinterested' quality.

A part of his ethical system which has found many critics is his conception of the relation between self-love and conscience. Both, in his view, are 'superior' principles; and in his anxiety to recommend his system as reasonable to those who have been attracted by Hedonist doctrines, he allows much to prindence and self-love,

BUTLER

'So far as the interests of virtue depend upon the theory of it being secured from open scorn, so far its very being in the world depends upon its appearing to have no contrariety to private interest and self-love' (xi. 21).

And it is Butler's conviction, and it lies behind his whole argument, that under the control of a benevolent Providence conscience and self-love will, in the end and at last, be found always to have pointed the same way. But he recognizes (as every observer must) that cases arise in life in which the two do not give the same counsel for the guidance of personal conduct, and in which honesty does not appear to be the best policy, so far as the present world is concerned. In such cases there is no hesitation in his teaching as to the supremacy of conscience; and even if he permits or encourages the man who is thus perplexed to look forward to the equity of the future life, where the wrongs of the present will be redressed, he does not allow this to be the dominant motive of his action. His ethics are intuitional, not utilitarian, like those of Hobbes, and they are not stained by that taint of otherworldliness' which is manifest in the moral

doctrines of Paley and his school. Butler's fame rests more securely on his contribution to Christian Apologetic than upon his Ethics, and the Analogu has always been more widely read than the Sermons. The title of this famous work is self-explanatory. The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature falls into two parts, the first concerned with the analogy of 'Natural' Religion. to what we know of Nature and her laws, and the second with the analogy of 'Revealed,' i.e. the His aim Christian, Religion to the same model. throughout is to present the reasonableness of religious belief to those who recognize a Supreme Author and Governor of the world, but who hesitate as to the religious doctrines of a Future Life, of Future Reward and Retribution, of the Moral Government of the world, of Miracles, of the Redemption of Christ, and so forth. He is not arguing the case of Theism against Atheism or Pantheism. He has, in his mind, the Deistical philosophy prevalent in England and France, which had not only affected minds hostile to religious influences, but had infected the teaching of professedly Christian theologians (see Deism). In his early correspondence with Clarke, to which reference has been made above, he shows that he had pondered deeply the abstract and metaphysical arguments for the Being of God; but in the Analogy he is not directly concerned with these. John Toland (1670-1722) and Matthew Tindal (1656-1733) are the writers whom he has most clearly in view, although he does not directly name them as he names his ethical opponent, Hobbes, in the Sermons. Their books, Christianity not mysterious, and Christianity as old as the Creation, were intended to rationalize the Christian system, and to show that the idea of revelation is a quite unnecessary element, while incidentally their tendency was to undermine the foundations of natural religion as well as of revealed, by urging the grave difficulties with which the theory of religion is beset. Butler's line of defence is bold and original. He takes as his text a saving of

Origen, that the who believes the Scriptures to have proceeded from Him who is the Author of Nature, may well expect to find the same sort of difficulties in it as are found in the constitution of Nature' (Introd. 6);

and he urges that difficulties in the theory of religion, whether natural or revealed, cannot be regarded as insuperable by practical men, if similar difficulties remain unexplained in nature. His

argument from analogy is mainly a negative 1 Tindal, in Christianity as old as the Creation 2 (1732, p. 251), had tried to controver the doctrine of benevolence put forward in his sermons by 'the judicious Mr. Butler.'

one. He never claims that natural law may be discerned everywhere in the spiritual world; he does not pretend to offer a 'natural' analogue to cvery spiritual fact. But he urges that for many of the difficulties which Deists and their disciples find in religious theory natural analogies may be found, and that thus an answer is provided to those who rely on these difficulties as destructive of belief. Probability is, for men, the guide of life; and exact demonstration of the purposes of the Eternal is hardly to be expected by those who recognize man's ignorance and the Divine Infinitude.

The opening chapter of the Analogy upon 'A Future Life' is, perhaps, the least convincing, as it seems to suggest a materialistic doctrine of the soul which is incredible. But Butler's argument does not necessarily involve this. We do not know, he urges, that the soul is extended in space and consequently 'discerptible,' and hence we cannot infer its destruction or the cessation of its activities from the analogy of bodily dissolution. He does not venture to argue positively from the immateriality of the soul to its immortality, as many of his metaphysical predecessors had done. Chapter ii, is concerned with the rewards and punishments of a future state, and he urges the analogy between what religion teaches about these and what experience teaches us about the temporal punishments of this present life. The Moral Government of the world is next passed under review (ch. iii.); if a perfect moral administration is not to be observed now, yet its beginnings may be traced, the natural tendency of virtue seems to be in the direction of happiness, and it may be reasonably expected that this tendency will hereafter be actualized in a perfect manner. A state of probation implies trial, difficulties, and danger (ch. iv.), which are also the conditions of our life under the natural government of the world. Such a state is intended for moral discipline and improvement (ch. v.), and the present order of things seems peculiarly fit to serve this purpose. Theoretical doctrines of necessitarianism (ch. vi.) need be no hindrance to religious belief, for religion is a practical matter, and in all the practical affairs of life we act as if we were free. And, finally, our inevitable ignorance of the whole scheme of Providence (ch. vii.) should make us cautious in laying stress on difficulties which we cannot completely resolve.

In Part 11. of the Analogy, Butler begins by explaining the importance of revelation, supposing it to be a fact (ch. i.), in opposition to the Deistical doctrine that reason is a quite sufficient and satisfactory guide without it; and he is urgent in pointing out that we are not competent to determine a priori what is the method or the content of revelation (i. 28). True to his practical good sense throughout, he insists that a priori methods in theology are apt to mislead, as the subject is really beyond our powers. There is no special presumption, he proceeds, against a revelation because it involves miracle (ch. ii.)—an argument which he develops with vigour, but which is not entirely satisfying. He returns in ch. iii. to the question of our competence for theological speculation, and his answer is decisive: 'Reason can, and it ought to judge, not only of the meaning, but also of the morality and the evidence of revelation '(iii, 13)-a far-reaching proposition. Conscience, he teaches, is the gift of God quite as much as Scripture; and no alleged dictum of revelation can be allowed to outweigh the unmistakable dictates of our moral faculty. We could not predict, that is, what course a true revelation must take; but if an alleged revelation contain clear immoralities or inconsistencies, we may safely pronounce it to be false. The stately chapter on the Redemption of Christ (v.) is notable chiefly for its insistence on the great principle that it is the Death of Christ, and not theories as to the manner of its influence in the spiritual world, which brings redemption. That the evidence of Christianity does not amount to demonstration, and that the Christian religion has not gained the allegiance of all mankind, arc often urged as obstacles to its acceptance (ch. vi.); but probable evidence is all that nature provides, and truth always takes time to win its way,

So brief an account of the contents of the Analogy does not exhibit either the power of the argument or its extent; but Butler's style is so severely concise that it is all but impossible to make a précis of his reasonings. It is sufficient if some idea has been provided of the scope of his work, the most remarkable feature of which is, perhaps, the sagacity with which he has anticipated objections. Most of the apologetic literature of the eighteenth century is useless in the twentieth century, but this cannot be said of the Analogy. The author was conscious, in a degree to which his contemporaries, whether heterodox or orthodox, did not attain, of the limitations of human knowledge of the greatness of God and the littleness of man; and the pleas of modern Agnosticism, accordingly, hardly affect his carefully considered argument. Pitt is reported to have said that the argument. Pitt is reported to nave same unecon-Analogy is 'a dangerous book, raising more doubt than it solved'; but this would be a shallow criticism. The difficulties with which it deals are not of Butler's making; they had been suggested openly by the writers whose influence he set himself to combat; and although many hasty readers may remember the difficulties while they forget the answers to them, that is not the fault of the book, but of human nature. It may be said, on the contrary, that there is no better tonic, even in the twentieth century, for weakness of spirit when a man is confronted with the perplexities of religious theory than the manly and straightforward work of Butler.

3. Influence.-It is curious that the Analogy is little quoted by the professedly apologetic writers of the age immediately succeeding that of the anthor. Leland, in his View of the Deistical Writers (1754), does not mention Butler at all, although he is at the pains of collecting various answers to Deistical doctrines; nor is it easy to find references to the Analogy for fifty years after its author's death, although it passed through a

good many editions, and, as we have seen, his reputation as a metaphysical theologian stood high in his lifetime. But in the nineteenth century Butler's writings exerted a truly remarkable influence upon divines of every school, and no writer was more frequently quoted in English theological was more frequently quoted in English theological circles. The study of the Analogy, says Newman (Apologia, ch. i.), 'has been to so many, as it was to me, an era in their religious opinions.' And Newman mentions specially Butler's doctrine of Probability, and his doctrine of Analogy suggestive of a sort of sacramentalism of Nature, as underlying much that he himself taught in after years. At first sight, the connexion between Butler and the Tractarians is not obvious; but it may have been real, nevertheless, and the hanishment of Butler's works from the curricula of the Oxford schools as a result of the anti-Newman reaction in 1845 may not have been so unreasonable as it seemed. The fact is that Butler's system had little in common with the simple evangelical piety of Wesley and the successors of Wesley in the English Church in the beginning of the nineteenth century; he laid more stress on reason as a judge of revelation, and spoke more warmly of the importance of a visible Church, than was agreeable to the popular divinity of the period between 1760 and 1830. Butler was, indeed, markedly independent of the influences of his time. There is no trace in his works of wide or extensive reading.1 He was a wise rather than a learned man; and he was little affected, to all appearance, by the currents of opinion in his own day. This may serve to explain at once his aloofness from contemporary controversy, to the personalities of which he never descends, and the slight impression which he made on the literature of his time, as contrasted with the massive reputation which he achieved a hundred years after his death.

LITERATURE .-- For Butler's career : T. Bartlett's Memoirs of LITERATURE.—For Butler's career: T. Bartlett's Memoirs of Joseph Butler (1839) is the main authority; see also the Life prefixed to Fritzgerald's edition of the Analogy (1850); W. A. Usoner, Bishop Butler (1835). Of the various editions of Entler's works the Butler (1835). Of the various editions of Entler's works the Butler (1835). Of the various editions of Entler's works the with supplementary volume of Butler studies; and by J. H. Bernard (2 vols., 1900); both of these have notes, and the latter provides an Introduction. Steere's edition of the Sermons (1882) is specially noteworthy as including a Memoir and some hitherto unpublished fragments; and Fitzgerald's edition of the Analogy (1809) is excellent. The essays upon Butler's writings and influence are innumerable.

J. H. BERNARD.

## CABBALISM .- See KABBALISM.

CÆSARISM .- From the time of Augustus to the time of Diocletian, what is called 'Casarism' is the most noted feature of the Roman Empire. Cæsarism was the outcome of many tendencies. It was a stream which was fed from many sources. It was, for instance, the culmination of the Greek conception of the city-State, in which the latter was regarded as the sphere in which the citizen was to realize himself, the measure and the goal of all his efforts, towards which his whole strength was to be directed. The rights and the duties of the citizen were alike exhausted within the city-State. This relationship governed the whole activity of the citizen. There was no limit to the duty which he owed to the State. For it he was bound to live, for it he ought willingly to die. Within the city-State there was no room for differ-

ence of view. State ideals were to be the ideals of the citizen, nor was there any room for the modern idea of freedom as against the State, or any distinction between religion and politics. The citizen was bound to worship and to serve the gods of the State. To refuse the gods their due was treason, and he was liable to punishment by the authorities for refusing to worship the city-gods, as he was liable for any refusal to serve the State in the time of danger or of war. This view, which obtains full expression in the works of Plato and Aristotle, was also the view of Rome. Only it obtained in Rome Like everything a more thorough expression. Roman, it was practical and utilitarian. Devotion to the State-patriotism as it was then understood

<sup>-</sup>had really no limit. It had not only all the <sup>1</sup> See, for a discussion of the authors who were probably well known to him, a paper on 'The Predecessors of Bishop Butler' by the writer of this article, in *Hermathena*, 1894.

characteristic marks of what we now call patriotism; it had the deepest religious sanction as well. Negatively, to refuse service to the State was treason, and not to recognize and serve the gods was also treason. For the gods and the State were one. They were bound up together, and the highest officer of the State might also be, and often was, the Pontifex Maximus.

Reserving for a little the question of the influ-

ences of the Roman provinces on the official Imperial religion, let us glance at the Roman religion itself and its character at the time of the Cæsars, since the advent of the Imperial religion coincided with the decay of the religion of Republican Rome. The old Roman religion was practically inoperative in the Imperial time. The worship of Janns, and of tome other Latin and Sabine deities, was continued and offered by the State. But the worship of other Roman deities had decayed. As early as the close of the Punic wars there was a tendency on the part of the people to transfer their devotion to the gods of other peoples. The gods of Olympus were identified with the gods of Rome, and the more abstract forms of the Roman detties were made concrete and anthro-pomorphic by their identification with the more lively gods of Greece. Nor were these identifications limited to the gods of Greece and Rome. From Egypt there came the worship of Isis, and after a long struggle this worship was allowed by the Roman authorities. The worship of Aeseulapius and Cybele also had a recognized place and validity. As Rome proceeded on her conquering career, and as district after district fell under her sway, the thoughts of the citizens were widened, new problems arose, wider horizons needed newer principles and larger methods than were required in the olden times. Means which were used in the narrower spheres had become inadequate. Thus religious rites and ceremonies, which were relied on to avert disaster or to win success, seemed, as the sphere of government enlarged itself, to be quite inadequate to the magnitude of the new situation. It was the custom in earlier Rome, in times of great peril, when all other means had failed, to choose a dietator for the sole purpose of driving a nail into the temple-wall of Juppiter. This remedy seems never to have been used after the time of Scipio. In Rome itself those rites which appeared adequate and sufficient in the old eity-States seemed out of all proportion when the city had become a world-wide government. What had seemed sufficient when Rome was simply a city-State among other Italian States, or even when she had brought all Italy under her sway, had become clearly inadequate when her dominion extended from Persia to Britain, and from the Rhine to the Great Desert. Rome had attained to Imperial dominion, the world had attained to some unity under her sway, the decrees of the Senate were operative everywhere, but where was any unity in the world of the gods to correspond with the visible unity of the Roman rule? The Roman eitizen could not but feel in some measure that he was a member of an imperial race; he must have felt that adversity and prosperity were now on a larger seale than formerly, that disaster now meant something infinitely more serious than in the olden time. His religious instincts, his feeling that he must somehow have the gods on his side continued, but how was he to propitiate them, or which were the gods to be propitiated? Could there be a power supreme over all the gods, one deity to whom he might surrender himself and the State, one deity who could support and protect him in all situations and difficulties? Thus even on the

subjective side, from the pressure of his own needs, there was a necessity which drove the Roman away from the multiplicity of the gods to some Divine eentre of nnity. For how was he to know which god he had offended or neglected? Or, if he could ascertain this, how was he to propitiate him? Or, if he could answer these questions, how could he know that the god he had offended and had propitiated could avert the disaster? Might not the propitiation of one god offend the others?

On the other hand, there were difficulties in reaching the one Divine power to whom one could snrrender oneself and be at peace. It is difficult to reach unity where the gods are the personified powers of Nature. For these powers are so unlike. The sea is unlike the land. Streams are different from mountains. Light has no resemblance to darkness, and the gods, who are these powers personified, ean never be reduced to a common denominator. The gods of Greece were so well defined, each of them had attributes so distinctive, that it was scarcely possible to reach unity except by discarding the individual gods. They belonged also to a numerous Divine society, in which each had his place and function, and thus none of them eould serve the new need which a world-wide government had brought into prominence. The more clearly defined the gods in the Olympic system, and the more definite their separate functions the less fitted were they for the function of unifying the Divine action, needed by the Roman religious citizen. As a matter of history, we find that the search after Divine unity led the Roman away from his own ancestral gods, and away from the well-marked gods of Greece, to the more vague and mysterious deities of Egypt or the nearer East. Thus the vague, undefined, and mysterious attributes of Isis attracted the Roman worshipper, and her worship rapidly spread in the later Republic and the early Empire. The priests of the goddess claimed that she cured diseases of every kind; she was identified with the female deities of Greece and Rome, possessed all their attributes, and usurped all their functions. Even more intense and absorbing, and affording more scope for passionate devotion, was the service of the Phrygian Mother of the Gods. Her name appears frequently on inscriptions, and she is 'the one, who is all' (Orelli, *Inser.*, no. 1871). We need not dwell here on other signs of the decay of the religion of old Rome, or on the passionate quest of the Romans for a satisfying religion, or for a religion which would justify them in surrendering themselves to its guidance. It is enough to refer to Mithraism and its wide-spread influence over the Roman Empire in the first and second centuries of our era (see the masterly and exhaustive account of its extent and character in Dill's Roman Society from Nero to Marcus Aurelius). It is sufficient for our purpose at present to point out that one element in the formation of the Imperial religion was the widespread unrest in every class of society, in Rome itself, and in all the provinces of Rome. Faith in the reality and efficiency of the gods of Rome and Greece had passed away, and the need of a Divine protecting power was felt more than ever. The need of devotion was as clamant as ever, or even more so, inasmuch as men's thoughts had widened, and their imaginations could people the universe with pictures of disasters miknown heretofore. They felt the need of one god—a god approachable, placable, able and ready to help. And this need went far to create its object, and to make them fill up with all Divine attributes the visible form of the power of Rome, till it attained an elevation fitted to inspire their trust and reward their devotion.

The ancient throne of the gods was vacant, and there was placed on it the figure of the Emperor, the visible holder of the greatest power known

Many influences helped to make this apotheosis reasonable and fit to the people of the time. There was the fact already noted of the identity of religion and rule in the city-State. The belief that the State and the god were one easily led to the thought of the divinity of the State. Then the decay of belief in the ancient gods, and the need, deep-seated in the human spirit, of something to worship, led on to the worship of visible and beneficent power as embodied in the majesty of Rome. Further, it was no new thing to worship men, either in Rome itself or in the provinces of Greece and of Asia Minor. In Greek story men were raised to Divine rank, or raised themselves to it, as the reward of work well done, and of heroic tasks completed at the cost of labour and of life. So we read the story of Heracles, of Theseus, and of many others. In truth, in no race of the world save the Hebrew was the conception of man far removed from the conception of God. Gods might become men, and men might be raised to Divine rank. And this universal attitude of mind helped to make the thought of the divinity of the Emperor not an absurd or untenable idea. None of the races within the Empire, save only the Jews, had any unalterable or invincible objection to the conception of a Divine humanity. In truth, in the old Roman religion the Divine and the human were thought of as inseparable. This appears very clearly in what is perhaps the most marked feature of the old Roman religion, namely the belief-one of the most universal and effective of the beliefs which ruled the Roman mind —in the Genius of the home, of the city, of the State. This belief peopled all existence, in all its forms, with beings, living, energetic, and helpful, with whom men stood in most intimate relations, and without whom and whose help it was impossible to prosper. It was necessary to invoke the help of the Genius in every transaction, and every process was carried on under the direction and with the help of its presiding spirit. Merchants, setting forth with their goods to some foreign land, invoked the protection of the Genius of the Roman people and of trade. They sought to conciliate, as they journeyed, the Divine power who presided over that way, and whose province it was to give them protection. But more intimate still was the relation of the family to its household Genius, who shared the family meal, who presided over the family's destiny, and was identified with it in weal and woe. The Lares, the Penates, the Genius, were described in many ways, and they had many functions; and the worship of them persisted, despite the opposition of the Church, far down into Christian times. The worship of the Genius of the household prepared the way for the acceptance of the worship of the Emperor and of the Roman State. It was simply an extension of the common belief, on the one hand; and, on the other, it was the identification of the belief in tutelary deities generally with the Genius of the reigning As the merchant and the traveller were wont to invoke the protection of the Genius of the Roman people, so now they invoked that same Genius, but as embodied in the reigning Emperor. Thus on this side also there was an open way that led to the worship of the Cæsar.

We must leave to other articles in this Encyclopaedia to trace the influence of philosophy and science and speculation generally on the religious beliefs of the Roman people, meaning by that phrase all the populations of the Roman Empire. Only we must affirm that from the literature of the period, and from the philosophy and speculathe period, and from the painteeping and special tion of the indicate the period of the relicious was the one supreme power in all lands around the state can be obtained. In the speculation of the Mediterranean Sea. But that power was not merely time there were many tendencies which affected the power which could set the legions in motion

only the cities, and only the educated and the learned. The tendencies to monotheism, to pantheism, to atheism, and to scepticism influenced only a limited number. The larger number, particularly outside of the greater cities, were intensely religious, if they only had known what to worship. Even if their faith in their ancestral gods had become faint, yet the trust in the Divine continued, and they sought for and obtained a more fitting expression. The Genius of their own house became one with the Genius of the Imperial house. and thus Emperor-worship was hallowed by the associations of many memories of former generations; the good ascribed to the action of the family Genius during all the family history was ascribed to the Genius of the Emperor; and so the sacredness of the past was carried over into the new wership. In this way the devotion to the new cult could become fervid and intense, and the delights of devotion could be experienced.

Thus in many ways and through many avenues Emperor-worship was prepared for as the official religion of the Empire. If we glance at the provinces, we can easily see that the preparation for the reception of this official religion was even more effective. As we have seen, in Greece proper the worship of the human as Divine was not foreign to the people. Heroes had been deified, and temples had been erected to them. Founders of States and founders of religions were regarded as Divine. Laws were thought of as Divine, and the tra-ditional givers of laws, like the Athenian and Spartan lawgivers, were regarded as Divine, feared, worshipped, and obeyed. But when we pass further east, among the Grecian peoples of Asia Minor, or into Egypt, we find a condition of things which facilitated the acceptance of the official worship of the Empire. The sacredness which hedged the persons of the kings of Babylon and Assyria passed over to the persons of the Persian kings; and they, if not regarded as incarnations of the Divine, were yet thought of as representatives of it. Titles of honour were heaped on them, and the resources of language were exhausted in order to set forth their unapproachable majesty. In their hands was the power of life and death; peace and gladness were the lot of those on whom they smiled, dishonour and death lay in their frown. The successors of Alexander fell heirs to the reverence shown to their predecessors. Read the history of the Ptolemys of Egypt, note the titles bestowed on them and the reverence accorded them, and it will be evident that to the Egyptian the new religion presented no strange feature. Nor would the claim seem strange to the subjects of the Syrian monarchs, the successors of Alexander in Asia Minor. They also made Divine claims, and to them worship was offered, or something not to be distinguished from it. We cannot enter into detail, but enough has been said to show that to all races, except the Jews, there was no historical reason why they should reject the claim of Rome to Divine obedience.

But the visible power of Rome was greater and more extensive than any other dominion which the world had ever seen. If it did not extend as far eastward as Alexander had reached in his meteoric career, it had penetrated into regions which Alexander had never entered. The dominion of Alexander was broken up into many parts. Rome had grown from more to more throughout the ages, and her dominion appeared to the subject populations to be as stable as the stars. Now, all that symbolized the Roman power was gathered into one hand, and embodied in the Emperor. It was the one supreme power in all lands around the Mediterranean Sea. But that power was not merely and direct them along the Roman roads, east and west, and south and north. That of itself was sufficient to ensure the respect of the subject populations. But the physical power was strengthened and supported by all other sources of power. And all the sources of power lay in the hand of Rome. Moral and spiritual forces were added to her splendid physical resources. The nations were subdued in every sense of the term. With the fall of the nations their gods also were held to be subdued. The gods of the besieged city were invited to leave it ere the final assault was made. When the city or the State fell, the gods were dishonoured. They had not been able to defend their followers. This result was modified by the practice which grew up of identifying the gods of the con-quered peoples with the gods of Rome. We have seen how this was accomplished in the case of the gods of Greece. Though the names were different, yet it was thought that in principle and essence they were the same. Thus the gods of the peoples with whom Rome was brought into contact came to be regarded as local forms of the gods known under other names as gods of Rome. identification was made easier by the fact that the gods of Syria, Asia Minor, and Egypt were known to the Romans under the names already given to them in Greece. Julius Casar and Tacitus illustrate the process, for they thought they recognized the Gallic and Teutonic deities as other forms of Mercury, Juppiter, Mars, and Minerva. Thus there was established a sort of identity between the gods of the victors and those of the vanquished; and the latter received a place within the pantheon of Rome. In the temples which were speedily erected within the provinces, Roman and barbarian deities were worshipped; and, remote though they were from each other in their original attributes and character, in the temples they were recognized as one.

Still this process did not lead to satisfactory results. There was needed a universal religion for the Empire. This was pressed on the governing minds of the Empire from many points of view.
While there was toleration for the religions of the subject races, as long as they did not interfere with the public peace, yet Rome was absolutely intolerant of religious practices and observances which seemed to interfere with the proper ends of government. If a doctrine interfered with the worship of the State-gods, if it assumed a hostile attitude towards Roman religion, if a strange god, so individual as not to be brought into harmony with the supremacy of Juppiter Capitolinus, was worshipped, then that form of religion was persecuted until it disappeared. Thus Druidism was persecuted to the death. It had a tradition and an organization which stoutly resisted any assimilation with the Roman system, and it was the hoast of the Emperor Claudius that he had completely annihilated Druidism (Suet. Claudius, 25). This may be taken as an illustration of the usual process, and of the method of Rome with regard to religious which proved refractory to the process of assimila-tion. But the need of a common religion for the Empire became more obvious to the ruling class. In fact, such a need was apparent to many empires before the problem became a practical one to the rulers of Rome. It was the main motive of the action of Antiochus Epiphanes in his persecution of the dews. It was also a spur to action and a leading force in the active process of Hellenization carried on by the successors of Alexander. But the need of Rome was greater, for the differences of races and of religions and of languages were more conspicuous in the Roman Empire than in any former period of history. In order to unify the Empire, there was needed not only the outward

power of military supremacy; there was needed a moral, and especially a religious, bond; there was needed a common oath whereby every one in the service of the Empire could profess his fidelity to the Empire. Soldiers, magistrates, officials, people in office all over the Empire, must have some common symbol of allegiance. This was found in the sacramentum, the oath of allegiance by which they swore fidelity to the Empire. This oath was made sacred and universal, for it was sworn by the Genius of Augustus, which was made one with the Genius of the Roman people. A common bond was required for the preservation and the consolidation of the common interests of the Empire, and this was found in the worship of the Emperor as the visible symbol of Roman strength. This, as we have seen, was not inconsistent with the tradition and character of the subject peoples. They were familiar with the thought of the divinity of the State, and of its rulers. Apotheosis was not strange to them. That visible tangible power which was seen in the hand of the masters of many legions was reinforced by the more dreaded forthcoming of supernatural consequences. Thus religion added its sanction to the forces of Imperial might.

While the needs of the time almost forced the Roman rulers to institute this religion of Imperial unity, there are many testimonies to the fact that the earlier Emperors were somewhat reluctant to accept the necessity. There are evidences that Augustus was unwilling to accept the Divine honours which were thrust upon him. But he could not withstand the force of the current. Even in Rome itself the popular current pressed strongly in the direction of ascribing Divine honours to the head of the State. The Senate had set apart and made sacred the place in which Augustus was born (Suet. Covar Augustus, 5). Many stories of portents and wondrous signs which accompanied his birth were in circulation, and these seemed to have grown with the years. Men looked back from the elevation to which Angustus had attained, and found or feigned many premonitions of it in the past. It is not necessary to dwell on these; it is sufficient to say that in Rome itself a glad welcome was given to the doctrine of the divinity of the Emperor. It is true that this was discouraged by Augustus himself. It is also true that Tiberius followed in this respect the example of his predecessor. It is told by Tacitus how Tiberius refused the petition of ambassadors from farther Spain, who asked for leave to build a temple to the Emperor and his mother as had been done in Asia. Tacitus even gives a speech which Tiberius was said to have made on the occasion (Annal. iv. 37, 38).

Notwithstanding the apparent reluctance of the Emperors to accept Divine honours, the new religion of the Empire made rapid progress. Augustus ngton of the Empire made rapid progress. Augustus had permitted temples and altars to be dedicated to him and the goddess Roma at Perganum (Tacitus, Annat. iv. 36). At other places also the practice was permitted. After the death of Augustus, his worship was introduced into Italy and Purish Roman and the control of the progress of the control of the and Rome, where it was not allowed during his lifetime. Thus during the reign of Tiberius the worship of the Emperor was widely spread over the whole world. Some testified that they had seen Augustus ascend to heaven. It soon became a crime to profess reluctance to worship the Imperial god. On his death, Divine honours had been decreed to Augustus by the Senate. There were instituted a new order of priests and a new series of religious rites in the service of the Imperial god. As if to give éclat to the new departure, names to the number of twenty-one, from the most prominent citizens, were chosen, and the names of Tiberius, Drusus, Claudius, and Germanicus were added to the number (Tacitus, Annal. i. 54). Repeated references are made in the Annals of Tacitus to the existence of the Angustan priesthood. A lawsnit was raised against a Roman eitizen because he had sold, among other effects, a statue of Augustus. Nor was the name of the Emperor, Augustus, without religious significance. It had a religious meaning from the beginning, and the people were conscious of this. Suctonius speculates as to the meaning, but he is persuaded Suctonius that it did mean something worthy, great, and religious. He tells that the new ruler was called Augustus, because this name was new, and was of higher dignity, and because places devoted to re-ligion and consecrated by augury were called ington and consecrated by augury were caused 'august.' He even makes an excursion into philology, and says that it was derived from auctus, which signifies 'increase,' or ab avium gestu gustuve,' from the flight of birds' (Suet. Casar Augustus, 7). Whatever we may think of the etymology, there is no doubt about the fact that the name challenged the reverence of the people, and had a religious significance from the first. What was implied in it is seen from the fact that the crime of majestas meant not only treason to the reigning Emperor, but disrespect towards the object of the adoration of the people, whether of the Emperor who had attained to an apetheosis, or of the reigning ruler. The significance of the title Augustus is further made manifest from the following, which we take from Lightfoot's Apostolic Fathers<sup>2</sup>, part 2, 'St. Ignatius and St. Polycarp,' 1889, vol. iii. p. 405: 'Imperator cum Augusti nomen accepit, tamquam praesenti et corporali deo fidelis est praestanda devotio' (Veget. ii. 5). A part of this passage is also quoted by Döllinger, The Gentile

and the Jew, Eng. tr. vol. ii. p. 166. However reluctant Augustus and Tiberius were to accept the new honours, the pressure of events was too strong for them. The new worship speedily became imperative. It became a crime not to worship, and the citizens of Cyzicus were deprived of their privileges because they had suffered the ceremonies in honour of Augustus to fall into contempt (Tacitus, Annal. iv. 36). In this case Imperial pressure was brought to bear on the people in favour of the new Imperial religion. This, how-ever, was almost a solitary instance. There was no unwillingness to accept it. Rather there was keen competition between cities for the honour and the privilege of building temples and organizing priest-hoods for the cult of the new religion. It is recorded by Tacitus that eleven Asiatic cities strove for the honour of building a temple to the reigning Emperor: 'Eleven cities rivalled each other, not in power and opulence, but with equal zeal contending for the preference' (Annal. iv. 55). If it was an honour to institute a religious organization, with proper buildings and persons for the Imperial worship, it was a very costly honour, as would appear from the fact that the claim of some cities was refused as they could not bear the expense. In the final issue the claim of Smyrna was allowed, mainly because 'of all the cities of Asia, they were the first that built a temple to the Roman name (Tacitus, Annal. iv. 56). Other testimonies might be added to show how rapidly the new religion spread throughout the Empire, and how greatly esteemed was the honour of having a temple to the Cæsargod within the city. The Senate of Rome was besieged by the cities of the Empire for the privilege of styling themselves nrocori, servants of the Casar-god, and for the privilege of inserting that title on their coins. It is evident that the honour was highly esteemed. But it is time to ask why the provinces, in particular, welcomed the new religion with such eagerness and enthusiasm.

In answer we must remember what the advent of the Empire meant for the provinces. It is scarcely possible to exaggerate their misery and wretchedness in the later ages of the Republic. The proconsuls raged furiously, knowing that their time was short. It is not necessary to dwell on this or to cite the authorities for it. But we may this, or to cite the authorities for it. But we may refer to the miseries of civil war, and to the terror of the times when Marius and Sulla strove for the mastery. The wars between Julius Cæsar and Pempey, the wars between Augustus and Antony. had brought unspeakable misery on the peoples and places where they were conducted. With the advent of the Emperor Augustus wars ceased, the temple of Janus was shut, a government which might fairly be called just held sway in all the provinces. The people felt a sense of security un-known for ages. Cassar was their friend, their ruler, their defender from enemies without their gates, and from oppression by those within. gave them security and a peaceful time in which they could live and work. He enabled them to provide for their wants, to accumulate property without the haunting dread that its possession would serve only to make them the mark for the envy and the greed of those possessed of power. Thus the Emperor became an earthly providence, which grew ever greater, as the peoples became more accustomed to its care. Imagination delighted to picture the greatness and the good-ness of the Imperial power; orators discoursed on it, and philosophers dwelt on the thought of the great community of the universe, in which gods and men had their places and their functions. Then the common people gathered into one all that they or their ancestors had conceived of greatness and goodness, and piled that upon the head of the Cæsar-saviour. If we had space, we might easily gather from the inscriptions a collection of epithets, descriptive of the glory thus ascribed to the Roman Emperors. These epithets are not merely adulation; they are were the Imperial Casars without a feeling of reciprocal devotion to the ideal of their calling, and to the duty devolving on them as beings invested with powers and responsibilities more than human. Seneca—to refer only to one instance—reminds Nero that he has succeeded to a vicegerency of God on earth. He is the arbiter of life and death, on whose word depend the fortunes of citizens, the happiness and misery of the people. His innocence raised the highest hopes. The Emperor is the one bond that holds the worldempire together; he is its vital breath. The Imperial task is heavy, and its perils are great. Man, the hardest of animals to govern, cannot be governed long except by love, and can be won only by beneficence and gentleness. In his godlike place, the prince should imitate the mercy of the gods. Wielding illimitable power, he is the servant of all, and cannot usurp the licence of the private subject. He is like one of the heavenly orbs, bound by inevitable law to move onward in a fixed orbit, unswerving and unresting. Such was the teaching of Seneca to his pupil; and this was the ideal of the best Emperors, who felt that they were in the place of an earthly providence to their people. But the consciousness of power led the holders of it from one stage to another. While some felt that this was a power entrusted to them by the gods, others came to regard the divinity by which they ruled as possessed of some inherent significance, and regarded themselves as Divine. Domitian issued his rescripts and formally claimed Divine power under the formula 'Dominus et Deus noster' (Suet. Domitian, 13). On the one hand, the Emperors increasingly

brought forward their claims to Divine power, and insisted on the popular recognition of the claims; on the other hand, the people, especially in the provinces, were forward in ascribing to them all the attributes recognized as Divine by them. Nor was there any other power which could reasonably enter into competition with this. Behind the visible majesty of the Emperor there lay all the prestige of the unrivalled history of Rome. The might of possession belonged to it, and all the visible forces of the world were at his command. Nor can we forget that the deification of the ruling power seemed the fulfilment of a hope which had been cherished for a long time by all the peoples of the East. There was a hope, there were prophecies, of a coming deliverer, and there are evidences extant of the wide-spread character of such a hope. The hope of the individual races was coloured by their history and by their idiosyncrasy. It took one form in Judæa, another in Asia Minor. and another in Greece, but the ferment caused by such an expectation can be traced over all the known world. It is very marked in the inscriptions which still remain. It is not necessary to multiply examples. But a quotation from one inscription may be made, because it illustrates the universal expectation, and describes what it was. The inscription will be found in Mittheilungen Inst. Athen. xxiv. [1889] 275 ff.; cf. also W. Dittenberger, Orientis Graca Inscriptiones Scheeta, Leipzig, 1895, ii. 366. The date of the inscription seems to be about 9 B.C.; Sir William Ramsay dates it 9-4 B.C. (The Letters to the Seven Churches, p. 436). The inscription refers to the birthday of Augustus. We quote a passage from it:

a passage from it:

This day has given the earth an entirely new aspect. The vorld would have gone to destruction bad there not streamed forth from him who is now born a common blessing. Rightly does he judge who recognizes in this birthday the beauning of life and of all the powers of the:

From no other day does not be common the same of the same of the common that the same of the common three of the common three of the common three day does the common three of the same of the common three day for the common three of the same of the common three day does not be common to be designated by the same of the common three day does not be common to be common to the day does not be common to be common to be dealed the day that the same day the day are were abegins.

Speaking of this inscription, Ramsay says that it records 'the decree of the Commune of Asia instituting the new Augustan Year, and ordered to be put up in all the leading eities' (op. cit. 436). Of the language of the inscription he says: 'All this was not merely the language of courtly panegyric. It was in a way thoroughly sincere, with all the sincerity that the people of that over-developed and precocious time, with their artificial, highly stimulated, rather feverish intellect, were capable of feeling' (p. 54). Other inscriptions to other Emperors might be quoted, but this is sufficient to show the feeling in the Commune of Asia towards the new cult. Reference might be made to the effect which the perusal of such inscriptions had on the attitude of the people. It would enhance their feeling of the majesty and worth of the Roman Emperor. It would stimulate their loyalty, and deepen it into devotion.

But the missionary energy of the new religion was not left to the passive power and effect of mere inseriptions, however effective these might be in their own way. The new religion had for its propagation an effective organization, a powerful priesthood, with many privileges, with ample powers, and with functions of a large order. While it is probable that, wherever there was a temple built for the worship of the Emperor, there was also an organized priesthood, yet it was in the provinces, especially in the province of Asia, that

the priesthood attained to the highest organization and to the greatest efficiency.

To the confederation of towns the Roman Government in Asia Minor had no occasion to oppose special obstacles. In Roman as in pre-Roman times nine towns of the Troad performed in common religious functions and celebrated common desidence from the common religious functions and celebrated common desidence from the common desidence of the control of the cont

The diets of the different provinces in Asia Minor were thus constituted for certain civil and religious They had the name of Commune purposes. purposes. They had the name of Commune Bithyniae, Cilleiae, Galatiae, Pamphyliae, The presiding officers of these unions were called 'Bithyniarch,' Ciliciarch,' 'Pamphyliarch,' ac-cording to the name of the province. We find, for instance, in Ac 19<sup>31</sup> the title 'Asiarch,' used to describe certain friends of Paul, who besought him not to adventure himself into the theatre. the province of Asia was the earliest and the most distinguished of all the provinces of Asia Minor, we naturally hear more of it than of the others. Not to dwell on the history of these Communes, the important matter for our present purpose is to note their bearing on the Imperial religion. In these Communes, temples were erected and priesthoods were established for the maintenance of this worship. 'In six at least of the cities comprised in the Commune Asia (Smyrna, Ephesus, Pergamum, Sardes, Philadelphia, and Cyzicus), periodic festivals and games were held under the anspices of the confederation' (Lightfoot, op. cit. 405, where the authorities for the statement are given).

It appears, also, that each of these cities had a temple or temples dedicated to the worship of the Emperors. As the separate cities were united in the Commune, so they were united in relation to religion. There were local chief priests, and there was a provincial high priest, who had supreme control of this worship over the whole province. The various designations were 'the chief priest of the temple in Smyrna,' 'in Ephesus,' according to the place in which the temple was situated. The provincial high priest was designated 'the high priest of Asia,' or 'of the Commune of Asia.' It was keenly debated for a time whether the high priest of Asia and the Asiarch were descriptions of different offices, or whether they were identical. The question may now be regarded as settled by the investigation of Lightfoot. The evidence which he has brought forward for the view that the chief priest of the province of Asia was also the Asiarch seems quite conclusive. Equally conclusive is the evidence he brings forward as to the tenure of the office. Many authorities assumed that the tenure of the office was for one year. This may have been the case with regard to the local priesthoods, but, as the Asiarch had to preside over the games which were held every fifth year, it is likely that the tenure of the office extended over that period. It is not

necessary for our present purpose to enter minutely into this controversy. All we are concerned with is the importance of the office, and the testimony which these facts bear to the prevalence, the influence, and the seriousness of this form of religion. The position of Asiarch was highly honoured and eagerly sought after. It was a position which no one could maintain unless he had great resources at his command.

In spite of the expense, this was an honorary position much sought after, not on account of the privileges attached to it, e, g, of examption from trusteeship, but on account of its out-ward splendour. The festal entrance into the town, in purple dress and with chaplet on the head, preceded by a procession of hops swinging their vessels of incense, was in the horizon of the festal entrance. of hops swinging their vessels of inceines, was in the horizon of the Greeks of Asia Minor what the olive-branch of Olympia was among the Hellenes. On several occasions this or that Asiatic of quality boasts of having been not merely himself Asiarch, but descended also from Asiarchs' (Mommsen, op. cit. 340). The civil, religious, and social standing of the Asiarch, the organized priesthood in every city of

the province, the solidarity of the whole priest-hood, ruled and directed by the Asiarch, and the favour of the Imperial government were factors in the popularity and effectiveness of the Imperial religion. It was a visible, tangible religion, invested with all the influence which the favour of the Government and the applanse of the people could give it. If, as is probable, the Asiarch liad control, not only over the priesthood of the Imperial religion, but also over religion in general, one can easily see how much its power and prestige would be enhanced.

lie enhanced.

It is probable that this superintendence, although it primarily concerned the Emperor-worship, extended to the affairs of religion in general. Then, when the told and the new faith began to contend in the Empire for the mastery, it was probably, in the first instance, through the provincial chief priesthood that the contrast between them was converted into conflict. These priests, appointed from the provincials of mark by the diet of the province, were by their traditions and by their official duties far more called and inclined than were the Imperial magistrates to animadvert on neglect of the recognized worship, and, where dissussion did not avail, as they had not themselves a power of punishment, to brinc the act punishable by civil law to the notice of the local or Imperial authorities, and to invoke the aid of the secular arm—above all, to force the Christians to comply with the demands of the Imperial cultus'

Christians to comply with the demands of the Imperial cultus (Monumsen, op. cit. 348f.). This quotation from Mommsen brings us face to face with the principle of all the persecutions of the Christian Church, from the first century down to the time of Diocletian. It was the refusal of the Church to submit to the Imperial cult that led to the declaration that they were outlaws, with no rights, and with no legal standing before the rulers. The test of their standing was whether they were willing to burn incense, or to offer worship to Cæsar. The Imperial religion became mere and more eager, militant, and oppressive. It was filled with the spirit of aggressive persecution. In its militant aspect, as against all those who refused to bow the knee to Casar, it was intolerant, aggressive, and exclusive. Whether it could long continue to command the inward assent of its adherents, or would long be able to satisfy the religious needs of its votaries, is another question. The fervid feeling, and the intense devotion expressed in the inscription quoted above, did not last very long. It lessened after the death of Augustus. As a religious force it is not apparent in the end of the 2nd century. But it still continued to fulfil its purpose as an official religion, and as a test of the loyalty of the citizen. It was well fitted to act the part of an engine of persecution. Its social power remained long after its energy as a religion had passed away. We shall end this article with a quotation from Ramsay, mainly to show what was the real character of this Imperial religion. He is expounding a passage in the Apocalypse (13<sup>12ff</sup>).

"It maketh the earth and all that dwell therein to worship the first heast," for the provincial administration organized the State religion of the Emperors. The Imperial regulation that

all loyal subjects must conform to the State religion and take part in the Imperial ritual, was carried out according to the regulations tramed by the Commune, which arranged the ritual, superintended and directed its performance, ordered the building of temples and the creation of statues, fixed the holidays and festivals, and so on—"saying to them that dwell on the carth that they should make an image to the beast. . . And it was given him to give breath to the statue of the beast, that the statue of the beast should be stated in the statue of the beast should be stilled. The last statement is familiar to us; it is not directly attested for the Plavian period by pagan authorities, but it is proved justiced for the statue of the beast should be stilled. The last statement is familiar to us; it is not directly attested for the Plavian period by pagan authorities, but it is proved instorical facts, and by the interpretation which Trajan stated about twenty-five years later of the principles of Imperial procedure in this department. It is simply the straightforward counciation of the rule as to the kind of trial that should be given to those who were accessed of Christianity. The accused enunciation of the rule as to the kind of trial that should be given to those who were accused of Christianity. The accused were required to prove their loyalty by performing an act of religious worship of the statue of the Emperor, which (as Pliny mentioned to Trajan) was brought into court in readiness for the test; if they performed the ritual, they were condemned to death. No other proof was sought; no investigation was made; no accusation of any specific crime or misdeed was made, as had been the case in the persecution of Nero, which is described by Tacitus. That short and simple procedure was legal, prescribed by Imperial instructions, and complete (The Letters to the Seven Churches, pp. 97-99).

CAGOTS.—The Cagots are a despised and formerly persecuted people of unknown origin, scattered in small groups under diverse names throughout the Western Pyrenees and in Brittany. They are the Capots, Cahets, Agotacs, and Gafets of the French, the Agotes or Gafos of the Spaniards, and the Cacous of the Bretons, although, strange to say, they are first mentioned as 'Chrestianos' in the year 1288. In 1460 the States of Béarn, where they were most numerous, called on the king of France to curtail their liberties; and in the towns the Cagot communities were then confined to separate quarters called cagoteries, which answered to the ghettos of the Jews. In the country districts they dwelt in wretched huts apart from the villagers; they were everywhere obliged to enter the church by a separate door; and after death they were buried by themselves, apparently in unconsecrated ground. In the church they were railed off from the rest of the congregation, a benitier ('holy-water fent') was reserved for their exclusive use, and they were either barred from the communion or else obliged to take the host from the end of a stick. In fact, everything was done to humiliate them, until they were emancipated by the French Revolution, at least from all these restrictions, though not from the hatred and contempt of their neighbours, which still largely persist. The side-doors of the churches were built up, but the separate fonts may still be seen in many districts, and other indications survive of the ostracism under which they formerly suffered.

Even in France the odium attaching to this 'infamous and accursed race' is by many attributed to some physical taint, such as goitre, cretinism, or leprosy, and, in 1872, Littré defined the Cagots as 'a people of the Pyrences affected with a kind of cretinism.' In England, too, they were supposed to be 'afflicted with extreme bodily deformity and degeneracy, and with deficiency of intellect' (Guy and Ferrier, Forensic Medicine. intellect (Guy and Ferrier, Forensic Medicine, 1875). But Dr. Hack Tuke, who visited several

of the groups in 1879, could find no evidence of goitre er cretinism amongst them, and he believes that they have been confounded with the inhabitants of the Pyrenees who really suffer from these complaints. Nor could be find any ontward indications which marked them off as a people physically distinct from the surrounding inhabitants, except that some are not dark like their neighbours, but blue-eyed and light-haired. Otherwise the Agotaes of the Basques, who are chiefly weavers, blacksmiths, and joiners, but have no land, differ in no respects from the Basques (q.v.) themselves, whose language they speak, while, like them, they are strict Roman Catholies. As recently as 1842 in some districts they occupied a separate place during the service, and on Rogation Days they join in a procession which sometimes gives rise to disorders, due to the ill-feeling of their Basque co-religionists.

Although now free from any taint of leprosy, weighty arguments have been advanced to show that the Cagots were originally subject to this disease, and that to it was due their separation from the other inhabitants. This is the opinion of M. de Rochas, one of our chief authorities, who pointed out in 1876 that the Breton word carodd meant 'leprous,' and that this word would easily assume both the French form Cagot and the present Breton form Cacou. He further remarks that they were also called 'Mézegs,' and that mézeau is French for 'leprous.' But such etymologies are seldom to be trusted, and the more general popular belief may still be the more correct one, that the Cagots are descended from some Visigoths or Vandals who were left behind in the Pyrenees when these barbaric hordes pushed through into Spain and Africa in the 5th century. Thus would be explained the above-mentioned blue eves and light hair, the word Cagot itself (canes Gothi = 'dogs of Goths'), and the charge of heresy that in early times was very generally brought against them. For it is to be noticed that these Visigoths themselves were heretics, being members of the then wide-spread Arian sect, to which the orthodox peoples of Gaul and Spain were bitterly opposed. Hence Guilbeau, quoted by Tuke, may most probably be right in holding that the 'Agoths,' as he calls them, 'were originally heretics,' or 'the descendants of certain heretics.' We can now understand why from the very first they were subject to cruel persecutions in Gaul, just as the orthodox inhabitants of Spain were perseented by their Arian Visigothic conquerors till the heresy was stamped out under King Riccaredus soon after the third Council of Toledo in 589.

No clear explanation has been given of the enrious designation 'Chrestianos,' which dates from the 13th cent.; but Tuke writes that at times 'many were no doubt falsely suspected of leprosy'; and as lepers were actually called pauperes Christi, the term may have originated in this way. The suggestion is the more probable since the cretins, who, we have seen, were constantly confounded with the Cagots, were also called Christians.

CAKES AND LOAVES.—I. Cakes made of firstfruits.—In primitive communities, and as a ritual custom surviving into much later stages,

firstfruits are the subject of solemn erromonial observances, before the bulk of the harvest can be eaten. They are eaten sacramentally, in order that the eaters may obtain the Divine lie which is present in them (for example, that of the cornspirit). Or, probably at a later stage, they are offered secrificially to the gods, who are supposed to have given the fruits of the earth to man; or sometimes both rites are combined (see FIRST-FRUITS).

The earliest form in which grain was cooked was probably that of roasting, grinding, and making it into rude cakes. This preceded that of baking it into loaves. Hence we find that the grain of the first sheaves is made into a cake, later a loaf, which is caten, or presented, sometimes with a few sheaves, to the god. The transition stage was probably that of boiling grain, or mixing it with milk or honey—the mixture being poured out as a libation, or eaten. Thus in N.W. India, the first of the grain is mixed with milk and sugar, and eaten by each member of the family (Elliot, Hist. of N.H. Pov. of India, 1869, i. 197). Among the Basutos the grain is boiled and presented to the

gods (Frazer,  $GB^2$  ii. 459).

Some instances of this sacramental use of cakes formed of the firstfruits may be given. Solomon Islanders, at the ingathering of the canarium nut, eat flat cakes made of the bounded nuts (Woodford, Head Hunters, 1890, pp. 26-28). The Ainus make new millet into cakes, which are worshipped by the old men. Then the cakes are eaten, after which the new millet may be used (Batchelor, Ainu and their Folklore, 1901, p. 204). Among the Natchez, the women gathered the first sheaves of maize; part was used as an offering, and part made into unleavened cakes, which were presented to the setting sun, and eaten in the evening (Chateaubriand, Voyage en Amérique, Paris, 1870, pp. 130-136). The Quichés of Central America, after gathering in the firstfruits, presented them to the priests. Some of the firstfruits were baked into cakes, which were offered to the idols who guarded their fields. These cakes were afterwards given to the poor (Brasseur de Bour-These cakes were bourg, Hist, des nations civil, du Mexique et de l'Amerique Centrale, Paris, 1857-59, ii. 566). Totonacs made a dough of firstfruits and the blood of three slain infants, of which certain of the people partook every six months (NR iii. 440). The cakes made of majze by the Virgins of the Sun in Peru at the festival of the Sun were eaten sacramentally by the Inca and his nobles (Prescott, Conquest of Peru, 1890, p. 51). Among the Coorgs of Southern India, after the first sheaf of rice is cut, enough of it is prepared and made into flour to provide a cake, which the whole family must cat. The man who cuts the rice afterwards kneads a cake from the meal, mixed with other things. Every one must partake of this cake. The Burghers, a tribe in the Nilgiri Hills, choose a man of another tribe to reap the first sheaf of grain. This grain is made into meal and baked into cakes, when it is offered as a first fruit oblation. Afterwards these cakes are partaken of by the whole family (Harkness, Description of a Singular Aboriginal Roce inhabiting the Summit of the Neilgherry Hills, 1832, p. 56(f).) The pagan Cheremisses cat sacramentally of the new loaf made from the new corn, the pieces being distributed by the sorcerer to each person (GB<sup>2</sup> ii. 321). Modern European folk-survivals show many instances of the ceremonial eating of a cake or loaf made of the new crops, and this doubtless represents an earlier sacramental cating of a cake or loaf containing the life of the corn-spirit, especially as the bread is often in the shape of a man or an animal. In Sweden the grain of the last sheaf is made into a loaf in the form of a girl, the loaf being divided among the entire household and eaten by them. At La Palisse, in France, a similar use is made of the grain of the last sheaf, which is baked into the shape of a man. This is kept until the harvest is over, when the Mayor breaks it into bits, and This is kept until the harvest is distributes it among the people, to be eaten by The Lithuanian peasant used the grain of them. the sheaf which was first threshed and winnowed. This was baked into small loaves, of which each member of the household received one. These were eaten, accompanied by an elaborate ritual  $(GB^2 \text{ ii. 318, 319})$ . In Sweden, Denmark, and Esthonia, the cake or loaf is in the form of a boar, a characteristic representative of the corn-spirit (GB<sup>2</sup> ii. 286 ff.; Grimm, Teut. Mythology, pp. 63,

The sacrificial or other ritual use of cakes baked from firstfruits is of frequent occurrence. Athens, during the Thargelia, the first loaf, made after the carrying home of the harvest, was called the thargelos. Part of the processional ritual consisted in carrying the eiresione, a bough of olive or laurel, tied up with wool, and laden with fruits and cakes (Harrison, Prol. to Greek Rel., 1903, p. 78 ff.). At Rome, the cakes which the Vestals prepared from the firstfruits were called mola salsa. The corn for making these was plucked in May by the Vestals, and the cakes were prepared and offered by them in June. At the Vestalia, donkeys were also decorated with wreaths and cakes (Warde Fowler, Roman Festivals of the Republic, 1899, pp. 148-149; Ovil, Fasti, vi. 283 ff.). Among the Hebrews, at the feast of Pentecost, two loaves of fine flour made from the first of the wheat were offered as a wave-offering, and kept sacred for the priest (Lv. 2315ff.). In Nu 1520f. the Hebrews are ordered to make a cake of dough from the first-fruits of the land of Canaan, and use it for a heave-offering. See FESTIVALS (Hebrew).

The Celtic Beltane cakes, of which so many survivals have been noted in Scotland, may have been made of some of the firstfruits kept over till spring, though this is not stated. But they were generally divided, and eater ritually. In some cases they were generally divided, and eater riusiny. In some cases the pieces were drawn by lot, and he who received a blackened piece was regarded as 'devoted,' and was the subject of a meek sacrifice. The cakes were sometimes rolled down hill, and, if one broke, it determined the fate of its owner throughout the sacrince. The cakes were sometimes routed down hin, and, it one broke, it determined the fate of its owner throughout the year. In another instance the cake was divided, and offered sacrificially to various noxious animals. The cakes were prepared in a special manner, and sometimes sprinkled without the control of the c

In many parts of the world cakes stamped with the symbols or with the actual form of a divinity, or dough and paste images of gods and goddesses, are commonly found, and are frequently ritually eaten. Among the Egyptians, according to Platarch, a cake stamped with the figure of a doukey (the symbol of Typhon) was baked on certain days (Lahlonsit, Pantheon et al., and the state of the control of the state In many parts of the world cakes stamped with the symbols

which is carried round the village and afterwards buried (GF3 ii. 411). Among the Teotons baked figures of sacred animals or of gods were reverenced, and probably, to judge by folksurvivals, ritually caten. In the Fridthiofsage we hear of images of gods baked by women and anointed with oil. The Indication Superstitionum (8th cent.) contains a section, De such images continued into times are a direct continuation of the carrier puran instances (Grimm, 68, 501, 1306; Saupe, Indicatus Superstitionum, Leipzig, 1891, p. 301.)

2. Calca sin sacrifice and ritual. — Calca are also

2. Cakes in sacrifice and ritual.-Cakes are also offered in sacrifices of propitiation or thanksgiving, either alone or with other articles of food, or are made use of in other ritual ways. The Sea Dayaks offer cakes, with many other things, to the god or Spirit who partakes of their essence (Ling Roth, Natives of Sarawak, 1896, i. 189). Similarly, the Malays propitiate the spirits of sickness by placing fourteen cakes-seven cooked and seven uncooked -along with numerous other articles, in a frame of bamboo, which is hung on a tree (Skeat, Malay Magic, 1900, p. 414). In Mexico, women who had died in childbed were deified and propitiated by offerings of bread, kneaded into various shapes, and pies. Balls of dough and pies were offered on one of the feasts of Tlaloc; and to Quetzalcoatl no bloody sacrifice was offered, but only bread, flowers, etc. (NR iii. 250, 334, 363). On the South American pampas, Darwin saw a tree on which were hung offerings of bread (Journal of Researches, 1897, p. 82). An interesting instance of the use of cakes, among other offerings, for purposes of propitiation and subsequent divination is recorded among the pagan Prussians by Jan Malecki (ed. Speyer, 1582) p. 259 f.). In their worship of 'Putscaetus, qui see; further, Usener, Götternamen, Bonn, 1896, p. 99f.), and who was believed to have his abode beneath an elder tree, the Prussians

Hitant pane, cerevisia, allisque cibis sub arbere sambuco positis, precantes a Putscaeto ut placatum efficiat Marcoppolum deum magnatum et nobilium ne graviore servitute a domiois ipsi prenantur: utque sibi mittantur Barstuccae qui subternane vocantur. His enim demonibus in domo versanitbus se ranei vocantur. His enim daemonibus in domo versantibus se fieri credunt fortunatiores : eisque collocant vesperi in horrec super mensam mappa stratam panes, caseos, butyrum et cerevisiam: nec dubitant de fortunarum accessione si maue reperiant cibos illic assumtos.

In similar fashion, in India, eakes, sweetmeats, and parched or fried grain are frequent forms of sacrifice; and this custom dates from ancient times, since the Vedas prescribe an offering of cakes (apupa) to be made to the gods (Muir, Sanskrit Texts, v. 463). At the present time the ordinary propitiatory offerings at village shrines in India are cakes, milk, and flowers. Cakes are also offered to the earth-goddess by the Patäris and Majhwars (PR i. 32, 98), and Siva is daily fed with cakes and pastry. Among the ancient Hindus the fortnightly religious services consisted chiefly in the preparation of sacrificial cakes of rice pounded in a mortar, kneaded into a ball by the head of the family, and baked on the fire. The consecrated cake was then cut up, and pieces, sprinkled with butter, were thrown into the flames, in the names of the various gods, including the god of flame himself. Other pieces were reverently eaten by the family (Monier Williams, Rel. Thought and Life in India, London, 1883, pt. i. pp. 93, 367). Among offerings in the Shinto ritual in Japan, food and drink take a very important place. Cakes made of rice are found among these offerings. At the present time these rice cakes, or mochi, are among the annual efferings at the tomb of the first Mikado, Jimmu. At every new moon the female attendants at the palace solemnly offered, in the 'place of reverence,' cakes to the sacred mirror which represented the sun-goddess. Among the New Year's Day observances in Japan one of the ceremonial rites consists in the laying on the domestic shrine of unleavened cakes made of glutinous pounded rice. These cakes are

called 'mirror' cakes on account of their shape, which is that of a flattened sphere. They are two in number-one representing the sun, or male principle; the other the moon, or female principle. kind of cake is also called the 'tooth-hardening cake, because it is supposed to strengthen the constitution (Aston, Shinto, London, 1905, pp. 212-13, 291, 313). In ancient Egypt, cakes were an invariable part of the offerings to the gods, and are referred to in the inscriptions. The formula of offering says: 'I give you a thousand cakes,' etc. These cakes were of different shapes, some being round or oval, and others triangular. Sometimes also they were made in the form of leaves, or even of animals. The round or oval were sometimes sprinkled with seeds. In the sacrifices to Isis at Bubastis the body of the sacrificial victim was filled with cakes and other meats, and then buried (Herod. ii. 40). Strabo (p. 811f.) describes the offering to the sacred crocodile, Sukhos, as consisting of a cake, meat, and honey wine, which were put by the priests into its mouth (Wilkinson, iii. 416, 418, ii. 457; Wiedemann, Eng. tr. 192).

Among the ancient Hebrews, cakes or loaves were offered, either alone or together with animal sacrilices. These cakes were unleavened, sometimes made with oil or sprinkled with oil, and were baked either in an oven or in a pan (Lv 24.5). peace-offering consisted of unleavened cakes mixed with oil, leavened wafers anointed with oil, and watch only externed waters another with only and cakes mixed with oil and fried. Leavened bread was also offered in this case (Lv 7<sup>12, 13</sup>). Cereal offerings, sometimes in the form of cakes, accompanied animal sacrifices (Lv 5<sup>11</sup> 8<sup>36</sup> 14<sup>16</sup>, Nu 6<sup>17</sup> 15<sup>4, 6, 9</sup>). The most typical offering was that of the shewbread, consisting of twelve loaves or cakes of unleavened bread, which were placed in two heaps before the Lord in the Holy Place every Sabbath. On these frankincense was sprinkled and the old loaves were eaten by the priests (Lv 249, Nu 47, 1 S 214; Jos. Ant. III. x. 7). The Hebrew ritual of the shewbread may have been derived from the similar Bab, custom. In the chamber of Bel-Merodach, at his temple in Babylon, stood a golden table on which were placed 12, 24, 36, or even 72 cakes of unleavened bread, which the god was supposed to eat (Zimmern, Beitrage zur Kennthiss der bab. Rel., 1991, pp. 94, 95; Hanpt, JBL, 1990, p. 59; Bel, vv. 3.6); and offerings of cakes are occasionally represented on early Bab. seals (Ward, in Curtiss, Primitive Sem. Religion To-day, New York, 1902, p. 267 f.).

In Greece, cakes (πλανόι, πόμμα, πόπανοι) formed an important part of all sacrificial oflerings, or were offered separately. Plato speaks of those who thought it impions to stain the altars of the gods with blood, and whose sacrifices consisted only of cakes and fruit mixed with honey (de Legibas, vi. 782). In many of the principal temples of Apollo, great importance was attached to bloodless sacrifices. There was an altar at Delos, called the 'altar of the plous,' on which only cakes of wheat and barley were placed (Porphyry, de Abstinentia, ii. 28). At Delphi, cakes and frankineense were consecrated in sacred baskets. At Patara the cakes took the form of bows and arrows, or lyres, symbolic of the two aspects of the deity (C. O. Müller, Hist. and Ant. of the Doric Rev., 1839, ii. 331). In the ritual of Artemis Tauropolos the sacrifices were maintained with cakes and honey. Associated with this was the ritual of Artemis Munychia, where we hear of Δφοφώντε, which were probably chees-cakes stamped with torches (CGS ii. 454 i.). The Charnians worshipped a securic of Agamemmon, to which there was no temple, it being kept in the house of the priest; and daily sacrifices of all kinds of flesh and cakes were offered beside it (Pausanias,

ix. 40. 11-12). The priests of Ægium had the custom of taking eakes, ordinarily used in that place, and flinging them into the sea, to be sent to Arcthusa at Syracuse (Paus, vii, 24, 3). the Archiusa at Syracuse (raus. vii. 24, 5). The Eileans, on stated days, took cakes and threw them into the spring of the Cephisus, believing that they appeared again in Castalia (Paus. x. In a sanctuary dedicated to Sosipolis, a native Elean deity, it was the daily enstom to lay before him barley cakes kneaded with honey (Pans, vi. 20. 2). In the Eleusinian mysteries the cakes offered were made from barley sown on the Rarian plain (Paus. i. 38, 6). At Athens a sacrificial cake. with twelve knobs on it, was offered to Kronos every spring, on the 15th day of the month Elaphebolion. In the cult of Ge, cakes of barley and honey were yearly thrown into a chasm in the earth, near which her sanctuary stood (CGS i. 27 f., iii, 24). In the cult of Demeter, during the pro-cessions of the The-mophoria, cakes were carried. It was also customary at this festival to throw pigs and dough eakes into certain sacred vaults, called the chasms of Demeter and Proscrpine. Serpents were said to live there, and these used to consume most of the flesh and cakes thrown in. Afterwards, probably at the next year's festival, women went down into the caverns, and, felching up the remains, placed them on the altar. Whoever was lucky enough to get a piece of the decayed flesh or cakes sowed it with his corn, and it was believed to ensure good crops  $(GB^2)$  ii. 309; CGS iii. 99). At the new or full moon the 'suppers of Hekate' were offered by rich people, and, at these feasts, small round cakes set with candles were placed at the cross-roads, as sacred to her and to Artemis (CGS ii. 511). At the Diasia, or spring festival, cakes of every imaginable shape appeared in the sacrifiees (Harrison, op. cit. p. 14). At the Thargelia, cakes of barley, cheese, and figs were placed in the hands of the pharmakos, or human victim (ib. p. 98). At Athens, during the Plynteria, a cake of dried figs, called the hegeteria, was carried in procession (ib. p. 116). Cakes steeped in honey were offered to sacred snakes on the Acropolis at Athens, and at Lebadeia, in the shrine of Trophonios. The women in the 4th mime of Herondas offer a πέλανος to the snake of Asklepios (ib. p. 349). In the vestibule of the Erechtheum at Athens there stood an altar of Zens. On this altur no living sacrifice was offered, but merely cakes without a libation of wine (Paus. i. 26. 6). Cakes made of flour, mixed with honey and olive oil, and into which flower blossoms had been kneaded, were offered to Adonis; and in the Dionysiac rites the women also offered mystic cakes three to Semele and nine to Dionysos (Theorr. Id. xv., xxvi.).

In Roman religion, cakes (libum) were also offered separately or in conjunction with other sacrifices (for those connected with firstfruits, see § 1). At the Palilia, shepherds offered to Pales baskets of millet and cakes made of the same (Ovid, Fasti, iv. 741 ff.). At the Liberalia, old women, crowned with ivy, sold cakes of oil and honey in the streets. These old women were named sacerdotes Liberi, and carried with them a small altar, for the convenience of the buyers of these cakes. From each cake that was sold they detached a small piece, which was offered on the altar to Liber in the name of the buyer (ib, iii, 725 ff.). At the rustic festivals of Ceres-the Feriae Sementivae and the Paganaliacakes, along with a pregnant sow, were offered. Cakes of the most primitive kind seem to have the been offered in each house in every circu during the Formaculia or feast of ovens. These eakes the Fornacalia, or feast of ovens. These eakes were made of far, a coarse meal, and formed into cakes by crushing in a primitive manner. Matrons offered to Mater Matuta, at the Matralia, cakes cooked in old-fashioned pans of earthenware (liba tosta) (Ovid, Fasti, vi. 482 ff.). On the festival of Summanus, cakes, which Festus describes as 'liba farinacea in modum rotae ficta,' were offered or eaten (for moulds of a wheel shape or divided into segments, used for making such cakes, see Evans, JHS, 1886, p. 44 ft.). The head of the 'October horse,' perhaps as a representative of the cornspirit, was decked with cakes or loaves (Festus, ed. Müller, p. 178 ff.). In the sacrificial ritual, after the head of the victim had been sprinkled with morsels of the sacred cake, or mola salsa, it was killed by the assistants of the priests. In the old Roman marriage ceremonial (the confarreatio) the bride and bridegroom ate together a kind of cake, panis farrens, as a sacramental offering to Juppiter (Gaius, i. 108 ff.). In other forms of marriage, eakes sometimes formed part of the sacrifice, which was an important portion of the ceremony. On a bronze hand in the Payne Knight collection in the British Museum. believed to be of the time of the Roman Empire before Constantine, there is a table with three cakes, supposed to be offerings to Juppiter. Upon two other hands are objects which seem to be round offering-cakes, divided by cross lines into four These are like the cakes found at Pompeii. parts.

Offerings of eake or bread still occur occasionally in quarters where Christianity has ousted the ancient paganism. In Bohemia, when a man has been drowned, a loaf of new bread is thrown into the river. In Franconia, on entering a forest, people put offerings of bread and fruit on a stone, to propitiate the demon of the woods: and the bakers, for luck, throw rolls into the flues of their ovens (Tylor, ii. 195, 369).

Cakes were frequently part of the food offered to the dead. In Egypt, eakes were laid beside the dead in the tomb, for the ka to feed upon; and the goddess who dwelt in the syeamore trees around the cemetery is represented holding a tray of cakes for the food of the ba. Sometimes such offerings were not made of perishable bread, but of stoneware, which by virtne of magic formulæ produced the actual food for the requirements of the dead Wilkinson, iii. 459; Flinders Petrie, Rel. of Ancient Egypt, 1906, pp. 13, 82; Wiedemann, Eng. tr. p. 297). The Ainus offer millet cakes to the dead, and also partake of the same at the

to the dead, and also partake of the same at the United European Computer of the Sacred Mount and the Instration of the people, as recorded in the Ingwine Tables, the classification of the people, as recorded in the Ingwine Tables, the classification of the people, as recorded in the Ingwine Tables, the classification of the people of the Ingwine Tables, and the Ingwine Tables, and Ingwi 1 (In the Umbrian ritual for the purification of the Sacred support organs has an epithen connected by busineer, p. 25, with the Hespythian (loss yapshar \$660por; vi. a. 50), Mars Grabovius (vi. b. 2), Mars Hodius (a deity of uncertain function; vi. b. 44), and Hontus Cerrius (the genius of the under world; vi. b, 40).—Louis H. Gray.]

funeral banguet (Batchelor, Ainu of Japan, 1892. At the festival of the dead in Japan, tables of food, such as cakes and fruit, are laid out near the shrine for three days for the use of the dead (Hearn, Unfamiliar Japan, 1894, p. 106 ff.). At the elaborate funeral ecremonics of the Hindus, balls of rice (pindas) and flat wheaten cakes, on which boiled rice, ghi, and sugar are piled up, are placed beside the deceased for his nourishment; and in the śrāddha eeremonies the characteristic feature is the offering of similar pindas and cakes of meal, which are said to represent the deified bodies of the pitris, and which supply them with nutriment, and accumulate merit for them. pindas are left for animals to eat. The feeding of a Brahman with eakes, etc., concludes the eero-monies (Sir William Jones, Works, London, 1799, iii. 129 ft. 'Laws of Manu' J. Monier Williams, Re-ligious Thought, etc., 285 ft.). The Bengali Musalmans have adopted these characteristic features of the śrāddha as an observance on the Shat-i-Barat (Arnold, Trans. 3rd Inter. Cong. Hist. of Rel., Oxford, 1908, i. 319). In European folk-observances connected with funeral rites, survivals of the offering of bread or eakes to the dead are sometimes found. Thus, in the Tirol, on All Souls' Day, eakes are left out for the dead to feed upon (Tylor, ii. 33, 34); and in Russia, gingerbread and tarts are put on the graves by the common people. In some put on the graves by the common proper. In some parts of England bread is given to the poor at a funeral, and, on All Souls' Day, 'soul-cakes' are begged for at farmhonses by peasant girls (for this and other references to 'soul-cakes,' cf. Brand, Pop. Ant., 1870, i. 216 ff.).

Images, representing human or animal victims, made of baked dough, are sometimes used in sacrifice as substitutes for those. The Egyptians, on account of poverty, made pigs of dough, and, having baked them, offered them instead of the actual animal (Herod, ii. 47). For the same reason, the Greeks, at the festival of Zeus Meilichius, offered little figures of dough at the festival of Zeus Mellichius, offered little figures of dough in the shape of swine and other animals (Thuc, i. 150). This was a common practice among the ancients, where animals was a common practice among the ancients, where animals was regular business of baking cakes in the shapes of the various animals sacrificed to the gods (see  $GB^2$  ii. 314 n.). Among the Romans, loaves in the shape of men were called marine, and in their ritual use were probably substitutes for earlier human victims. The Hindux, where human sacrifice was not permitted, in their ritual use were probably substitutes for earlier human victims. The Hindus, where human sacrifice was not permitted, made human figures of paste or dough, and cut off their heads in monour of the gods (buhois, Besorption of India, 1817, p. 160), and the state of the gods (buhois, Besorption of India, 1817, p. 160), took the form of models of the victim animals in meal and butter (Tylor, ii. 465). The Malays ofter to the spirits, on the sacrificial tray, a dough model of a human being called usual tray, a dough model of a human being called usual substitute (Seata, op. cit. 72). Loaves bearing human figures are thrown into a river to disperse fog in China. The custom is said to have been invented in a.p. 220 by an official who was is sain to have been inverted in A.B. 200 by an official who was shocked at the barbarity of offering human victims for this images in the form of human beings are made to appease demons of disease and of death, in Bombay, Bluttan, and Borneo. In Borneo, also, if any one has been attacked by a crocodile and has escaped, he casts into the water a substitute troome and as escaped, no casts into the water a substitute for himself, in the shape of an image of a man made from dough or meal. This is done to appease the water-god (GB2 ii. 348, 350). The Pueblo Iodians offered dough models of animals after success in the chase (AR iii. 174).

3. Cakes in folk-survivals .- Some of the cakes which have a prominent place in folk usage at certain periods of the year, c.g. at Christian festivals and holy days, as well as on other occasions, are probably lineally descended from cakes used sacrificially or sacramentally in pagan times. This is suggested by the customs observed in the making of these cakes, or the eating of them, by their division among the members of the family, or by their being marked with sacred symbols (the Cross [hot cross buns]) or figures (those of Christ or the Virgin [Simmel cakes]). These last probably replace the cakes stamped with pagan images or symbols. As in so many other instances where pagan ritual was Christianized, nothing is more likely than that the cakes used at pagan festivals became, by an easy transition, cakes associated with Christian festivals. Among cakes which may have had this history may be mentioned Yule cakes, made in the form of a child, Twelfth cakes, pancakes on Shrove Tuesday, cakes eaten on various Sundays in Lent (Mothering, Simnel, Whirlin cakes), hot cross bins on Good Friday, Easter cakes, Michaelmas cakes, Hallowe'en or All Souls' Day cakes. The Twelith cake was divided into as many pieces as there were persons in the house. Portions also were assigned to Christ, the Virgin Mary, and the Magi, and these were given as alms. The member of the household who got the bean or piece of money hidden in the cake was hailed as king. In Devonshire, cakes were exten and cider was drunk

on Twelfth Day; parts of the cakes were presented to the apple and pear trees, and a libation of cider was poured over them. This was to secure a good crop (Chambers, Book of Days, 1865, i. 62-63; Brand. op. cit. i. 15 fl.). Older enstoms associated with wedding-cakes point to the connexion of this cake with some rite resembling the Roman conformation (Brand, op. cit. ii. 58). For many details regarding these cakes see Brand, op. cit., and cf. the remarks of Grimm, Teut. Myth. 63, 591.

CALENDAR (Introductory).—By the term calendar' we understand the system by which days are named in relation to their place in larger units of time. In this sense the subdivision of the day into hours or other small units is independent of the calendar, while the era or other method by which years are named or numbered is also, as a rule, independent of it. Even the point from which the year is reckoned may be independent, and the Julian calendar has notoriously been used along with many different eras and many different New Year's Days. Wherever months have been used, the days have usually derived their names from their position in the months, and the system of reckoning months has therefore been a part of the ealendar; but the months have sometimes been reckoned independently of the method of numbering the years, and even of the point from which each year has been made to run, so that the calendar is less concerned with the names of years than with the names of months.

1. Natural phenomena on which calendars are based.—The recurrence of day and night and the seasons of the year are so closely bound up with the conditions of human existence, that it is necessary for all men to have regard to them, and ti is therefore natural that the day and year should be used everywhere as units for the measurement of time. The recurrence of the phases of the moon, governing as it does the supply of light at night, provides another measure which has been almost universally used from the earliest times, and the convenience of having a unit intermediate between the day and the year has led to the retention of the month, even where it has become an artificial unit independent of the phases of the moon. It is probable that the subdivision of the month has given us the week, though this again has become independent both of the moon and of the month.

2. Elementary principles of calendar con-struction.—It has been an almost universal practice to name or number the days according to their position in the month, and to name or number the months according to their position in the year. In order to do this it is convenient to have a fixed point for the beginning of each month, and

a point is provided, in the case of the month, by the reappearance of the lunar crescent in the evening sky, after conjunction with the sun. This is what is known as the apparent new moon or phasis, and it probably served to mark the beginning of the month in all primitive calendars, and this phasis still regulates the beginning of the Muhammadan fast of Ramadan. But though Nature provides an obvious starting-point for the month, it is otherwise with the year. Except in extreme northerly and southerly latitudes, there is no annual return of the sun after a period of absence, corresponding to the monthly return of the moon : the seasons slide gradually one into another, and a definite starting-point must be obtained either artificially or by astronomical observation. The result is that early calendars, while, for the most part, adhering to the rule that the month must begin at the phasis, have no definite rule for the beginning of the year. The year had to begin at a fixed season, and was made to consist generally of twelve months, sometimes of thirteen mouths, so as to keep each month fixed to a particular season. The natural desire to make the calendar year correspond with the physical year was often seconded by the desire to connect some religious festival at once with a fixed day of the month (often the full moon, for the sake of evening light) and with a fixed season of the year. The earliest calendars were generally strictly empirical. new month was determined by simple observation of the phasis, and the number of months in each year was settled from time to time by a civil or religious authority, which was in its turn guided by the state of the weather or of the crops. Father Kugler has shown (ZA xxii, [1908] p. 70) that this was the case in Babylonia in the time of the dynasty of Ur (26th-25th or 25th-24th cent. B.C.), as it was certainly the case with the Jews before the calendar reform of Hillel in the 4th cent. A.D. The great problem of ancient calendar-reformers was to discover a rule to determine which years were to contain twelve and which thirteen months, or, as it is more usually expressed, to discover a rule to govern intercalation, as the insertion of the thirteenth, or intercalary, month was called. As astronomical science developed, a second problem a fixed point for the beginning of each year. Such arose—that of finding a fixed rule to take the place of observation in determining the duration of each mouth. In one or two cases the months were given an artificial length. Thus, in the Egyptian calendar (see Calendar [Egyptian]), which must be very ancient, though there is no evidence that it is as ancient as Ed. Meyer supposes (viz. 4241 B.C.), there are twelve months of thirty days each, and five additional days, making a year of the fixed duration of 365 days. On the other hand, the Romans had four months of 31 days, seven months of 29 days, and one month of 28 days, making a total duration of 355 days (approximately equal to twelve lunar months) for the year. When an interculation was necessary, the Romans inserted 22 or 23 days only, so that the calendar months ceased to correspond with the lunar months. A further feature, peculiar to the Roman calendar, is the longer average duration of the six months from March to August than of the six months from September to February. This is merely from September to February. This is merely an exaggeration of a natural phenomenon, the mean interval between conjunction and phasis being at its minimum at the vernal equinox in March and at its maximum at the autumnal equinox in September, so that the lunar months from March to August are on an average about eight hours longer than those from September to February.

3. The solar year and intercalation.-The oldest 3. The solar year and mericanation.—The order approximation to the length of the solar year, of which we have any knowledge, is the Egyptian calendar year of 365 days. It would appear, however, that the Egyptians were early acquainted with a more exact value. Of all the annual astronomical phenomena those most easily observed without instruments of measurement are the heliacal risings of the fixed stars. A star which rises in the daytime or shortly before sunrise is invisible, or visible only in the evening; at the end of this period of invisibility comes a day when the star can just be seen before it is lost in the morning twilight. This is called the heliacal rising of the star. The Egyptians specially observed the heliacal rising of Sirius, the brightest of the fixed stars, and reckoned the mean interval between one heliacal rising and the next at 365 days, 6 hours. Modern calculations have been unable to improve upon this value. We have several references to the date of the heliacal rising of Sirius, the oldest belonging to the reign of Senwosri III., about 1880 B.C. But, in spite of their knowledge of this more exact value for the year, the Egyptians continued to use the year of 365 days till after the introduction of the Julian calendar at Rome (see CALENDAR [Egyptian]). Where a lunar calendar was in use, the observation of annual astronomical phenomena was valuable for the regulation of intercalations, and must from an early date have been considered in addition to the state of the crops, Thus at Babylon the heliacal risings of different zodiacal stars and asterisms were observed, and some rules have come down to us for controlling intercalations in this way. But for the regulation of intercalations it was of more importance to determine the relative lengths of the natural year and natural month than the actual length of either. It would appear that as early as the 6th cent. B.C. a cycle of three intercalations in eight years was introduced both at Athens and at Babylon. Such a cycle assumed that the mean year contained 12g or 12 375 mean months. The most exact value that modern astronomy can give with certainty is 12.368267 for the number of mean lunar months in the tropical year, on which the seasons depend. and 12:368746 for the number of mean lunar months in the sidereal year, on which the heliacal risings of the fixed stars depend. These values are accurate for the present day; but, while it remains

uncertain whether the earth's motion is subject to an acceleration, it is impossible to give the corresponding values in ancient times to more than four decimal places. We thus get 12:3683 for the number of lunar months in the tropical year, and 12:3687 for the number of lunar months in the sidereal year. A value almost identical with these was first proposed in 452 E.C. by the Greek astronomer Meton, who framed a cycle of seven intercalations in nineteen years, reckoning <sup>2</sup>N or 12:368421 mean months to the mean year. It is not certain whether the Metonic cycle was ever adopted at Athens (see CALENDAR [Greek]). The same cycle was brought into use in Babylonia in the 4th cent. B.C. at the latest, and has been generally adopted wherever intercalations have been regulated by cycles at all.

4. The calendar month.—Meton and his Greek

successors aimed, however, not merely at establishing a cycle of intercalations, but at the establishment of a cycle which should regulate at once the length of the month and the number of months in the year, and which should thus render the calendar entirely independent of observation. For this purpose it was necessary to express the mean length of the month as a number of days represented by a fraction with 235 or a multiple of 255 as its denominator. Meton himself proposed \$2540 = 294 12h 45m 57.45°. Callippus in 330 g.c. proposed \$2545 = 294 12h 44m 25.53°. Finally, about 143 g.c., Hipparchus proposed \$4560 = 294 12h 44m 25.55°. The true length of the mean lunar month is cold bill the 904 15h 45m 204 200 in 19 904 20 is 29d 12h 44m 2.81s for the present day, or 29d 12h 18 23 12 14 2 2 31 for the present day, or 23 12 44 3 3 3 for the time of Hipparchus, so that the cycles successively proposed mark a gradual approach to the true value. Elsewhere the length of the month was beginning to be obtained by calculation instead of by observation, but it was apparently among the Greeks only that these apparently among the Greeks only calculations were combined with those governing intercalation to form a cycle. The Elephantine intercalation to form a cycle. The Elephantine papyri show that the Jews of that city were already, in the 5th cent. B.C., beginning their months not at the phasis of the moon, but at the sunset following the mean conjunction of the sun and moon, which they found by calculation; they adopted a value for the mean lunar month of not less than 29d 12h 43m 44.63° and not more than 29d 12b 44m 51·15\* (Monthly Notices of the Royal Astronomical Society, Ixix. 19). But, while they found the beginning of the month by calculation, they appear to have had irregular intercalations, governed perhaps by the state of the crops. In the 2nd cent. B.c. both Hipparchus and his Babylonian contemporaries adopted 29<sup>a</sup> 12<sup>h</sup> 44<sup>m</sup> 3·3<sup>s</sup> as the true length of the mean lunar month—a value as exact as any that modern astronomy can assign. Babylonian astronomers even went the length of computing the time of the true conjunction of the sun and moon, having regard to the anomalistic motion of both luminaries, and then performed the still more complex problem of computing the time of phasis, which determined the beginning of the calendar month.

5. The Julian calendar.—In the 1st cent. B.C. there was a reaction throughout the Roman Empire against the lunar calendar. In 48 B.C., Julius Cæsar, with the aid of the Alexandrian astronomer Sosigenes, constructed the famous Julian calendar, in which the motion of the moon was entirely ignored, and the mean year was taken at the value current in Egypt, 365 days, 6 hours. Each month was given a fixed number of days, with the single exception of February, which received 28 days in ordinary years, and 29 in every fourth year. The example set by Rome was rapidly followed, and different cities and communities in the Roman Empire either adopted the Julian calendar, or

framed calendars of their own based on the same principle. Sometimes the old calendar and the new lived on together, but lunar dates are rare in documents subsequent to the Christian cra. The lunar calendar survived among the Jews, who, when they substituted calendar rules for observation in the 4th cent. A.D., adopted the Metonic cycle of intercalations and the Babylonian value for the mean lunar month.

6. The agricultural year.—Where the lunar calendar held good for religious, political, and commercial purposes, it was necessary for agricultural purposes to fix the seasons in some other way. The position of a particular month in the way. The position of a particular month in the space of a few years, and, where intercalation was irregular, might vary by considerably more. It was necessary therefore to have recourse to those phenomena which occupy a fixed place in the solar year, and from an early date Greek farmers recognized the season by observing the solstices and equinoxes, and the annual risings and settings of the fixed stars. They also noted what would be less easy to determine directly—in what sign of the zodiac the sun was stationed. No calendar, properly so called, was constructed out of these materials, but the interval between these different phenomena was early noted, and was connected with the change in the seasons and the state of the weather. Several of these intervals are given by Hesiod. When Meton published his calendar, he inserted the dates of the equinoxes and solstices and the heliacal rising of Sirius. Later astronomers compiled parapegmata, giving the exact intervals between those astronomical phenomena which recur annually, with the weather that ought to accompany each; and it was thus possible to obtain by dead reckoning from any single observation an accurate knowledge of the season

of the year. These astronomical phenomena were

inserted in Casar's calendar, often against the wrong date, and long continued in use to designate

the season of the year, though their dates were doubtless taken in practice from the published

calendar, and not from actual observation (JPh,

No. 57, pp. 87-99).
7. The lunar calendar in the East.—It is believed that the modern Indian lunar calendar, first expounded in the Sarya-Siddhanta belonging to one of the early centuries of our era, is based on Babylonian astronomy, from which several of its lunar values appear to be derived. The months are reckoned in some places from the true conjunction, in some from the true opposition, of the sun and moon; both are elaborately computed with reference to the anomalistic motion of both sun and moon. An intercalation takes place when two conjunctions or two oppositions occur while the sun is in the same sign of the zediac. Here we have for the first time scientific computation entirely supplanting cycles and observations for both the number of days in the month and the number of months in the year. It is interesting to observe that, in order to accommodate the calendar the better to the anomalistic motion of the sun, the anomalistic year, i.e. the mean interval between two successive solar perigees, is taken as the solar year, and its duration is fixed at 365<sup>d</sup> 6<sup>h</sup> 12.6<sup>m</sup>, whereas the correct duration at the present day is 365<sup>d</sup> 6<sup>h</sup> 13.9<sup>m</sup>, and the duration in ancient times, for which it is impossible to determine the fraction of a minute, must have been 365<sup>d</sup> 6<sup>h</sup> 14<sup>m</sup>. It is interesting to observe that the Babylonians of the 2nd cent. B.C. reckoned 365 6 h 138 m, so that Indian astronomy is in this instance a little inferior to Babylonian (Kugler, Die bub Mondrechaung, 1900, p. 95; Ginzel, Handbuch der mathemat, and techn. Chronol. i.

[1906] 310-402). The Chinese calendar resembles the Indian lman calendar in its general principles, both as regards the rule governing intercalation and the reckoning of the calendar month from the true conjunction as obtained by a strict astronomical computation; but the constants used are not Babylonian, and appear to have been derived from native astronomy, until this was superseded by Western science in the 17th century.

8. The week.—The Babylonians appear to have observed a Sabbath on every seventh day of the lunar month, and it is probable that this usage was originally connected with the four quarters of the moon. Among the Jews the seven days' week was reckoned independently of the moon, and we already find traces in the 1st cent. B.C. of its connexion at Rome with the sun, moon, and five planets, which have given their names to the seven days. In the modern Jewish calendar the length of the month is so arranged with regard to the days of the week as to prevent certain of the great festivals from falling on the day next to a Sabbath.

9. The lunar month and the week in the Christian calendar .- The connexion of the Christian festival of Easter with the Jewish Passover, and of the Christian Sunday with the Jewish week, has given rise to movable feasts in the Christian calendar. These feasts fall on a fixed day of the week, which is generally at a fixed interval from Easter, which falls on a Sunday on or near the date of Passover. From a very early period the Christians reckoned the date of the Passover and the consequent date of Easter for themselves. For this purpose we find an inaccurate 84 years' cycle used at Rome. Gradually the cycle of 19 years supplanted all others, and, in the form in which it was accommodated to the Julian calendar, the effect on the assumed date of Passover was the same as if the Callippic cycle had been adopted. It therefore assigned on an average 22° too much to the lunar month. The result was that by the 16th cent, the calculated new moons fell on an average four days later than the true new moons. In the form which eventually won its way to acceptance the rule was that Easter fell on the first Sunday after that 14th day of a lunar month which fell on or next after March 21, where March 21 was supposed to represent the date of the vernal equinox, and it was widely, but erroneously, supposed that this rule was established by the Council of Nicæa in A.D. 325,

10. The Gregorian calendar .- The Julian year had been based on the mean interval between two consecutive heliacal risings of Sirius in Lower Egypt. This was a species of sidereal year. Already in the 2nd cent. B.C. Hipparchus had discovered a difference between the sidereal year, which governs the sun's position in relation to the fixed stars, and the tropical year, which governs the time of the equinoxes and solstices; but this discovery received little attention till the time of Ptolemy in the 2nd cent. A.D. The result was that the dates of the equinoxes and solstices moved slowly backward in the calendar year, until the date of the vernal equinox came to be March 11 instead of March 21. In consequence a new Gregory XIII., assisted by the mathematician Clavius. Ten days were omitted at once so as to restore the vernal equinox to the date which it had occupied at the time of the Council of Nicaa; and the mean length of the calendar year was fixed at 365<sup>d</sup> 5<sup>h</sup> 49·2<sup>m</sup>. The true length of the mean tropical year is at the present time 365d 5h 48·8m, and must in 1582 have been 365d 5h 49m, the fraction of a minute being uncertain. It would appear, therefore, that the Gregorian calendar

adequately represents the tropical year. At the same time, provision was made for a correction of the lunar dates, by means of which Easter is calculated. The new calendar assumed for the lunar month a mean duration of 29d 12h 44m 2:71s -a duration which will be correct about 400 years after the present date. The reformed calendar was immediately adopted in nearly all Catholic countries, but only slowly among Protestant States, and has not yet been accepted by the Greek Church. It has the merit of checking the slow movement of the seasons backwards, which characterizes the Julian calendar; but it is a cumbrous system for calculations spread over long periods, and astronomers generally prefer to use the Julian and not the Gregorian year as the unit of time.

Muhammadan religion has given currency to an Arabian lunar calendar, in which the calendar year is a purely artificial period of twelve lunar months which is not correlated with the solar year, and which may begin at any season of that The beginnings of the months have usually been determined empirically; but calendar rules have been devised for astronomical purposes, and the empirical dates are rapidly giving way, except

for religious purposes.

CALENDAR (African).—Data regarding the African calendar are scanty, and concerning many tribes are thus far entirely lacking; but in general it may be affirmed that the degree of development was only meagre. A typical African calendar seems to be presented by that of the Warumbi, a people centred between lat. 0°-1° N., long. 27°-28° E. According to Maes (Anthropos, iv. 627),

'ils comptent les mois par lunes, distinguent les saisons et divisent l'année d'après elles. L'année des Warumbi va d'une assion sèche à l'autre. Celle-ci commence en décembre et finit vers la fin de janvier. L'année comporte approximativement 13 lunes, mais les Warumbi n'en comptette point le nombre. Ils 13 lunes, mais les Warumbi n'en comptent point le nomore. In ne savent d'alleurs point déterminer exactement le nombre de jours d'une année. Quelquefois ils comptent par lunes, vous diront qu'il y a quatre ou cinq lunes, que telle ou telle chose est arrivée, mais n'en tiennent point compte pour déterminer leur âce, dont ils n'ont que peu ou point de notion. Chez cux l'on age, dont ils n'ont que peu ou point de notion. Chez eux l'on est jeune ou vieux, mais on ne compte jamais le nombre d'années de la vie.

Perhaps the acme of African calendrical development is shown by the Yoruba, who have a year (odun) which is divided into a dry season (ewoerun), the season of the Harmattan wind (ewo-oye), and the rainy season (ewo-ojo), the latter subdivided into the first rains (aro-ko) and the last rains (arokuro). They have a system of moons and weeks. EUFO). They have a system of moons and weeks, The week consists of 5 days; Ako-ojo (\* First Day'), Ojo-owo (\* Day of the Secret' [sacred to Ifal]), Ojo-Oyun (\* Day of Ognn' [the god of iron]), Ojo-Shango (\* Day of Shango [the god of thunder]), and Ojo-Obatala (\* Day of Obatala ). The first of these days is unlucky, and during it all work is forbidden; while, in addition, all followers of a particular god must abstain from labour on the day sacred to that god; blacksmiths, for example, are not allowed to ply their craft on Ojo-Ogun. Six of these weeks are supposed to make a lunar month. about 12 hours being subtracted from the last week in the moon to make it synchronize with the lunar month. The Yoruba are unacquainted with the hour, but divide the day (osan) into 5 periods, and the night (oru) into 3 'cock-crowings.' The

<sup>1</sup> Cf. the five-day pasar week of Java and Sumatra (below, 131'). With this may be compared the Bab. hamustu, a period 1 G. the investay postar week at the Bab, hamusla, a period of 5 days (hased on the sevagesimal system) used in commercial of 5 days (hased on the sevagesimal system) used in commercial Chromologic, Leipzig, 1984, 1, 26, 1194, for further details regarding the E.b. fee day week, see below, p. 1

week of five days is also in use among the Akposa of W. Africa; these are named Eyla, Ewa, Imle, of W. Africa; these are named  $E_{J}a_{i}$ ,  $E_{a}a_{i}$ ,  $I_{a}a_{i}$ , deities other than Uwolowo (Müller, Anthropos, ii. 201). The Ahanta, of the W. Gold Coast, on the other hand, divide the lunar month into two periods of 10 days and one of about 91, while a week of 8 days is recorded in Old Calabar (Daniell,

L'Institut, ii. 90).

The Tshi-speaking peoples of W. Africa divide their year, which consists of 13 lunar months (infi), into the 'little Holbor' (Ahohbor kakrabah, May-August) and the 'great Hohbor' (Ahohbor kassi, September-April), although some of the northern members of this stock have 12 months of northern members of this stock have 12 months of 30 or 32 days, named from the seasons, etc. The lunar months are divided into 4 periods of 7 days each: Adjivo-da ('Khwadjo's Day'), Ibna-da or Bna-da ('Kobina's Day'), Wuku-da ('Kwakn's Day'), Yaw-da ('Yow's [or Kwow's] Day'), Iffi-da ('Kwofi's Day'), Memin-da ('Kwamin's Day'), and Kwasi-da ('Kwasi's Day'), these names apparently being those of distinguished chiefs apparently being those of distinguished chiefs apparently being those of distinguished chiefs apotheosized after death. Wednesday, Saturday, and Sunday are considered feminine and lucky; Tuesday is a day of rest for tishermen, Friday for agriculturists, etc. The Tshi weeks begin at different times of the day, and both the Tshi and the Ga add to each seven-day week, to make the period of 4 weeks agree with the lunar month, Besides this system, the Tshi also reckon by periods of 40 or 42 days, the end of each of these periods being the great Adae feast, which is followed, after 18 or 20 days, by the little Adae, these Adaes, like the weeks, beginning at different periods of the day.

Even where the system of lunar months has been developed, the older method may still persist. an admirable example of this being found among the Basuto of S.E. Africa.

'More or less they keep or purely reckon their time by the seasons of the year (their changes), by animals (their birth time), by plants (their annuality or growth), by the stars, such as the Pleiades (their position, time of rising and setting), but more especially by the moon itself. A full month consists of that space of time from the beginning of the evening when the part prom its to be seen it between that space of time from the beginning of the evening when the new moon is to be seen in the west . . . to the last day of its appearance in the heavens; and, moreover, includes two more days when the moon cannot be seen at all in the heavens. . . The first of these two days is called or said by them that the moon et lemfelta, lit. 'is gone into the darks'; and the second, et little days the new moon will be plainly visible to every-closely the expension of the second, et little days the new moon will be plainly visible to every-closely the expension of the second, et little regard is paid as to counting the number of days in any month, since the bulky moon itself fills up the deficiency (Sechefo, Anthropes, iv. 8314).

The tywkels hunny months of the Results read.

The twelve lunar months of the Basuto year (sclemo, also meaning 'spring,' 'plough-time')
begin in August, and bear the following names: 'plough-time') Phato, Loctse ('Anointer,' because, in the quaint words of Sechefo, himself a native Basuto, 'the hardy month of Phato [August] has truly been syringed, anointed, and sweetened by the present Loctse [anointer] anointing the land as it were by the sweet oil of delicacy and smiling verdure'), Mphalane (apparently from Liphalana, 'glitters, because 'the fields are sparkling and glittering as if it were oceans of water gently moved by the soft breezes, and thus dancing under the brilliant sun'; this was formerly the month for the rite of female circumcision), Pulungoana ('young gnu,' these animals being born at this time of the year), Tsitoe ('grasshopper,' being the time of the hatching of such insects), Pherekhong ('inter-joining of such insects), the but of the watchers who sticks' [for building the huts of the watchers who keep the birds from destroying the crops]), Tlhakola ('wiping off' [of the green but impregnated husks of

<sup>1</sup> Because the apes, seated on the mountain-peaks, can see the new moon before it becomes visible to men dwelling lower down.

the mabele crop]), Thakubele or Hlakubele ('the mabele in grain'), 'Mesa ('fire-kindling' [by the bird-searers in the chill early morning] or 'roa-ting' [of mealies, which are plentiful in this month]), Matsacanon ('laughter at birds' (the mabele now being ripe and able to mock the attacks of the birds, thus relieving the bird-scatters of their tasks)], 'Phapporne ('beginning of swelling' [of the senyardu-buleni,' a sort of bulb]), and 'Phupu' ('bulging out' [of plants]).

It need scarcely be said that in parts of Africa, Muhammadanism has influenced the calendar, as is clearly seen, for instance, in the divisions of the day among the inhabitants of Bornu (Koelle, African Native Literature, London, 1854, p. 284).

African Native Literature, London, 1854, p. 284).

The recurrence of sacred days among the Yoruba and Tshi has already been noted. In like fashion, Tucsday and Sunday, and especially Friday, are unlucky in Senegal; among the Mandingan Bambarra of the Sudan lucky days were the first of the month, even days not containing 6, and odd days containing 5; in Akkra, on the Gold Coast, a distinction was even drawn between lucky days of a greater or less degree of good fortune; and in Ashanti only about 150 days were recognized as sufficiently lucky for the commencement of important undertakings. Besides these days, there were festivals at greater intervals, such as the feast celebrating the planting of the yam in Dahomey, Ashanti, Fernando Po, etc., and that held at the harvest of the same fruit on the Gold Coast.

of Anthropos, for his contresy in sending him advance sheets of
the second part of Schefo's study expressly for the completion
the present article.

CALENDAR (American).-1. Calendar systems of the North American Indians.—The North American Indians may, broadly speaking, be classed among those peoples who stand midway between the hunter state and the agricultural condition of existence. Some of the tribes among them possess calendar systems rich in varied festivals and celebrations, all more or less of an agricultural character; whilst others scarcely appear to notice the passage of time and the seasons, and possess almost no distinguishing feasts or other social observances. But all, even those living upon a more or less fixed agricultural basis, are at one in the simplicity of their methods of computing time, varying only in the more or less elaborate manner in which they celebrate its principal seasonal stages. Day and night, the changes of the moon and the seasons, the growth of vegetation and annual plants, and the habits of animals and birds, form the data upon which their systems are based. By some of the tribes four daily divisions were recognized—sunrise, moon, sunset, and midnight; whilst the diurnal round was usually designated a 'night' or 'sleep.' The manner of reckoning the years depended upon the locality in which the tribe was situated. Thus, in the more northerly latitudes they were known as 'snows,' and in the south as 'summers.' four seasons were very generally recognized, and were named according to the natural phenomena incidental to their recurrence in various latitudes.

The lunation is by far the most important of the time divisions known to the Northern Amerinds. Before the coming of the white man there was, it is supposed, but little attempt at the construction of anything like a lunar year, and, where this attempt was made, the number of lunations embraced VOL\_III.—5

by a 'year' was generally 12. Some of the tribes. however, reckoned 13 moons to a year; and in one calendar-that of the Kiowa, which possesses 12 moons-half a moon is intercalated in one of the unequal four seasons, and the other half in the following season, the year commencing with the Mexico the year is known as a 'passage of time,' and the seasons as 'the steps of the year.' The new year is called 'mid-journey of the sun,' to designate the middle of the solar round between the summer solstices. With the Zuñi, half of the months are 'nameless,' and the other six months 'named'; that is, the first six months have definite names, and the last six of the year have ritualistic names (such as Yellow, Blue, Red, White, Variegated, and Black), derived from the colours of the prayer-sticks offered up at the height of each crescent,' or moon, to the gods of the north, west, south, east, zenith, and nadir, who are severally represented by these colours.

Compensation for the surplus days in the solar year appears to have occurred to the Sioux or Ojibwas. Captain Jonathan Carver, in his Three Years' Travels through the Interior Parts of North America (1796), says.

America (1/190), says:
Some nations among them rectors their years by moons,
Some nations among the rectors the second model of miner mouths,
observing, when thirty moons have waned, to add a supernumerary one, which they term the lest moon; and then begin
to count as before (p. 16i).
He proceeds to relate that the first appearance

He proceeds to relate that the first appearance of each moon was halled by the Indians with joy. They gave a name to each month as follows, the year beginning at the first new moon after the vernal equinox:

year beginning at the first few most accessive made quinox:

March, Worm Month; April, Month of Plants; May, Month of Flowers; June, Hot Moon; July, Buck Moon; Ausust, Sturgeon Moon; September, Corn Moon; Oetober, Travelling Moon; Ausurher, Beaver Moon; Devember, Hunting Moon; January, Cold Moon; February, Snow Moon.

They called the last days of each moon the 'naked days,' and its first appearance its 'coming to life again.' They had no division of weeks, but counted days by 'sleeps,' half days by pointing to the sun at noon, and quarters by the rising and setting of the sun, for all of which they possessed hieroglyphic signs. The Haidah intercalated what they called a 'between-month,' because it was between the two periods into which they divided the year; and it is possible that this was sometimes omitted in order to rectify the calendar. The Creeks counted 12½ moons to the year, adding a moon at the end of every second year, reckoned half in the preceding and half in the following year, much as did the Kiowa. Many tribes kept records of events by means of symbolic figures or hieroglyphs. One of the most remarkable of these is the Dakota 'Lone-dog winter count,' painted on a buffalo skin, and depicting the events embraced between the years 1800 and 1871. The calendar history of the Kiowa is a similar record of tribal affairs. The Sioux tribes of the East measure time by leather thongs knotted in various ways-a device which was adopted by the Governor of South Carolina in his dealings with them (Mooney). They divide the year into five seasons, but do not possess so minute and peculiar a division of it as the Bella Coola Indians of British Columbia, who resolve the year into two parts, separated by the winter and summer solstices, which they regard as periods of indefinite length, and between which five months are counted. Each solstice is reckoned, therefore, as approximately six weeks (Boas).

The tribes of California, though related ethnologically in a more or less intimate manner, differconsiderably from one another in their calendar system. The Hupa keep no account of time, as they consider it superfluous to do so, and guess at

one's age by examining the teeth. The Maidn believe that Kodovampeh, the Creator, established the seasons, which they divide into Kum-men-ni, the rain season; Yo-ho-men ni, the leaf season; I-hi-lak-ki, the dry season; and Mat-men ni, the falling-leaf season. The Pima of Southern Arizona have long been accustomed to record events by

means of notched sticks.

'Four sticks,' says Russell, 'were "told" to me by the men in whose charge they were. To any other person they would have been absolutely meaningless' ('Pima Annals' in American

Anthropologist, vol. v.).

The years are marked on these sticks by transverse notches; the events by smaller notches or rude symbols. The oldest of these annals date from the time of the meteoric shower of 13th Nov. 1833, but older sticks were remembered by aged

members of the tribe.

The Algonquin Indians of Virginia reckoned vears by 'winters,' or cohonks-a name taken by them from the note of the wild geese during that season. They divided the year into the budding or blossoming season (spring), highest sun season (summer), corn-gathering season (autumn), and cohonk (winter). The months they designated as the moon of stags, corn moon, first and second moon of cohonk, etc. They made no distinetion between one hour and another; but they divided the day into three parts—the rise, power, and lowering of the sun. They kept a calendar by making knots in string, not unlike the quipo records of the Peruvians.

The modern Creeks commence the New Year immediately after the celebration of the Busk, or ripening of the new corn, in August (see below). They divide the year into two seasons only, viz. winter and summer; and subdivide it by the suc-

cessive moons, as follows:

cessive moons, as follows: Heydrikecoor (Big ripening moon), August; Otauwośskichec (Little chestnut moon), September; Otauwośskicheco (Big chestnut moon), Cotober; Herwichte (Falling) et al moon), Novemmon and Cattle winter moon, or Big winter moon's young brother), January; Houtdhalaksec (Windy moon), February; Tatisant-choose (Little spring moon), March; Tansautehichicoo (Big spring moon), April; Kechicsec (Malberry moon), May; Kichohassec (Blackberry moon), Jun; Hoyedehee (Little ripening moon), Jun;

They count the number of days or years, either past or to come, by tens, and can rarely compute more nearly than within a moon the date upon which a given event took place.

which a given event took place.

The Comanches, says Schoolcraft (Hist. of Indian Tribes, ii, 129), possess

'no computation of time beyond the seasons, which they count by the rising height of the grass, falling of the leaves, and the sold and hot seasons. They seldom count by new moons. With them one sur is one day.'

The Dakotas, says the same authority (ii. 177), count time by seasons, and 28 days to the moon.

The names of the moons are:

The names of the moons are:

January, Hard moon; February, Moon in which racoons
run; March, Moon of sore eyes; April, Moon when the geese
lay; Man, Moon for planting; June, Moon for strawherries
and hoeing corn; July, Midsunmer; August, Moon in which
corn is gathered; Neptunber, Wild rice moon; Jothebr and
November, Running of the doe; December, Moon when the does
shed their horns.

The Mandans and Minnetarees, Dakotan tribes, are generally aware that there are more than 12 lunations in a year, but have no formal names for the lunar periods. The Hidatsa, a people of the same nation, speak of the seasons of 'cold weather' or of 'snow,' of 'warm weather,' and of 'death' or 'decay'; but they do not regularly allot a certain number of moons to each of these seasons,

2. Festivals connected with the calendar of the N. American Indians .- To a tribe subsisting upon an agricultural basis the prime object of keeping a calendar is the proper recognition and timely remembrance of seasonal festivals. In latitudes where the seasons are by no means exact in their

1 Derived from Creek puskita='fasting.

recurrence, the lack of a stated calendar would quite disorganize all these celebrations; and, even with its aid, some confusion prevails in certain tribes as to the exact dates upon which certain ceremonies should be held. Many of these functions are of a highly elaborate nature, and occupy many days in their observance, the most minute attention being paid to the proper performance of the various rites connected with them. They consist, for the most part, of a preliminary fast, followed by symbolic dances or magical ceremonics, and concluding with a gluttonous orgy. A wide similarity prevails among these ordinances in North America, and, broadly speaking, it may be laid down that visible differences may be accounted for by circumstances of environment

or variations in seasonal changes.

Of the Indians of Virginia (Algonquins), who were the first to come under the notice of Europeans, it was observed that they held regularly recurring festivals to celebrate the ripening of fruits and grain, and more irregular feasts to mark the return of wild fowl and the hunting season in These were obviously the celebrations general. of a people subsisting on a basis midway between the hunting and the agricultural states. they were being slowly impelled towards the latter phase, however, is evident from the fact that their most important annual festival marked the period of harvest, the celebration of which lasted several days. Dances were engaged in, and heroic songs recited; and the entire observance appears to have been identical, in its general aspects, with the Indian festivals of the present day. The Creeks, as noted above, commence their day. The Creeks, as noted above, commence then New Year at a similar period, after the celebration of the Busk. The Cherokees recognize the same feast, at which time they burn all rubbish, and cleanse their habitations. A fast is then held for three days, during which time purgatives are taken. All crimes except murder are pardoned, so that the community as a whole may commence the new period free of sin. On the fourth morning the high priest produces a new fire by friction, and the members of the tribe are supplied from it. Feasting and dancing are then indulged in for three days, after which the people return to their usual avocations. This festival of the Busk, however, appears to have had other significance besides that of a mere seasonal offering of firstfruits. All the dances, invocations, and rites were shaped and ruled by the application of the number four and its multiples in every imaginable relation. Besides being a seasonal celebration, it possessed the significance of a sacrifice to the four winds— the rain-bringers. Four logs were placed in the shape of a cross pointing to the four cardinal points, and then consumed by fire, thus symbolizing the four winds to which they were a burntoffering. The four winds originally typified the four ancestors of the lumian race.

Adhering to our classification of tribes according to the chronological sequence by which they became known to Europeans, we find that the Mandans (Dakotas) celebrated each year, as their principal festival, the 'Buffalo Dance'-a feast which marked the return of the buffalo-hunting season. The actions of buffaloes were imitated by eight men wearing the skins of these animals on their backs, with horns, hoofs, and tails remaining. Their bodies were painted black, red, or white; and a lock of buffalo hair was tied round their ankles. In their right hand they held a rattle, and in the left a slender rod, 6 ft. long, while on the back a bunch of green willow boughs was worn. The ceremony took place at the season of the year when the willow leaves fully expand under the bank of the river. Pairing off,

the dancers took up their positions on four different sides of a large canoe, to represent the four cardinal points of the compass. Two figures were painted black, to represent night; and two red, to represent day. Two men, dressed as grizzly bears, stood beside the canoe, continually threatening to devour any one who interfered with the ceremony; and those had to be appeased with food, which, in turn, was snatched away from them, and carried off to the prairie by two other men. These were chased by a swarm of urchins, who relieved the men of their spoil. During the ceremony the old men beat upon sacks, chanting supplications for bullaloes and other provender. On the fourth day a man entered in the guise of an evil spirit, who was driven from the vicinity with stones and curses.

Although, on the surface, this festival would appear to be wholly a sessonal celebration, the introduction of the four cardinal points, which are therein symbolized, renders it more complex in its aspect. Essentially a hunter, the red man has ever these points present to his mind, and indeed they are to him, as to Empedocles, 'the source of ever-flowing nature.' Catlin, who recounts the circumstances of the festival, did not etect its origin in the veneration of the cardinal points, but numerous cognate myths since collected prove it to have had this conception as its foundation. The Buffalo Dance was probably a purely seasonal feast, which became confounded with the older idea of worshipping the four points of the universe.

The festivals of the Thompson River Indians of British Columbia have been fully investigated by Teit. They appear to be almost wholly social in their nature, and to possess but little true seasonal significance. In the winter-honse feasts of these people a messenger is sent ahead by the visitors to announce their coming, so that the function takes somewhat the shape of a 'surprise party.' He further lets down food through a hole in the hut. Another custom of this tribe is to let down a kettle bedecked with feathers, and a lighted slow match, into the hut of the person to be visited, and to swing it violently, to the accompaniment of a rhythmic song. Those who have inserted it keep withdrawing it, while those inside attempt to eatch and detain it when captured. Bundles of clothing and food are thrown down to the inmates of the hut as presents, and later on they return the visit. The semi-public feasts of the Thompson River Indians are known as 'potlatches,' and the staple food at these entertainments is usually horse-flesh. When this tribe gathers at the spring-house (nskaptsi'lx) for the annual fishing, a great dance-feast takes place. The people assemble in full festival paint, and commence dancing at sunrise, the married and unmarried men and women forming four separate groups. One chief stands at the west, and another at the east. These help to keep time for the dancers, and lead the singing, at intervals praying and prophesying. The unmarried people choose their husbands and wives during the first dance of the morning, and this part of the ceremony would seem symbolic of the spring mating season. At sunset the people again dance four times, and then disperse to their homes. After smuset a ceremonial smoke is held by the older men, when four pipes are smoked to the four cardinal points, or their spiritual prototypes. About fifty or sixty years ago the chief of the ceremonies began to hold these dances once a week, on Saturdays, and kept the days by cutting notelies in sticks.

The Kwakiut Indians of British Columbia have a winter dance, connected with the refunding of the purchase-money for a wife. It is most elaborate, but consists chiefly in rigorous eleminness, and dancing in character, and closes with a

veritable orgy.

One of the most highly developed and elaborate festival-systems of the Amerinds is that of the Hopi or Moki of Arizona, which has been ex-

haustively studied by several prominent anthropologists. It is typical of the snake-dances of all the Pueblo Indians, and is almost theatrie in its performances. The *Soyalanwa* is a winter-solstice ceremony, held in December, and lasting about 9 days. It is purely an initiatory ceremony, in which the young men of the tribe are put through tests akin to those generally supposed to form part of the Masonic system. On passing the tests, the candidate is admitted to one or other of the secret societies of the tribe. The Poweniu ceremony (poweniu= put in order) is celebrated under the direction of the chief priest of the Powami fraternity. By this rite the fields and gardens are symbolically put in order, and protected against sand-storms, ants, and other destructive forces, and finally are consecrated for the coming planting season. From 8 to 12 men participate, belonging to the different totem claus—Balger, Crow, Rabbit, etc. The high priest is assisted by the chief of the Katcina clan, the head of a kindred society. The period of the Powamu cere-mony is in February. The Mishonquori ceremony is held in August, in alternate years, and is per-formed by the Snake and Antelope fraternities. It is announced on the fourth day following the last day of the Niman, or farewell ceremony of the Katcina brotherhood's season. It is essentially a seasonal festivity, the principal object of which is to obtain a good rain-supply, and it lasts 24 days. It is divided into groups of four days each—two of four days each, before the yungya, or assembly day; then, two of four days each of the ceremony pure and simple; and, finally, four days following the public performance, which are exclusively devoted to merrymaking. The Oraibi, summer snakeof the others. It is preceded by a preliminary ceremony sixteen days before, and by a nine-day ceremony which commences eight days before the snake-dance. In the years when the snake-dance is not performed, a complicated 'flute ceremony' takes its place. There exist two factions who takes its place. takes its mace. There exist two factions who never take part in the same festivities, called by Voth the 'Conservatives' and 'Liberals,' who are hostile to one another. The exact time for the performance of the snake-dance is difficult to place. as much depends on the condition of the melon and other crops. If the drought is great, the crops suffer, and the ceremony is hastened, but the date is partly regulated by that of the last Kateina ceremony in July, the snake-dance usually taking place on the fourth day after the last dance of the Katchia ceremony. There is also a winter ceremony lasting nine days, which is celebrated in January. The same kiras, or dance-houses, are made use of as in the summer ceremony, and the same songs introduced. This is the Kateina festival, which usually takes place in years with even numbers, and lasts intermittently until the summer festival season. These snake-charming ceremonies have their origin in the universal reverence shown to the serpent tribe all over Americaa reverence based on the idea that the snake underwent an annual rejuvenescence in the casting of its skin, or perhaps that the symbol of the serpent with its tail in its mouth represented the round, full sun of August, the season of the ceremony of the snake-dance. The latter hypothesis is the the snake-dance. The latter hypothesis is the more probable, as in the Katchau winter ceremony snakes are never used.

snakes are never used. The Pina tribe of the Southern branch of the Athapasean family mark their drinking festivals or Tosecin drunks on their notehed-stick calendars by the letter 'T.' These take place at the harvest season of the sugnaro eactus, which marks the beginning of the year. It also coincides with the maize and mesonite harvest, and the torrid heat

of summer. These festivals partake more of the nature of debaucheries than of ritualistic ceremonies, and are purely seasonal celebrations.

"Illness feasts' are common with the Apache Indians. These are held for the purpose of banishing illness, and consist in the patient who suffers being fed by the medicine-man with choice food and tissein drink, to the accompaniment of chanting. Should an epidemie be prevalent, however, a regular festival with dameing takes place, for the purpose of exorcizing those powers of evil who are regarded as answerable for the misfortune. The Apaches are not, however, overburdened with reverential ideas, or prone to self-huniliation, and have few religious festivals. Their principal celebrations are the 'Scalp Danee,' held after a successful combat, a ceremony for the purification of weapons, and burial-feasts attendant upon the sepulture of famous warriors.

The Iroquois have a 'Feast of the Dead' which occurs once in twelve years. The tribe proceed to the burying-place, and, after 'reviving' the names of those who have been dead for twelve years, exhume their bodies and cast them into a pit, along with elothing and provender, much in the spirit in which pre-historic man supplied his dead with

things material.

The festivals of the tribes of California have been fully examined by Stephen Powers, who has skilfully analyzed the seasonal ceremonies of the Maidu, Konkan, Karok, Yuki, and other confeder-acies. The Maidu have four great festivals in the year: the Hok-tom-we-dah (open-air festival), in the spring : I-lak-kum-we-dah (dry season festival), about 1st July ; Ush-ti-naoh (burning of the dead), about 1st September; and Yak-kai-we-dah (winter festival), about the end of December-all seasonal. Other important festivals of this tribe are the 'Manganita Danee,' held to eelebrate the ripening of the manganita berry, and the 'Great Spirit Dance' in propitiation of demons. The Konkan, in the Tsi-pi ka-mi-ni, or 'Weeping Dance,' have a ceremony akin to the Iroquois 'Feast of the Dead,' and the Maidu 'Burning of the Dead.' It is held in the last days of August, begins in the evening, and lasts till daybreak. The celebrants bring food and clothing to the place of sepulture, all of which articles must be new. These they hang on a semicircle of boughs. In the centre burns a large fire, close to the graves, round which a solemn dance is executed. The goods are then burned, and their 'astral' counterparts are supposed to reach those deceased persons for whom they were intended. This occasion marks the New Year's Day of the tribe. The Karok have a 'Dance of Propitiation' on 1st September, for the purpose of propitiating the spirits of earth and forest, when a fire is kindled—the first of the rainy season. Their 'Salmon Dance' is held at the opening of the salmon-fishing season, to ensure a good catch. The Yurok have a similar festival. The Wailakki celebrate a 'Clover Dance,' which is held when the burr clover is fit to eat; the Yuki have a 'Green Corn Danee' at a similar season; and the Tatu and Pomn have an 'Acorn Dance.' The last mentioned race possesses a enrions festival, or rather ceremonial observance, known as the 'Grand Devil Dance.' It is held under the anspieces of the fraternity of the 'Woman-Tamers' once in 7 years, and is looked forward to with terror by the women of the tribe. Yu-ku-ku-la (the devil) is supposed to visit the tribe in the guise of certain of its members. With these Satanic emissaries the men of the tribe engage in sham combat in defence of the women. This quaint enstom is said to have had its rise in the intractability of the women of the Ponu, whom the men hoped to render more amiable by this means. The Nishinam eelebrate

a 'First Grass Dance' after the rainy season, and a 'Second Grass Dance' in the spring. Another vernal festival of theirs is the We-da, held in the early spring to guard against snake-bites. The Ta-tn-to-vis, or 'Rattlesnake Dance,' of the Yokuts is held by the medicine-men of the tribe for the purpose of giving immunity to the Indians, for a year, from the dreaded snake-bite.

3. Fasts of the N. American Indians.—The practice of fasting is observed far and wide among the Indians, and, although frequently practised in connexion with public eeremonials, is perhaps more generally earried out in private. The first fast of life is usually the puberty-fast, when the youth or girl is sent to a deserted locality to remain alone for a period ranging from one day to a week, during which time he or she is supposed to be granted visions by means of which their eareer in life, or sometimes the nature of their totemic commexion with the supernatural, is to be made clear. The fast is usually accompanied by signs of self-abasement, such as torn garments or complete demudation, and earth-strewn head.

plete denudation, and earth-strewn head.

The most complete account of a puberty-fast is that of Catherine Wabose, or Ogeowyalnockwut Oquay, an Indian prophetess, whose experiences thereof were taken from heavin lips by Mrs. Schoolcraft. When she was 12 or 13 years old, she let her mother's local strength of the stre

Before embarking upon a warlike expedition, or prior to a great hunt, it is quite common for the warrior or hunter to fast, and medicine-men regarded the practice as one which conferred upon them special powers of illumination. Initiation into secret or religious societies is almost invariably preceded by more or less rigorous abstinence, and in some of the great festivals the chief participants were obliged to fast prior to the eeremony. The length of these varied with the tribe, but in general their duration was from one to four days, a day being counted as from midnight to sunset. as well as solid food is generally prohibited in an Indian fast. The native standpoint as regards fasting is succinctly put by a Cherokee medicine-man, who explains its necessity as 'a means to spiritualize the human nature, and quicken the spiritual vision by abstinence from earthly food.' spiritual vision by abstinence from earting food. It is not uncommon to regard it as a means by which the 'smell' of worldly things may be removed. Tribal fasts are often announced, to avert any disaster which the medicine-men believe threatens the community.

4. South American calendars and seasonal festivals.—(1) Peru.—The only species of chronology known in the Peru of the Incas was a lunar reckoning. The four cardinal points in the sun's course were ascertained by means of the intihuctura, a device consisting of a high flattened rock surmounted by a small cone, the shadow of which, falling on certain notches on the stone below, marked the date of the great sun-festivals. The Peruvians, however, had no true calendar. At Cuzzo, the capital, the solstices were measured

by pillars called pachacta unanchae, or indicators of time, which were erected in four groups on eminences—two in the direction of sunrise, and two in that of sunset- to mark the extreme points of the sun's rising and setting. The solstices were known to have arrived when the sun rose and set between the middle pair in each group. nearest approximation to the year known to the Inean astronomers was the primitive one of 360 days, divided into 12 moons of 30 days each. These moons were not calendar months in the correct sense, but merely a succession of lunations, commencing with the winter solstice; and no method appears to have existed by which the reckoning might be co-ordinated with the succession of years. The names of the twelve moons, so far as can be ascertained from various sources, were as follows:

ascertained from various sources, were as follows:

\*\*Inchay Preny Quilla (Small-growing moon), approximately
January: \*\*Hatan Pueny Quilla (Great-growing moon), approximately
February magazine and proposition of the province of Ayamarca, approximately Newpher; \*\*Uma Raymi Quilla\*\* (Growing Raymi Quilla\*\* (Moon of the Peast of the province of Ayamarca), approximately November; \*\*Ceapac Raymi Quilla\*\* (Moon of the Sun), approximately becember.

mately December.

That the natural course of the moon was the standard of time with the Peruvians is inferred chiefly from the fact that the principal religious festivals began on the new moon following a solstice or equinox. The ceremonies in connexion with the greatest festival, the Ccapac Raymi, were made to approximate to the lunar phases, the various stages commencing with the 9th day, full moon, and 21st day, or last quarter. But there is good reason to believe that the ruling authorities often determined upon which moon a certain festival was to take place, and were by no means rigid in their acceptance of ecclesiastical

chronology. With the Peruvians each month had its approximate festival, or rather a festival was apportioned to each lunation. But the solstices and equinoxes were the occasions of established ceremonies. The arrival of the winter solstice, which in Peru occurs in June, was celebrated by the Intip Raymi, or great feast of the snn. The principal Peruvian festival was the *Ucapac Raymi*, the national feast of the great god Pachacamac, which took place at the summer solstice, when the New Year was supposed to begin. Molina, Fernandez, and Garcilasso, however, date the New Year from the winter solstice. The vernal equinox, which in Peru occurs in September, and coincides with the beginning of the rainy season, was the occasion of the third great feast of the Inca year, the Ccapac Situa, or

Ccoya Raymi (moon-feast).

The general character of these festivals appears to have been mild, and indeed almost child-like. They usually consisted in the sacrifice of llamas from the sacred herds, libations of maguey or maize-spirit, and the performance of symbolic dances. One of the most picturesque was that of the Citoe Roymi, or gradually increasing sun, held in June, when nine days were given up to festival. For three days previous to the event a rigorous fast was observed, and no fire might be kindled in any house. On the fourth day the Inca, accompanied by the people on musse, proceeded to the great square of Cuzco to hail the rising sun, the advent of which they awaited in silence. On its appearance they greeted it with a joyous tunult, and, forming in procession, marched to the golden Temple of the Sun, where llamas were sacrificed, and a new fire was kindled by means of a concave

mirror. Grain, flowers, animals, and aromatic gums were the usual sacrificial offerings on such occasions. This festival was broadly typical of all the seasonal celebrations of the Pernyians.

The calendar of Incan Peru was purely agricultural in its basis, and marked in its great festivals the renewal or abandonment of the labours of the field. It owed little to astronomical observation, and was not more advanced than the calendars of races otherwise much interior in civilization.

(2) Chili.—The Araucans, the aboriginal inhabitants of Chili, observed the solstices by the shadows of rocks, reckoning time independently by a snccession of 12 lunations having seasonal names.

(3) Brazil.—The Bakairi Caribs of Brazil possess a calendar which is almost unique in its nomenclature, illustrating, as it does, the transition from a merely seasonal reckoning to one in which the period of harvest is indicated. It is as follows:

period of harvest is indicated. It is as follows: Khopolaterie' hardest rain' (alout January); Khoponogeto, less rain' (February); Khopohoketutile, 'rain ceases' (March); Khuratile', it (the weather) becomes good' (April); Souheho, 'wood-cutting' (May and June); (July nameless): Ituitale, 'end-of-the-day-time' (August); Khoporetile, the-rain-is-coming (September and October); (Nov. nameless); Anazimule, 'the-mate-ripus' (December).

The Uapes of Brazil have a calendar to mark the recurrence of the Dabucuri festival, or initiation of the young men of the tribe. This occurs

six times in the year as follows:

The assaby on 1st Jan.; the acception 2nd Feh.; the mirits on 3rd March; the patand on 4th May; the amari on 5th July; and the wige on 6th November.

These revels are of the most riotons description. The neophytes, painted black and red, are wedded to women of the tribe, to the accompaniment of mournful chants and dances. The myth of the god Jurupari is symbolized (see art. Brazil), and

the proceedings end in a saturnalia.

(4) Paraguay.—The Abipones of Paraguay had a feast on the 'Recovery of the Pleiades.' When they disappeared, they were said to be 'sick,' and much rejoicing was evinced at their reappearance and supposed recovery. The principal festivals of this tribe were occasional, and signalized victories, burials, birth of caciques, shaving of widowers and widows, the changing of names, and councils of war. Upon news of a victory, a public crier was dispatched from house to house, who saluted the women with a kiss, and the men with a spear to which a bell was attached. The spear was returned to him when he left the dwelling after inviting the inmates to the festival. This office was usually filled by a medicine-man of advanced age. house of celebration was decorated with the scalps of the slain enemies, hung on an erection made of reeds. The victors spent the time from snnset until morning in chanting their victories, and in drinking a species of liquor resembling mead.

(5) Patagonia.—The Tehuelches of Patagonia signalize the birth of a child by slaughtering a mare or cow, and removing the stomach, in which the newly-horn infant is laid. The tribe then feast on the remainder of the animal. They appear to have no seasonal festivals. See, further, the

have no seasonal festivals. See, further, the Mexican and Mayan' article.

CALENDAR (Armenian).—When they became a Christian nation, the Armenians felt the need of a regular calendar for their religious ceremonies, and hence there was developed among them the study of the science of time. So long as they were pagans, this people, like the Egyptians and Persians, had a year of exactly 365 days, while, according to our calendar, the year has 3651 days. This is why we reckon 366 days every fourth year. In 1460 years there would be a difference of a year between these two computations, so that Julian year [460 corresponds to the year [461 of the Armenian era.

To indicate the relation of events in time, the Armenian chronologists, in the conrse of ages, invented various eras. These we shall pass in succinct review, referring for fuller details to the special works dealing with them. There are the great Armenian era, in which the year is a vague quantity (this is the era usually employed), and the lesser eras, the year of which is a fixed quantity.

with Zoroastrianism, which, according to Iranian traditions, took its rise in Atropatene; and this transmission was carried out under the successors of Tigranes I., when Armenia passed into the hands of the Achamenians. The designation 'vague year is derived from the fact that, in the Armenian year, the days change their positions; similarly.

the festivals, in four years, change by a day.

(b) Months.—The year is divided into twelve months of thirty days, with five additional days (auceleach, pronounced aveliats) which are intercalated after the twelfth month. The names are given here according to the scheme of transliteration explained by the present writer in Bishop Sebêos' Histoire d'Héraclius, Paris, 1904, p. xv:

1. Nawasard. 2. Hori.

Sahmi.
 Trê.
 Khaloch (pron. Qarots).

7. Mehekan.
S. Areg.
9. Ahékan.
10. Mareri.
11. Margach (pron. Margats).
12. Hrotich (pron. Hrotits). 6. Arach (pron. Arats). Awcleach.

The meaning of the month-names is still very obscure, in spite of the explanations that have been suggested, e.g., by Dulaurier and Hübschmann. First of all, it must be noted that these names are often in the genitive, because they are under the government of the phrase 'month of, understood before them.

understood before them.

Nawasard means 'New Year' (Dulaurier, op. cit. p. 11;

Hubschmann, Arna-n. Gram., Leipzig, 1897, 1, 292). It is a

word of Iranian origin; for meaning, cf. Persian Naurue.

Hori and Sahui are of very uncertain derivation; it has
been observed that these words meant 'two' and 'three' in

Georgian; these would therefore be the second and third

words of the year.

been observed that these words meant 'two' and 'three' me Georgian; these would therefore be the second and third months of the year.

Trê.—Galast Ter Mkritschian found in a manuscript the older form Treey, which explains the common form Trê. Treay is a genitive; it must, thee, be connected with the name of the is a genitive; whom we find mentioned by Agathangelos. Thus The Treey, whom we find mentioned by Agathangelos. Thus the tree of the ancient Armenian year is the mooth of the get Tree.

Khaloch would be the month of harvest (Dulamier, p. 114.); it may also be the Armenian form of a different word, of foreign origin, introduced into the Armenian calendar.

Arach also looks like a genitive plural. All etymologies pro-

Arach also looks like a genitive plural. All etymologies proposed for it down to the present day are unsatisatory. Mchekun.—A good explanation of this word is given by ulusemman (op. cit. p. 191). It means the month secred to the festival of Mitro of Mithra. It is the many be a foreign Armaian word, meaning 'san'; but it also may be a foreign Armaian word, meaning 'san'; but it also may be a foreign Armaiann (p. 95), corresponds to the Pahlavi word Adaragia, 'das Monatelst am Tage Adar des Monates Adar.' The form Aheki is also found, recalling the Armenian word ahek or aheak, which means 'lett.' Marcri, according to its form, may be either a nominative or seem satisfactory.

a genitive singuar. The etymologies proposed as yet do not seem satisfactory.

Maryach is, in Christian name, Markezan or Markazan (cf. Hübschmann, p. 506).

Hydden is ao Armenianized Persian word (cf. Hübschmann,

p. 184 (.). (c) Days.—These are practically the same in the ancient and the modern calendar:

Sunday = Miašabathi or Kiraki. Monday = Erkonšabathi. Tuesday = Erekhsabathi. Tuesday = Ereknsabathi. Wednesday = Chorekhšabathi. Thursday = Hingšabathi. Friday = Urbath. Saturday = Sabath.

The ancient Armenians had no continuous era for counting indefinitely. They reckoned by the years of the kings, patriarchs, etc. But when they became Christians they had to fix the Easter feast; they therefore borrowed the computation of Easter from the Alexandrians, who were the best Christian mathematicians at that time. They had Andrew of Byzantium's Paschal canon of 200 years, which lasted down to the 6th century. Then they borrowed the quincentenary canon (532) of Æas of Alexandria.¹ It must be carefully borne in mind that, when we speak of the establishment of an era, we mean the establish-

ment of a canon. When was the Armenian era established? Historical data on the subject will be found discussed at length in Dulaurier's work (p. 52). This author has shown that the beginning of the Armenian era is 552—the year when the 1st of Nawasard fell on the 11th of July. Chronologists have often fixed

their synchronisms by writing 551; but this is a their synchronisms by writing 551; but this is a mistake. In spite of the disagreement amongst historians, it appears to be proved that, in 552, Nerses, and not Moses, was catholicos (cf. Kalemkiar's app. ii. in his Armenian tr. [Vienna, 1897, p. 107 ff.] of Gelzer's 'Armenien' in  $PRE^3$  ii. 63 ff.; and the anonymous list of catholicoi [ed. Mgr. Ormanian] in Calendrier de l'hôpital arménien, Constantinople, 1908, p. 172). It is clear to the present writer that Nerses did not establish the Armenian era; for we must not confuse the starting-point of an era with the date of its establishment. It was while Moses was catholicos that the Armenian era was established, entirely for a canonical, viz. a Paschal, purpose. The starting-point of this era was fixed at 552 because the 200 years' canon of Andrew of Byzantium was com-pleted then, and for several years there had been great difficulty in fixing the Easter feast. But the era could not have been actually established in 552, for the quincentenary cycle was not yet known. The latter computation was made at Alexandria by Æas in 562; it was the cycle of  $532 (19 \times 28)$ . The Armenians reckoned 562 the tenth year of their cycle, and 552 became the first year. They must have required some time to acquaint themselves with this system and to adopt it. The result was that, by the end of the 6th cent., they had established an era to fix the computation of Easter. this era being based on the quincentenary canon of Alexandria, and started with the year 552. The catholicos Nerses, therefore, had nothing to

do with this question. <sup>1</sup> See Dulaurier (p. 36) for a very accurate list of caoons, and for full information on the establishment and adoption of the various canons.

There was still, however, a great difficulty to face, since the reckoning was by Armenian 'vague' years, whereas for a Paschal cycle a fixed year was of Shirak tried to remedy this defect, but his work has not yet been discovered. The catholicos Anastasius (661-667) had deputed Anania to study the fixed calendar, and for this purpose he convoked the bishops to a national council. Anastasius died, however, before the meeting, and the Armenian era remains 'vague' down to this day (Dukurier, p. 183). Dulaurier (pp. 383-389) gives an excellent table, which may still be employed, showing when the 1st of Nawasard falls for each year of the Armenian 'vague' chronology.

2. Lesser Armenian eras .- It was the end of the 11th cent, before Armenia had a fixed calendar, and she owed it to John the Deacon. His work consisted in the substitution of the Julian for the old 'vague' system; he intercalated the bissextile day of the Roman calendar after the fifth additional day, in imitation of the Alexandrians, and counted five instead of six additional days every fourth year, besides making the fixed year begin on the 11th of August. The Feasts of the Saints were made stable, and Armenian Menology received a regular definite form. The correspondence between the Armenian and the Roman months became absolutely fixed. The 'little era' of John the Deacon had vogue especially in Upper Armenia, but it is never used in the chronicles, and obtained no acceptance with the generality of the nation (Dulaurier, pp. III-II5).

Whereas the 'vague' year is called the 'great era,' the lesser eras have fixed years. The beginning of the 'little era' of John the Deacon is 1084, i.e. just a quincentenary after the opening of the 'great' Armenian era. Here, again, eare must be taken not to confuse the starting-point of this era with the date of its establishment. John the Deacon established his 'little era' ten years after its commencement. It began in 1084, because that was exactly the first year of the second onincentenary; then he added an intercalary day (Awelikh), and thus obtained complete correspondence with the Julian year. Every four years there came a leap-year. Now a fixed year was established; the feasts changed no longer. John the Deacon kept the names of the days and months as they were in the ancient system, and his era is met with quite frequently in documents of the Middle Ages.

One question still remains obscure; in 1084 the 1st of Nawasard fell on the 29th of February ; John the Deacon took as the beginning of his year the This fact has not yet received a 11th of August. satisfactory explanation (ef. von Gutschmid, 'Das ranische Jahr, in Berichte über d. Verh. der suchs. Gesellsch. der Wissensch., 1862, passim). In any ease, John the Deacon established a purely ecclesiastical era, and brought it into agreement with the

Julian era of the Martyrology.

After John the Deacon we have a third era, employed by the Armenians of Persia and the Indies—the little era' of Azaria, beginning with the year 1616 (1084+532). Like John the Deacon, Azaria employed the Julian year, with its intercalation every four years. He made a fixed year, but he added a day to the month of Nirhan, and so kept Awelikh unaltered. The year of Azaria began with the vernal equinox, i.c. 21st March, Julian = 2nd April, Gregorian. The names of the months in the calendar of Azaria are as follows:

,	Šams .		JULIAN. 21 March.	GREGORIAS
				2 April,
	Adam		20 April.	2 May.
	Shath		20 May.	1 June.
	Navay		19 June.	1 July.
5.	Lamar		19 July,	31 July.
6.	Nadar		13 August.	30 August.

			JULIAN,	GREGORIAN,
-	****			
7.	Thiray		17 September,	29 September,
Ν.	Damay		17 October.	29 October.
9.	Hamiray		16 November.	28 November.
10.	Aram.		16 December.	28 December.
	Ovdan		15 January.	27 January.
12.	Nirhan		14 February.	26 February.
	Awelikh		16 March.	25 March.

Dulaurier (p. 116) explains these names as follows:—Šams, 'the sun,' and Lamar, 'the moon,' are two Arabic words,' Thiray is exactly the same as Tir, the 4th month in the Persian calendar; Sbath suggests the Hebrew new (Dulaurier confuses calendar; Stath suggests the Hebrew RgV (bulaurier confuses this word with 22%, which was the HIM month, from the Feb-ruary new moon till the March new moon (iteschins, Hib, and aram, Handeweterle W, Leipzig, 1899); Mamiray is the Arab, Amir or Emir; Adam is the mane of the first man; Adam, that of the seventh descendant of Hais, the founder of the Armenian nation. The names of these months are, indeed, more or less comprehensible; plut Dulaurier's explanations cannot be accepted. It must be remembered that the calendar of Azaria was employed by the Armenians of Persan and the Indies; the explanation of these names, then, must be sought in the direction of Persian and Himdustans. in the direction of Persian and Hindustani,

From 1320 onwards (=760 of the Armenian era), the difference between the two eras was 550 years instead of 551. Nevertheless, to find the popular Christian year corresponding to a year of the Armenian era, it is necessary, as a rule, to continue adding 551. The reason for this is probably the fact that the fixed year of John the Deacon gained the ascendancy, so that the fixed year was used far oftener than the 'vague' year even by writers who employed the months of the latter [this theory will be developed by Galust Ter Mkittschian in the

preface to his edition of Agathangelos].
Although the 'vague' year of the Egyptians, Persians, and Armenians is the same (for the ancient Persians, ef. Tabari, Gesch. der Perser und Araber, tr. Noldeke, Leyden, 1879, p. 436), there is a difference of five days between the Armenians and the Persians. The first day of the ancient Persian year fell on the 1st Awelikh of the Armenians, and not on 1st Nawasard. The Egyptian and Armenian computations, on the other hand, correspond exactly. An important question now arises. If, as is generally admitted on the evidence of the names of the months, the Armenians borrowed from the Persians, why did they not keep the same starting-point for their year? In the present writer's opinion, the Armenian computation was borrowed indirectly from the Egyptians, through the Aramaeans of the South of Armenia; and then later, under Persian influence, the forms of the month-names changed. It was the Persians who, in borrowing from Egypt after its conquest by the Achemenians, clauged the method of computation for the beginning of the year. Von Gutschmid (passim) has tried to explain the cause and manner of this change; his explanation is ingenious but not convincing. Probably it was due to religious reasons.

The charts of the Rubenians, who ruled in Cilicia or Lesser Armenia, are dated by the Dionysian era of the Incarnation and by the Indiction, and occasionally, at the same time, by

the Armenian era (Dulaurier, p. 122).

Galust Ter Mkrttschian, a monk of the monastery of Etchmiadzin, discovered a new Armenian era, the work of a certain Stephanos. In this era the months have the ancient names, and each has 30 days. It is probably a fixed era, and was used in Cilicia; the year began on 1st March (Julian). We have no further data. (This information is gathered from manuscript notes. It has not yet been published.)

There are other dates employed by the Armenians, On the walls of the cathedral of Ani and in certain manuscripts we find mentioned thiw horomoch, (pron. horomots), i.e. the 'Roman' or 'Byzantine era.' But it is not the well-known Byzantine era. This expression is explained by Brosset (Collection des historiens armeniens, St. Petersburg, 1874-76,

ii. 360), who makes this era begin in 248-249 (Julian) the beginning of the second millennium from the foundation of Rome (751+219=1000).

There is another era called thunkon Xosrovayin, i.e. 'era of Khosrov,' but it has not yet been

satisfactorily explained.

Mention should be made, finally, of a somewhat rare formula of the manuscripts, 'the era of the reign of the Lord,' in Armenia. found in an account of the Gospel of the Thargmanichkh, preserved among the Antonian Fathers at Ortakeuy (Constantinople), and would cor-respond to an era of Gregory the Illuminator, or of the conversion of Armenia to Christianity-301 of the Julian era (see Chamchean, Hist. of Armenia [in Armenian], Venice, 1784-86, iii. 2, 13; Karekin, 111 Almennan, venice, 179-30, in. 2013 Antennan, Catal. des anc. traductions armén., Venice, 1889, p. 606; Dashian, Catal. der armen. Handschriften in der Mechitharisten Bibliothek zu Wien, Vienna, 1895, p. 4, col. 2 of the Armenian text; Survey of Armen, Palwography, Vienna, 1898, p. 190 [in Armenian]). Dulaurier (p. 289 f.) also mentions a manuscript in the library of the patriarchal monastery of Etchmiadzin, which alludes to an era of the conversion of Armenia to Christianity, beginning with the year 304 (Julian), the time of Gregory the Illuminator's arrival at the patriarchal see.

3. The conversion of an Armenian into a Julian date.—The various chronologists who have turned their attention to the correspondence of Armenian dates with dates of other calendars, have invented systems more or less ingenious and more or less practical (which will be found in the works cited at end of art.). The following is a new method of converting an Armenian date into a Julian. Multiply the Armenian year by 365, add 191 and the number of the day reckoned from the commencement of the Armenian year, and call the result a. Divide a by 1461, calling the quotient b and the remainder e. Multiply b by 4, and add one of the numbers 0, 1, 2, 3, respectively, according as e is equal to or greater than the numbers 0, 365, 730, 1095, respectively, and call the result d. Add 551 to d, and the result is the Julian year in which the given Armenian date falls. Take from c one of the numbers 0, 365, 730, 1095, according as c is equal to or less than the 1st, 2nd, 3rd, or 4th of these numbers, and the result will be the place in the Julian year, already found, of the given Armenian date. The order 0 in a year means the last day of the preceding year. It the Armenian era is divisible by 4, it is necessary, finally, to add 1 to the Julian date.

Let us take two examples:

(1) Thomas Arcruni (10th cent.), *Hist. of Armenia* (tr.Brosset), 174, says; 'Ashot finished his days and died in the country of p. 174, says: 'Asnot mushed his days and deed in the country of Vantosp, on Thursday, the 6th of the month of Hopki, 323 by Armenian computation, and was conveyed to his bretbren in the monastery of Surb-Khatsh, in the province of Agbbag': 323 x 956 + 191 + 36 = 118122 = a

 $\frac{323 \times 305 + 191 + 30 = 118122 = a}{118122}$   $\frac{118122}{1461} = 80 = b \text{ and remainder} = 1242 = c$  $80 \times 4 = 320$ 

320+3=323=d 323+551=874

353+501=514
1242-1095=147=27th May.
The Dominical Letter of the year 874 is C. The 1st of May is a Saturday, the 27th is a Thursday. Therefore, Thursday, the 6th Hophi, 323 of the Armenian era=Thursday,

 $86 \times 4 = 344$ 344+0=341=d

 $\begin{array}{c} 344+0=341=a\\ 344+551=595\\ 100-0=100;\ 100+1=110=20\text{th April}. \end{array}$  The Dominical Letter is E. The 1st of April is a Tnesday, the 20th is a Sunday. In the year 895, Easter fell on 20th April.

Therefore, Sunday, the 4th of Nawasard, 344 of the Armenian cra=Sunday, 20th April, 895 of the Julian cra. (This is unpublished matter, following a manuscript note of Reverend Father Seraphin Abdullah, who will soon publish a complete, authoritative discussion of the Armenian cra.)

Since the 'vague' Armenian year began on Share the vague Armenian year began on Shursday, 1tth July 552, for the figures of the days of the week we count Thursday I, Friday 2, etc., and Wednesday 7 or 0. To find the 1st of the Armenian year or the 1st of Nawasard, we must divide the year by 7; the remainder is the day of the week of 1st Nawasard.

4. Peculiarities of the Armenian liturgical calendar.—The Armenian Church has not only the same feasts as other Christian Churches, but several peculiar to herself. While the other Churches celebrate their feasts on dates fixed by the civil calendar, with the exception of Easter and the feasts dependent thereon (movable feasts), the Armenian Church has only six fixed feasts: (1) the Theophany; (2) the Purification; (3) the Annunciation, formerly eelebrated in the octave of the Nativity, on the fifth day; (4) the Nativity; (5) the Presentation; (6) the Conception. The Nativity of the Virgin was introduced among the Armenians in the 13th cent.; the Presentation and Conception are of a still later date (18th cent.). The Theophany was originally always celebrated on a Sunday; it was only in later times that it was lived for the 6th of January.

The Armenian Church distributes the various feasts according to the days of the week. All the Sundays are consecrated to the Resurrection. Every Friday is sacred to the Crucifixion; fasting or very sparing diet is the rule on that day, and hymns of penitence are sung at service. A Dominical Feast may be held on a Friday; a Saint's Feast cannot take place either on a Sunday or on a Friday. Wednesdays, like Fridays, are given up to fasting and works of penitence; Wednesday, being considered the day on which the Annunciation took place, became the Feast of the Incarnation. The same rules, therefore, bind Friday and Wednesday; and no Saint's Feast can take place on Sunday, Wednesday, or Friday.

The Feasts of the Saints then may be celebrated only on Monday, Tuesday, Thursday, or Saturday; and, even on these days secured to them, they have to give place to a Dominical Feast or a fast-day falling on the same date. The Feasts of Saints falling on a Monday, Tuesday, or Thursday may be changed into Dominical Feasts or into days of fasting; those falling on a Saturday cannot be changed except into a Dominical Feast. There are about 125 days in the year on which the Feasts of the Saints may be celebrated, and the Armenian Church has also thought fit to group the memorials

of several saints on one day.

The Dominical Feasts comprise all those connected with the Incarnation, the feasts of the Virgin, of the Holy Cross, and of the Church. These feasts have their own special hymns. The Feasts of the Saints are more simple, only some of them having special hymns; for the others, hymns are borrowed from the services of the Apostles or prophets, etc. On fast-days the hymns, psalms, and spiritual songs have a penitential tone.

The Easter Feast has a variability of 35 days (from 22nd March to 25th April), and there is accordingly a period in the liturgical year whose variability is determined by that of Easter. period is divided into two parts: the days before and the days after Easter. The Armenians count back ten weeks from Easter Sunday, and fix for the tenth Sunday before Easter the day of Aradjavor, the beginning of their Paschal period. second part contains fourteen weeks, seven from Easter to Pentecost, and seven from Pentecost to the Transfiguration (= Vardavar, the Feast of

Roses). This Paschal period of 24 weeks may begin at any date between 11th January and 15th February, and end between 28th June and 1st August.

The following are the prescriptions of the Armenian Church for the celebration of the Assumption of the Virgin and the

Exaltation of the Cross.

If 15th August and 11th September fall on a Sunday, these If 18th August and 11th September fall on a Sunday, these feasts are held on these days. If 15th August and 14th September do not fall on a Sunday, they are celebrated on the Sunday, nearest the dates in question. The Feast of the Assumption may fall on any day from the 12th to the 18th of August, and is preceded by a week of fasting, leginning on the preceding Monday. The Feast of the Exalitation of the Cross may fall hettween the 14th and the 15th of September. The period of Advent begins on the nearest. Sunday to 18th November, and lasts on to the Theophany (see Tondini de Quarenghi, op. cil. infra., passim).

Overmer, and nests on to the Interplanty (see Tolanda de Darrenghi, op. ed. infra, passion).

CALENDAR (Babylonian).—It is coming to be more and more clearly recognized that the Babylonian festivals and the rites connected with their are related in the most intimate way with the are reader in the most infinite way with the calendar, which, again, is as old as civilization itself. As the ancient Egyptians had already fixed upon a year of 360 days, dividing it into three seasons of four months each, and as the actual source of this computation was Babylonia, it is clear that the cycle of 360, representing the earliest attempt to make an adjustment between the lunar year of 354 days and the solar year of 3651 days, goes back to a very remote antiquity. 'Twelve are the months of the year; six sosses (i.e.  $6 \times 60 = 360$ ) are the days of the measure of the year's beginning—so runs the well-known and frequently cited passage in WAI iii. 52, 37, which on astrology known as *Enu-ma Bel.* The Egyptians and the Babylonians, in fact, differed only in their methods of intercalation, which the aberration from the true solar year soon rendered necessary: the Egyptians inserted the five so-called cpagomenæ at the end of every year, while the Baby-lonians intercalated a whole month every fifth or sixth year, as required; or, in districts where the linear year of 354 days prevailed—as, e.g., the city of Ur—every second or third year. In reality, therefore, the Egyptians had a year of 365 days, retaining the older tradition of 360 days only by marking off the intercalary five as epagement dedicated to special deities. Even this increment was in time found to be inadequate, the deficiency amounting to one day in four years, or, otherwise, to a month in 120 years, and a quarter of a year in 360; and accordingly we find, as far back as the period of the Old Empire, a further correction in the so-called Sothis or Sirins year (1461 common years=1460 stellar years).

cannot say whether the Babylonians had recourse to any such astronomical method of adjustment, but it is possible that the 'year of the great red serpent' (mentioned but once, in a text dating from c. 2000 B.C., Cun. Texts, xxii. 48, line 5), with its train of over a dozen-originally perhaps nineteen-names of animals, may refer to an intercalary cycle recognized in the period of the kings of Nisin.

The earliest Bab, calendar known to us shows a remarkable combination of purely agricultural operations and religious festivals, the calendar of the husbandman being thus interwoven with that of the priest. This consists of the names of months occurring in the temple archives found at Telloh, and dating from the period anterior to Sargon (i.c. the time of the patesis Lugal-anda and Uru-kagi-na, c. 3000 B.C., or even earlier). II. de Genouillae (Tublettes sumer, arch, p. xx, has essayed to arrange the names as follows:

1. Month of the festival of the goddess Ea'u (subsequently

1. admin of the the head ming of actions).
2. Month of the Aboulded Ectival (February).
3. Month of the Aboulded Ectival (February).
4. The Aboulded Ectival (February).
5. White Aboulded Ectival (February).
6. White Aboulded Ectival (February).
6. White Aboulded Ectival (February).
7. Adapt, with the variants Gürdubda and Gürdündde (written gaba), likewise referring to the apportionment of the

Month of Še-illa (lit. 'corn-lifting,' possibly 'winnowing': Nisan), with the variants 'Lu-ku-ke-a-illa of the god Nin-Girsu,' 'Lu-ku-ke-a-illa of the goddess Is-khanna'l, and

An-ta-sur-ra.

6. Month of the festival Še-ku ('corn-cating') of the goddess Iš-khanna.

7. Month of the festival Gud-du-bil-sar-a of the goddess Is-Khanna (Tyyar).

8. Month of the festival of the god Bil-dar.

8. another of the restival of the god 191-0ar.

10. "the festival Dineka" (corn-eating ') of Nin-Girsu.

11. "the festival of the corn-eating of Nin-Girsu.

12. "the festival Dineka" of the goddes 18-khanna.

To these, however, must be added a few mames

which have not been identified, viz. :

Month Mal·lu-ur (meaning unknowu). Month of the god Lugul-uru-ki ('king of the city'), or Lugal-

ucu-bar-cu.

Month Si-nan-un-ni-ba-duru-bu-a (meaning unknown).

One of these three would, no doubt, supply the name of the missing ninth month.

Tablets of a date slightly later, i.e. the period of the earlier Sargon of Agade (Akkad), furnish us with the following series, side by side with which we place the closely related series found in tablets dating from the times of the kings of Ur:

1 or 7. Month of Gan-mas. 2. Month of Gan-mas. 

2 or 8. , Gud-du-bil-sur-sar. 3 or 9. Month of the god Bil-

sur,
Month of the festival of the god Bil-dar,
Month of Su-numun (the later Tammuz). dar. 4 or 10. Month of Su-numun

('sowing').
5 or 11. Month of Se-dim-kir. the god Tur-6 or 12.

6. Month of Dim-ku. 7. ,, the festival of the god Tur-zi.

8. Month of the festival of the the go zi (Tammůz). Ur=intercalary month.

7 or 1. Month of the festival

deitied Dungi.

9. Month of the festival of the goddess Ba'u. 10. Month of Mu-ŝú-du.<sup>3</sup>

of the goddess Ba'u.

S or 2. Month of Mu-så-du.

O or 3. Mes-en-du
še-a-nå. 10 or 4. Month of the festival 11. Amar-a-si.

Amur-a-si, 11 or 5. Month of Se-še-kin-a. 12. Sc-kin-kud 4 (the later Adar).

12 or 6. the festival 1. Month of Se-illa. Še illa.

The comparison of these lists is most instructive. While the meaning of the Sumerian names is in many cases obscure, the fact that in the Sargon list the intercalary month is placed after Tammuz (the later Ehd) makes it clear that in this calendar

The coldess whose name is formed by the ideogram ab (or s) and the inscribed symbol that; in the period of Hammuradi is occurs in the phonetic form 18-kharra, and is commonly, though wrongly, transcribed Nina, as the goddess was also the deity of the later town Ninua.

deity of the later town Nima.

2 Written Mu-\$is-gab.

3 Written Mu-\$is-gab.

4 Side by side with this we also find a month Dir-\$e-kin kud,
i.e. the later We-Adar, or 2nd Adar (intercalary).

the year began in autumn, and that, accordingly, the festival of the New Year was observed on the 1st of Tishri, the month of 'the festival of Ba'u.' We see, moreover, that in course of time the month associated with the new festival of the deified king Dungi took the place of the intercalary month (the so-called second Elul). A further modification, however, must have been introduced at the same time, as the new month of the 'Dungi-festival lost its intercalary significance, while, coincidently, the New Year festival was transferred to the first day of Se-illa, as follows indirectly from the fact that a second Se-kin-kud now makes its appearance as an intercalary month, thus fixing, of course, the end of the year. This modification also explains why the month of Mes-cn-du-\$e-a-na simply drops out, thus making Amar-a-si follow immediately npon Mu-su-dú.

It is unfortunate that the inscriptions of Gudea, which we must refer to a period shortly before the which we must refer to a period shortly before the rise of the dynasty of Ur, supply only two names of months, viz., the 'festival of Bau,' or 'New Year' (Statne G, iii. 5f. = E, v. 1f.), and 'temple-month,' following immediately thereafter; but with the help of the partially mutilated third series of the calendar K. 104 (B/AI v. 43) we can so far restore the calendar of Gudea, thus:

1. Festival of Ba'u =Tishri (Antumn). Temple-month = Arakhsamna. (unknown) -Kisley =Tebeth. 5. Sin-ga-zu l 6. Me-e-ki-gal =Shebat.

= Adar. = Nisan (Spring).

7. (inikhown)
8. Gud-bil-sar-sar
9. Festival of the goddess Nin-DAR 2= Sivan.
Tammuz.

- Sha-numun-na - 71 0 = Āb, 10. Shu-numun-na 11. Festival of [Gu-de I]-a Ki-sig (7)-Ba'u = Ehil.

The following list (in Radau, Early Bab, Hist, p. 299) also dates from the period of the dynasty of Ur:

CT:
1. Month of Šv.kin-Lud ('corn-reaping'; the later Adar),
2. "Maš-azag-ků (cf. Gau-maš?),
3. "Dun-da šu ('cating of the Dunda fruit'),
4. "Khusi bil-khu-ků ('eating of the Khu-si-bil

Ki-sig(\*)-Nin-a-zu (\* mourning for Nin-a-zu '), Isin-Nin-a-zu (\* festival of the god Nin-a-zu '), 5. 6. ٠.

(1) 7. (2) 8. (3) 9. (4) 10 (5) 11. ISBN-Ata-de-2a (\*1850val of the go A-ki-ti (\* new year '). Isin-Dungi (\*festival of Dungi'). Shi-HI-ski (\* third month'). Isin-makh (\* sublime festival ') Isin-an-na (\*festival of ears '[?]).

Isin-Me-ki-gal.

This series clearly bears a close relationship to that which we have re-constructed for Gudea's time. It certainly begins the year with the month of Se-kin-kud (beginning of spring), but it still calls the seventh month 'new year,' and also retains Me-ki-gul as the last month of the autumn half-year, precisely as does the list of Gudea; and, as it embraces a festival of Dungi, it cannot have been redacted before the deification of that monarch (in the thirty-seventh year of his reign).

Although the various series of months given above are drawn from documents discovered in the ruins of Telloh, and must accordingly have been in use in the kingdom of Sirgulla or Girsu in particular, yet in these lists, dating from the period anterior to Sargon till that of the kings of Ur, a considerable degree of diversity presents itself. Lists current in other districts would of course show a still greater diversity. Thus in Nippur, for instance, as is shown by the documents of the University of Pennsylvania about to be published by P. Engelbert Huber, there was, in the period of the kings of Ur, a different set of names in use, viz., the Sumerian designations recognized through-

1 Incorrectly transcribed from Sekinkyd or from Sekilla?

2 As V. Ravd. 43 gives the form Xin-DAR-na (with the prolongation -na), the name of this god, who is mentioned in the
inscriptions of Guidea as the consort of 15-khanna, would probably be more accurately transcribed Xin-pitn-na.

ont Babylonia from the days of Hammurabi till the late Bab. period (and also in Assyria); which designations, however, were generally read as Semitic, and accordingly had at a later date simply the value of so-called ideograms. This Sumerian group current in Nippur at that early date is as follows (we give in a second column the usual Semitic renderings which subsequently came into use, and which, as is well known, were adopted by the Jewish calendar):

Bár, Bár-bár-garra, Bár-zag-garra ('New Nīsan. ox'), lvvar. Siyan. Shu-numun-a ('month of sowing, seedmonth')
Bil-bil-gar, Bil-bi-gar ('month of fire-making')
Kin, Kin-Ishtar ('work, or mission of Tammūz. Χh Kin, Kin-Ishtar ('work, or mission of Ishtar')
Dul, Dul-uzuyya ('sacred hill')
Gish-apin-di-a, Apin-di-a ('plough-tillage').
Gan-gan, Gan-gan-ud-du ('coming forth of Tishri Marchesvan Gan-gan, Gan-gan-ud-du (\*coming forth of the clouds 'Ph.ud-du (\*coming forth of the flood !).

Ab-pa-ud-du, Ab-du (\*coming forth of the flood !).

Ash-a (\*curse of water) or simply 1sh
(\*Curse)

Schinkau (\*grain-harrest)

(\*Dirig-Schinkau d, Schinkau II-kam-ma .) Kisley Tebeth. Shebat. Adar. intercalary Adar.)

The names of the Sumerian list recur commonly in contracts and letters dating from the Hammurabi dynasty, and are thenceforward found in the following fixed forms:

IOHOWING INVEL TOTINS:
Birzeg-gar, Guds.is.d, Shig.a, Shu.numun.ne, Bil-bil.gar,
Kin. Ishkar, Dul.caza, Apin.dbe.a (or Gish.apin.dbe.a), Gangan.nd-du (subsequently Gan.gan.ne. always, but Gan.gan.an.
dit as late as the Kassite period), 1b.ud.du, 4sh.a (subsequently
1sb.-a.n was common), She.kar.kad; 2 in the Assyr, and later
Esb. period, however, the names were generally written in an
abbreviated form, thus: Bar (or Bar.azay), Gud, Shig, Shi,
Bil, etc.

From the period of the Hammurabi dynasty onwards, however, we note the important fact that, besides the Sumerian names enumerated above, their Semitic renderings are occasionally met with, but not always the same designations as in later times.

times. Thus we have Arakh Rabûti (month of the 'great' gods Anu and Endil) for Bûr-zan-gar (subsequently Nison); Arakh Apart for Gudzissi («Tyva); Arakh Shexteqlanm), and prohably also Khumtu, for Shûg-a («Sivan); Arakh Tur-zi («month of Tammüz) for Shûg-aum, and («Tammüz) for Shûg-aum, and («Tammüz) for Dury); Arakh Elione and Arakh Eluli for Kin-Ishlar (subsequently Ululu=Eluli); Arakh Sbütti (month of the Seven Stars or Pleiades) for S-kin-kud (later Adaru); as also Tiru, Kinûnu ('benzier, 'probably = Kisley, Nadri, 'Sandûti (with the variant Shadûti), Mamiti («Tbeth [']) and 'festival of Ramman' («Shebat)—desimations not ve treetisely identified. designations not yet precisely identified.

The usual Semitic series of names (K. 8521)

seems to have become permanently established in the days of the Kassite period, and in the Assyr. We give it here, together with the names of the corresponding month-deities (K. 2049+129=

WAI iv. 2 33):

Xisaanu (Nisan) (Iyyar) (Siyan) Simannu Du'uzu (Tammuz)

Anu and En-lil. Ea as the 'lord of mankind,' Ea as the 'ford of mankind.'
Sin (moon-god).
The 'bero' Nin-ib (=Tammūz,
or the Sun of Spring).
Nin-gish-zidda (fire-god).
fshtar (the planet Venus).

(**A**b) (Elūt) Ululu

Along with these, as the writer is privately informed by Pater E. Huber, occur names—singly, it is true—with which we are already acquainted from the lists given above, such as Ask.tt, Sie.esh.sha, Isin-naakh, Isin-an-na. Isin-Meckicant, Mash.acay.kh, Eil-da.kk (cf. above Dunda-ki or Shida-ki), Isin-Xin-a-zu, i.e. eight names, elsewhere specifically vouched for only in Radaus list, together with a few otherwise unknown designations, such as Azug-shim, Sha-sir-a-she-de-a-sar, Mi-du-du (or Mi-ush-ush [?]).

du (or Mi-ush-ush [?]).

We find, further, in this period a month called St-a-ga
'2 We find, further, in this period a month called St-a-ga
(perhaps also Isin-a-ga), which should probably be identified
with the Shig-a-1-ga-se-ga (hence a variant of Shig-Niran) of
the Nippur list; also a month called Shu-gar gind (= Firm [?]).

cf. Shu gar-gi=turru).

Tishritu. (Tichri) Arakh-sumna Kisilimu Tebitu

Addura Intercalary Adar (Adar)

Shamash, the there. (Marchesvan) Marduk (the planet Juppiter).

(Kisley) Nergal (the planet Saturn). Nergal (the planet Saturn). Papsukal (messenger of Ann and Ishtar). Ramman (storm-god).

Seven-god. Assur, father of the gods.1

The etymology of these Semitic names is much more obscure than that of the corresponding Sumerian designations, which are for the most part quite intelligible. *Nisum* seems originally to have meant 'intercalary month'; 2 Airu, month of blossom or spronting'; Adduru is perhaps the 'dark' or 'gloomy' month, and Kisilimu probably comes from the name of the river-goldess Ka-silim; a delinite origin can be assigned only to Du'uzu (=Tammūz) and Arakh-samna, 'month of the numeral eight.

It is obvious that the basis of this official Bab. calendar, more especially of its Sumerian terminology, is formed by the conception of a mythical world-year, which also dimly appears in the list of ten patriarchs given by Berosus and the Book of Genesis (before the Deluge). The first two months, viz. that of the 'Divine throne of destiny' (Barzag-qur) and the Ox-month (Gud-si-sa), belong to the highest triad of gods, and also to the first man, as being the creation of Ea (cf. in Berosus, Aloros [=Aruru], who creates man; Adapados, the Divine mediator or λόγος; Amclon = amelu, 'man'). Then follow seven months assigned severally to the planets, as also to the zodiacal signs from Gemini to Sagittarius, viz. Sīvan, 'brick-month,' or the month of the heavenly twins Sin and Nergal, and of the building of the first city (cf. Gn 417); Tammuz (Caneer); Ab (month of the 'descent of fire, in the period of the Assyr. king Sargon; cf. the Sumer. designation 'fire-month' and the name of Sumer, designation the month and the name of the sixth Heb. patriarch 'I-yarad,' fire came down,' abbreviated 'Yarad'; Elūl (Ishtar, the Virgo of the zodiae); Tishrī (Dul-azag, the 'sacred mount,' i.e. the altar of incense formed like a terraced tower in the sky near Libra); Alrakhsumma (Scorpio; as regards 'plough-month,' cf. the Snmer. lam, 'plough,' and Lamech, the name of the corresponding Heb. patriarch), and Kisler (the 'clouds' of which foreshadow the Deluge).

Moreover, just as in Genesis the Deluge takes place in connexion with Noah, so the next two months in this calendar, viz. Tebeth and Shebat (Sumer, 'coming of the flood' and 'curse of rain,' respectively, and, in the zodiac, Capricornus and Aquarius, the watery region of the sky), carry an numistakable reference to the Deluge, while the future burning of the world is symbolized by the last month, Adar (Pisces, but in Bab. astronomy, also 'lighthouse' or Phares).3 These cosmological ideas must, therefore, have been stamped upon the calendar system not later than the age of the kings of Ur.

Besides the Semitic names of the months already specified, there must have been other Semitic systems of nomenclature, of which, unfortunately, only a few isolated examples have come down to Thus we find, as far back as the days of the Ur dynasty, a month called Dapitam (sometimes Dabi), which was perhaps identical with the Sumer.

<sup>1</sup> The assigning of the intercalary month to the supreme deity of Assyria shows that the Assyr, calendar likewise is of Bab. origin.

origin. the Arab, nasi'a, 'to intercalate a month.' This devices the world suggest that at an earlier period the year began with Aira, the 'coronation-month' of the Assyrian kings; and, in point of fact, the inscriptions bear witness to a 'second Nasus,' i.e. an intercalary Nisan, '370 the constellation Pisces corresponds the 'great mountain' 370 the constellation Pisces corresponds the 'great mountain'.

3 to the consteanor Prese corresponds the "great monitant of Zee 47, which in Rev 83 is actually called δρος μγγα πυρί καιδμένου; quite close to it, in Aries, stands what in Zee 42 is called the menórah, and in Rev 87 πυρ. The "mountain which Bel climbs with shorts (W.11 iv. 11, 41a) is depicted on the Rah. seal cylinders in storey form.

Bil-lid (=  $dab\hat{a}t\hat{i}$ ; possibly we have here the origin of the later Tebeth). From Mesopotamia, again, in the period of Hammurabi, comes the name Birizzaaru (from Birid-sarru, 'hostile coldness' [?]). The Assyrians, too, were acquainted with the usual Semitic appellations, but also used names the asker Scantre appearations, but also used names the like Khichar, Kusultu (=Siyan), Tamkhiru, or Tamtiru (?), the last of which would mean 'rainmonth' (=Tebeth), Pit-bàbi, 'opening of the gate,' probably some religious ceremony (=Tammūz), Mukhur-ilâni (as early as Hadad-nirâri I.), and others found in the so-called Cappadocian tablets discussed by Goleschineff and Delitzsch. It is therefore interesting to note the list in V. Rawl. 43, which, though a mere fragment, originally contained three series of names, for the most part purely Semitic:

Shir'i.eburi. Sivan: Apinum Tammuz: Apal Pite-babi Zargūtum (? myni) Phila. [Thrrati. Likittalti. Tichei . Ibtazu Salditi Khuldubba-uddu Isin-Me-ki-ual Karditi.

The second group seems to have been current especially among the Semitic inhabitants of Elam; for, according to Scheil, Mémoires, x. 19, Semitic contract tablets from Elam of the early Babylonian age furnish the following important series:

rishri; the month of Arakh-samna; Laluhum (= Tishri). Ekil-ili, ening (\* the Ekil-ili, rpinu (\* the the field of God'). the head of God ).
Sherkhum, epiau.
Tanakhirum (cf. the Assyrian
month Mukhuriläne).
Zililatum.<sup>2</sup> Kisley: Shebat: Adar Ekil.ili.She.kin.kud ('car-harvest

the field of God'), and Adarum. herkhum-She-kin-kud-a Nisan: Khar hubirm (cf. kharsha, 'land-cultivation' [ ]). Lyar: .. Sivan . Lukhkhum (?).

Tammûz : Dutium (!). Elül : Eluli.

A dislocation to the extent of one month, introduced into Elam probably at a later period, is indicated by an isolated reference in 11. Rawl. 49, No. 1, col. 1, 2: 'the month Bar-azag-gar (Nisan) No. 1, col. 1, 2: the month buc-disaggia (1883m) = the month Gad (lyyar) in Elam. Another Elamite name, Ea-khad (\*sheep-month'[2]; cf. the name of the Elamite deity Lakharat-la Rakharatir), is mentioned in Scheil, op. cit. ix. 32, as occurring in documents of the 6th and 7th cents. B.C., which elsewhere make use of the ordinary abbreviated Bab. ideograms. As every month but Tishri has been traced in these, Scheil is probably correct in supposing that *Ra-khal* was an Elamite Elamite gods enumerated by Asharbanipal immediately after the seven deities worshipped by the kings, i.e. the planetary deities, were originally gods of the months. The twelve are as follows: Ragiba (cf. the Arab, spring-month Rajab), Sunugursara ('the great king'), Karsa, Kirsamas, Shudànu, Aipak-sina, Bilala, Paningirri (rather than Panintimri), Silagara, Nabsa, Nabirtu, and Kindakarbu. The list is a melonge of Semitic (Ragib, Shudânu, Bilala, Nabsa, Nabirtu) and native Elamite names.

We have thus seen that in Babylonia the nomenclature of the months varied according to period and locality, and that eventually that particular system which is first attested by documents from Nippur in the age of the kings of Ur superseded all the others. The two great divisions of the year began respectively in spring (previous to 300 0 B.C., in the sign of Gemini; from

a frequently mentioned tool of worship.

2 hexact spelling of Silitium; in the Gilgamesh coic (Song G). Silili is the name applied to the mother of the horse that Ishtar loved, i.e. probably the astronomical Pegasus (Sililitu is therefore the plur, majest, for Pegasus).

3000 to 1000 B.C. in Taurus: from 1000 B.C. in Aries), and in autumn (Sagittarius, Scorpio, and Libra, for corresponding periods). At first the year itself might begin either in spring or in autumn, but in no long time there arese the recognition of a definite date for its commencement, viz. either in Nisan or in Tishri, with a second Adar or second Elūl as intercalary, according to period and locality. It may well be the ease that the practice of beginning the year with autumn was a Chaldwan one, thus covering Ur, Girsu, and the region east of the Tigris, and that the beginning with spring belonged to Babylonia proper-Nippur, Babylon, etc. While it was the custom under Hammurabi to intercalate a second Elūl, we find that under his successors the intercalation of a second Adar already prevailed; in the reign of Abeshua, in fact, we have one instance of an intercalary Nisan, with which should be compared the hemerology in K. 2514+4101, as also the suggestion already made, that at one time the year hegan with Tyyar. Perhaps this was actually the early Assyr. practice.

Similarly it is probable that the observance of a lunar year of 35 days, with months of 30 and 29 days alternately, and with an intercalary month every 2nd or 3rd year, was of Chaldean origin, whereas the year of 380 days may be hypothetically assigned to Babylonia (see above). As a matter of fact, the temple archives of Telloh, dating from the period of the kings of Ur, suggest in all probability an intercalary eyele of 19 years, the additional month being introduced in the third year four times successively, and in the second year three times successively. Thus, e.g., the intercalary year synchronized with the 28th and 31st years of king Dungi, and likewise with his 42nd, 44th, and probably his 46th year; as also with the 3rd, 5th (7th), and 9th years of Gimil-Sin; so that during the intermediate reign of Būr-Sin the intercalation would fall in his 3rd, 6th, and 9th years (cf. L. Messerschmidt's list in A. Jeremias, Dus Alter der bab. Astr., Leipzig, 1909,

p. 88 f.). In regard to the week, we find a similar contrast between the practice in Chaldea, i.e. among the nomadic and West Semitic tribes, and that of the Bab, state religion, in which the worship, not of the moon, but of Shamash and Marduk, was the dominant factor. As has been ingeniously argued by Sayce — with the independent support of Winckler and Jensen—from early Assyr. contract tablets found in Cappadocia, the most ancient division of the month was into weeks of five days, the year accordingly having 72 weeks (which pre-supposes, moreover, a year of 360 instead of 354 days), as was also the case in ancient Egypt, where a week of ten days-originally, no doubt, a doubleweek of 2×5 days—was recognized (for other instances of the five-day week in Africa, Java, and Sumatra, see p. 64a). In the hemerologies of the library of Ashurbanipal, however, in which apparently every month consisted of 30 days,1 we find entries from a Chaldean calendar with months of 30 and 29 days, according to which new moon fell on the 1st day of the 1st month and of alternate months thereafter, while a penitential day of some kind was observed on the 7th, 14th, 21st, and 28th days of the 1st month, and on the [5th, 12th, and] 19th of the 2nd month, and so on throughout the year; here, therefore, we have quite plainly a week <sup>1</sup> The complete series consisted of fifteen tablets. Of these, Nos. 2 (II Nisan), 4 (Sivan), 8 (II Elü), 10 (Marchesvan), 12 (Chebth), 13 (Shebat) and 15 (II Elü), 10 (Marchesvan), 12 (Chebth), 13 (Shebat) and 15 (II Adar) have survived, in full or in part; but only tablets 8 and 10 have been published (W-II v; 25, 38). From the variants furnished by Pinches we may try 25 (Shebath). The mane of the series was India (the moong of as 'funt' that grows of itself (cf. W-II v, 9, 22)) bel-arbim (i.e., as 'lord of the month'). of 7 days.\(^1\) A like result follows from the division given in K. 170(Cun. Texts, xxv. 50), viz., 1st day, new moon; 7th day, moon as a kidney, i.e. half-moon; 15th day, full moon (elsewhere shabadtu; 0th Egyp. smd-t), and from the Creation epic, 5, 15 IT.

According to this hemerology, the festivals observed every month—apart from the specifically Chaldran festivals already named—were as follows:—

dran festivals already named—were as follows:— The Nubuttu, or 'unptial couch' of the god Marduk of Babylon and his consort Surponit (cf. Asurb. ix. 11), on the 3rd, 7th, and 16th days, and on the following days (the 4th, 8th, and 17th) the Abab or Essesa festival of the god Nobo.

On the 1st, 2nd, 13th, 15th and 16th, 18th and 19th, and 21st and the 22nd days, sacrifices to the gods Shamash, Belit-matati ('mistress of lands'), Sin and Makh (i.e. Rûbatu, 'the exalted'), and to Sin and Makh only, on the 29th.

The Segar festival of En-lil and Nin-lil (cf. Ašurb.

The Se-gar festival of En-lil and Nin-lil (cf. Ašurb. i. 12) on the 12th, and the 'bright day,' the Se-gar festival of Sin and Shamash on the 20th.

The festival of Shamash and Ramman (summer

sun and winter sun) on the 23rd.

The festival of Enegal ('lord of the palace,' i.e. probably, of the under world) and of Nin-egal ('mistress of the palace') on the 24th.

The festival of the goddess Gur as the consort of Nergal on the 27th; this was associated with the imminent disappearance of the waning (or so-ealled Nergal) moon, as was also the Bubbulu (\*to be borne or washed away'; cf. Heb. mabbulu, 'the Flood') of Nergal on the 28th. Sacrifices to Ea, the god of the watery region of the heavens, and his consort Makh, were also made on the 28th and 28th.

That the majority of these festivals were of astral origin appears from their manifest connexion with the course of the moon; from the fact that most of the sacrifices had to be offered in the evening or by night; and, finally, from the explicit mention of the worship of the 'star of the waggon' on the 10th and 25th of the month.

The calendar in WAI v. 48 refers not to festivals, but to the performance or omission of certain actions; we are told, e.g., that the 10th of Iyyar and the 27th of Tannuz are 'favourable for judgment' (or, 'for administering justice'), the 20th of Iyyar is a time for 'killing a goose,' the 21st for 'quarrels,' the 25th 'not to take a wife,' etc.

There were also festivals, however, which were observed not every month, but in some particular month, thus resembling the great festivals of modern times. Chief among these was the New Year festival (Zag-mug or Akitu), which was celebrated with great pomp from the 1st to the 10th of Nisan: on the 8th Marduk eams forth in solemn procession from his temple of E-sag-illa, to the house of prayer or sacrifice situated outside the city in order to celebrate his marriage with Sarpanit, returning thereafter from the submrb of Shu-anna to Babylon on the 11th of Nisan (cf. Nebuchadn. ii. 57). In Sippar the corresponding festival of Shamash was held on the 7th of Nisan, and was repeated at the beginning of the second half-vear, on the 7th of Tishri.

On the 4th of Tyyar was celebrated the marriage-feast of Nebo and his consort Tashmit (K. 501=Harper, Letters, No. 113, and cf. above the Ab-ab festival), and on the 10th of Tyyar there was in Sippar a festival of Shamash, with which the coronation festival in Assyria—the king being regarded as the incarnation of the sun-god (cf. 20, number of Shamash and ideogram for king)—was perhaps connected.

1 This required to be adjusted, however, by reckoning a week of ten days (from the 20th to the 29th) at the end of every second month.

or ten days (from the 20th to the 25th) at the end of every second month.

2 On the other hand, the week of five days is presupposed in WAI ii. 55, No. 3, lines 17-26; 1st-5th day, new moon; 6th-10th, kidney (half-moon); 11th-15th, full moon.

On the 17th of Sivan-the month of the moongod—the Akitu festival was held in Harran, the ancient lunar city of Mesopotamia; in Arbela, however, it fell on the 17th of Elül, the month of the goddess Ishtar, who was greatly venerated in that city. A processional festival of the 'mistress of Babylon' was held there on the 25th of Sivan

(Ašnrb, viii, 96-100).

On the 3rd of Tammūz the gods of Erech returned from a procession at Eridu—a ceremonial undoubtedly connected in some way with the 'deathmournings' (ki-bad) held in that month on account of the summer languishing of Tammuz, the god of spring and of vegetation (cf. Ezk 814), In Ab, the month of the Sirins festival and of the zodiacal constellation Leo-the sacred beast of Ishtar-a great feast was celebrated in honour of that goddess (Asurb. cylinder B. 5, 16), but it was presumably repeated in the following month, Elūl ('the corn-ears of Ishtar'), as we know to have been actually the case in Arbela (see above).

Corresponding to the festival of Shamash in Sippar on the 10th of Tyyar, a sacrificial feast in honour of the sun-god was also observed in that city in the month of Marchesvan. This, however, took place on the 15th of the month—the precise date, therefore, on which Jeroboam instituted the festival of the two golden calves in Bethel (1 K 1232), the ealves being emblematic, at least in the first instance, of the waxing and waning moon, though instance, of the waxing and wating moon, though the festival may have been intended simply to represent that of Sukkoth (Booths'), with a post-ponement from the 15th of Tishrī to the same day

of the following month.

of the following month.

For the month of Kisley a special ephemeris in a late-Babylonian transcript has been preserved (Peisner, Humnen, 1896, No. vii. p. 144). With certain days of this ninth or winter month, viz., the 4th and 7th, 8th, 10th, 12th and 13th, 15th and 16th, 22nd and 25th, and finally the 29th, this document associates certain temple-festivals in various cities; c.q. with the 4th, that of Marduk in E-Temenan-ki (in Babylon), the Ishtar festival in Dür-Kurigalzu, and that of the 'mistress of Nina' (in the district east of the Tigris); with the 15th that of Ash-kur in Sadirim. As the 29th is associated with the festival 'of the god Nergal' without indication of locality,—and therefore probably common to all Babylonia,-this function presumably represents the day of Nergal's death at the winter solstice (21st Dec.) or 'the mourning for the death of En-me-sharra.

In the month of Shebat, as we learn from Asurb. 134, the city of Kalakh observed the festival of Ninib, the chief deity of Nineveh, and there was a similar celebration in Elūl, the month of Ishtar. According to the list of month-gods in K. 2049 + 129 (WAI iv. 2 33 a, at the foot), Shebat was dedicated to Papsukal, the messenger (sukallu) of Ann and Ishtar-in reality a representation of Tammūz as a youth (cf. Bab. babu= child'), and thus a deity allied in character to Ninib.

Finally, on the 15th of Adar a solemn sacrifice was offered to Shamash in the city of Sippar, as also on the 3rd of Elül, the corresponding month of the other half-year. Whether the Jewish feast of Purim, which was likewise observed on the 15th of Adar, was in any way connected with this Shamash festival still remains a matter for investigation. The celebration of the Jewish festival lasted from the 13th to the 15th of Adar, while on the 13th of Ivvar the Assyr, eponyms entered upon office by pronouncing the words piece Asur Hadad agruru, 'as I cast the lot of Asur and Hadad' (cf. the conjunction of Shamash and Hadad everywhere else; and with grava cf. the Heb.  $g\delta r\bar{u}t$ , 'lot,' probably an altered form of  $g\delta r\bar{u}t$ ). In Est 3' the act of casting lots (שָלָל פּ פּ דָּע)

is manifestly associated with the accession and deposition (Nisan to Adar) of Haman, the Persian grand vizier, i.e. the chief eponym: it would therefore seem that the name of the feast takes its origin from this event.

Had we a single complete calendar of the annual festivals observed in any of the more important centres of worship in Babylonia or Chaldica, as, e.g., Nippur or Babylon, or again, Ur or Eridu, we could, of course, give a more exact description of the various festivals. Even as it is, however, the astral origin of most of the functions is quite unmistakable. We have here, accordingly, a fresh corroboration of the fact that amongst the people of the ancient East there was no such thing as an agricultural festival without a religious basis. The two interests were combined from the first. even amongst nomads, but most completely, of

course, amongst tillers of the soil.

In conclusion, something remains to be said with regard to the probable origin of the Babylonian or more precisely, perhaps, the Chaldean -calendar. This problem is closely connected with that regarding the origin of the zodiac with its twelve divisions. The crux of the problem lies in the further question whether the Chaldreans had observed the phenomenon of precession, i.e. the advance of the equinoctial point by one zodiacal sign every 2160 (one-twelfth of 25920) years—a question undoubtedly to be answered in the affirmative. The list of monthly stars, with their relative degrees, given by Pinches in JRAS, 1900, pp. 573-5, shows clearly that the Babylonians, on the ground of early tradition, fixed the beginning of the zodiacal series at the eastern end of Gemini (cf. Hommel, Aufsätze u. Abhandl., 1901, p. 459), and that accordingly their calendar must have originated c. 5000 B.C. This is corroborated by the delineations carved upon boundary stones dating from the Kassite period, these being based upon an equatorial zodiac beginning with the twin dragons. The figure corresponding to the latter—two heads of panthers or lions upon one neck-also plays an important part on the seal-cylinders, and sometimes occurs in conjunction with the severed head of Adapa, the god of creation, of whose blood mankind was formed on the morning of creation (or at the beginning of the world). The actual (or at the beginning of the world). beginning of the world, however, which is anterior to the creation of man, was dated as far back as the period of Cancer, i.e. about 7000 B.C.: and this ancient astrological tradition is also implied by the Egyptian zodiac found in Denderah (dating from the Roman imperial period, but of Chaldrean origin), which likewise begins with Cancer. For in Cancer were situated the two contiguous dragons, one—that with the head of a lion—representing Tiamat, the other—with the vulture's head—Kingu, her consort. The dragon with the lion's head, as a symbol of the beginning of the world, is found upon ancient seal-cylinders almost as frequently as the twin-dragon with two heads upon one neck just alluded to.

The Taurus era (c. 3000-1000 B.C.), immediately

succeeding that of Gemini, is indicated by a sketch frequently reproduced on scal-cylinders, that, namely, in which the hero Gilgames waters the wild-ox at the streams flowing from the vase bearing the young shoot—the treelet of Tammuz; while the twin-heroes Gilgames and En-ki-kak (Eabani?), who are quite as frequently depicted together, point rather to the previous era. The shoot of Gilgames, ildakku (carlier išdakku,

1 As Chalden, i.e. the district to the west of the Euphrates, and perhaps a character to the west of the Emphrates, and perhaps embracing Essern Arabia, was the native soil of a strology, and thus, too, of the carliest knowledge of the stars, it is altogether likely that the 'Babylonian' calendar has its origin in the same region, and not in Babylonia proper, which lies between the Euphrates and the Tigrica. Sumer, qis-a-am, i.e. 'tree of the water of the wild-ox '), the νάρθηξ of Prometheus, is not referred to in the surviving fragments of the epic, but it is mentioned in the ancient Sumerian hymn of Nergal (Cun. Texts, xv. 14, line 35). It is quite in keeping with this that we find Gilgames (Orion) with his ship (Argo), the Bull, and the river Eridams (cf. Eridu in Chaldrea?) in close proximity to one

another among the stars. The most ancient names of months so far identified, viz. those current in the period of Lugal-anda and the earlier Sargon, are not directly connected with the signs of the zodiac. The relation is of a more indirect kind, inasmuch as the festivals of the gods (including, in particular, Nin-Girsu = Ninib, Ish-khanna, the Scorpion-goddess, Bildár, and Ba'u, and also, even at that early date, Tnr-zi = Tammūz) are of astral origin. Nevertheless, in the case of the Sumerian series, traceable from the age of the kings of Ur and current till the later Bab, period-a series which must at one time have begun with the ox-month (Gud-sidi = Iyyar; ef. above, the Assyr. coronation festival, and the ancient practice of intercalating a month after Nisan instead of Adar)—the connexion with the zodiae is perfectly obvious. The reader should compare what has already been said (in dealing with the world-year) regarding the various names. The appellations Gud-sidi (Taurus), Brick-month Gemini, and the building of the first city), the 'Ishtar month' Elil, and the 'sacred hill' (the altar in the constellation Libra) are of themselves quite sufficient to place the matter beyond doubt

doubt.

S2f., v. 73); H. Radan, Early Rabylonian History, 1909, pp. 287-207 ('The Names of the Months'), with the very full review by F. Thureau-Dangin in Expositor, The served in Expositor, The Sandard in Expositor, The served in Expositor, The Sandard in Expositor, The Exp

CALENDAR (Buddhist).—Buddhism has no CALENDAR (buddinst).—buddinsin has no general system of its own for measuring times and seasons. In the land of its birth the new religion was, in almost every particular, influenced by prevailing Brāhmanical thought and practice. In ancient India the months were lunar, and the calendar varied in different parts of the country. Every month, including the intercalary, or thirtcenth, had its mahatmyn, or 'excellence. The Buddhist year was based upon the ancient Brāhmanical rule that every new-moon day (dursu), and every full-moon day (paurnamāsa), should be set apart for religious observances. In later times the intermediate quarter-moon days were also held sacred. The number of fast days (upavesatha) was consequently increased in Buddhism to four every month, or one per week.

Another Hindu idea was incorporated into Buddhism in its observance of seasons. Hinduism celebrated the junction of six seasons, viz. spring, summer, the rains (varsa), autumn, winter, and the season of dew and mist. Buddhism added to these others of its own, but now generally observes only three seasons-summer, the rains, and

The festival of the New Year has been universally observed from earliest times. It celebrates the victory of light over darkness.

India, this marks the termination of the inauspicious month Pausa, and the beginning of the sun's northern course (uttarcyana) in the heavens.

Four eras are commonly current among Hindus in India, but none is of Buddhist origin. In Burma, however, the third, the religious era, dates from 543 B.C., the year in which Gautama Buddha is supposed to have entered nirvāna.

In China the Buddhists have arranged their calendar of festivals and fasts to suit the Chinese months, which are lunar. In the popular calendar there is no mention of anything astronomical. Cf.

art, Calendar (Chinese)

In Cevlon each Buddhist monk is supposed to keep a calendar (lita), from which he learns the awarh-hāwa (the length of the shadow, by which, according to rules laid down, varying with the time of year, the hour of the day may be known), the age of the moon, and the years that have elaused since the death of Buddha.

In the Japanese calendar, as introduced from China, the year is divided into lunar months (see CALENDAR [Japanese]). In 1872 the Japanese Government decided to discontinue the system of lunar months and adopt the Gregorian calendar.

The Tibetan system of reckoning time is of mixed Western and Chinese origin. It is by the twelve year and sixty year cycles of Juppiter, which have been derived through India from the West, but with the substitution of some Chinese astrological terms for the Indian, the Tibetans having derived their chronological system mainly from India, with their Buddhism.

In all Buddhist lands the weekly fast is more or less strictly observed. The commemorative and other festivals, in the various countries, differ considerably, both in regard to the time of their observance and the manner in which they are

celebrated.

See, further, FESTIVALS (Buddhist).

J. H. BATESON. CALENDAR (Celtic) .- I. Precedence of night. -A certain knowledge of astronomy is ascribed to the Druids by Cæsar (de Bell, Gall, vi. 14: 'They discuss and impart to the youth many things regarding the stars and their motion, the extent of the universe and the earth') and Pomponius Mela (iii. 2), and some passages of Irish texts support their statements. But this knowledge probably did not surpass the primitive astronomy of barbarie races everywhere, sufficient to adjust roughly the hunar and solar years; and it was doubtless mingled with astrology (see DRUIDS). Our acquaintance with the old Celtic calendar depends mainly on a few classical references, on scattered mainly on a rew classical references, on scattered notices in Irish and Welsh texts, and on the fragments of the calendar of Coligny. The Celtie year was a lunar year. This is attested by a passage in Pliny (HN) xvi. 44) referring to the plucking of the mistletoe by the Druids. This is done 'ante omnia sexta luna, quae principia mensium annorumque his facit, et seculi post tricesimum annum, quia jam virium abunde habeat nee sit sui dimidia.' While it has been supposed from this passage that the Celts counted periods of time from the sixth day of the moon, there is reason to believe, as de Ricci points out (RCcl xix. 26), that the phrase quae . . . facil . . . tricesimum annum is a general indication of the place of the moon in the Gaulish calcudar, and that the subject of Buddhist countries it signifies the triumph of Buddhism over ignorance. The corresponding finit represented by quae is luna and not sexta Hindn festival is called Makara Saikkranti. In luna.' Thus each month, year, and cycle of thirty

years would begin with a new moon, not on the years would neght with a new moon, to on the sixth day of the moon (cf. Jullian, Recherches sur la rel. gaul., Bordeaux, 1903, p. 63, where this view is also adopted). This enstom of counting time by the moon is further attested by Casar (de Bell, Gall, vi. 18), who says that the Ganls 'define the divisions of every season, not by the number of days, but of nights; their birthdays and the beginning of months and years they observe in such an order that the day follows the night.'
Many passages in Irish and Welsh texts show incidentally that this method of counting by nights prevailed; 'three nights' or 'nine nights' are frequently referred to, or a space of time is counted from such a night; or, when a certain number of days and nights is referred to, 'nights' precedes 'days.' Generally also when 'night' is used, it means a night and a day (cf. our 'se'nnight, 'fortnight'). This is in accordance with Indo-European usage (see Schrader, Reallex, der indoger.

Attertumskunde, Strassburg, 1901, p. 845 f.).

2. The calendar of Coligny.—A number of bronze fragments of a calendar were discovered, together with fragments of a statue of a god, together with fragments of a Statue of a good, at Coligny, near Lyons (the region formerly inhabited by the Sequani), in 1897. The calendar had probably been set up in a temple dedicated to the god. While some philologists have maintained that its language is Lightian, it is generally believed to be Celtic, though its place in the Celtic group is not precisely fixed. The calendar is generally dated towards the second half of the 1st cent. A.D. The fragments as restored show that it had been engraved on a long bronze tablet, and that it covered at least a period of five years. There are in all sixteen columns, fourteen of which give vertically four months each, and two three months each; in all, sixty-two months. These two columns are headed by an intercalary month, which occupies double the space of an ordinary month. Each month is headed by its ordinary month. Each month is headed by its title, preceded in the case of the month called Samon by the word MID, and in other cases by the initial M. This word mid has been explained as meaning 'month' (RCCC xxx. 215, xxi. 23; cf. Ir. ml, Welsh mis, 'month'); but Loth contests this interpretation (RCCC xxx. 130). To the title are added in the case of months of 30 days, MAT, and in the case of months of 29 days, ANM, except in the case of the month Equas of 30 days, which has ANM. Seven months have 30 days, and five 29 days. Each month has its days numbered from 1 to 15; then follows the word ATENOUX, and the remaining days are again numbered 1 to 14 or 15. When they are 14 in number the word DIVERTOMY OF DIVORTOMY follows. Each number is followed by symbols, initial letters, or words, the significance of which, save in a few cases, has not been discovered, and is preceded by a small circular hole in which a peg may have been inserted to mark each day as it arrived. The names of the months as they occur in the calendar are:

Samon (30 days) Giamon (29 days)

Duman or Dumannos (29 days)

(29 days)

Rivros (30 days)

Anaean or Anacantlos
(29 days)

Equos (30 days)

Elembiv (29 days)

Ogron (30 days) Edrini (30 days) Cutios (30 days) Cantlos (29 days)

The name of the interestary month of 30 days is Ciallos.

Summa is the summer-month, from 'samo-(cf. 0, 1r. son, 'summer'); Gamon, the winder-month, from 'gatimos (t. 0d Welsh garon, 'winter'); Ogron, 'cold' (cf. Welsh or'ogros, 'cold'); Riron, the month of the god Rivos, the harvest-month, probably August. Rivos, according to Rib's, is the god whose statue was found along with the calendar.

He is represented as Apollo, or perhaps as Augustus in the rôle of Apollo. Augustus, who had given his name to the month of August, was chosen to represent Rivos, the god whose name gave the month Rivos August (see Rhys, Trans. Sed Later. Cong. Hist. Rel., Oxford, 1988), in 223.73.

The calendar is obviously lunar. The months are roughly lunar months; seven of 30 days each and five of 29 days each give a year of 355 days, instead of the usual lunar year of 35t days as with inscend of the usual timar year of vary as with the Greeks. Loth (RCC xxv. 120) compares for this extra day the Irish, Welsh, and Breton phrase in contracts, promises, etc., 'a year and a day,' and states that the formula belongs to an epoch when the lunar year varied in duration from time to time by a day. While the popular current year of 354 days was retained, all chance of error in fulfilling the contract was avoided by prolonging the duration of the contract by a day; and it may have been religious and judicial seruples which led the Druids officially to augment the year by a day. We may compare Numa's Roman year (lunar) of 355 days, the number being decided because of the belief in the virtue of old numbers. In the calendar of Coligny a month of 30 days is intercalated every two and a half years, in effect making each year a year of 367 days. evidently part of a system by which a given number of lunar years was made to synchronize with a given number of solar years.

De Ricci (RCe xix. 21, xxi. 25) finds the key to the system in Pliny's reference to a period of 30 years. In 30 lunar years, with 30 days intercalated every 2) sears, there are 11,000 days with 30 days intercalated every 2) sears, there are 11,000 days (c=10,05720 days) being 22-20 days. Be Ricci supposes (1) that every 15 years a month of 22 days as omitted, equivalent to 58 days in 30 years, thus reducing that the month Equos, of 30 days, has attached to it the letters Anx, reserved for months of 20 days, he supposes an error in the drawing up of the calendar. Altering Equos to a month of 29 days, and including the intercalary days (=306 days in the year), we obtain in the 30 years' cycle 10,880 days. In 30 solar years there are 10,857 20 days, which is meanly equivalent, a month of 30 days were condited from the calendar every 20 years, this would give 10,350 days, increasing the error by 563 days. These, however, are problematical solutions, and its is unlikely that those who framed the calendar every days. On the other hand, if they reckoned a solar year as consisting of 306 days, and if we assume the error in the month equos, then the intercalated month of 30 days word any year as consisting of 306 days, and if we assume the error in the month of 30 days are as consisting of 306 days, and if we assume the error in the month of 30 days and 30 days, which would produce the same result.

The intercalary month of thirty days in 2½ years, equivalent to twelve days in each year, has its days called by the name of the months in the calendar, beginning with Samon. Thus the twelve names are repeated two and a half times. Among the German's and Hindus, as well as among the Celts, are found traces of twelve intercalary days or 'nights' in the year; and relics of the custom still exist in Brittany, where the first twelve days of January or the last six days of December and of January of the last six days of December and the first six of January are called gourdezion, or 'supplementary days.' There is evidence also of their existence in Wales, where the twelve days added to the lunar year of 354 days were called Dyddiwn Dyddon, 'days of days' (William ab Ithel, Barddes, Llandovery, 1862, p. 422 ff.), equivalent to the 'blank days' of the Welsh laws. We are thus, evidently, in presence of an old Indo-European method of accommodating the lunar year of 354 days to the solar year of 366 days (Loth, RCA xxiv. 310, xxv. 118). But in Brittany each of these days is regarded as prognosticating the character or quality of a month in the coming year. With this may be compared the fact that in Brahmanic belief the twelve days are 'an image of the coming year (Schrader, op. vit. p. 391). De Ricci, therefore, surmises (RCel xxiv. 316) that this superstition was entertained by the framers of the calendar, and that it is denoted by the fact that the days of the intercalary month bear the names of the thirty months which follow, and in the same order.

the same order.

On one of the fragments which contains the month Ciallos that name is followed by Sonnocingos and a mutitated passage, which appears to refer to a 13th month and a year of 385 days, i.e. the lmar year of the calendar (355 days), plus a month of 30 days. Sonnocingos, according to Loth and Thurneysen, means 'course of the sun,'while Loth supposes ciallos to be connected with a root ki, 'to collect, 'giving it the meaning of 'collection' or résumé—'an etymology confirmed by the fact that the intercalary month collects in effect the 12 intercalary days of 2 years, and the half of these 12 or days of the Aragment of unother calendar was discovered in 1802 in the Lake of Antre, near Moirans (Jura); on it the month Ogrom appears to be mentioned (Villefosse, Comptex Rendus de Lacad des Inser, xxvi. 1808) 256).

2. Division of the year,—Apart from counting

3. Division of the year.—Apart from counting by months or moons, the earliest division of time was probably by seasons rather than by yearssummer and winter, and later also spring. The fourth season, autumn, was with the Aryans the last of the seasons to receive a distinctive name (Taylor, Origin of the Aryans, London, n.d., 164, 187; cf. also Schrader, op. cit. 366 f., 395-7). The adaptation of the lunar months to a course of the seasons finally issued in the attempts to synchronize lunar and solar time, but it is doubtful whether among the Celts generally the course of the year was divided by the equinoxes or solstices. Traces of the division by 2, 3, or 4 seasons are found in Celtic remains. Like the Teutons, they divided the year primarily into two parts. This is shown by the calendar of Coligny, since the intercalary menth appears now before Samon, now before Giamon, each of them the first of six months. It appears also from Irish texts, which tell that 'the year was divided into two parts, i.c. the Samradh, from Beltine to Samfhuin, and the Geimhredh, from Samfhuin to Beltine' (cited in O'Donovan, Book of Rights, Dublin, 1847, Introd. liii.). The year is also expressed by die se mis, 'twice six months,' in the Irish laws, where also a division into two unequal parts is referred to— Samh-Jucht, a summer period of five months, and Gamh-Jucht, a winter period of seven months. But 'this division was evidently made to regulate the price of grazing lands' (O'Donovan, lv.). In Welsh texts two divisions also occur, the calends of May (Cadan Mei, May 1st), and the calends of winter (Calan Guyaf, Nov. 1st) (Ancient Laws of Wales, ed. Owen, London, 1841, i. 396, 588). The year probably began with the winter half; this seems to have been the case in Ireland, where Foghamhar ('the harvest') is defined as the name given to the last month, and where the year commenced with Samhain (Samfhuin), the day of the feast of Tara, i.e. Nov. Ist; cf. the phrase 'from one feast of Tara to another' (O'Donovan, liv. f.: Loth, RCel xxv. 126). In the Isle of Man, the beginning of the year with Samhain is still commemorated by mummers, who, Year's night, Hogunnau' (Kelly, Eng. and Manx Dict., Douglas, 1866, s.v. 'Blein'). There was Date, Doughas, 1800, 8.2. Biein J. There was also a custom of reckoning years as winters, c.g. Kulhweh's horse is said in the Mabinogion to be four winters old (Rhŷs, Celtic Heathendom, London, 1888, p. 360). The calendar of Coligny affords no evidence as to whether Giamon or Samon began the year. But if Rivros is the harvest month, approximately August, and if Ogron means 'cold then Samon cannot be May, since that would make Ogron, a cold month = September. Probably, therefore, Samon is approximately June, and Giamon approximately December. Loth (Reel, xxv. 130) points out that the name Mid Samon is almost exactly equivalent to the Welsh, Breton, and Irish names for June (Ir. mis mithemain=

mett-samain = medio-samoni-, 'middle of summer'). In this case the twofold division of the year in the wales, though, if Mid Samon is 'middle of summer,' there is here a trace of the division

which made summer begin with May.

A threefold division of the year may have obtained among the Celts at some period. In all Aryan languages there is no primitive name for autumn-the last of the four seasons to receive a name. For the Celts this appears from the fact that, out of the Celtic names for the four seasons, three only are Indo-European,—those of winter, spring, and summer, -while these for autumn have arisen during the Celtie epoch. Some passages in the Welsh laws may point to this threefold division (Loth, RCel xxv. 127 f.). Possibly, too, the triple Celtic Matres, goddesses of that fertility with which the course of the seasons was connected, may owe their number to a threefold division of the year.

The later fourfold division is shown clearly by the old Irish method of arranging the four seasons, arrived at by subdividing the two halves of the

lst quarter, Gcimhredh, begin-ning with the festival of Sam-A. Geimhredh hain, Nov. 1st. (winter half)

2nd quarter, Earrach, beginning Feb. 1st (sometimes called

Oimele),

3rd quarter, Samhradh, begin-ning with the festival of Beltane, May 1st (called also Cét-soman or Cét-samain, 1st day of Samono-s; cf. Welsh Cyntefyn).

B. Samhradh (summer half)

4th quarter, Foghamhar, beginning with the festival of Lughnasadh, Ang. 1st (some-times called Brontroghain).

For the texts and for the old explanations of these names, see O'Donovan, lii. ff.

This fourfold division must have been general over the Celtic area, for traces of the great festivals, with which three of the divisions began. still survive in folk-custom or can otherwise be discovered. Thus survivals of Samhain, Beltane, and Lughnasadh are found in Brittany, Ireland, Wales, the Isle of Man, and the Scottish Highlands, while a festival in honour of the god Lug occurred in Gaul on Aug. 1st (see these fully discussed under Festivals [Celtic]). Traces of a festival to open the spring are lacking. If such a festival existed, it is now completely effaced by St. Bridget's Day, Feb. 1st. The ritual of these festivals, in accordance with the Celtic rule that night preceded day, began on the evening before with the moon's rising (RCel iv. 189; Monnier, Traditions comparées, Paris, 1854, p. 222).

None of these festivals is connected with the times of equinox and solstice. This points to the fact that originally the Celtie year was independent of these, that 'it was more thermometric than astronomical, and the Lugnassad was, so to say, its summer solstice '(Rhys, 419; Lughnasadh comes midway between Beltane and Samhain in the summer half of the year). On the other hand, there is ample evidence in folk-custom over the whole Celtic area, as in general over Europe, of the ritual observance of Midsummer day, June 24th, and its eve, while this ritual is scarcely to be distinguished from that of Beltane. It has been argued that the ritual of an old pagan summer feast was transferred, under Christian influence, to that of St. John Baptist on Midsummer day, and tradition in Ireland alleges that the change from Beltane to this feast was made

by St. Patrick (O'Donovan, li.; cf. Bertrand, Rel. des Gautois, Paris, 1897, p. 105; Hyde, Lit. Hist. of Ireland, London, 1899, p. 91; Keating, Hist. of Ireland, tr. O'Mahony, 1866, p. 300; Grimm, Teut, Mythol. ii. 624). But, in spite of the Christian elements in the Midsummer festival, which at all events denote a desire to bring it under Church influence, the pagan elements, even in folk-custom, are strongly marked, while the festival is so deeply rooted in an earlier paganism all over Europe that this theory of transference must be given up. Without much acquaintance with astronomy, men must have noted the period of the sun's longest course from very early times; and it would probably be observed ritually. Whether this ritual observance existed before that of Beltane, or whether the two feasts arose independently and entered into competition with each other, it is impossible to say. Perhaps Beleach other, it is impossible to say. Perhaps Beltane was an early pastoral festival marking the beginning of summer, when the herds went out to pasture (in its ritual eattle were passed through the tire), and Midsummer was a more purely agricultural festival. And, since their ritual aspect and purpose are similar, they may have borrowed each from the other, thus representing different currents of early custom. Or they may be later fixed dates of an earlier movable summer festival. Practically we may now regard them as twin halves of such a festival (see FESTIVALS [Celtic]). The Celts may have observed in some fashion the solstices and equinoxes, as the survivals of Midsummer Day tend to show, and as may be suggested by such facts as that of the Helvetii appointing a day close to the March equinox for an assembly of forces, perhaps because this was a sacred day (Cæsar, de Bell, Gall, i. 6). Some trace of this may also be found in the phrase 'from the middle of spring to the middle of autumn, according to the old computation, from mid-March to mid-September, in each case near the time of the equinoxes. (The phrase occurs in 'Destruc-tion of Da Derga's Hostel,' RCde Xxii. 167.) The solar arrangement, however, did not affect

the Samhain festival at the beginning of the Celtic year, or that of Lughnasadh. These remained, and still remain in folk-custom, constant. Probably very ancient village rituals for fertility, which may have been more or less liable to variation in the time of celebration, mark the origin of these greater periodic Celtic festivals. The latter were connected mainly with the anthropomorphic divinities of growth and with magical rites to induce fertility, and were apparently, in some cases, held at a stated centre in each large district. Where the Celts came under Roman influence, the observance of the Roman calendar tended to dislocate some of the festivals. Thus, in Gaul, much of the ritual of Samhain was transferred to the calends of January. Germanic influences may elsewhere have affected the Celtic calendar, since some of the Samhain ritual has passed over to The influence of the Christian calendar, with its list of feasts and saints' days, must also be taken into account. Not only did the introduction of the Roman calendar finally demolish the old Celtic method of computing time, but the Church attempted, with varying success, to hallow the older ritual by giving it a Christian colouring or by substituting holy days for the old festivals. Thus All Saints' and All Souls' Days occupy the place of Samhain; St. Bridget's Day occurs on Feb. 1st; St. John Baptist's Day at Midsummer; Lammas at Lughnasadh. Again, while some of the ritual of the old festivals still survives on their actual date in folk-enstom, some of it now occurs on saints' days within the range of the pagan festival days. Specially is this the case vol.. 111.-6

with the Sandain ritual, some of which is found on St. Martin's Day (Martinmas) and on other saints' days in Nov. and Dec., while in Wales and the lsle of Man Laghnasadh rites occur on the first Sunday in August (see Rhys, 421 f.).

4. Periods of years. - Certain periods of years seem to have been regarded by the Celts as sig-nificant, perhaps as sacred. In Irish and Welsh texts these periods are referred to as if they were well-marked divisions of time; or certain events, mythical or historical, are mentioned as occurring within them or are dated by them, showing that the mental outlook of the scribe, or of the folk among whom such traditional events were told, had been prepossessed by the influence of these periods. In the calendar of Coligny, 2½ years is clearly marked out as such a period, and the same period is mentioned in Irish texts, c.g. king Lagaire entered Leinster at the end of  $2\frac{1}{2}$  years (RCel xiii. 52). But the period of 3 years is much more usual. is due, doubtless, to the sacred character of the number three among the Celts, as is evidenced by the three-headed gods and the number of triads, Divine, mythical, and customary, etc., in Celtic belief (cf. Rhys, Index, s.r., 'Three'; Usener, 'Dreiheit,' Rhein, Mus. f. Phil. Iviii. [1903] 31. Note especially the three gods of Dann, the triple war-goddesses, triple Matres, the three cranes, three blemishes, three satires, the grouping of heroes by three, the triads of Welsh literature, etc. Wishes are made for three years; mythic kings reign for the same period; and—still more significant—the fair of Carman, celebrated at Lughnasadh, was held every three years (Windisch and Stokes, Ir. Texte, Leipzig, iv. [1900] 273; RUel xv. 312). In the Welsh Mabinogion and in the Welsh laws the same period occurs as and in the Wesh laws the same perior occurs as a round measure of time (Loth, Mab., Paris, 1889, i. 83, ii. 25, 30; Anc. Laws, i. 263, 488). Still more frequent both in Ireland and in Wales is the period of 7 years, which had evidently a well-marked and sacred significance, due, doubtless, to the fondness for the number itself. Thus mythic kings very frequently reign for that time; various events happen every 7 years, or occur at the end of 7 years, or continue during 7 years (Loth, RCC xxv. 138 ff., 147 ff.). The feast of Tara, held at Samhain, was celebrated every 7th (or perhaps every 3rd) year (O'Donovan, I.). Finally, the period of 30 years, referred to by Pliny, is mentioned as a round number of years in certain passages in Irish texts (Loth, Revi xxv. 140). In the absence of definite statements regarding such periods of years in the calendar of insular Celts, these references must be taken for what they are worth, but they seem at least to indicate the actual measurement of time by 3 and 7 years

5. The month.-The oldest Indo-European name for periods of time was the 'month'; and there are traces, among the Tentons, Slavs, and other peoples, of a custom of grouping the months by two, considering them as brothers, as male and female, or as full and empty months, and using one name for two successive months qualified by great' and 'little,' etc. (Grimm, op. cit. ii. 788). Loth (RCel xxv. 124) considers that this usage may have been current among the Celts, since with some groups six of the twelve months have taken Latin names, as if originally each two months had but one name, while, occasionally, one month still bears popularly the name of the preceding month qualified by 'little.' Be this as it may, a primitive method of dividing the months into half-months by the light half and dark half of the moon is found among the Celts. In Celtie ritual the influence of a waxing or waning moon was believed to be significant (see NATURE (Celtie)). Hence the lunar month was maturally divided into two parts, one before and one after full moon, in accordance with primitive usage. The calendar of Coligny divides the first 15 days from the second 15 (or 14), which are also numbered consecutively from 1 onwards, and between each half is placed in large letters the word ATENOUX, indicating the night of the full moon, 'great night,' or, as Thurneysen translates it, 'renewal' (Ztschr. f. celt. Phil., Halle, 1899, it 523 ff.; cf. Mid. Ir. athanghudh), the period at which the month renewed itself. The same division occurs in Wales, where pythewnos, a fortnight, means 'a fifteen night,' and in Ireland, where coiethiges had a similar meaning and where teora coiethiges meant 'three lifteens,' i.e. a month and a half (Loth, RCel xxv. 131; Rhys, 361).

6. The week.—Indo-European names for the week were late in being devised, and it is doubtful whether with the Celts, in spite of the sacredness of the number 7, a week of 7 days or nights existed before Christian influences were felt among Thus the Irish seachtmain, 'a week,' is due to Christian missionary teaching and is a corruption of Lat. septimana (cf. Gael. seachduin, Cornish seithun, Bret. sizun). The new week in Wales was, however, called by a native name, wythnos, 'eight nights,' in accordance with the custom of reckoning a period with the night on which it began and the night on which it ended. Thus wythnos would be equivalent to 71 days, and it is possible that here the name of an earlier subdivision of the pythewnos has been used for the later week of 7 days. Native to the Celts are periods of 9 and of 3 nights and days. The number 9 is of frequent occurrence and evidently of sacred significance in Celtic texts, and a period of 9 nights, or of 9 nights and days, is found as a well-marked portion of time in Ireland, and is called by Rhy's (op. cit. 360) 'the nine-night week.' In Irish its title is nomad, 'a space of 9 days' (Stokes, RCel xxii. 428); cf. eo cend nomaide, 'until the end of a ninth,' i.e. of a 9-night week,—a phrase of frequent occurrence in the texts (cf. RCel xxii. 193),—while delays of 9 nights and periods of 9 nights are found in the Irish laws (Rhŷs, op. cit. 363; Loth, RCcl xxv. 134; D'Arbois de Jubainville, Études sur le droit celt., Paris, 1895, i. 365, ii. 112). Equally in Welsh texts and laws the same period is found, e.g. delays of 9 days (Anc. Laws, i. 84, 94, 142, etc.), while both in Wales and Ireland the names for the 9-night week were sometimes applied popularly to the new week.

larly to the new week.

Rhy's (op. cit. 368) supposes that the 9th night was held to contain all the others, "as being the boundary or limit within contain all the others," as being the boundary or limit within within the led of the others, as being the boundary or limit within with the eld rule of counting the night with with the eld rule of counting the night with which the leads of 9 nights and 8 days. Thus a "day" must have intervened between each week, if each began with a night, nules, as is probable, the 9th night originally ended one week and began another, i.e. it was common to both. Later the period is one of 9 nights and 9 days. Rhy's also finds mythical personifications of the 9-night week according to two methods, and he cites cases of 9 personifications of a more or less uniform character, or a single personification with the attribute of 9 attaching to it (op. cit. 366 fb). These must be regarded as attaching to it (op. cit. 366 fb). These must be regarded as attaching to it (op. cit. 366 fb). These must be regarded as a single a rounder, of 5 nights anche was divided into halves called nonder, of 5 nights anches as the benight week, the 5th night must have been reckoned to each half, ending one and beginning another, as the 9th night also ended one week and hegan another (cf. Rhys, 363, 363, 370).

The week of 9 days being found annong many

The week of 9 days being found among many races, its origin has been sought in various ways. Some have seen in it a multiple of the sacred number 3 (cf. the numerous triads and enneads of beings in 'Da Derga's Hostel,' RCel xxii, passim); others have adopted Kant's view that before the synodical month of 29½ days was

adopted, the sidereal month of 27½ days, divided into three parts, originated the period of 9 days (Loth, RCrl xxv. 135f.); Rhŷs offers another but by no means convincing explanation (op. cit. 364).

If the sidereal month divided into three parts produced roughly a period of 9 days, this again divided by 3 gave a period of 3 days. In any case 3 was a sacred number with the Celts, and a period of 3 days and nights occurs frequently in Irish and Welsh texts. Thus a delay of 3 nights in judicial matters is frequent (D'Arbois de Jubainville, op. cit. passim), and 3 nights and days of fasting, of hospitality, of a sojonn, of a journey, of a truce, etc., are common (Loth, RCel xxv. 1321; 'Tain bo Fraich, ib. xxiv. 132; 'Finn and the Man in the Tree, ib, xxv. 341, etc.).

7. The day.-The old Celtie names of days have been replaced by others borrowed from other sources and due to Latin and Christian influences (see MacBain, Etymol. Dict. of the Gaelic Language, Inverness, 1896, p. 117 f.). As has been seen, the days during which the moon was waxing were with the Celts, as with other peoples, considered propitious for many under-takings, especially for ritual purposes. This is gathered mainly from later folk-survivals; but older evidence is found in the case of the mistletoe cut on the 6th day of the moon, and in the fact that the Celtiberians danced in honour of their god on the night of the full moon (Strabo, III. iv. 6). Some evidence of 'lucky' days is also derived from the Irish texts (cf. e.g. 'Songs of Buchet's House,' RCel xxv. 27). Certain days, or groups of days, as well as certain hours of the day or night, were doubtless considered lucky or unlucky, as popular survivals show. Midday and nridnight, according to Lucan (Pharsal, iii, 404 ff.), were hours when the Divine guardian of the grove showed himself, and when the priest himself dreaded to approach it. Certain days were appropriated to greater or lesser festivals, e.g. Sam-hain, Beltane, Lughnasadh, on the first of the respective months, as well as to other periodic festivals, in some cases to divinities on their festal days-the communal sacrifice of the hunters of Galatia to their Artemis 'on the day of her birth' (Arrian, Cyneg. 33), the yearly sacrifices of the Irish to Cenn Cruaich (RCel xvi. 35), the periodic holocausts of the Gauls (Diod. Sic. v. 32). Reference may also be made to the meeting of the Druids of Gaul 'at a fixed time of the year' (Cæsar, de Bell. Gall. vi. 13).

CALENDAR (Chinese).—The Chinese calendar, which was practically copied by the Japanese, with the substitution of Japanese for Chinese names, is scarcely so ancient as is generally supposed. It is true that at an early period the Chinese became acquainted with a twelve-year cycle of Juppiter, depending on that planet's progress through the twelve signs of the zodiac; but this cycle had in China only astrological significance, whereas in India it became part of the calendrical system. It is equally true that the Chinese early endeavoured to formulate a lunisolar year, and there is evidence of a year of 360

days side by side with one of 366 days, the discrepancy between the latter and the jurrely lunar year of 351 days being adjusted by intercalation at intervals of three or five years. Chinese tradition ascribes to the Emperor Yao (24th cent. B.C.) the institution of an astronomical board for the regulation of the calendar, and this tribunal, which still issues the ollicial calendar each year, was profoundly influenced by the science of the Jesuit.

missionaries of the seventeenth century.

I. Era.—The Chinese have no initial point from which succeeding years are numbered. When recording dates, they usually give the name of the Emperor and the year of his reign (the first year of his reign being reckoned as beginning on the New Year's Day after his accession), as is the practice in England with regard to Acts of Parliament. Besides this, however, they also employ a sexa-gesimal cycle, beginning with 2637 B.C., for the years and days, and, to a limited extent, for the months. The basis of this cycle is the live elements, wood, fire, earth, metal, water (mu, huo, t'u, kin, schui), which, being divided into antitheses (activepassive, male-female, etc.), give the sub-cycle of the ten heavenly stems (kan): kia ('growing the ten heavenly stems (kenn); here the wood'), yi ('building wood'), ping ('natural fire'), ting ('artificial fire'), wu ('earth), ki ('earthen ware'), keng ('metal'), sin ('wrought metal'), ting ('building water'). The ('running water'), kuei ('standing water'). The second sub-cycle is formed by the twelve earthly branches (tschi), each designated by the name of an animal. This duodenary cycle, which is also found in Tibet, among the Tai and Khmer, and, at least in part, in Egypt, Old Turkish inscriptions, and the Turfan fragments (Ginzel, Chronologie, i. 85 ff., 404, 411, 413, 501 f.; F. W. K. Müller, "Persische" Kalenderansdrücke im ehines. Tripitaka,' in SBAW, 1908, pp. 460-463), is as follows: tse ('mouse'), tscheu ('ox'), yin ('tiger'), muo ('hare'), sekin ('dragon'), szé ('snake'), ngu ('hare'), wei ('sheep'), sekin ('monkey'), yeu ('eock'), siù ('dog'), hai ('swine'). The kan and tschi are grouped together, beginning with kia-tse, and when the denary cycle has been repeated six times and the duodenary five times, the initial com-

The year 1940 is the 47th year of the present eyele; and, as Chinese chronologers begin their cycle; and, as Chinese chronologers begin their cycle; reckoning with the year 2637 i.c., the present is the seventy-sixth cycle. But they have not adopted the system of numbering their cycles; and therefore a reader cannot tell to which cycle a date may belong, unless he be assisted by the context. In some historical works one finds both the cycle number and the vegy of the reign eigen.

the cyclic number and the year of the reign given.

2. Vear and month.—The Chinese year consists of twelve (synodic) lunar months, and is made to correspond with the solar year by the occasional insertion of an additional, or interealary, month. The space of time covered by twelve of these lunar menths being less than the solar year by 10 days 21 hours, in every nineteen years there are seven years of thirteen months. We shall now explain the rule under which the intercalary months are inserted. The length of a Chinese month is 29.53 mean solar days; and the time which the sun occupies in passing through one of the twelve signs of the zodiac averages 30.44 days. These two periods being of so nearly the same length, it happens in most cases that a Chinese month begins when the sun is in one sign of the zodiae, and terminates when it is in another sign. But, as the month is the shorter of the two periods, occasionally there must come a time when a month begins and ends when the sun still remains in the same sign. Every such month is adopted as an intercalary month; and by this simple plan there is provided exactly the right number of interealary months to

eorrect the divergence of the Chinese from the solar year. The intercalary month never occurs in the winter—not, as is generally supposed, because of some arbitrary rule, but because the sun (which moves faster in winter than in summer) is then travelling at more than its average rate of speed, and passes through a sign of the zodiac oil less time than is occupied by a lunar month, so that at that season a month cannot possibly begin and end while the sun remains in the same sign.

At the present time the first month of the year is known in Chinese by a special name, Tsching-yia, 'hallowed (or true) month'; but the remaining months are called the 'second month,' third month,' and so on. Anciently, however, the months were designated according to the characters of the tschi, which also corresponded to the twelve zodiacal signs (kmg), although the latter were counted in reverse order. These old Chinese month-mames were as follows: Tsc-yiec, Tscheu-yiec, Yin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yie, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Schin-yiec, Yeu-yiec, Sin-yiea, Hai-yiec, their names being equivalent respectively to 'child,' 'blad-'and,' 'plant-hasket,' 'open door,' 'motion,' 'completion,' 'encounter,' 'laden trees,' 'ripeness,' 'jug,' 'destruction,' 'return to rest.'

An intercalary month takes its name from the month which precedes it. Thus, if it follows the fourth month, it is called the intercalary fourth month. Every month begins with the first day of a new moon; and the new year begins with the first new moon after the sun enters Aquarins. New Year's day thus varies between 26th January and 19th February. As the length of a month is 29:53 days, it must consist sometimes of 29, some times of 30 days, the latter the more frequently.

It results from the above-described conditions that the equinoxes occur regularly in the second and eighth months, the solstices in the fifth and

eleventh months.

The Chinese have no formal division of the month; but it is a common practice among them to speak of anything as happening in the first decade (1st to 10th day), middle decade (11th to 20th day), or last decade, of such a month, much as we say, 'first week in June,' etc.

The first month of the luni-solar y ar was originally 17m-yie, as ordered, according to tradition, by Tschuan-hiū (2513 B.C.). In the second dynasty (1766-1123 B.C.) the beginning of the year had retrograded a month, in the third (1122-255 B.C.) two months, and in the fourth (255-209 B.C.) three months, until the Emperor Wu-ti, in 104 B.C., in his reformation of the calendar, is said to have made the year once more begin with Yin-yue—a tradition which must not be taken too strictly.

tradition which must not be taken too strictly.

3. Day.—As already noted, the Chinese divide their days into sexagesimal periods, their names being identical with those of the corresponding years—Kuctss, Yictskeu, Ping-yin, Ting-man, Wu-schin, Ki-sz?, Keng-ngu, Sin-wci, Jin-schin, Kuci-yeu, Kia-sin, Yi-hai, Ping-tsi, Ting-tscheu, Wu-yeu, Kiemus, Keng-schin, Sin-sz?, Ting-tscheu, Wu-yeu, Kiemus, Keng-schin, Sin-sz?, Inn-pha, Kuci-wci, Kiu-schin, Yi-yeu, Ping-siu, Ting-hai, Wu-tsi, Kit-scheu, Keng-yin, Sin-maa, Jin-schin, Kuci-sz?, Kiu-ingu, Yi-wci, Ping-schin, Ting-yeu, Wu-siu, Ki-hai, Keng-tsi, Sin-tscheu, Jin-yiu, Kuci-mao, Kiu-schin, Yi-yeu, Ping-schin, Ting-yei, Wu-schin, Ki-yeu, Keng-siu, Sin-hai, Jin-tsi, Wu-ing-ki, Ki-wci, Ke-un-schin, Sin-yeu, Jin-siu, Kuci-tschen, Kiu-yin, Yi-muo, Ping-schin, Ting-sz?, Wu-ngu, Ki-wci, Ke-un-schin, Sin-yeu, Jin-siu, Kuci-hai. This cycle of days is found in the most ancient historical records, the dates of important events being recorded by mention of the cyclic day, as well as of the day of the month, month, and year of reign. These cycles, though not need for ordinary purposes, have been continued without interruption to the present time. Besides this the

Chinese have long possessed a cycle of 28 days, designated by the names of the 28 lmar mansions (sieu, kung):—kio ('horn'), k'ong ('neek'), ti ('fundament'), fong ('room'), sin ('heart'), wei ('tail'), k'i ('dang hasket'), teu ('wimowing [an'), nieu ('cattle'), nie ('virgin'), hie ('grave-mound'), vei ('house-ridge'), sehi ('sacrificial hearth'), pi ('wall'), kuci ('saudal'), teu ('harvest woman'), vei ('field watchman'), moo ('setting sun'), pi ('net'), tsui ('manes'), lieu ('pasture'), sing ('somstellation'), tschong ('net'), yi ('wing'), tschong ('wall'), kwci ('manes'), lieu ('pasture'), sing ('constellation'), tschong ('net'), yi ('wing'), tschong ('waggon'). The week of seven days, on the other hand, is unknown, except in commercial centres frequented by Europeans, where for Monday, Thesday, etc., the names 'first day,' 'second day,' the (Li pai yi, Li pai bi', tei', have been coined.

The day begins at midnight, and is divided into two parts, the former called tsch'u ('beginning') or kino ('odd'), and the latter tsching ('even'). Each of these halves is subdivided into four k'o, or 'quarters' (tsch'u-k'o, 'beginning quarter,' yi-k'o, 'first quarter,' etc.); and a k'o falls into 15 fen ('mintes'), while European influence has introduced further divisions corresponding to 'seconds,' 'forenoon.' and 'afternoon.'

4. Other divisions.—An additional method of

marking time is afforded by the 'Twenty-four Solar Terms,' which are divisions of a solar year, and quite independent of the official year with its twelve or thirteen lunar months. These Solar Terms commence alternately on the day of the sun's entry into a sign of the zodiac, and on the day of its reaching the 15th degree in the sign. Their length thus averages 15.22 days, though it varies between 14 and 16 days. The first term begins when the sun reaches the 15th degree in Aquarius, or approximately on the 5th of February. These 'Terms,' which are alternately odd (tsie) and even (k'i), have the following names:—Li-tsch'un ('beginning of spring'), Yu-schui ('rain-water'), King-tschi ('eoming-forth of worms'), Tsch'un-fen Ku-yi ('coming-tortin of worms'), Isch un-yen ('spring equinox'), Ts'ing-ming ('pure elearness'), Ku-yi ('seed rain'), Li-hiu ('beginning of summer'), Siao-man ('little fertility'), Mang-tschung ('grain in granaries'), Hia-tschi ('turning of summer'), Siao-schu ('little heat'), Ta-schu ('great heat'), Li-ts'ieu ('beginning of autumn'), Tsch'uschu ('bonndary of heat'), Pe-lu ('white dew'), Ts'icu-fen ('autumn equinox'), Han-lu ('cold dew'), Schuang-kiang ('fall of hoar-frost'), Li-tung ('beginning of winter'), Siao-suc ('little snow'), Ta-suc ('great snow'), Tung-tschi ('turning of winter'), Sino-hun ('little cold'), Ta-han ('great cold'). These terms are marked in the almanac published annually by the Government; and agricultural operations, sowing, etc., are always regulated by them. Closely connected with them is the twelve days' cycle often called the 'cycle of choice,' twelve signs are associated with the 24 tsie-k'i just enumerated, inasmuch as the last day of a k'i and the first day of the following tsic come under the same sign. The names of the signs of this twelve days' cycle, which has some connexion with astrology, are as follows: -kien ('attain'), tschu astrology, are as follows: -kern ('attam), rexched ('exclude'), man ('full'), p'ing ('indifferent'), ting ('determinative'), tschi ('seize'), po ('hreak'), me ('complete'), sching ('complete'), schen ('concive'), kin ('open'),  $p_i$  ('elose').

Mention should also be made of the three Chinese eras tscherng,  $\rho u$ , and ki. The tscharg is 19 lumisolar years, when the relation between the rise of the new moon and the beginning of the k'i again begins: the  $\rho u$  is a cycle of 72 years, when the difference between the tropical solar year and the lunar year is very nearly equal to the product of the sidereal and synodical time of revolution of the

moon; and the ki is equal to 20 pu=1440 years, and represents 261 sexagesimal cycles.

CALENDAR (Christian).—The Christian calen-

CALENDAR (Christian). - The Christian calendar derived its name (in the languages of Western Europe), as it did its form, from the Roman pagan calendar (see Calendar [Roman]), which it gradually superseded. The germ of the Christian calendar is to be sought in the customary observance, in each local church, of the death-days of its martyrs and bishops. Lists of these were preserved in the diptvehs of each church. References to such lists meet us in St. Cyprian's letters. Writing (Ep. 37) about recent martyrs, he gives direction that the day of their death should be noted in order that their commemorations might be celebrated among the memorials of martyrs. In another letter (Ep, 34) he mentions as a well-known custom the celebration of the anniversaries of the Passions of martyrs. Tertullian (de Corona, xiii.), reproving Christians for taking part in pagan commemorations, reminds them that they have their own registers and fasti. Sozomen (HE v. 3) testifies in regard to two neighbouring towns in Palestine, Gaza and Constantia, that, although they were united by Julian under one civil government, each retained the festivals of its martyrs and the commemorations of the priests who had presided over it. See, further, COMMEMORATION OF THE DEAD.

1. Calendar of Filocalus.-The earliest festival lists which have come down to us belong to the local church of Rome. They are contained in a compilation of chronological documents of the date A.D. 354—itself a re-publication of an edition of 336. The title-page is inscribed 'Furius Dionysins Filocalus titulavit.' The name of this calligrapher is found in two inscriptions in Rome, in one of which he describes himself as 'Damasi Papae cultor atque amator.' He appears to have been employed by Damasus in designing the lettering for the metrical epitaplis which that Pope wrote for the tombs of the martyrs. The compilation commences with a civil calendar giving the national pagan festivals, but marking the Christian week by the letters A-G, which are prefixed in regular sequence to the days, side by side with the nundinal letters A-H. This probably had become a feature of the State calendar since the observance of Sunday had been legally sanctioned by Constantine in 321. There is a list of consuls from B.C. 510 to A.D. 354, in connexion with which certain Christian events are noted, viz. the birth and the death of Christ, and the arrival in Rome of SS. Peter and Paul, and their martyrdom. Other civil documents are also given. Of special Christian interest are a table of the days of the occurrence of Easter from 312 to 411, a catalogue of Bishops of Rome from Peter to Liberius, and two lists entitled respectively 'Depositio episcoporum' and 'Depositio martyrum,' which note in calendar order the days of the burial of the Roman bishops and martyrs, with the place of their interment, where the memorial service was annually held. In these two lists, which we may assume were copied from official archives, we have the calendar of the Church of Rome, as concerned immovable feasts, of the year 354,

With very few exceptions all the entries appear in the Roman calendar of the present day.

An analysis of this primitive calendar yields the following results. The 'Depositio episcoporum' contains the names of twelve bishops from Lucius (254) to Julius (352). The last two, Marcus and Julius, are inserted at the end, out of calendar order, by the second editor. One hishop of the period, Marcellus, is omitted, and another, Xystus (Sixtus), is placed in the martyr list. In the 'Depositio martyrum' 52 names appear, of which several are frequently assigned to a single day—that, no doubt, on which they suffered together, as we know to have been the on which they suffered together, as we know to have been the case with Preptua and Pelicitas. 24 days in all are observed— Christmas, which heads the list, and St. Peter's Chair, Feb. 22 CYHI, Kal. Martias, Natabe Petride cathedra') being included. The only cutries relating to foreigners are: 'Non. Martias March '1] (depositio) Perpetuae et Pelicitatis, Africae'; and 'AVHI, Kal. Octob. [Sept. 14] Cypriani, Africae, Romac cele-brator in (coemuterio) Cidilisti.' There is no notice of nartyrs who suffered before the 3rd century. The earliest mentioned are perpetua and i-Pelicius (292). The oldest Romans are Culistus (222), wt. 11, and Hippoly the and Fondamic Cidilistis (222), wt. 11, and Hippoly the and Fondamic Cidilistis, and the complex consistency of the martyrs at their craves del not, after all We may therefore conclude that the practice of celebrating the amiversaries of the martyrs at their graves del not arise at Bome until the 3rd century. If the festival of any martyr of the 1st or 2nd cent. had become traditional, it would hardly have failed to find mention in the 'Depositio martyrum.' The entry 'Petri in Catacumbas et Pauli Ostener Tuses of Basso Cons.' June 29) is not the amiversary of the martyrdom of these Apostics, but the commemoration of the translation of these aposities, in the commonistic of the Cransation of the remains in the year 288. The collection of Flocalias was preserved until recent times in two MSS of the 8th or 9th century. One of these has totally disappeared, but two 17th event, copies remain, one at Brussels and the other at Rome. Of the second MR, two fragments only survive in the library of Perns, loat a only such that the control is the limit of being on being on the copy made from it when entire is in the Imperial library at Vienna. (Mommsen has published the civil calendar in CLL i. 334, the other documents in Mon. Germ. Auct. Ant. ix. 13t. For a summary of the contents of the collection, see Duchesne, Le Liber Pontificalis, i. 1892, p. vi. f., and see also Duchesne, Acta Sanct., Nov., tom. 2, pars i. p. xlviii. f.)

2. Gothic calendar .- A fragment of a list of 2. John Calendar.—A riagilien of a list of martyrs, in the Gothic language, of the end of the 4th cent., has been published by Mai from an ancient palimpsest in the Ambrosian library at Milan (Script, Vct. v. 66), and by Migne (PL xviii. 878). It contains 38 days only,—from Oct. 23 to 878). It contains 38 days only,—from Oct. 23 to Nov. 30,—and in addition to national saints includes the Apostles Philip and Andrew, and the

Emperor Constantine.

3. Calendar of Polemius Silvius .- A calendar of complete framework, i.e. with all the days of the year inserted, was drawn up by Polemius Silvius in 448-in an appendix he names the consuls of the following year—and addressed to Eucherius, Bishop of Lyons (d. 450). Silvius had before him another calendar, which, as he says in the preface, he set himself to simplify for the use of the unlearned. The calendar has a curious resemblance to a modern almanae. Historical dates are entered. as, e.g., the day of the capture of Rome by the Gauls (Id. Feb.). The words 'Kalendae' 'None,' 'Idus,' 'Epiphania' are explained by the author after a manner of his own. Weather indications are given. A few pagan festivals are recorded, evidently as legal or business dates. Christian commemorations are connected with 10 days only, and include Christmas, St. Stephen, Epiphany, St. Vincent (Jan. 22), the Passion (March 25), the Resurrection (March 27), St. Lawrence (Aug. 10), Hippolytus (Aug. 12), and the Depositio SS. Petri et Pauli, which is assigned to Feb. 22 instead of June 29. The Maceabees (Aug. 1)-the one OT commemoration in the West-appears here for the commemoration in the west—appears here for the first time. This calendar is preserved in a single MS of the 12th eent, in the public library at Brussels (edited Boll. Acta SS., June, vol. vit. Migne, PL xiii, 676, and Mommsen, CH. i. 335).

4. Calendar of Tours.—A list of the fasts and distributed by the discussion of Tours in the facts and distributed between the comments.

vigils in the diocese of Tours instituted by Bishop Perpetuus (461-490) finds a place in the *Historiar Francorum* of Gregory, Bishop of Tours (x. 31). It mentions only the chief festivals, i.e. those preceded by a vigil. These are Christmas, Epiphany, the Resurrection on the fixed day March 27 (VI. Kal. April.—the only date given), as well as Easter and Ascension Day; also, among

others, the Nativity and Passion of St. John Bantist, St. Martin, St. Hillary, St. Peter's Chair Eaplist, St. Martin, St. Higry, St. Feter's mair (Natale S<sup>n</sup> Petri episcopatus), and SS. Peter and Paul. The station days, guarta et sexto feria, from Quinquagesima to St. John Baptist's day, are appointed for observance amongst the fasts.

5. Calendar of Carthage.—This calendar was first edited in 1682 by Mabillon in his Vetera Analecta, Paris, iii. 398. It was discovered by him in the monastery of Clugny, written on two pareliment sheets, since lost, which formed the covering of a copy of St. Jerome's commentary on lsaiah. In this calendar, of the earlier Carthaginian bishops Cyprian (d. 258) alone is mentioned. being honoured as a martyr; eight bishops are commemorated as such, from Gratus who was present at the Council of Sardica (343) to Eugenius This latter date therefore marks the (d. 505). age of the final redaction of the calendar. From the names of the bishops, and that of St. Augustine (Aug. 29), we conclude that the calendar belonged to the Catholic Church and not to the Donatists. It begins on XII. Kal. Maias (19th April), and ends on XIV. Kal. Mart. (Feb. 16)—the nine weeks during which Lent occurs being omitted, either through compliance with the Eastern custom, attested by the Council of Laodicea (between 343 and 381), which discouraged festivals at that time, or simply owing to a defect in the MS. The heading is: 'Hic continentur dies nataliciorum martyrum et depositiones episcoporum quos ecclesia Cartagenis anniversaria celebrant. Martyrs and bishops are not separated, as in the Roman calendar, but the distinction is maintained by the different descriptions-natalicia (birthdays, i.e. into the higher life) and depositiones (burials) -of their days in the heading. Moreover, in the list 'depositio' is prefixed to each bishop, except in the case of Cyprian (Sept. 14), who is classed among the martyrs. The number of days commemorated - 79 - shows a large increase when compared with the 12 and 24 of the Roman lists of a century and a half before. The calendar has also become wider in its scope: 18 foreign names appear in it, as compared with the 2 in the Roman. Among these we observe 9 Roman saints. 3 of whom are not found in Filocalus, though no doubt at this time they were commemorated also at Rome. And, as regards the African saints, they do not belong exclusively to Carthage, as the names in the Roman calendar are all Roman. Martyrs are included from the three ancient African provinces, viz. Africa proper, Numidia, and Mauretania. Festivals in honour of NT events and personages have multiplied. Christmas is now followed by its attendant feasts, St. Stephen (Dec. 26), St. John,2 here coupled with his brother James (Dec. 27), and the Holy Infants (Dec. 28). With Christmas is also connected the day of St. John Baptist, i.e. his Nativity (VIII. Kal. Jul.—VIII. Kal. Jan. representing the six months' interval of Lk 129). We find also Epiphany (Jan. 6), SS. Peter and Paul (June 29), St. (Oct. 13), and St. Andrew (Nov. 29). The Maccabees (Aug. 1) has now gained a firm footing in the West (see Calendar of P. Silvius above, § 3).

6. Syrian calendar.—The calendars which have

hitherto occupied us were mainly of a local character. We come now to a calendar which takes a wider range, being formed by the inclusion of the Saints' lists of several Churches.

In 1837 there was discovered by Dr. Henry Tattam in the monastery of St. Mary Dequara, on the Nitrian Lakes in 1 In the Sacramentarium Gallicanum the mass for St. John

In the Sacramentarium contenuation the mass for St. John Baptist (i.e., his Nalivity) is followed by a mass for his Passion (Mirratori, Lit. Rom. Vet. 1748, 878, 9). 2 The text has 'sancti Johannis Baptistae'—undoubtedly a copyist's error for Apostoli, as the Baptist is commemorated in

the calendar on June 21.

Egypt, a codex containing—in addition to the Chemetine Recognition, Euseibins on the Theophania, and other works an ancient calcular written in Syriac. Tattam acquired the MS for the British Museum; there is now lies. The calcular was first edited by W. Wrightin where is now lies. The calcular was first edited by W. Wrightin the Journe, Secred Lit., 1884, viii. 45f., with a Eng. t. 423 and subsequently by R. Graffin in the 2nd Nov. vol. of the Acta Sanctorum, lii., the names being turned into Greek by Duchestac. A note in the last page of the codex is to the effect that it was completed it Edessa in 411.

The calendar consists of two parts. Part I. is arranged according to the Roman months (to which Syriac titles are given), and contains the names of martyrs belonging to the Roman Empire. It begins on the day after Christmas (Doc. 26), and ends on Nov. 24. Part II. contains a list of Persian martyrs, arranged in the order of their ceclesiastical standing as bishops, presbyters, and deacons. As no dates are given, it must be regarded as a historical record, not as a calendar of martyr-festivals.

The calendar proper (i.e. Part I.) is evidently compiled from the martyr-lists of the chief cities in the Eastern (trans-Adriatic) part of the Empire. Only one local Roman feast (Xystus) occurs in it, and one African (Perpetua and her companions). The place of honour is given to Nicomedia, which has been credited with by far the largest number (32) of entries. From this and other indications we may infer that the first editor had his home in Nicomedia, and wrote in Greek. The date of his work is not earlier than 362, as martyrs are recorded who are mentioned by Socrates and Sozomen as having suffered under Julian. Owing to careless editing, many saints are mentioned twice or even The names of distinguished martyrs had found place not only in their own but in other calendars, and when the lists were combined, in eases where the day of celebration differed, they were allowed to appear again and again. The compilation is made up of Arian calendars. In the list received from Alexandria, Athanasins is omitted, but Arius is included. 'At Alexandria, Areios the presbyter' is the entry opposite July 6. Lucian (of (Antioch), Jan. 7, and Eusebius (of Cæsarea), May 30, are also commemorated. Possibly also 'Ensebius, Nov. 8, is the Arian bishop of Nicomedia. But in substance the Catholie and Arian calendars must have been much the same, as after the schism both parties, no doubt, retained the old lists, merely adding distinguished partisans. In 15 entries the words 'of the ancient martyrs' are added to the name. If, as seems likely, this means that the martyrs mentioned suffered before the persecution of Diocletian, it follows that by far the greater on Diocecian, it follows that by far the greater number of the names of this calendar date from that persecution. From Nicomedia the calendar in all probability came to Antioch, and there received the long list of martyrs, falling little short of the Nicomedian, credited to that city. Thence it was carried to Edessa, where it was translated into the Syriac vernacular, and again augmented by the addition of local saints. also the list of Persian martyrs was appended; and, as thus edited, the calendar in the MS of 411 has come down to us. In this calendar the only festivals other than Saints' days noted are Epi phany and Easter, the latter in connexion with the commemoration of All Martyrs, which is assigned to the following Friday. The only Apostles commemorated are SS. John and James (Dec. 27), and SS. Paul and Peter (Dec. 28). St. Stephen, who is also called an Apostle, appears on Dec. 26.
7. The Hieronymian Martyrology.—The ten-

7. The Hieronymian Martyrology,—The tendency to combine local festival records in one list, which we observe in the Syrian calendar, finds its fullest development in the compilation which came to be popularly known as the Hieronymian Mar-

tyrology.1 It comprises, as its chief elements, the calendars of Rome, Carthage, and Syria. The nucleus of the work is the Roman calendar, but of a later stage than that presented to us by Filocalus, As it appears in II.M., it shows a great increase in martyr festivals. The 22 days marked for observance in A.D. 354 have grown to some 150, and, instead of the one or two names then allotted and, instead on the one of two names then above a to each day, groups—sometimes large groups—of names are almost invariably found. The ealendar has, moreover, ceased to be merely urban and suburban. It includes all Middle Italy. Opposite 'Romæ' are placed festivals of places a considerable distance from the city, even as far off as Forum Sempronii, 174 miles away—the number of miles from Rome being here, as elsewhere, noted in the The list of Roman bishops, kept separate text. from that of the martyrs by the chronographer of 354, has been made a part of the general calendar, and has been continued (with the sole omission of Zosimus) to Boniface I., of whom both the consecration day (IV. Kal. Jan.) and the death day (11. Non. Sept.) are given. As the consecration day would be observed only during the lifetime of the bishop, it may be concluded that the Roman calendar was received into the work shortly after the death of Boniface (422). After Boniface only Popes of wide-spread fame appear—such as Lee the Great, Hilary, and Gregory the Great-attached to whose names often occurs a notice showing that they were exceptionally added: e.g. IV. Id. Sept. 'Hilarius per quem Victorius ordinem pasehalem conscripsit.' With the Roman calendar were incorporated the calendars, in part or whole, of other Italian cities—which probably already formed two collections (of Upper and Lower Italy) before they came into the compiler's hands—and the calendar of Carthage. To the calendar of the West thus formed, a later editor added the Syrian festival list —that is, its first part, for of the second he seems wholly ignorant—and thus gave a kind of ecumenical character to the work. Like the Roman, the two other chief sources have been received into H.M. with augmentations, as compared, that is, with the independent forms known to us. The African list has been swollen by a number of martyrs who, it has been conjectured, suffered during the raid of Genscrie, 428 (Achelis, Die Mart. pp. 103, 107). The Syrian calendar has been extended to 460, as the translation of the remains of St. Simeon Stylites, which took place in that year, is commemorated on Jan. 5. It is noteworthy that the editor, who evidently accepted the calendar as Catholic, has in all innocence taken over its Arian colouring, the commemoration of the two bishops Enselins being retained, and even that of Arius himself, his name appearing in the corrupted forms Arthoci, Artotes, or Ari Thoti in different MSS.

The preface to H.M. takes the form of a letter addressed to St. Jerome by two bishops of North Italy, Chromatius of Aquilea and Iteliadorus of Altinum, in which they beg him to Aquilea and Iteliadorus of Altinum, in which they beg him to Aquilea and Iteliadorus of Altinum, in which included a calendar of Eusebius; and of his reply, stating the famous feeting calendar of Eusebius; and of his reply, stating the tamous head of them this calendar in a cartalled form which included only the most notable martyrs, and with the names arranged according to the months and days of the year. It was through this fabrilous association of the work with St. Jerome (d. 420) that heb Martyrology received its name, and no doubt won in large measure the prominent position which it attained. The practice is first cited by Cassiodorus (de Institutione Divin, litt. As. 1145) in 544. As H.M. must have been them to the control of th

<sup>&</sup>lt;sup>1</sup> The omission of Christmas is remarkable. It probably stood at the commencement of the year in the original Greek text, and was struck out by the Syrian copyist, influenced by the usage of his own Church.

<sup>1</sup> Hereafter cited as H.M.

Italian, and the memorials of the northern cities seem best known to him. He has also selected North Italian bishops as correspondents with St. Jerome in the preface.

A work like H.M. would naturally receive augmentations

norm-spondants with St. Jeronae in the predace.

A work like H.M. would naturally receive augmentations from time to time. The most remarkable of these took place in Gaul. The numerous, almost daily, notices of Gallican usints, with other indications of Gallican use, point to this. Probably this expansion of H.M. occurred at Austre, which, although a comparatively insignificant town, furnishes more festivals han any other, and has all its bishops noticed but one. The last bishop whose name is recorded is Aunacharius, and, as his "anale," i.e. critance upon office (Frid. Kal, Aug.), only—and not his death—is commemorated, we may assume that the result of the continuous control of the control of the control of the critical from the Carlot of the Carl groups being allotted to each day. On June 2 the names of 220 saints appear. It frequently happens that the same martyr is commemorated on different days, in connexion with different places. This was a natural result of an uncritical combination places. This was a natural result of an interfacet combination of several calendars, when no care was taken to avoid repetitions. Transcriptional errors abound, in many cases rendering the entries unmeaning. We find often, as in the instance petitions. Transcriptonal errors abound, in many cases reducting the entries unmeaning. We find often, as in the instance given above, names divided, or two names fused into one. Milia's sometimes changed into 'milites'. The names of cemeteries are regarded as names of marters. So great is the confusion, that de Buck, the first critical reviewer of 11.M, gives as his verificity. William of the confusion of 11.M, gives as his verificity. More than the confusion of 11.M, gives as his verificity. And the latest editors, of Rossi and John Milliams, and the confusion of the confusio

8. The later Martyrologies. - Martyrologies, called 'Menologies' by the Greeks, are distinguished from calendars in this, that they do not merely give the names and dates of saints, but add historical or legendary accounts of their martyrdoms. Occasionally in Il. M. the entries of the deaths of martyrs are thus enlarged, but this feature became characteristic in the works which succeeded and were based upon it, and which are therefore properly termed Historical Martyrologies. The chief sources from which these accounts are derived are, in addition to II.M., the Passions and Acts of the Martyrs, the works of Eusebius, Rufinus, Jerome, Cyprian, Gregory the Great, the Liber pontificalis, etc.

The series of Historical Martyrologies commences with the Martyrologium Romanum Parvum, 1 composed at Rome about 700. It makes a rather sparing use of biographical matter, so that the Passions found in H.M. are often more diffuse. About the same time Bede drew up his Martyrology. He made large extracts from his authorities, and added several English and Frankish saints to the Roman list, and also, contrary to the Western usage, introduced some names from the OT, taking their dates from Greek Menologies. He left many days vacant, but these were filled up by later hands, so that it is impossible to decide how much of the Martyrology ascribed to Bede is actually his. Bede was followed by a line of successors, each of whom used the works of his predecessors, while availing himself of other materials. These subsequent writers were Florus of Lyons (c. 830); Wandelbert of Prum, who composed a metrical Martyrology (c. 848); Hrabanus Manrus (c. 850), whose work, in the opinion of Achelis, is independent of Bede; Ado, Bishop of Vienne (c. 870); Usuard, a monk of St. Germain-des-Prés, Paris (c. 875), whose book is practically an epitome of Ado's, and was the most used of all the Historical Martyrologies; and Notker Balbulus, a monk of St. Gall (c. 896). Martyrologium Romanum, which was compiled by Baronius at the instance of Gregory XIII., is a revised and augmented edition of Usuard. It was prescribed for exclusive use in choir, at the

was prescribed for excusive use in choir, at the ennomical hours, by a Papal brief in 1584. Achelistraces a twofold series of Martyrologies, starting from I.M.: a Roman-French line, viz. M.E.P., Ado, Usuard, and Bar-onius; andan Anglo Saxon-Germanline, viz.Bede, Florus, Wandel-bert, Herbanss Maurus, and Notker. Dom Quentin does not make this distinction. He regards field as the source of all the later Marty rologies, and places M.E.P. is act in the series, after vis.

The forementioned Martyrologies were written in

1 Hereafter cited as M.R.P.

Latin. A Martyrology in Anglo Saxon, which is probably a translation made c. 850 from a Latin original of 750, has been edited by Herzfeld, London, Two others, in Irish, and including many Irish saints, have come down to us-the Martyrology of Oengus, of the date 804, composed in rhymed verse, and the Martyrology of Gorman, also metrical, written between 1166 and 1174 (both edited by Whitley Stokes for Henry Bradshaw Society, 1895 and 1905). The need for Historical Martyrologies arose from the practice of reading the Passions of the Saints during Divine Service. custom is first mentioned by Aurelian, Bishop of Arles (545) (Regula ad monachos, Migne, PL lxviii. 396). It was the origin of the Lections subsequently inserted in the Breviary. The earlier practice was to read passages from Holy Scripture alone.

o. Later calendars .- We have seen that H.M. is essentially a collection of the calendars of local churches. Such calendars, in fact, could be in many cases reconstructed from the materials which it furnishes. But, apart from H.M. and the early calendars of which we have already treated, we do not meet with calendars proper until the 8th eentury. In the West, however, the lack of calendars is supplied by the liturgical books of the Roman and Gallican (i.e. non-Roman) rites, as in them provision is made for special Masses on Sundays and other days of observance, following the local festival lists. The books of the Greek Church do not help us here, as it has never been the Eastern custom to vary the Liturgy according to the day or season. In the Western Service-books the Sunday cycle appears for the first time, and thus an important feature is supplied, in which the early calendars and the Martyrologies, which, with rare exceptions, notice immovable feasts only, are lacking. At first the Saints' days were distributed through the whole year, but eventually, as their number continued to increase, they were placed together in a separate division of the Service-books. the Proprium de sanctis, apart from the cycle of Sunday services, the Proprium de tempore.

Belonging to the 7th cent, among books of the Gallican rite, we have the Missele Gothieum, which was apparently drawn in for the diocese of Autur, the Lectionary (c., book of Lections read in the Mass throughout the year) of Luxenii, which probably represents the use of the church of Paris (ban Monn, Revine Benedictine, 1858, p. 485); and the Lectionary of Sibs (ed. Morrin, Thinges, 1854, under the two local scheduler covered of Massell, and the Lectionary of Sibs (ed. Morrin, Covered Church). Bruges, 1803, under the title Liber Comicus), which shows the festival his of the ancient exclessistical province of Toleto. To the 7th cent. also belongs the Gelasian Sacramentary, a Boman Service-book in use in France before the time of Charlesacque, The earlier Leonine Sacramentary, being a private collection of Masses, is an uncertain guide as to the calcular of its age. Coming to the 5th cent., we have the Gregorian Sacramentary, containing the Boman Hurgical services of the time, adapted for

use in France (for the Roman Sacramentaries, see art. Collect). In it, with Alcuin's supplement, the Sunday cycle, as represented in the Proprium de tempore of the later missals, is almost complete. We have also the Calendar of Charlemagne (ed. Piper, plete. We have also the Calendar of Charlemagnic eq. (1)per, Derlin, 1859.—A Roman calendar with many Frankish saints in-serted. Of the same age is a Lectionary published by Fronteau in 1652, from a MS written in gold characters belonging to the Church of & Geneviève, Paris. The East is represented in this Chinch of St. Geneviève, Paris. The East is represented in this sentury by Coptic calendars published by Seiden die Sanateus, iii. 15, London, 1850-55)from MSS which have since disappeared; and by the Menology of Constantinople, which gives a long list of the martyrs, confessors, and dectors of the Eastern Chinch, but only three martyrs of the West—Lawrence, Gerwasius, and

of the martys; consesses, and excessed the season to make the highest processing of the West-Lawrence, Germains, and Protasius (ed. by Morcelli, Rome To the other contents and protasius (ed. by Morcelli, Rome To the Other Cologne, which To the Other Cologne, Michael Cologne, Morcelli, Cologne, Mor

by an unknown author (Migne, PL exxix, 1274). It seems to belong to the diocese of Sens. The Leofric Missal (ed. Warren, by an inknown author (Migne, PL exam., 1274). It seems to belong to the diocese of Sens. The Lorfic Missal (ed. Warren, Oxford, 1883) contains the calcular of Glastonhury, c. 970. At foot of p. kip, the editor gives a list of English calculars in MSS of 9th to 11th centuries. The Bosworth Psatter (ed. Gasquet for the Charles of the Charles of the Calcular of Carterbury Cherwere, St. Lordon, 1988), gives the calcular of Carterbury Cherwere, St. Charles of the Calcular of Winchester, the capital.

When Missals and Breviaries took the place of the earlier

When Missals and Breviaries took the place of the callier Sacramentaries, Lectionaries, etc., they were generally provided with calendars. A great number of these, and also of separate calendars, have survived, and many have been published. See for specimens Hampson, Medii evi Kulcubarium, vol. i., Loulon, 1841.

With the exception of the Irish and Anglo-Saxon documents with the exception of the Irish and Anglo-Saxon documents of the Irish and cluded in Hampson's collection (see allows). Colombia in German also appear for the first lime in the 14th century. The mediavial asles auptear for the first lime in the 14th century. The mediavial calend irs, like those prelixed to modern missals and breviaries, and to the Book of Common Prayer, are 'perpetual,' i.e. not for any special year, but containing only the invariable elements common to all years, tables being generally provided by which the first printed such appearance of the period of the colombia of the common to all years, tables being generally provided lifety which the first printed calendary period and the colombia of the first printed calendary period and the colombia of the first printed and properties of the first printed and provided the colombia of the first printed and the colombia of the first printed for popular use reproduced in facsimile 104 calendary printed for popular use reproduced in facsimile 104 calendary printed for popular use sheets, are mainly written in German and Latin by John Region a few dates, ecclesiastical and civil. The first calendar for a definite year was printed in German and Latin by John Region montants at Nuremberg in 1475. It is a trangaged for the years mentanue year was printed in German and Latin by John Legaco montanus at Nurenherg in 1475. It is arranged for the years 1475, 1494, and 1513, as the first years of a nineteen-year cycle, and so designed that the dates for other years can be calculated

from it.

10. The Sunday cycle.—(1) Western.—All Sundays in the year, like the movable festivals, depend upon the date of Easter, with the exception of those connected with Advent and Christmas, i.c. those which occur from Nov. 27 to Jan. 6, both inclusive. The Sunday cycle begins with Advent Sunday, which is always the nearest Sunday to the Feast of St. Andrew (Nov. 30), either before or Three more Sundays in Advent follow; after. then two after Christmas, in case Advent Sunday falls on a day from Nov. 28 to Dec. 1, otherwise only one. Next come Sundays after Epiphanyfrom one to six, according to the position of Easter; Septnagesima; Sexagesima; Quinquagesima; six Sundays in Lent—the two last being generally known as Passion Sunday and Palm Sunday; Easter Day; five Sundays after Easter; Sunday after Ascension; Whitsunday; Trinity Sunday; and lastly, Sundays after Trinity-from twenty-two to twenty-seven, according as Easter falls later or earlier. The reckoning of Sundays after Trinity is that of the Church of England, and the one that appears in most English almanaes. The Clurch of Rome and the Greek Church number the Sundays after Pentecost (Whitsunday).

(2) Eastern .- In the East, all the Sundays except those immediately before and after Christmas Day, Epiphany, and the Exaltation, depend upon Easter. According to the calendar of Constantinople, with which the Russian and Georgian practically agree, the cycle of Sunday observance begins with the Sunday which in the West immediately precedes Septuagesima; i.c. it starts with the season pre-paratory to Easter. The Sundays usually take their names from the Gospel of the day. The 1st Sunday is called the Sunday of the Publican and the Pharisee (Lk 1810-14). Then follow in order: the Sunday of the Prodigal Son (Lk 1511-32); Abstinence Sunday, κυριακή τής απόκρεω (the Western Sexagesima)—so called because it is the last day on which flesh is eaten, though the fast does not begin until the following week; Cheese-eating Sunday, κυριακή της τυροφάγου (Quinquagesima)—thus named because cheese and butter are allowed to be eaten until the end of the day; 1st Sunday of the Fast, or of Orthodoxy (1st Sunday in Lent)—com-

memorating the conclusion of the iconoclastic controversy; 2nd, 3rd, 4th, 5th Sundays of the Fast; Palm Sunday [iloly and Great Monday, Tuesday, etc.]; Easter Day (κ. τοῦ Πάσχα), sometimes called Bright (Λάμπρα) Sunday [Monday, Tuesday, etc., of the Renewal (Διακαινήσιμος)]; Antipascha, or Sunday of St. Thomas (Jn 2019-31); Sunday of the Ointment-Bearers (Mk 1543-168); Sunday of the Paralytic (Jn 51-15); Sunday of the Samaritan Woman (Jn 45-42); Sunday of the Blind Man (Jn 91-38) [Ascension Thursday]; Sunday of the 318 Fathers of Nicrea; Holy Pentecost; and All Saints' Sunday (Trinity Sunday). The Sundays that follow are numbered after Pentecost, or are styled the Sundays of St. Matthew. Next come Sunday before the Exaltation, i.e. of the Holy Cross (Sept. 14); and Sunday after the Exaltation. The Sundays onwards, up to that which corresponds with the Western 2nd Sunday in Advent, are numbered after Pentecost, or are styled Sundays Then follow: Sunday of the Holy of St. Luke. Forefathers; Sunday before the Nativity of Christ; Sunday after the Nativity; Sunday before the Lights, i.e. Epiphany; and Sunday after the Lights. The remaining Sundays, up to the Sunday of the Publican, are reckoned after Pentecost, or are called Sundays of St. Luke.

11. The computation of Easter.-The primitive Christians all agreed in celebrating Christ's death and resurrection at the season when they actually occurred, that is, at the time of the Jewish Passover. They also agreed that the Crucifixion took place on a Friday which coincided with the 14th day of the first Jewish (lunar) month Nisan, the day on which the Paschal lamb was slain. But a division of opinion prevailed as to the days or day on which the death and resurrection should be commemorated. The Christians of Rome and of the West, claiming the authority of St. Peter and St. Paul, with many Eastern Churches, attached most importance to the days of the week, Friday and Sunday, on which these events happened.
If 14th Nisan did not fall upon a Friday, they celebrated the death of Christ on the Friday following it, and the resurrection on the Sunday that succeeded, continuing their fast until the latter date. On the other hand, the Christians of Asia (proconsular) and of some neighbouring provinces, who traced their tradition back to St. John and St. Philip, insisted upon the observance of the day of the month on which our Lord suffered, hence receiving the name of 'Quartodecimans.' They always celebrated Christ's death on 14th Nisan, irrespective of the day of the week, and, ending their fast at 3 p.m. (the hour when our Lord expired), then began their Paschal feast, thus commemorating the death and resurrection on the same day. It is noteworthy that 'Pascha,' which subsequently came to mean the day of the resurrection, was employed, when first used as a Christian term, to designate the day of the passion (Tertullian, adv. Jud. 10; de Bapt. 19). The distinction of  $\pi \alpha \sigma \chi \alpha$ σταυρώσιμον, Good Friday, from πάσχα άναστάσιμον. Easter Day, marks a transitional use of the word (Suicer, Thes. eccl. ii. 621 f., i. 304).

The first recorded occasion on which the two customs came The first recorded occasion on which the two customs came into competition was the visit of Polycare, Bishop of Swyrna, to Anicetus, Bishop of Rome (\*, 168). It was then judged fitting that each party should alide by its own usage. The controversy was renewed in 185 by a later Bishop of Rome, Victor. At his instance, appearently, several Councils were held in the East and West, which decided against the Quartodecimans. These refused to give ap their traditional usage, and found a champion in Circumstance of the Council of the induce other Charrenes to do the same. Thanky, manny inrough the mediation of Irenaus, Bishop of Lyons, who, as a native of Asia and a Western hishop, was in touch with both parties, peace was restored, and the Asiatics were allowed to retain their usage in their usage until the Council of Niewa (Eusebius, HE v. 23, 24).

As Christians made their Paschal anniversaries coincide in season with the Passover, so, for a long period, they were satisfied to accept the Jewish computation of the time of that festival, which should fall on the first full moon after the vernal equinox. But in the 3rd cent., owing to supposed errors in the Jewish calculation, which was based on a lunar cycle of 84 years, and also doubtless with the desire to be independent of the Jews, Christians began to frame lunar cycles for themselves. The earliest of such cycles extant is one drawn up at Rome by Hippolytus, about the year 222. This was a 16-year cycle, that is, it assumed that the new moons fell on the same days of the month at the end of every 16 years. So highly esteemed was Hippolytus for his work, that a statue of him, still in existence, was erected in Rome, with his cycle engraved on the sides. But the cycle proved faulty, and although emended in 243 by another calculator, the author of de Pascha computus (published as an appendix to St. Cyprian's works), it was not retained in use. In the beginning of the 4th cent, we find an 84-year cycle again employed at Rome (Ideler, ii. 238). At Antioch the computation according to the Jewish methods was maintained until the Council of Nicaea. It was at Alexandria that special study was given to the question, and from it ultimately came the ruling which found general acceptance. Dionysius, Bishop of Alexandria, in a Festal Epistle (c. 250) published the earliest Greek Paschal canon on record. It was calculated on an S-year cycle, and it specified that Easter should not be celebrated until after the vernal equinox (Eusebius, HE vii. 20). Subsequently (c. 277) Anatolius, a native of Alexandria and afterwards Bishop of Laodicea, took the momentous step of making Meton's cycle (see below) of 19 years the basis of a new Paschal canon (ib. vii. 32). This was adopted at Alexandria, with the important change that the vernal equinox, which, according to Anatolius, fell on March 19, was assigned to March 21.

It should here be stated, for the sake of clearness, that the need for the employment of cycles for fixing the date of Easter arises from the fact that the conditions for determining it involve both the solar and the lunar year. As Easter day must be a Sunday, and one subsequent to the vernal equinox, the solar year is involved. As, again, Easter day bears a certain relation to the age of the moon, the lunar month and year become a necessary element in the calculation. The Metonic cycle was that upon which the determination of Easter was finally based. Meton, an Athenian astronomer, discovered (c. 433 B.C.) that in 19 solar years there are almost exactly 235 lunar synodic months, so that after the completion of every cycle of 19 years the new moons, and therefore all other phases of the moon, recur in the same order and on the same days of the month as they did at the beginning of the cycle. An error in the Metonic cycle was pointed out and corrected by Callippus of Cyzicus in 340 B.C. Meton calculated that 19 solar years contained 6940 days. He therefore assumed that the length of the solar year was  $365_{15}^2$  days, that is  $\gamma_{\sigma}$  longer than  $365_{1}^{2}$  days—a more approximate length, as was afterwards ascertained, and later on adopted in the Julian calendar. This excess would amount to a whole day in 76 years. The Metonic cycle, therefore, would be a day wrong at the end of that time, and should be corrected by dropping a day. This was done by a rule introduced by Callippus that every fourth evele should consist of 6939 days instead of 6940. Some 200 years later a further correction was made by Hipparchus. He found that the Callippic year of 365 days was about 300 of a day too long, and therefore proposed to omit one day at the end of every 304th year.

The lack of uniformity as to the date of Easter caused many inconveniences, and exposed Christians to the decision of pagans (Epiphan, Har, lxx. 14). In the West the 1st Council of Arles (314) attempted, but without success, to make the existing Roman use universal by decreeing 'ut Pascha Dominieum uno die et uno tempore per omnem orbem a nobis observetur' (Mansi, Collect. Concil. ii. 471). The Council of Nicaca (325), at the request of the Emperor Constantine, next took up the matter. Its deliberations, we know, resulted in the decision-involving the condemnation of the Quartodecimans—that Easter day should always be kept on a Sunday and never at the same time as the Jewish Passover (Socrates, HE i. 9; Euseb. Vit. Const. iii, 18), but what the Council further decreed on the subject is involved in doubt. St. Ambrose, in a letter written about 60 years afterwards, states that it resolved that the moon of the first month should be determined by the cycle of 19 years (Ambrose, Oper. ii. 880, Epist. 23). But in the extant records of the Council no trace of such a decree exists. The most probable solution of the difficulty is that the Council commissioned the Church of Alexandria, as most skilled in astronomical science, to frame a rule based on the 19-year evele. After the Council of Nicaea, the Paschal computation of Alexandria was generally accepted throughout the East, but the Roman Church retained its own rules of calculation; so that it frequently happened that Easter was celebrated on different days at Rome and Alexandria. At last, through the instrumentality of Dionysius, a Seythian and a Roman monk, the question was settled. The Alexandrian computation, as modified by him in 525, was adopted at Rome, and subsequently gained universal acceptance in West and East.

The countries which fell latest into line with the rest of the Church in the matter were the British Isles and Gaul. The British and Irish Christians had learnt to compute Easter according to the cycle of 84 years which had been in use at Rome in the beginning of the 4th cent., and they continued this practice unaffected by changes elsewhere. Not only was this cycle erroncous in its method, but it permitted the occurrence of Easter Sunday from 14th to 20th Nisan (Bede, HE ii. 2, 4, 19). Ås 16th Nisan is the earliest day on which Easter can fall, we may probably see here the result of a confusion between the earlier and the later meaning of pascha -that word, which in 300 meant Good Friday, had now come to mean Easter day. The bitter controversies on the Easter question which followed the arrival of the Roman St. Augustine in England were not settled until 747, when the Council of Cloveshoe decided in favour of the Roman usage. In Gaul a Paschal cycle of Victorius, Bishop of Aquitaine, drawn up at Rome in 457, which had been employed by Dionysius as the basis of his table, found such acceptance that it continued in use until the time of Charlemagne.

The conditions which were finally adopted for the determination of Easter are these: 1. It must he kept on a Sunday. 2, (a) This Sunday must be the next after the 14th day of the Paschal moon reckoned from the day of the new moon inclusive. (b) If the 14th day should happen to be Sunday, Easter must not be kept until the following Sunday. 3. The Paschal moon is the calendar moon whose 14th day falls on, or follows next after, the day of the vernal equinox. 4. The 21st March is to be taken as the invariable day of the vernal equinox. The object of the second rule is to prevent Easter from being kept either before

<sup>1</sup> Cyril of Alexandria ('Prologus paschalis,' éd. Patavius, de Doctrinat Temporum, Paris, 1627, ii. Append. p. 881), claims for his Church such a synodical commission to calculate Easter, but does not mention the Council which conferred;

the day of the Jewish Passover-which would put the Resurrection day before the day of the Passion; or on the Passover day-a coincidence which Christian prejudice regarded as intolerable. The following brief summary of these conditions is given in the chapter 'De anno et ejus partibus' prelixed to the Roman Missal and Breviary :

prenacea to the Modral Missal and Breviary:

'Ex decreto sacri Concilli Nicacin Pascha, ex quo reliqua
Festa mobilia pendent, celebrari debet die Dominico, qui
proxime succedit xir Lunae primi mensis; is vero apud
Hebraeos vocatur primus mensis, cujus xiv Luna vel cadit
in diem verni acquimenti, quod die 21 mensis Martil contingit,
vel propius ipsum sequituri.

It is important to bear in mind that, as stated in rule 3 above, the moon 1 by which Easter day is calculated is the calendar moon or moon of the lunar cycle, and not the actual moon of the heavens. The real motions of the sun and moon, being variable, have not been employed by the Church for the fixing of her festivals. Similarly the vernal equinox in rule 4 is not the true but the calendar equinox. The true equinox obviously cannot be fixed to a single day, because, in consequence of the intercalary day every fourth year, it must necessarily oscillate between two days

(Clavius, v. §§ 12, 13).

The Dionysian Easter canon had been generally accepted throughout Christendom; but it suffered from two defects which in process of time compelled attention. (a) Taking for its basis the Julian calendar (see CALENDAR [Roman]), it assumed that the solar year consisted of exactly 3654 days. But the solar year falls short of the Julian estimate by somewhat more than 11 minutes, and this error would accumulate to one day in about 1281 years. (b) It further assumed that 235 lunar months are exactly equal to 19 Julian years, whereas they are nearly 1 hours shorter-a difference which would accumulate to one day in 308 years. Notice was directed to the matter at the beginning of the 13th cent. in the Computus of Conrad, and later on by an anonymous writer, generally supposed to be Vincentius of Beauvais. A treatise of Roger Bacon, 'De reformatione calenda,' which was addressed by him to Pope Clement IV., is still in MS at Rome. In the East also, Isaae Argyrus, a Greek monk, contributed (1372) an essay on the subject (criticized in Petavius' *Uranologion*, Paris, 1630, lib. viii.). In the 15th century the matter was brought before the Conneil of Constance (1414) by Cardinal Peter D'Ailly and before that of Basel (1436) by Cardinal Cusanus. It was again mooted at the Lateran Council under Leo X. ally, the Council of Trent delegated the revision of the calendar to the Pope, and Gregory XIII. carried it out in 1582. The Papal commission appointed for this purpose worked upon proposals made by Luigi Lilio, a Calabrian astronomer. The commission was presided over by a distinguished mathematician, Christopher Schlüssel, who is better known by his Latinized name Clavius. To him the reformed calendar is mainly dne.2 For these earlier suggestions about revision see the 'Procemium' to Clavius's work, and Ideler, ii. 300 ff.

At the time that the Gregorian revision was set on foot, the error arising from the undue length of the Julian year amounted to nearly 10 days. The true equinox, therefore, had receded nearly 10 days from the calendar equinox, March 21. error also of the lunar cycle had grown to more than 4 days, so that what was accounted the 14th day of the moon was really the 18th day. Different methods were suggested for getting rid of this accumulation of errors. That which was adopted

2 Clavius, in a work (Romani Cabad. explicatio) published at Rome in 1000, gave an exhaustive account of the whole subject.

by Gregory's mathematicians was to drop 10 days at once out of the calcudar, and thus to restore the equinox to March 21, the day on which it fell about the time of the Nicene Council. It was accordingly ordered in the Pope's Bull that the accordingly ordered in the Feys and that the 4th October, the Feast of St. Francis, 1582, should be immediately followed by the 15th, 10 days being thus omitted from the calendar. As regarded the rectification of the lunar cycle, it was decreed that the new moon should be drawn back 3 days. Consequently in the first rectified year of the cycle, the first new moon was removed from Jan. 3 to Dec. 31 preceding. To prevent the recurrence of similar confusion, rules were made that 3 bissextile days should be omitted every 400 years, and that the new moon should be carried back

1 day 8 times in 25 centuries, beginning from 1800. The Gregorian calendar, or 'New Style,' was almost immediately adopted by Roman Catholic nations. In Germany the Emperor Rudolf II. and the Roman Catholic States accepted it in 1583, but the Elector of Saxony and the Protestant States adhered to the Old Style, objecting to the New, not merely as coming from Rome, but because of certain defects which Sealiger and other authorities pointed out in its astronomical accuracy. This difference of calendar was productive of much dissension and inconvenience, especially in places where populations were mixed. In 1700, at the instance of Leibniz, the Protestant States agreed to omit 11 days from their calendar, and so far conformed to the Gregorian revision. But, instead of following the rule that Easter should depend on the 14th day of the calendar moon, they determined it by the true astronomical full meon. Thus it still happened that in some years Easter was kept on different days by the two parties, and much confusion resulted. At last, in 1775, on the proposal of Frederick the Great, the Corpus Evangelicorum resolved to accept frankly the Reformed Calendar, thus producing uniformity of practice in Germany. In England the change was made in 1752, in pursuance of an Act of Parliament passed the year before, which enacted that the day next following the 2nd September 1752 should be called and reckoned the 14th September, the 11 inter-mediate days of the common calendar being omitted; and that the centennial years 1800, 1900, etc., should be common years, with the exception of every 400th year, beginning with 2000, which should be regarded as leap-years; also that for the future Easter day and the movable feasts depending upon it should be celebrated according to new tables and rules which, with a new calendar, were annexed to the Act, and which were directed to be substituted for the existing calendar, etc., in the Book of Common Prayer. The new tables and rules were prepared by the then Astronomer Royal, Dr. Bradley. All Eastern Christians, including Greeks and Russians, with the exception of the Romanized Uniats, still adhere to the Old Style. At present their reckoning is 12 days behind that of the rest of the eivilized world.

12. Calendar letters .- In the Julian (pagan) ealendar, days of the year were arranged in successive groups of 8, called nunding, with the letters A-H attached to them. This suggested to Western Christians-for the plan was never adopted by the Easterns-the marking of the days of the week in the Christian calendar with the 7 letters A-G, repeated throughout the year. These 'calendar or peated throughout the year. These candad of ferial letters, as they are called, were, as has been noticed above, introduced probably at the time when the Christian Sunday was legalized by Constantine. We have seen that they occur in the pagan calendar of Filocalus side by side with the nundina. Sunday, or Dominical, letter of each year is that

<sup>1</sup> Church chronologers were in the habit of giving the name Full Moon 'to the 14th day of the calendar moon (Ideler, ii. 198). In the definition of Easter in the Book of Common Prayer, 'Full Moon' is used in this sense.

which stands opposite the first (and every successive) Sanday in the year; and, when it is known, the week day of any day in that year can be ascertained. The 29th Feb., which occurs only in leapyear, has no letter in the regular sequence affixed to it; it takes the letter of March I, which therefore occurs twice. This has the effect of changing the Sunday letter for the rest of the year. A leap-year, therefore, has two Sunday letters; the first applicable to January and February; the second, which in the order of the letters of the alphabet is always one behind the first, to March and the remaining months. The Roman Catholic calendar still follows the Julian in placing the intercalary day between the 23rd and 24th Feb., thus making two 24ths, as in the Julian calendar there were two VI. Kalend. Hence the change in the Sunday letter takes place in the Roman calendar ratirer Feb. 24. The English Church calendar ratined the ancient practice until 1662.

13. Golden numbers and epacts.-The designation 'golden numbers' was given in the Middle Ages to the numerals in the calendar which denoted the 19 years of the Metonic lunar cycle (see above), either as an expression of the great value attached to them or as having been inbricated. These numbers were formerly marked throughout the year in the first column of the calendar, being allixed to the days of the occurrence of the new moons in each year of the cycle. But since 1752 they indicate in the Prayer Book the days upon which the full moons of the respective years fall, and they are inserted in the calendar only from March 22 to April 18, the Paschal full moon limits. Easter day itself occurs at earliest on March 22, and at latest on April 25. In the Roman calendar, since the Gregorian reformation, 'epacts,' which represent the number of days of the moon's age at the beginning of each year in the 19-year cycle, have taken the place of the 'golden numbers' in the first column.

14. Christian era.—As the Christian calendar was based, as regards its form and divisions, on the official (Julian) calendar of the Roman Empire, so during the earlier centuries Christians employed the eras used by their pagan countrymen. About the year 532, Dionysius, whose part in framing the Easter canon has been mentioned, proposed that the epoch of the birth of Christ, which he assigned to Dec. 25 A.U.C. 753, should be adopted by Christians. This was called the Vulgar or Dionysian Era, and gradually gained almost general acceptmence on the day of the Nativity, Dec. 25, but ance. Dionysius did not make the epoch comon Jan. I in the following year A.U.C. 754. A.D. I is not the year of the Nativity, but the first current year after it. It is well known that Dionysius was incorrect in his calculation, and that the birth of Christ should more probably be assigned to A.U.C. 749 or B.C. 4.

15. Commencement of the year.—The acceptance by the Church of the framework of the Julian ealendar involved the placing of Jan. 1 at the beginning of the Christian calendar. But, besides this New Year's Day, to which the calendar bore witness, other beginnings of the year, of more purely ecclesiastical origin, have been observed in Christendom. The chief of these are the following: (1) March 1, kept in Merovingian France, among the Lombards, in the Republic of Venice, and for a long time in Russia; (2) Easter, observed chiefly in France, and hence called Mos Gallieus; (3) Sept. 1, according to the enston of the Greek and Russian Churches; (4) Christmas Day—the usage in England in Anglo-Saxon times, also in Scaudinavia, Prassia, Hungary, Switzerhand, etc., in early times; (5) March 25, the Annunciation B.V.M., used first in the North of Italy, whence it passed into France and Germany. It was adopted

in England as a Church reckoning in the 12th cent,—superseding Jan. 1, which had been the beginning of the year since 1066—and in the 14th canning of the year since 1066—and to be the legal and ecclesiastical usage until the revision of the calendar in 1751. It was then enacted

'that the supputation according to which the year of our Lord beginneth on the 25th day of March shall not be made use of from and after the last day of December 1751; and that the latday of January next following . . . shall be reckoned . . . to be the first day of the year 1752.'

It should, however, be noted that, although in the successive editions of the English Prayer Book from 1559 to 1662 it is stated that the year of our Lord begins on March 25, yet the expression New Year's Day is applied, in the rubric following the collect for St. Stephen's day, to Jan. 1. It is also to be observed that from 1549 onwards the series of daily lessons are arranged in the calendar with reference to Jan. 1. Thus both calendar with reference to Jan. 1. usages, the legal-ecclesiastical and the calendar, are recognized. While this double commencement of the year prevailed, it was customary, in giving the date of an event between Jan. 1 and March 25. to write both years-the legal first, the calendar afterwards: thus 20 Feb. 1721-2. A somewhat similar practice came into use, and was kept up for many years, after the introduction of the New Style, namely, that of writing the two dates in the form of a fraction, the old above, and the new below the line, thus 18 May 1760.

Yet another arrangement of the year is that connected with the cycle of church services. The Latin and English Churches in the West, and the Nestorian in the East, commence their ritual year on Advent Sunday, or, as the Nestorians name it, the first Sunday of the Annanciation. The Armenians begin theirs on Epiphany, Jan. 6. The Constantinopolitan rite, with the Russian and Georgian, makes, as we have seen, the starting-point of its round of movable festivals the Sunday of the Pharisce and Publican, which coincides with the Western Sunday before Septuagesima. Hestivals and Fastis (Christian).

Literature—For the early calendars and Martyrologies: de Rossi-Duchesne, Martyrologiom Hierospanianum, predensis and the proposed of the pr

CALENDAR (Egyptian).—1. INTRODUCTION.—The calendar is always one of the most important elements in a society, for it denotes civilization. It is especially so in Egypt, where it explains a large part of the religion, and gave rise to some of the mythology. It is not only the fundamental basis of worship, but it is probably the element which has had the greatest influence on

the evolution of religious ideas, and, consequently, on the organization of ethies. The Egyptian calendar is also one of those for which we have the richest collections of information and documents. It may therefore be considered from two points of view; (1) by examining it with regard to its absolute divisions, its improvements, and its application to chronology; or (2) by studying the conception which gave rise to it, its original characteristics, and the very large part it played in connexion with religion. In the present state of science, everything seems to have been said and content of the con

written from the first point of view.

II. DOCUMENTS.—These are particularly abundant, and, fortunately, they extend from Memphite times to the Roman period. We may note the following as real calendars in chronological order: (1) the Palermo Stone (Vth dynasty, copied partly from documents of great antiquity), (2) the Kahun Papyrus (XIIth dynasty), (3) portions of the calendar of Thothmes III. at Karnak (XVIIIth dynasty), (4) portions of the same king's calendar at Elephantine, (5) calendar of Medinet-Habu (XIXth dynasty), (6) calendar of Sallier Papyrus (XIXth dynasty, cf. British Museum Papyrus (XIXth dynasty, cf. British Museum Papyrus (XIXth dynasty), (1) that of Fahle (Ptolemaic age), (8) that of Ombos (same period), (9) that of Denderah (Roman period), (10) that of Esheh (same period), (11) that of the Leyden Papyrus (same period).

Further, the tombs and stellar from the end of the HIrd dynasty to the close of the classical period present thousands of funcrary calcudars, sometimes with long lists of dates, anniversaries, and commentaries. We have them also for all the historical periods, and scattered throughout all the

provinces (cf. below, § IX.).

Lastly, in addition to calendars properly so called, we may mention: (1) the series of calendric anniversaries quoted in all the Books of the Dead (even the very earliest known specimens), on payyri, and on the inner sides of coffins, and evidently copied from pre-historic versions; (2) the innumerable references in the texts in general, from the famous Texts of the Pyramids to the payyri, as well as the inscriptions in the temples, the accounts of bistorians, the texts connected with local festivals, the references on stele, tunbs, etc.—the whole from the Memphite to the Roman period (for the chief bibliography on these documents, see § XVIII. of lit. at end of art.).

There is good reason for believing that the 'ancient playetter's of the monuments of the earliest dynastics are represented to the control of the earliest of the earliest and therefore the oldest in the world, and also that the vascs of the Negradeh period reproduce still older calendric indications. On this bypothesis, which has not yet been formulated, see below, § IX., in connexion with the notation of time on the Palermo Stone and on the 'plaquettes'.

III. DIVISIONS OF TIME.-Egypt was never acquainted with anything like an era, referring to a cosmogonic date, such as the Creation, to a noteworthy meteorological event, to an imaginary episode, or to a legendary or historical fact. With the exception of the stele of San, dated the 400th year of an ancient king, Egypt never had any idea of dating her annals except by the years of rule of the reigning Pharaoh (see below, § Vl.). Nor did she try to imagine periods and eycles; all that modern science has from time to time thought to discover in this sphere regarding so-called divisions of time has always been disproved by a more careful study of the texts. The Sothic period and the Sothic half-period (see below) were not invented until the time of the Antonines. The supposed Sadu period does not at all correspond to a cycle of thirty years, but to royal jubilees with variable anniversaries, not based on the ordinary calendar (except under the Ptolemys = triakon-taeteris), but perhaps on facts of astrological char-

acter; the hunti (simple or double) has in modern times been translated sometimes by 'cycle of 60 (and 120) years,' sometimes by 'millions of years' (de Rouge, Chrestomathie, ii. 129)—which clearly shows the absence of ancient texts. As a matter of fact, the hunti forms part of the group of vague terms by means of which the language tried to express 'great length,' and which may be translated, more or less inexactly, 'many years,' in-numerable years,' as long as the existence of the sun, 'indefinite length of time' (but not 'infinite'), etc. The Egyptian did not even know the century, or the fraction of the century. The four year cycle of Brugsch is no longer taken seriously; Borchardt's hypothesis (Verhandl. Orient. Congr., 1902, p. 329) of a census cycle of fourteen years, under the first Thebans, is ingenious but nothing more; and if Breasted has noted that the moon occupied the same place in the calendar every nineteen years, no text shows that the Egyptians turned this to account in order to form a calendric division. These modern attempts seem destined to the same failure as the hypothesis of the 'period of the Phœnix'—a rubric which no longer figures in Egyptological publications (cf. Naville, Festivalin Egyptotogreal publications (cf. Naville, Festivat-hall, p. 7). And the year (roupit), with its divisions, remains positively the only certain measure by which Egypt reckoned time. The year began—in theory at least—on 19th July, and the 365 days of which it was composed

were divided into three seasons (tetramenies) of four months, each month containing thirty days. The five complementary or epagomenal (cf. below) days, placed at the end of the twelfth month, form a sort of distinct period, intercalated between the small year' (360 days) and the 'large year' (365 The uniform months (abudu) were divided into three periods of ten days. They were known as that of the beginning (hati), that of the middle (abi), and that of the end (pahu)—and this at least as early as the Xth dynasty (cf. Daressy, Décans, etc.). The day itself (haru), divided into twelve honrs (uônuit) of daytime and twelve of night, obeyed the demands of tripartite and quadripartite symmetry of the whole system by dividing its hours of day and hours of night into three periods  $(t\hat{v}ri)$  of four hours each. There is no ground for saying that the subdivisions of the hour into minutes (at) and seconds (hat) were known in the Pharaonie period, Lepsius (Chronol.) has shown that they are far more probably the work of scholars of the Ptolemaic age. The division of the second into 'thirds' (anit) is a modern invention of Egyptologists who took the words 'twinkling of an eye literally for the measurement of an exact space of time. But even in the latest times the Egyptians were not aware of the existence of such a fraction.

The division of the day into three parts, rearked by sunrise, midday, and sunset, is uncertain. The fact, often mentioned, of offerings of resin, nyrrh, and incense, made to the sun of Ileliopolis at these three moments of the day, is reported by Plutarch (de Faid. So). Probably this simply indicates a local saverdotal custom, and not an absolute division of time.

The names of the three seasons, shait, pipit, and shômu, refer roughly to the appearances of the valley of the Nile during the year, and to the eyele of irrigation. The first alone corresponds more oless exactly to the four months of inundation. The second and third are of artificially symmetrical composition; the second (pirit) may resemble in some measure the four months of the growing of the crops in Upper Egypt (the end of November to the end of March). The third (shômu) is clearly artificial. It is usually translated 'season of harvest'—a reading which is simply inferred by deductive reasoning, for neither the word nor the 1 baressy recently contended (in Annales du Service des aut.

1 Daressy recently contended (in Annales du Serrice des ant. de l'Egypte, 1909) that they were formerly divided into four weeks of seven days; but there is no sufficient evidence for

sign refers positively in Egyptian to any such concept as the primitive meaning, and it is by inference that the meanings 'harvest' and 'products of the soil' have come from the sign for the season. Originally it probably designated works of irrigation preceding the rising of the waters

(cleansing of canals, etc.).

The names of the months do not seem to have been in use in the earliest times. At least the official inscriptions never mention them. say: first, second, third, fourth month of such and such a season. It seems probable that, at an uncertain date, popular custom gave currency to the use of nomenclature denoting the months by the characteristic religions episode which was commemorated in them. Some of these are cited by the classical writers. The fact that they are exactly those which the Copts use for the corresponding months gives reason for thinking that the same thing is the case with those which they do not cite, and science has adopted the habit of giving the names of the twelve Coptic months to The Egyptian months. They are, for the first season, Thot, Paophi, Athyr, Chouak; for the second, Tybi, Meshir, Phamenot, Pharmuti; and for the third, Pakhon, Payni, Epiphi, Mesori.

IV. HISTORY .- 1. From earliest known origins to the year 238 B.C .- As it has just been described in its simplicity and relative perfection, the Egyptian calendar appears throughout the whole of its history. However far back we may trace it, we cannot reach the moment of a change in it-any more than we can show an authentic improvement during the series of centuries down to Ptolemy Euergetes I. It has been said that the year was at first a lunar one of 354 days, in which the dates were given by the days of the moon, and that there are clear traces of it, for example, in the manner of writing the month by the sign of the crescent, or in the fact that the reign of Osiris had lasted twenty-eight years, which, says I'lntarch (de Isid. 42), corresponds with the days of the lunar month. This is extremely plausible, because almost all the calendars known in the world began in this way, and because the movement of the moon was the only noteworthy division perceptible to man in his early efforts. This is proved clearly enough by the etymology of the word 'month' in the principal Aryan languages-to speak only of the calendars of our races. But, so far as Egypt is concerned, it is a mere assumption, for there are no real traces of it. and it is not right to say, as many writers have done, that 'the lunar year preceded the solar year, in Egypt as in India.' It has also been contended that there was a year of 360 days, traces of which are preserved in the religion; e.g. in the fact, quoted by Diodorus (i. 22), of the 360 cups of milk on the tomb of Osiris at Phile. is confusing a demand for symmetry-which is really a mark of civilization-with initial gropings. The year of 360 days is a year of administration, and of sacerdotal accounting, which we find in use in the height of the historical period, parallel with that of 365 days, and which naturally was completed by the five epagomenal days (cf. the calendar of Medinet-Habm or the 'contracts of Synt'); hence the terms 'small' and 'large' year used to denote the temple year and the ordinary year respectively. The efforts of all races show, on the contrary, that even comparatively civilized peoples, like those of Benin or the Bavili, have never passed from the lunar year to the year of 360 days, with months of 30 days, but have, as a rule, com-pensated for the error between the number of lunar months (12 lunations=354 367 days) and the apparent revolution of the solar year by introducing after the twelve lunar months a complementary month of some days, often qualified by

the name 'season.' The most probable supposition, then, if we want a hypothetical history of the Egyptian calendar, is that the lunar year (or the 13 sidereal months) was originally followed by an epagomenal month. The use of the numeration by ten, and especially the need for practical symmetrical divisions, naturally led (but undoubtedly much later) to the creation of the month of 30 days, which, owing to its artificial character, corresponding neither to the sun nor to the moon, denotes a distinct step in advance. The fraction remaining to be harmonized was thus reduced to the five epagomenal days.

We find these epagomenal days in the very earliest mentions of the calendar. The first Egyptologists for a long time believed that the invention did not go further back than the XIIth dynasty. It is now proved that these five days over and above the year (harn dunt hiru round) existed not only under the Memphite Empire but long before, since mention is made of them in the Texts of the Pyramids (Pepi 2, line 75t). This, to all appearance, carries them back to the pre-historic period, and it is quite incorrect to ascribe the 'invention of the year of 365 days' to the year 4211 (Breasted, Ancient Records, p. 40). That is merely the earliest date postulated by those scholars who believe in the Sothic period (cf. below), but there is nothing to prove that these epagomenal days are not as old as Egypt itself. The legend of their invention by Thoth playing chess with the moon was long believed to be of comparatively recent date, on account of the Greek form which Plutarch (de Isid. 12) gives to it. But the Leyden Papyrus (i. 346) has shown that the legend existed in its essential features in the time of the Thebans, and the Texts of the Pyramids have carried it back to the very beginnings of Egyptian mythology. These five days preserve a Egyptian mythology. These there have never a further sign of their extreme antiquity in their designation 'little month,' which brings them peculiarly near to the 'short month' of the Bayili and the 'supplementary month' of Benin, and which was kept until the time of the Coptic calendar.

These ἐπαγόμεναι ἡμέραι were regarded under the Ptolemys as a complement of the year. Leyden Papyrus presents a theory which is probably different. These days are really 'in addition to the year,' but religiously (and especially from the point of view of the dead, and of astrological influences on the living) they seem to be a sort of 'preface' to the new year. They form a period 'preface' to the new year. They form a period quite apart, which has its special calendar, its names (cf. Chabas, Œurres, iv. 207), its horoscopes, its gods, and its spirits. If the whole is referred to the old tables of funerary calendars, the result seems to be that the 'year' ended with the last day of the twelfth month. The first of the epagomenal days, therefore, marked the 'opening of the year,' and the beginning of the year (tap roupit) was the first day of the first month of the new year (cf. the five Mexican epagomenal days, which are called nemontemi = 'useless,' or 'unfit for work').

This calendar has justly been cited with admi-ration, and classed with those which mark most clearly the height reached by ancient civilizations; and Breasted (Aucient Records, p. 25) was right in pointing out the immense advance it was for humanity. It is sufficient to recall what were, down to avery late date, the best Hellenic calendars, and the testimony of Strabo (xvii.) on this point, or to think of what the Roman calendar was down to the end of the Republic. All the classical writers, from Herodotus onwards, were only performing an act of justice when they spoke of the Egyptian system in a tone of respect. If ancient Egypt knew nothing about the learned and manifold complications of the Indian cycles (length of

ancient Indian year = 13 sidereal months or 355.1823 days), the needs of absolute chronology may deplore the fact, but the historian can point out the superiority of this simple system, which harmonizes practical and symmetrical divisions so skilfully with real time. The whole world, from the time of the earliest civilizations, has proved the impossibility of adjusting to the course of the moon a notation of time suitable for human activity. And it was probably in this that the first superiority of the Egyptians consisted. If they did not know, as it seems, the famous period of 223 lunations recognized by the Babylonians, their 12 months of 30 days, followed by five days, were far superior to the lunar year of Chaldea, with its very imperfect remedy supplied by the 'second month of Aldur,' or the 'second Elul,' or the 'second Nsun,' added every six years; and far superior also to the 18 months of 20 days each of the Mexican calendar, with its five nemontemi. Undoubtedly, non-civilized races, like the Kikuyn, have also discovered the month of thirty days, but their double period of six months is what really accounts for this. If Egypt had kept to the lunar month, she would have experienced all the inconveniences of those peoples who have persisted in making use of it. The 'seasons,' to which it is enstomary to point as one of the merits of the Egyptian calendar, have been discovered in Africa by focieties far less advanced. The 8 months' season and the 4 months' season of the Bavili correspond, as a matter of fact, to the 3 Egyptian tetramenies, and Benin possesses the 3 tetramenies. The great difference is that the Egyptians reduced the 'thirteenth month' to five days, by the adoption of the month of 30 days. At the same time Egypt made the very useful subdivision of the month into decades, instead of having recourse, like her sister nations of Africa, to the unsymmetrical week of 8 days, or to that of 4, or to the artifices of pastoral peoples like the Basutos. They might also, like ourselves, have absorbed the 365 days in their twelve months, by accepting the Would any inconvenience of months of 31 days. one dare to assert that their months, all symmetrical, are not better? And have we not heard it proposed in our day to place the five supplementary days apart at the end of the year, without the authors of these propositions having any idea that they were simply asking for a return to the calendar of the ancient Egyptians?

2. From Ptolemy Euergetes I. to the end of Egyptian civilization.—The system, nevertheless, presented two defects of very unequal importance: (1) the hours had only an approximate value, variable throughout the year; and (2) the year itself was shorter than the real solar year by 5 h. 48 m. 57 s. (length of the tropical year in 3000 B.C.

= 365 24249916 days).

(1) The former of these faults proceeded from the basis on which the hour was introduced. majority of African races had the same idea as the Egyptians: to divide the day into the same number of equal fractions as the year is divided into (excluding the 13th month). This was to obtain the division by twelve. It may be preserved, with a rough approximation, if the division is applied, as it is in the Upper Congo, to the space of time between one sunrise and another. making special divisions for the day and for the night, the Egyptians encountered serious diffi-culties. As the first hour of the day began at dawn, and the twelfth ended with sunset, the length of each hour naturally varied according to the season. For a long time the Babylonians had the 12 equal fractions of the day, τὰ δυώδεκα μέρεα had taught them to draw on the line described by the shadow of the pin of the sun-dial. It was not. however, until Asia had taught the Greeks the use of the two series of twelve similar hours, and the Ptolemys had come to Egypt, that this advance was realized. We saw above (p. 92h) that it was at this same time that the minutes were instituted,

from the same Asiatic source.

(2) The second defect of the system was more serious. It had affected all calendars, including the Chaldwan, and still affects that of many systems in vogue at the present day. The quarter of a day, which the year of the Egyptian calendar neglected, in the long run produced errors which were manifestly intolerable, and it does not seem ever to have occurred to the Egyptians to adopt such a simple but clever correction as that of the Mexican tonalpounque ('snn's examiners'), who added 13 complementary days after a cycle of 52 years. Authentic examples, taken from texts and cited by all Egyptologists, prove that the discrepancy might reach several months; and papyri have bequeathed to us complaints by the employees of the administration on the matter. The date of the low Nile in the inscription of Uni (V1th dynasty), the Ebers Papyrus under Amenhotep I. (XVIIIth dynasty), a date of the heliacal rising of Sothis under Thotmes III. (XVIIIth dynasty), and the date of the rising of the waters under Shabataka (XXVth dynasty) are four good examples of divergence between the calendar and the astronomical truth. The practical necessities of worship and of economic life could not put up with these discrepancies, which went so far beyond the limits of the reasonable. From time to time an administrative measure cut off, or added, the necessary number of days, and made the calendar year and the solar year start on the same day. Then things once more went on getting worse until the day when the too evident inconveniences made the government again have recourse to the forcible regularization of the two years, the real and the calendric. It had undoubtedly taken place shortly before the time of Herodotus, for he speaks (ii. 4) of the year of 365 days as a perfect instrument, agreeing with the seasons.

Nothing definite is known concerning these manipulations. Only it is probable that the further we descend in history the less frequent they were, because in the earliest times the direct less frequent they were, because in the earliest times the direct observation of the sky and of Nature was more the basis of the calendar, and would thus speedily note the error. The increasing power exerted by what was written, as is always the case, must have resulted in a longer continued observance of the official calendar, in spile of the contradictions offred by the stars and the seasons; hence the paradoxical result that the discrepancies were more prolonged in proportion as the centuries of civilization increased in number. It is certain, in a contradiction of the contradictions control and the contradictions of civilization increased in number. It is certain, in a contradiction increased in number. It is certain, in the contradiction increased in number at the contradiction increased in number. precisely the latest in date—that which evisted at the time of the reform of the year 238 s.c. The heliacal rising of Sothis took place in that year on 1st Payni—an error of ten months.

This way of setting right the discrepancy by sudden leaps seemed intolerable to the astronomers, steeped in Asiatic science improved in Greece. who devoted their attention under the Ptolemys to the defects of the Egyptian year. Their calculations led them to the discovery that it was necessary to increase the duration of the year by about six hours. The easiest solution was to group these six hours in a supplementary day every four years, and, as a result, the world had the leap-year' introduced by the celebrated Decree of Canopus in the year IX, 17 Tybi of the reign of Ptolemy III. Euergetes I. (7th March 238). The fact that the definitely fixed year contained the mention of the appearance of the star Sothis, and that the heliacal rising of this star took place on the 19-20th of July, later on led the contemporaries of the Antonines to infer that the Egyptians had possessed, τῆς ἡμείρης (Herod. ii. 109)—undoubtedly owing to at least in the science of the temples, the know-the regular divisions which the use of the πόδος ledge of a perfect cycle in connexion with the

beliacal rising of this star. Noting the annual difference between the ancient calendric year of 365 days and the date of the appearance of exactly at sunrise, they were easily able to calculate that, after 1460 astronomical years, exact agreement would be re-e-tablished, so that these 1460 years were equal to 146t years of 365 days. They imagined then that the priests had noticed the equation, and they therefore created the famous 'Sothic period,' which they affirmed had been known and used from the most ancient times by the national chronology. Egypt was thus supposed to have possessed two calendars—the one conforming to scientific truth, the other, in spite of all its inconveniences, used for administrative life, the two tallying exactly on one single day every 1469 years. Censorinus, who noted it in A.D. 239, attri-buted an indefinite antiquity to this period of Sothis, of which the only one that history has ever mentioned, and which ended, according to him, exactly 100 years previously (A.D. 139), was the last of a whole series. The statement of the author of the de Die Notali, taken up and commented on, represented from that time the view of official Egypt, which, in order not to stop half-way, imagined a Sothie half-period. 'Thy divine festival, Sothis, is celebrated every 730 years,' says the Philæ inscription.

The idea that the priests knew and employed the period of 1460 years led naturally to the inference that they were acquainted with, and employed, an exact Sothic year reserved for their use. The supposed use of a double year in Egypt and the idea of comparing the whole with the astronomical year have been further complicated. in modern science, by the use of a terminology (vague year, civil year, astronomical year, sacerdotal year, heliacal year, solar year, etc.) whose meanings vary according to the authors. The whole has been the subject of most difficult controversies from the time of Champollion down to the present day. It is strange to notice that the two initial data of the whole debate have been neglected-(1) Did the Egyptian word picit mean 'heliacal rising,' or simply 're-appearance of the star on the horizon'? (2) Do the exact astronomical calculations adapt themselves to the argument? Nevertheless, it was not until 1909 that Legge (see literature at end of art.) raised

these questions.

The reality of the Sothic period has given birth to infinite discussions for or acquiret its existence (cf. the innumerable works on the subject in Egyptology). An incredible amount of patience, calculation, science, and ingenuity has been expended for a hundred years without the question having advanced one step, and the Egyptological School remains, to-day as formerly, divided into two equal camps. For the long and ingenius pleas of the ancient Fourier or of Wilkinson in lawour of the Sothic divided into two equal camps. For the long and ingenius pleas of the ancient Fourier or of Wilkinson in lawour of the Sothic efforders have substituted more sound reasoning based on the monuments. But, in proportion as their scientific weapons were being improved, their opponents were striving after progress in the same direction. Neither the elever redutations of Budge, were able to convince Borchardt, Mahler, or Sethe, any more than Birch long ago succeeded in presauding Rouse'; and the latest works of Meyer or the vleenent assertions of Breasted determined and serious partisans. Fach new discovery of an Egyptian document mentioning the helical 'rising' (?) of Sothis is therefore the signal for heated discussions for at least three or four years; cf. e.g. the bibliography on the subject which followed the publication, in 1898, of the Kahur calcular (XIIth dynasty). The intermediate opinion of Franan (holding oan exact apricultural year, and, up to a certain point, a savere or an exact place of the party. The refutation of Meyer by Torr (Memphis and Myzeno), also quite recent, scened to sum up the strongest on the detail of the monuments and the nature of the above the party of the status of the data of the monuments and the nature of the above the party of the status of the data of the monuments and the nature of the above the party of the status of the party. The refutation of Meyer by Torr (Memphis and Myzeno), also quite recent, seemed to sum up the strongest on the detail of the monuments and the n

who thought of bringing the question on to scientific ground, which was what ought to have been done first. His strictly nuthematical statements allow none of the proposed dates to hold good, and seem to give the coup degrate to all attempts to draw thromological inferences from the system of Meyer.

and good, and seem to give the complex state to all attempts and all seems to the seems of the s

The magnificent reform of Ptolemy III. was very far from being accepted with the obedience which history manuals usually attribute to ancient Egypt. The old national year persisted in practice until the time when the edict of Augustus (A.D. 10) made the year of 3654 days compulsory. The type was henceforth proposed to the classical world, and in its eyes Egypt was the country of high scientific culture to which it had to look for its models of reform. It is well known that it was the Egyptian Sosigenes of Alexandria (Macrobius, Saturn, i, 13) who definitely reformed the intolerable Roman calendar, and who, under Julius Casar (year 'of confusion'), at last gave the Mediterranean world a date derived from a calendar copied from the Egyptian model, with the necessary modifications for the seasons. We may therefore say that it is Egypt that has given us our calendar. twelve minutes and twenty-nine seconds of deviation from the real time which it presents every year, and which make it necessary to drop out a day every 131 years (Gregorian year = 365°2425 days; solar year = 365 242918 days-in the year 1910), did not need to be taken account of until many centuries later. The Julian (properly speaking, Egyptian) calendar continues to be law in Russia and in the Oriental Christian world, which ignored the reform of Gregory XIII. (1582), as England itself did until 1752. Lastly, the Copts preserved not only the Julian year, but also the 1st of Thoth for the beginning of their year, which now falls on the 11th of September, after having started on the 29th of August in the year regulated by Euergetes,

V. FUNDAMENTAL CHARACTER.—If the Egyptian calendar is compared with other calendars,

not for its perfection but for the characteristics of its original elements, it reveals significant differences. The basis of its divisions, of its conspicuous dates, and of its festivals seems to be neither solar nor of a really agricultural nature.

Neither the solstices nor the equinoxes were used, as with so many other races, to mark the beginning, or the internal divisions, of the year; and the significant absence of myths or ceremonies referring to these phenomena (although Egypt was acquainted with them, as Brugsch noticed in his Myth. p. 671) is a decisive fact, which is corrobo-rated by an examination of the Books of the Dead or the Texts of the Pyramids. The legend of Ragrown old is of late date. The statements of Plutarch referring to the feast of the antumnal equinox (22nd of Paophi) and of the winter solstice should not lead us a stray any more than the 'little sun' or the 'infant sun,' which is assimilated with Socharis, and is the sun of the winter solstice. The whole thing, like the festival of the 30th of Epiphi, orthat of the 'beginning of Summer,' belongs to Roman times. The interpretation of the sources in order to find out facts of this kind shows two elements combined in equal quantities; the infinence of Graco-Roman civilization, and the final assimilation of ancient myth to the sun's courses (e.g. the winter solstice assimilated to the search for the parts of Osiris). The dates themselves, however, often show the recent entrance of these solar characteristics into the Egyptian calendar (e.g. the self-styled winter-solstitial character of the festival of Socharis, celebrated from the very beginning in the mouth of Choïak, necessarily supposes that month to have become the month of December, and consequently the 1st of Thoth carried back to the end of August, i.e. the accomplishment of the Ptolemaic reform).

This statement does not in any way contradict the high degree of Egyptian astronomical knowledge, or the position held in Egypt by the worship of all the primitive surgeods, or the importance by the worship of all the primitive surgeods, or the importance but the primitive surgeods of the importance of the primitive surgeods. The properties of the compositions of the Theban are give sure evidence of it. It should also be noted that the prediction of eclipses was never attempted, and that this phenomenon was always to the Egyptics of the properties of the properties. The moon, with the sudden changes connected with it, had the same fate. Except the facts of the huar month, there is nothing to be found resembling a cycle, or attempts to systematize clipses. A sun whose whole existence is contained in a day, a moon with a loneer and more varied life, the daily struggle to this fact, the risks suddenly arising from the diminimion at unforeseen times of the brightness of one or other of the two great luminaries—all these thins are closely related to primitive religions, which the uncivilized races of the present day have not yet her alled to get beyond. And the statement that these radiamentary data became solidified, without evolution, in the interpretation of the superiority of its symbolical views or its moral character, it must have got them from other elements.

The absence of characteristics based on climatological or meteorological phenomena is no less remarkable. There are no anniversary dates, or seasons connected with states of the clouds, regime of the winds, or periods of cold or heat. Gods like those of the winds, who played important parts elsewhere (e.g. in Chaldea and America), are unknown in the classical Egyptian calendar. And its divisions are not arranged according to anything resembling phases of germination, blossoming, or maturity of the natural or cultivated products of the earth, and, however far back we go, there is not a trace of a pastoral calendar, like that of Ba-utoland, for example. An exclusively aggicultural country like Egypt should prima facic have based its calendar on the changes of the

cultivation of the earth. But the latter did not play any direct part in it, except irrigation (see below). There is nothing to be found gation (see below). There is nothing to be found resembling the iestivals of ploughing and sowing, and the panegyrie of Min at Medinet-Habu is the only example where the harvest intervenes, as a simple episode, in a religious festival. We saw above (p. 92<sup>h</sup>) that the seasons of four months had above all a symmetrical character, but no real agricultural one. In the description of the seasons, it is stated that for the mouths neither agricultural denominations are to be found, nor legends, proverbs, adages, popular poems, nor any of the hundreds of significant facts which so clearly mark the months of uncivilized races throughout Africa in general. The festivals themselves might deceive by their titles when we hear of them only from Plutarch or Strabo, or through the brief allusion in a papyrus to a festival at which lioney or lentils are eaten, where one inhales the perfume of the honit or the tekhui flowers, or to festivals of 'fishing' or 'ploughing.' When the monuments give the commentary on them, we see at once that the principle of the festival has no direct connexion with these references, or that our translations are veritable mistranslations. Honey, e.g., is eaten at the 'feast of the valley,' and this originally refers to the annual exodus of the souls of the dead when the protecting gods come for them. The honit flowers are a simple episode in a group of funeral offerings, in a festival based on the dénouements of the Osirian drama. The socalled 'ploughing' means 'digging the ground,' and the texts show that the reference is to a nocturnal rite connected with the mysterious wars against the spirits of evil. The Memphite festival of 'fishing' is a fragment of the crowning eeremony, in which the king catches the fish, or the game of the moor, 'as Horus captured and destroyed the cursed,' etc. And the "Tôpevors of the Alexandrian ealendars, if it is not a recent invention, must certainly have had an origin connected either with the Osirian cycle or with the warlike themes of pre-historie legends, before it assumed the peaceful character in apparent connexion with the seasons which it has according to the Greeo-Roman classics. In short, if it is evident that a country like Egypt necessarily associated its rural and agricultural life with rejoicings and ceremonies of every kind, and if Egyptian literature occasionally shows that this was so, it is none the less eertain that nothing of all this served as a formative element in the establishment of the calendar of the year, either for its divisions or for its anniversaries (lmt see Frazer, Adonis, 1907, p. 283 ff.).

These circumstances are quite easily justified by the conditions of the Egyptian portion of the Nile Valley. Being nearer the equator, the people here paid less attention than those in the north to the gradual diminution of the power of the sun's rays, to its sinking on the horizon, or to the difference (much less noticeable there) between the summer day and the winter day. The winter solstice was not noticed there as the signal of a deliverance, or spring as the awakening of Nature; hence an original suppression of calendric elements which increased in importance the further north one ranged. And, just as Egypt was ignorant of all the myths arising from the melting of ice or snow, so she did not know of the great annual events which are marked by the aspect of high mountains, or the successive verdure of the forest; her year and her mythology received none of these impressions, so strongly marked elsewhere that they are a part of our own intellectual equipment. At the same time she was safe from all those great meteorological phenomena which, further south, determine the divisions of the year. She had no

'rainy seasons,' 'periods of storms,' 'monsoons,' or prevailing winds sufficiently marked to characterize a complete portion of the year. Her gods, who inhabited neither the mountain peaks nor the rain nor the thunder clouds, had certainly to be situated very high among the stars, or very low on the same plane as human societies. In the end, soil or climatology, latitude or geography, all tended to leave Egyptian thought face to face with a single remarkable phenomenon, the only one of vital importance for her, viz. the fluctuations of that river on which all life depended in the fragment of the universe known to her. And, after all, it was with the study of its movements and the anticipation of them that everything had to be connected that had a bearing on the measuring of time.

The dates and festivals relating to inundation are well known to its. The 'reception of the Nile,' which denotes the opening of dikes and canals at the time of the rising of the waters, is indicated in a number of funerary calendars (cf. below), but no mention is made of the day of the menth on which it was inserted. It was a movable festival, as it is in modern Muhammadan Egypt. Libanius (Ethiopica, xi.) has described the festivals of Slishel, during which a wooden statute of the Nile-god was carried in procession. This was simply the form of the festivals of the 'opening of the canals' of Middle Egypt, adapted to local geography, and with a different name. The present-day Arab 'night of the tear-drop' is merely the modern transposition of the 'night of the tears of Isis,' the announcement of the first perceptible sign of the annual immdation (20th June). Lastly, the festivals of Socharis in the beginning of October are perhaps an adaptation, to Memphite funeral ideas, of the first sign of the retact of the waters.

There are not many of them in all; if Libanius, Heliodorus, and the Egyptian inscriptions give us different names according to localities and times, these Nilotic festivals altogether number at most two or three; the first quivering of the rising waters, the time of opening the Egyptian fields for irrigation, and probably the time when the Nile begins to decrease. But the principal date was not there. It was the date of the exact moment when the height of the waters reached the level necessary for fertilizing the ground, after almost a month of rising (about the 20th of July in the elassical age, but probably later in pre-historic times, before the disuppearance of several of the upper cataracts of Nubia). It was a question of finding a sure index, somewhere in Nature, which would mark the fact that a new year had just become manifest to the Egyptians.

While intent on detecting in the sky some coincidence between the coming of the waters and the appearance of the stars, the Egyptians noticed (and undoubtedly long before the time to which we can go back by means of the monuments) a remarkable phenomenon. Sirius (one of the seven stars of the constellation Canis Major), which was invisible from the beginning of June, again appeared in the east, some minutes before sunrise, towards the middle of July. Its re-appearance coincided exactly with the time when the Nile entered the period of high water for Middle Egypt. In this unfailing coincidence there seemed to be the most manifest sign of an indissoluble connexion between the spring-tide of the river and the rebirth of the star. It was, therefore, the re-appearance of Sirius that was adopted to mark the beginning of the new year: νομίζεται διά τῶν lepων γραμμάτων νέον έτος είναι (Decree of Canopus). The brightness of the star in the firmament was like the resplendent signal which unerringly an-

nounced the re-commencement of the gifts of the river. It was called 'a second sun in the sky. Sirius (Egyp. Sopdu; Hellenized form Sothis) saw his glory associated with that of the sun; for it was 'like a crown on the head'; it was regarded as 'taking its place in his divine barque' first day of the new year. . To be able to shine in the sky like Sopdu at sunrise' was a wish formulated in the texts for the destiny of the dead. Such a place in the national conceptions sooner or later caused the assimilation of the Dog-star with the greatest female deities of Egypt. The star 'by whose rising the years are counted' was the living image of Bastit and Sokhit, successively. and, according to local theologies, became the dwelling place of Isis, the star of Isis (τὸ ἄστρον τὸ της "Ισιδος [Dec. of Canopus]), or that of Hather, or, rather, Isis and Hather themselves. The confusion with the great Hathor of Denderah explains the strange ceremony of this temple, when on the first day of the year the statue of the goddess was brought on to the terrace of the sanctuary, there to receive the first rays of the rising sun. was in order to realize literally and in this world what was going on at the same time in heaven. Synt, Assuân, and the temple of Thebes guarded most carefully the 'Ship of the Rising Waters, which so many of the inscriptions attest to have been one of those relics which the kings tried to embellish and restore. Deified and assimilated with Sirius-Hathor, it was led to the river with great pomp on the first day of the year, and the local god-sun or companion of the sun-travelled on the bank that day, as if in material evidence of the fact that the return of Sirius, that of the annual Nile, and the new year of the sun were three aspects of the same act. Nor did the Egyptians hesitate to see in the rising of the star the real cause of the inundation; it was to Sopdu-Sirius that 'the abundant waters which spread over all the earth' were due (cf. Brugsch, Matériaux, p. 27). Once more in the religious history of humanity the relation was declared between what is seen in the sky and what happens on this earth. The most important date of the calendar thus became connected with the general theory of astrology. And the admirable constancy of the phenomenon, by urging the Egyptians to increase their observation of the coincidences, must have helped them to deduce the remainder of the calendar from the whole.

VI. STELLAR NATURE: RELIGIOUS CONSE-QUENCES.—If the appearance of Sopdu was a remarkable case of the influence of the stars on our world, it was not an isolated one. not the place to repeat what is said of astrology in general, or to trace in detail its natural foundation, based on experimental pseudo-verification (see art. STARS [Egyptian]). The manner in which coincidences and the foreseeing of the return of influences were established in Egypt could not have differed in any way from what had taken place in the astrologies of other peoples (cf. e.g. for the Chaldwans, the excellent résumé of Maspero, Hist. i. 777). To these re-commencements of the same events, always in agreement with certain aspects of the sky, which man promptly determined, the animistic tendency immediately added another element. To these stars and their movements, to their combinations and their journeys, it gave the life and the representations of beings who struggle and act in this world. Because they seemed to draw silbouettes of men or animals, to appear like new-born children, to unite, or to knock against each other, people began to speak of their births, marriages, and struggles. These representations, made up of assembled stars, a Cambodian or Mayan calendar may draw differently; but they express the same idea as that of an Egyptian or a Chaldaam. They are as old as the observation of man. From these two combined notions, influences, and representations, issued the detailed description of the forces by which this world is governed every hour. From these facts, duly noted, with the moment of their arrival, the Egyptian calendar emerged complete, portioned out with certainty, for the whole length of that year of which the appearance of a star was the important moment.

A third element determined its principal characteristics. Just as in the case of primitive, and modern non-civilized, races in general, this earth presented the spectacle of a perpetual struggle between thousands of visible and invisible beings. It was inexplicable in its confusion, so that it was almost impossible to discover whether the gods and spirits were the friends or the enemies of man. Thrown into the conflict, man did his best to conciliate the former and drive back the latter. The Egyptian, like the others, had very early connected the gods and good spirits with the sun, and the evil spirits with the darkness. The system did not lead him any further than the others, either for religious history or for ethics. On the contrary, when he conceived the notion of associating the spectacle of the terrestrial struggle and its combatants with that of the apparent conflict of the celestial beings, and when he combined the whole with the astrological data of influences, he realized one of the most decided advances ever known in the history of religions. At the same time, not only were the events of the terrestrial universe the result of those which happened in the sky, but they were the clear image, capable of being read in good order, of all that seemed so confused in this world. Henceforward the Egyptian became gradually more skilled in classifying the latter, and also the beings who took part in it.

The indissoluble link created in religion between the stellar world and the earth is repeatedly attested, at every time of ritual, by magic or so-called religious texts. The Texts of the Pyramids are a mine of valuable information for the very earliest times. They speak of the disturbances which we see in the sky of the property of the disturbances which we see in the sky of the property of the

The connexion established between the two armies of combatants led first to the assimilation of the facts, and then to that of the beings who were their agents. The astrological coincidences had given an opportunity of arranging, as far as the celestial world was concerned, the powers which were regarded as good and those which had to be looked upon as evil. The good naturally attracted to themselves the Divine beings or 'spirits' of this world who had a tendency to be rather the allies of man, and the evil did the same in the case of his constant enemies; hence the fusion of the stars (1) with the innumerable spirits or genii of primitive beliefs, (2) with the classical gods who took part in the life of man. It would be out of place here to justify the mechanism of these assimilations. They sometimes arise from the apparent form of the figures of the sky, sometimes from combinations of the conflict which seemed to be going on in the sky, and sometimes from purely astrological coincidences. Not only were the characteristics and representations of the Divine world particularly specified, but so also was the history of the gods, which the daily struggle of the sun interpreted too summarily ever to draw a complete mythology from it. There was the creation of legendary episodes in the life of the gods. It was putting into stories the battles which the stars seemed to fight, or the influences

which they brought to bear on this earth. Formerly these things took place in the sky and on our earth at the same time. Henceforward they re-commenced on high, and annually subjected the domain of man to the same conditions as those experienced in legendary history. The anniversaries of marriages, travels, and 'births' (e.g. the Palermo Stone) of the gods were henceforth placed at fixed times by these re-commencements which man could note and predict by consulting the book of the celestial vault. At the same time, Egypt assimilated to this history, written for the celestial regions, the whole mass, which was up to that time confused, of its traditional, historical possessions: traditions more or less pure, more or less synthetized by legend or allegory, of great actual events of early times (invasions, wars, national catastrophes, organizations of society, etc.), or pseudo-historical summaries of origins. All this became incorporated by assimilation in the annual history of the stars; all this fixed the days. Facts, precisely stated, were henceforth inscribed, and their anniversaries were fixed for the days when the sky, by its tables and its different parts, presented the same arrangement as it had had before, at the time of these events. The whole gave rise to a national history, in which the gods and their legends were connected with the calendar by an indissoluble bond, and in which all that was seen in the country of Egypt still bore the material trace of their actions. For each part of the valley the theologies found etymologies which explained, in alliteration, the names of towns, sanctuaries, or hills by one of the legendary acts of the life of the gods, at the same time as they fixed the date of each of his acts in the year (Brugsch's Dict. géographique contains several hundreds of remarkable examples [cf. e.g. pp. 101, 174, 198]). The tendency to see this world only as a dependence and a momentary aspect of perpetual re-commencements was so strong that it marked the historical facts themselves with this trait. If kings are supposed to re-commence their terrestrial life ad infinitum in heaven, with the gods with whom they have become identified, the opposite is none the less What Pharaoh does on this earth is merely the repetition of the legendary Divine actions. And even their real historical victories—at least up to a certain point—were regarded as re-commencements by the calendars in which their anniversaries were inserted (e.g. for Usertesen in the XIIIth dynasty, Thothmes III. in the XVIIIth, etc.).

The Divine and historical legend, formed by these successive elements, gradually became a whole, so coherent and so closely connected with the calendar that the sky became a sort of index where people day by day read the annals of legendary Egypt. Each year the cycle was renewed with the return of the same influences. Pictographic reproduction and written notation of direct observations gave rise to books or pictures of them, the interpretation of which supphed both a date and a whole page of this history. For it was sufficient to read the positions of the stellar Divine beings to understand who they were, what they were doing at that precise moment, and what events had followed in the sky, of which the events of the present moment were the mere consequence.

We shall confine ourselves to noticing the Egyptian point of view of the matter. It may be said that Egypt came very near the possession of an astrological scripture, with all the imperactions and all the obstacles encountered by the civilizations which have attempted it, when they have reached the time for the application of scripture to economic and non-religious life. Egypt escaped this owing to causes which cannot be explained here. The point which must be noted by specialists is the interest which arose in establishing in what measure and up to what point other scriptures—notably in America—have

assumed similar characteristics, being at the same time astrological and mytho-historical; so that they possess a double value of great importance for modern science.

The result of such a system was to subject each moment of the calendric year to an influence of one or more of the Divine beings. Egypt made a detailed application of it. Naturally the months, the seasons, and the 'decades' had their protecting deities, and the general theory could not fail to extend the system to the days. Those gods who governed the months ended by giving them for the most part the names which have just been cited (although the lists of the monuments are far from agreeing; cf. Budge, Gods, ii. 293). The names of the gods governing the 360 days (cf. Brugsch, Matérieux, p. 47) have been regarded as an invention of late date, but always in ignorance an invention of rate date, our arrays in ignorance of older documents. They are perhaps as old as the gods of the 'decades,' of which we now possess lists of the time of the Xth dynasty (cf. below). Theology could not fail to push the distribution of Divine protectors to its furthest limit, and charge a god or a spirit with each hour of the day (Budge, Gods, ii. 294, 302). In short, there is not a moment when special influence, denoted by name, is not being exercised, either on the whole of Nature or specially on each of the creatures of

this world. The consequences of this calendar had infinite applications. At first haltingly, then less awk-wardly, theology realized in these infinite re-commencements the notion that time does not exist, since it is reversible. The perpetual renewal of the conflicts assumed, in a theoretical form which gradually became more dogmatically abstract, the problem, confronting primitive man, of the conflict, also infinite, which goes on in this world between good beings and harmful beings. In describing and organizing it, the calendar not only created astrology; it attracted the attention of man to what he could do on those vital dates when the battle returned to decisive moments. Everywhere, even where religion had succeeded in reading in the sky that events re-commence continually and endlessly on this earth, experience, nevertheless, showed that the κόσμος is unceasingly disturbed by the return of evil. The endless duration of the re-commencements of victorious good was therefore an endless duration in fact, but in no way guaran-There was always doubt teed for the future. There was always doubt concerning the final success of the beneficent powers. This distress of mind was greater in the religious which were unable to rise to the calendar. But both classes attempted to evolve the manner in which man may intervene in order to contribute to the success of the good spirits. The less civilized knew no way of taking part in the confliet except at the times when they were surprised unawares by its spectacle in the sky (e.g. the numerous accounts of intervention at the moment of eclinses of the sun or of the moon). Elsewhere the conflicts are precisely stated at lunar dates, especially equinoctial or solstitial. In every case the intervention of man made use of the same resources—a mixture of mimetic and sympathetic magic. Images of dolls, of battles, of travels, of voyages were and are still made all over the world. The Eskimos, the Alcuts, the Columbians (cf. artt. ESKIMOS, ALEUTS, etc., in this encyclopædia, and see  $GB^2$ , for many examples), when intervening in favour of friendly gods, acted in the same way as in the case of the collective mimetic ceremonies for fishing or hunting. The Indians of California and the Polynesians carried about on certain dates a sun manufactured and conceived in the same way as the Ra-sun which Egyptian processions made to sail in a barque. But if the Egyptian concept has not a less humble origin, the perfection of the

calendar has given us the opportunity of tracing the information much further back. Bound not to the agricultural world, but to the history of the heavens, the calendar multiplied the foreseen and precise occasions of human intervention. The pretended battles of the worshippers of the Egyptian gods, or the manufactured images, were similar to what the Banks Islanders, for example, were able to make in this order of ideas. But the details. shown in the sky, of the history of the gods supplied a multitude of remarkable details concerning what these worshippers could do. Festivals worthy of the name, processions, and real dramas followed. The imitation of the acts of the gods gave rise to the imitation of episodes in their life, and then to the imitation of their whole life. Symbolism and the progress of meditation, starting from this point, were able to lead to the obtaining of moral information from the esoteric sense (created, of course, afterwards) of the anniversaries of all the calendar. Thus a whole section of religious information is derived from those festivals of the Egyptian calendar which-a significant fact for their stellar origin-almost all have their starting-point in night. To this possibility of co-operating, exactly at the propitious moment, in the struggle for good, magic naturally brought its ordinary resources. Mimetic and sympathetic data, brought to perfection (costumes, statues, thata, brought to perfection (costumes, statutes, etc.), combined with the infinite power given by the knowledge of names (7.v.), and with the power of the voice, and of the chant in the incantation—in a word, with the complete arsenal common to humanity. In associating it with the science of the calendar, Egyptian religion was able to guarantee that, if the same gods (or their mimetic substitutes) repeated the same acts in the same places (or in their equivalents by 'geographical magic') and on the same days (fixed by the calendar), the order of the world was assured. And the worshippers who had contributed to them were sure to have acquired the most important merits in the eyes of the gods.

The consequences of such a system (which has necessarily been only very briefly stated) are evident :

(1) First there is the importance for each person knowing the propitions moment for accomplishing an action or for abstaining from it, and of knowing the sum of the influences for each instant of life; hence the important rôle among the clergy which was played by 'the people of the hours,' or priests charged with controlling and fixing them. Hence also the position held in the life of the temple by those people of the san (the Ptolemaic  $\phi_i(\lambda a)$ , who, month after month, took charge of the whole service. These men were not so often scholars as watchmen (urshui), sentinels entrusted with the defence of the Divine castle.

The question of the technical perfection of Egyptian astronomy The quistion of the teaming period to the planta second will not be examine the mean the result of the planta). Cf. as several results of the planta period to the planta period

(2) There is the part played in the life of the Egyptian by participation, in all its forms, in the dramas and mysteries, which, throughout the whole calendric year, reproduced in the sanctuaries, and for the purpose explained above, the phases of the life of the national gods.

The whole was translated into three practical applications, as far as the religion of living beings is concerned. Two are of a passive kind, and the third is active. (a) The production in pictures of the calendric influences common to all or belonging specially to one individual. These are the stellar pictures, the *decani*, and the zodiacs, (b) The drawing up of the list of influences for each day (calendars of lucky and unlucky days). (c) The organization of anniversary days, when man intervenes on behalf of his gods, and repels the evil gods. These are the festivals, the processions, and the mysteries. Intervention of the dead or for the dead will be examined separately.

VII. PRACTICAL APPLICATIONS. - 1. Astronomical charts, etc.—The number of documents and of works cited below on this subject permits only of a résumé of the chief notions, keeping in view the present state of science and the points

not yet treated.

(a) Astronomical charts.-Charts of the sky, properly so called, considered in their connexion with the influences of each of the stars or groups of stars, must have existed from the very earliest times. As a matter of fact, as no ecilings of the temple of the Middle Empire have been preserved, we do not know of them any further back than the beginning of the second Theban Empire (Ramess-But the Texts of the Pyramids contain clear allusions to ordinances of the stellar gods, in astronomical pictures. These important references have never been pointed out, any more than the question has been discussed whether chapters xviii. to xx, of the Book of the Dead are not descriptions (more or less mutilated) of ancient astronomical pictures belonging to the oldest temples. Those of the temples of Esnèh, Edfu, Denderah, and Kom-Ombo, although of Ptolemaic or Roman times, and permeated with non-Egyptian ideas, are, in the main part of their wording, drawn from national chronicles. The collection and general comparison of all those pictures are still awaiting a special publication.

(b) Zodiac.—Babylonian influences, transmitted by Greece, brought into Egypt the generalization of the use of signs of the zodiae, the most famous types of which—those of Esnèh and Denderah have been the subjects of very numerous works, which are, however, already out of date, and disregarded by modern Egyptology. It seems to be admitted in a general way that the zodiacs were unknown in Egypt before the Græco-Roman period. Their elements, nevertheless, are found on the tomb of Seti I., and they figure on a certain number of sarcophagi of the Saite epoch, or previous to the Greek period (cf. British Museum, No. 6678). Lastly, there are real indications that the signs of the zodiae were known and used as early as the first Theban Empire, according to certain allusions in the funerary texts, which have

not yet been carefully studied.

(c) Decani. - Besides the course of the five planets, the Egyptians had noticed the rise, culmination, and setting of the stars. Among the constellations they attached special importance to those which they saw at fixed times sinking towards the horizon, disappearing, and then imperceptibly taking their original place after this disappearance. The 36 decades of the 12 months were placed under the protection of a number corresponding to these constellations when situated on the horizon. Hephaestion (4th cent. A.D.) has given in Greek a list of their names, the comparison of which with the Egyptian monuments has established greater exactness. For a long time Egyptologists thought that their invention belonged to the Theban epoch. They were found at Abydos, at the Ramesseum, at the tomb of Seti I., in that of Rameses IV., then on the sarcophagus of Nectanebo, in the temples of Edfu, Esneh, Denderah, etc. The discovery of sarcophagi with texts of the Middle Empire has led to their recovery, with extremely curious details, as early as the Xth dynasty at least (coffin of Masahiti, and fragments of coflins of Akhmim). It seems certain to the present writer that allusion is made to them

in the pre-historic formulæ of the Texts of the Pyramids. Each of the three decani of the month presides in turn over the decade of the head (tapi) of the month, that of the heart (abi), and that of the hind portion (pahu). Their variants and variations, as well as the remnants of time when the decani combine with the influences of the planets, laid bare to astrological research a vast region for special studies (cf. Lit. below, § VII., Daressy's recent contribution, 1909).

(d) Stellar tables.-The rôle of the decani is quite distinct from the checkered stellar tables noticed in the royal tombs (especially Rameses VI. and Rameses IX.). Erman (Life in Ancient Egypt, tr. Tirard, pp. 349-391) has explained their part very clearly, as well as the mechanism of the series of pictures, and the value of the legends. The positions of the stars, for a fixed time, and in connexion with the different parts of the body of an imaginary man supposed to contemplate them, are inscribed with respect to the configuration of the stars themselves. Unfortunately, the workmen who copied them have done so carelessly, and these tables are almost useless from the astronomical point of view. Nor is the religious nature of these strange documents very apparent. The opinion of Petrie (PSBA xxiv. 319), that they are simply

kings, is an ingenious way of reconciling the chronology based on the Sothic period with the contradictions presented in the tablets of the Royal Tombs; but no proof has been given of this

horoscopic pictures referring to the nativity of the

explanation, which is too briefly stated.

2. Calendars of lucky and unlucky days.—
Apart from the allusions in the religious or literary texts, the famous Sallier Papyrus and the Leyden Papyrus (i. 366) are the sources of the most valuable information. The methodical comparison with the similar tables of the Assyrians would be a fruitful study. Up to the present this has been too much neglected, most of the publications during the last fifty years limiting themselves to quoting and abridging the masterly work of Chabas, who is no longer at the height of present-day knowledge, either for translation or for commentary. The only advance made has been to point out, thanks to the Kahun Papyrus, that that sort of book existed as early as the X11th dynasty. have therefore another proof of the extreme antiquity of everything connected with the Egyptian ealendar. It is necessary to call attention in a general way to the manner in which horoscopes are clearly connected, for each day of the calendar, with influences resulting from the chart of the sky on that day. The most striking proof lies in the importance—which till now has not been pointed ont-of the division of the day into three parts, each of which is subjected to the influences which have control of the world at that moment. We may therefore have completely good days, completely bad days, or days partly good and partly bad.

The connexion is remarkable for the days on which one must not go out 'st nightfall,' or, on the contrary, 'as long as it is daylight,' or 'during the morning,' or 'at nin'day.' Each time the sign corresponding to this third of the day is marked as bad, the others remaining good.

The days are not simply good or had, as we are usually informed. There are three degrees: the good, those which are prohibitive or purely bad, and those on which there is 'a struggle' in the world between good and evil. The facts of the celestial war by which these statements are justified are day by day put opposite this first diagnostic. Although they are deformed, as usual, by the unification caused by the Osirian legend absorbing all the old legends of the primitive gods, we can recognize the antiquity of all the facts mentioned. When events and dates are noticed, we find most

of these facts either in the temple calendars (see below) or in the pre-historic texts of the Books of the Dead. Such a work, carefully treated, may lead to the explanation of a day in connexion with some of the scenes or the mystic texts of the tombs and temples. It must be said that the popular character of collections of the type of the Sallier Papyrus has been exaggerated. It is rather the practical application which deserves such a qualifying character, although even this point is doubtful. In order to give the document its full value, we have first to make a table of its interdictions, and see to what mythological (i.e. stellar) facts they refer. The most frequent prohibitions are against leaving the house, going out at a certain time, travelling, sailing, undertaking a piece of work, or undertaking anything whatsoever. Speaking, singing, and sexual intercourse come next. Certain things or persons bring misfortune if they are looked at on a particular day. Prohibitions on a particular day. against killing or eating certain animals are equally numerous, as well as those against setting fire to or burning certain substances. The whole, at first strange and childish, may be justified in each case by the study of the astrological myths connected with corresponding episodes in the history of the

The corresponding fortunes have to be divided into quite distinct classes. Some are risks from which people may escape by observing the calendar; diowning; dying from plague or fevers; losing one's life 'thy encountering spirits'; being killed by a bull or a serpent into which these same spirits have entered; remaining ill for the rest of one's life; 'dying risk new entered; remaining ill for the rest of one's life; 'dying entitle have entered; remaining ill for the rest of one's life; 'dying entitle have entered; remaining ill for the rest of one's life; 'dying entitle have entered; remaining ill for the rest of one's life; 'dying entitle have entered; remaining ill for the rest of one's life; 'dying entitle have entered; 'dy now one of the content of the rest of the cannual epidemics (fever'), by drowning, or by sudden indigestion (sie). The middest of them foretold deathers or bindroness. The case of the child born on a certain day, who will lose its hearing because that is the day on which the ears of Osiris were sealed,' shows sufficiently the kind of deductions made for each day from the examination of the corresponding mythological fact.

The whole, subsequently adapted to popular superstition, gave rise to the base applications of soreery, and to that carieature of real astrology which has reached us from the Egyptians of the last centuries, and from the Roman world, which was infested with their ignorant juggleries. 'on that day' (am harn peu) of the soreerers' formule is simply a return to the notion of ancient magic-placing oneself in the calendric conditions of time and surroundings necessary to reproduce the rôle of the god or the spirit who is most influential at that moment. It is, as a matter of fact, being inspired with the universal notion applied even at the present day by a fetishist sorcerer of the Congo. If a separation was made in Egypt between the puerility of these horoscopes, or practices, and the really religious ceremony of the official cult, that separation did not exist at the beginning. It took place when the notion of the calendar allowed the priest to go further, and to put in place of simple mimetic magic the noble theory of re-commencements, with a commentorative character, and with participation on the part of the worshippers. Priesthoods which are still rudimentary, like those of the southern tribes of the Victoria Nyanza, show how processions and sacrifices may arise from primitive barbarism when the calendric observation is more or less formulated. The Egyptian race, being better placed by nature, arrived at real temple-calendars, with the immense reserve of religious and moral forces implied by their final adoption.

3. Temple calendars, festivals, ceremonies.—
The really surprising number of calendar festivals had caused even the Greeks to marvel (cf. Herod. ii. 59), but it is sufficiently proved by the origin and the value of such ceremonies as have just been explained. It will be noticed that cults regulated

by astronomy (especially in Mexico, where the innumerable series of festivals astomded the first conquerors) have always been remarkable for the number of festivals, and probably for the same reason as in Egypt.

On account of the numerous documents of every kind (cf. § I. above), we are still able, not only to recover a large number of these festivals, but also (although with serious difficulties in the present state of science) to form an exact and detailed idea of the ceremonies and the precise purpose which they had in view. Such an important subject cannot be treated fully in the present article (see art. FESTVALS [Egyptian]). All that need be recalled for our present purpose is what has direct connexion with the calendar, i.e. with the notation of the dates of the religious year, the relation of the episodes mentioned to the ceremonics carried through on the chosen anniversaries, and the religious character which gradually evolved, through these festivals, from primitive astrology.

The great majority of these innumerable festivals have a double common character which has never been pointed ont. They begin at night, and have a dramatic and warlike signification. Many, indeed, are entitled day-festivals; but in every case in which it is possible to get back to the sources, they are seen to be in reality the continuation of an original festival or rite which took place during the night—a fact which is most important for the astronomical nature of their origins (see above). As regards the inward essence of the chief ceremony, it is very seldom of a joyful character. Undoubtedly, as throughout the world, the course of centuries and popular fancies added comic episodes and burlesques to it, and the assembling of great crowds has frequently introduced noisy rejoicings (cf. Herod. ii. 48). The real foundation of the ceremony is a battle, and the official rejoicing, noted by the ealendars, is not manifested until afterwards, as a consequence of the victory.

The different kinds of anniversary festivals may be divided into twelve chief classes: (1) births of the gods, (2) episodes in the life of Osiris, (3) circumnavigations and voyages of the gods, (4) wars of the gods, (5) cosmogonic anniversaries, (6) funerals of the gods, (7) births and anniversaries of the kings, (8) commemorations of foundations, (9) festivals of the sun, (10) festivals connected with the Nile and agriculture, (11) exclusively funerary festivals, and (12) miscellanca, or of doubtful meaning (planting of the willow, inscription of the Ashdu tree, erection of the obelisk, etc.), must not be led astray by such a classification. It is absolutely artificial, optical (if one may say so), because it takes account only of external features resulting simply from the titles. In every case in which we can see the details from the monuments, it may be said that the act pur excellence of the ceremony consists in a conflict, in which the priests and the worshippers play the different parts of a real warlike drama. (We omit the anniversaries of births, the travelling of the Amon family to Luxor and its sojourn in its houses of rest, the festivals of the opening of canals, and others of the same type.) But festivals of apparently simple rejoicing, like those perpetual journeys of the gods to visit each other (Hather to Edfu, Horus to Denderah, Hathor to Fayyum, etc.), or of simple cxoduses (khâu=ēξοδείαι) of the gods round the temple, or on their sacred lake, might at first sight be classed among the series of peaceful rejoicings par excellence. Nevertheless, as soon as the evidence of a classic (r.g. Herodotus at Papremis [ii. 63 f.]) frees them from chance, or as soon as texts (as at Edfu) detail them minutely, the episode of the battle appears-all as is shown, a priori, in the brief mentions of the calendar of the Palermo Stone (killing the hippopotanus, striking the Ann, binding the Barbarians, etc.). Everywhere the gods attack reptiles or crocodiles, and cleave them goes attack repairs of crossomes, and creave their in two—the serpent Apopi, and the serpent Sebain, etc.: at Heliopolis, Bastit, the Divine cat, cuts off the head of the serpent; the people of Pn and Dapu rush at each other, like those of Papremis: the partisans of the gods are attacked by hostile gods, escorted by their followers. Monsters of wax, of clay, of wood, or of rope (like the serpent made of rope which Plutarch says was cut in pieces at the festivals of Osiris) are pierced with blows, lacerated, cut in fragments by the priests or worshippers. Rå 'gets rid of his enemies' at Illahun. Every year, at the same 'place of massacre,' Edfu celebrates the 'defeat of the opponents of Horus.'
If the feasts of the month of Choïak (they come from Memphis and are the result of the gradual fusion of Osiris and Socharis) are taken from the calendar of Abydos, the legend of the 'good god' seems to be formed from a series of warlike anniversaries, older than the oldest history. His barques are attacked, and his enemies are overthrown and cut in pieces. On the road to Pagar and on the lake of Nadit, the train of the procession fight with each other continually. Who would have suspected this character of the Osirian festivals, with titles so unwarlike, if we had not happened to possess the evidence of a dozen inscriptions on the point? Without the frescees of a Theban tomb (Tomb of Kheriuf), who would ever have known that an apparently peaceful date like the planting of the Dadu included pitched battles with sticks between the priests and the accessories? Would it ever have been suspected that at the Memphis festival of fishing, the officiant, when capturing the fish, was 'seizing the enemics'? Hundreds of other festivals are distributed throughout the year, and warn us that these dates of the ancient calendars of the Book of the Dead are speaking of real festivals when they mention 'the night on which the children of the rebellion were destroyed' (it is represented on the pre-historic 'palettes'), that on which 'the cursed are exter-minated,' or on which 'the enemies of Nib er-Dzer are massacred.

From the examples just given, we may be allowed to infer that these battles also characterized the exoduses of Annbis from Synt, of Hathor from Denderah, etc. This induction is singularly confirmed when suddenly, for a festival whose warlike character is not mentioned by a single Egyptian text, the witness of Herodotus or Plutarch shows us the representation of wars or of the slaying of monsters overcome in them. Actually, as in the Sallier Papyrus, there seems each day to have been a battle in this world. But these are fought in the temples of Egypt, now here and now there, at places fixed by legend. This is the point that must be remembered for the present study, the classification and origin of the festivals as well as their picturesque details being treated in another article (FESTIVALS [Egyptian]).

The connexion between the character of these festivals and the origin of the calendar is evident. The festivals, which are neither anniversaries nor commemorations, in our sense of the word, but re-commencements, give rise to the detail of repetition in this world of this drama of the sky, of which they are the representation. And the participation of spectators in the massacre of the evil gods, the insistence by the worshippers (especially at Abydos) on the active rôle they filled in these sacred dramas, when they 'helped their god,' show

a fundamental agreement between the magical

data and the calendric data as the basis of the Egyptian cult.

This character of the anniversaries of temple calendars explains also the dates when the gods travelled and visited each other. These are not simply meighbornly relations, or reminiscences of the alliances of the pre-historic tribes of the Nile Valley. Although the course of centuries gives a character of rejoicing and pilgrimage to these festivals, the real origin is the imitation of the martial acts of the mythological life of the gods, thus shown forth with great pomp. And we saw above how -at least for the most part—it was the reading of the sky that suggested the principal episodes in it.

Thus by natural consequence the unchanged character of the temple calendar from the beginning to the end of history is proved. The study of thistorical documents shows that, as they existed under the Memphites, so we find the festivals under the Roman dominion. The only work done by theology was to generalize for the whole of Egypt some festivals which originally were merely local. But Egyptology has accomplished thus only part of its task. The study of the pre-historic texts of the Books of the Dead and the Book of the Pyramids proves that the festivals and calendric dates of these collections appear again, with names hardly modified, in documents of the historic age, like the Palermo Stone or the stelle of the ancient Empire, and that the whole fits into the lists of the classical calendar.

The chief importance of the anniversary date is sufficiently justified by what has already been said. (The exact dates of the principal festivals will be given in the article PERTIVALS [Egyptian].) The way of marking it in the classical epoch consists simply in the indication of the esason, the month, and the day. A different method seems to have existed in Heispoolis. day. A different method seems to have existed in Hempous-Its character is difficult to grasp. The present writer proposes simply as a hypothesis of his own to read as calendric dates the numbers marked in the celebrated Palernio Stone, which have numbers marked in the celebrated Palermo Stone, which have always been interpreted as agrarian measurements or as the heights of the Nile. He thinks it possible to see in them notations of height taken with some very simple instrument, or more specially the height of the shadow of some arrangement like the Bahylonian nobox—perhaps even the height of an emblem like a sacred stone, the prototype of Enzloon of the Great Temple (cf. Naville, Pestitud-Indi, pl. ix.). With the same restrictions hettinks that the pre-listone vases or Thinhe tablets of Neggadeh and Abylos contain indication date the festivals miniation, and these tablets. The correct interpretation, however is not very the sea to the same tablets. ever, is not yet forthcoming.

The development of the theory of the anniversary festival in the calendar seems therefore to have been briefly: (1) the idea of the influences of the stars; (2) the putting of their positions into living images in the form of beings, conflicts, travels, births, etc.; (3) the notation of corresponding myths; (4) the assimilation of the conflicts which take place on the earth with this mythology; (5) as a consequence, the assimilation of the gods or spirits of this world and their legends with the conflicts and acts of the inhabitants of the firmament; (6) the combination of the whole into a unique cycle, the dates of which are given by the appearance of the sky; (7) the artificial creation, in order to correspond with these dates, of pseudohistorical or purely legendary facts; (8) the invention of the great Osirian drama, incorporating the myths or the disconnected accounts of the local proto-history of the various parts of Egypt (if necessary, with the aid of alliterations or artificial etymologies); (9) the tendency to confuse Osiris with the Ra-sun, and to see in the legend of Osiris a symbolical figure of the struggle between the desert and the Nile; (10) the gods, combined in the latest epoch, induce symbolism, the concept of the struggle between darkness and light; and (11), as a last result, there is the struggle of moral light with the darkness of sin, the struggle between good and evil, with the defence and active obligations which it entails for the worshipper.

The living worshippers of the god are not the only persons who participate in these annals of the calendar. The dead also take part in them, and fight on their side. The explanation of the theory of death among the Egyptians will be found in art. STATE OF THE DEAD (Egyptian).

VIII. FUNERARY CALENDAR .- I. Festivals .-The remarkable lixity of this calendar is attested by several thousands of monuments (not including the texts of the Book of the Dead type), from the Memphite mustabas to the titles of the tombs, or the stelle of the latest epoch. From Memphis to the first cataract, every necropolis has supplied sufficient funerary calendars to draw up the inventory and to show the importance of its character. As far back as we can go at the present time (IVth dynasty), the work of unification for the whole of Egypt is completed (cf. c,g. the sarcophagns of Khufu-Anku). Two classes of dates and festivals appear: the first are common to all the provinces of Egypt; the second remain, throughout the course of history, local and peculiar to certain necropolises. The exceptic examination of those of the first class shows that they are the product of a list which combined festivals that were formerly peculiar to such and such a region. They began by belonging properly to the dead subjects of Socharis at Memphis, of Ambis at Synt, of Uap-Matom at Abydos, of Hathor at Denderah, etc. The fact that as early as the 1Vth dynasty they are the common property of all the Egyptian dead, almost everywhere unified by the Osirian legend, is of sufficient significance to give an idea of the immense preparatory work that was necessary before the period known to us.

The chief list, identical at the beginning and at the end of history, gives: (1) the day of the year (1st Thoth), with the festival of lighting the new fire (the festival of 'lamps' of Herodotus, ii. 62), the 'service of the dead,' and the 'surrounding of the remple in procession, and the Surfamming of the temple in procession, a visit to the local god, in great pomp, at the dwelling-places of the dead (Beni-Hasan, Synt, Denderall, Thebes, Edfu, etc.); (2) the great festivals of the dead on the 17th, 18th, and 19th of Thoth (festival of lamentations, of the flame, and the Unguit); (3) the festivals of Socharis in the month of Choïak: sacred night, sacred morning, procession round the walls of the temple (originally round the sanctuary of the white wall at Memphis, then, later, in all the chapels of Socharis in Egypt). This is one of the most solemn moments in the life of the dead and in the calendar connected with it; in the Palermo Stone we find the feasts of Socharis mentioned in the whole historic series, sometimes with valuable details (cf. Revillout, Revue Egaptol. i. 43, with an incomplete bibliography, but full of important examples; cf. also the Kahun Papyrus of the XIIth dynasty and the very important text of the calendar of Nofir-hetep at Thebes [XVIIIth dynasty]); and (4) the festivals of the five eyagomenal days. To the first group may be added the following calendric list, which is simply a table of funerary services to be offered to the dead, rather than festivals with processions or ceremonies of a mythical character: the beginning of each season, the beginning of the month, and the day of the half-month, the 4th, 5th, 6th, 17th (sadzau), and 30th of each month (see Munich, stele no. 3). There is no ground for asserting a relation between the monthly festivals and the moon, from the funerary point of view.

The indications of the stelle enumerate afterwards a certain number of festivals already known to the non-funerary calendar: the rising of Sirius, the arrival of the Nile, the 'reception of the river, the 'travels of the gods' from one town to another, visiting each other, etc.

Lastly, festivals probably common to the whole of Egypt are local in appearance, either because we have not enough documents, or because they bear different names according to the localities, although they are really identical (removal of sand, scattering of the sand, festivals 'of the mountain' or 'of

the valley, 'transferring of the statue to the temple), Thus at Thebes the 25th of Choiak is called

Matterit.

The festivals of Menophis (Exodus of Min, Assembly of Osiris Nib Paxto), those of Beni-Hasan (great and small 'cat hing'), and those of Theles (morning of Mede-Kan, festival of the two enclantresses, of the 'Assembly of Baila,' of the 'hearing of sepeches,' and of the 'opining of the chaptel) are smalle examples given here of the titles of local festivals. They have not yet been stanich. It is probable that it will turn out that, under other names, they were celebrated throughout the whole of Egypt, and that their triple link will be found with mythology, with the corresponding formula in the Book of the Bead, play, with the corresponding formula that is costs of the Poisson and with the representations in the temples or the hypogram and with the representation in the temples of the hypogram are mentioned, come from another part of Egypt—which presuppases a long preliminary work of tusion (cf. cg. the Thelsan festival of Isahi, which is said to be consecrated to the souls of the dead of the Lord of Hermopolis').

The whole is accompanied, for the statues 'of millions of years' of deceased kings, by a complete special calendar. It is sufficient to state here that it consists chiefly of festivals of the clothing of statues, processions to the temples, and participation in the majority of the great festivals of the

ordinary local calendar.

2. Historical summary; probable formation .-The fact that the calendar appears fully formed as early as the Memphites, and undergoes no essential change down to the end, admits only of a hypothetical explanation of the way in which it is formed: (1) by the examination of the peculiarities of the festivals; (2) by the direct or indirect mention of their origin; or, above all (3), by the archaic traces of a previous state of affairs in the Book of the Dead. The sarcophagi of the first The lan Empire are in this respect the next source of considerable discoveries. The most important at the present time are those of Babei, found by Petrie at Denderah (Cairo Museum), and those exhumed by Garstang at Beni-Hasan. As in the case of the festivals, we shall treat here only what is connected with the calendar, the rest of the funerary theory being more conveniently treated in the art. State of the Dead (Egyptian).

The faculty, which at first was restricted to those who had within them one or more Divine souls (i.r. to chiefs, sons and heirs of the gods), of reuniting with the gods of this earth and of sharing in the direct offering of worship, was extended to those who were capable of understanding the necessary magical prescriptions, and who had received the necessary talismans. They were then able to walk on good roads—to return to this world. They could do so only once a year, when the local god at his festival came to look for them They then accompanied him as in the necropolis. worshippers (amkhu) or as companions (shown), and, along with the living in the procession, participated in the whole drama of the festival, and then in the offering. The whole thing could take place only in the locality in which the famous mythological fact had formerly occurred, and at the time when the sky indicated the exact date when the fact should be renewed by the festival (typical examples at Synt, at Hermopolis for the festival of Bailu, at Thebes for the 'testival of the valley,' at Denderah, etc.). This festival took place in many provinces, at the time of the annual rising of the waters and at the New Year-the resurrection of all the things of the valley (c.g. Fayyum, Herackeopolis, Abydos, Denderah, Edfu, Assnân). But in other places it was at different dates (month of Choïak at Memphis, Pharmuti at Hermopolis, etc.). The continuance of the happiness of the dead was due to a triple series of continued actions, the benefit of which was evidently at first contined to the kings, but afterwards extended to ordinary men: (1) the introduction into the local calendar, with all its results, of the festivals of strange gods which fell on a different date, making the local dead benefit thereby; (2) multiplying the circumstances in which each of these gods had the power of making the 'hiving soul' of the dead return to this earth; and (3) not restricting to a single place in Egypt the possibility of accomplishing the magical rite necessary for each day, but extending the benefit of it to all in the necropolises. This work in course of formation is seized on in texts like that of Babei, where the calendar already enumerates one hundred dates of festivals, in which, at a certain place, the dead person may take his share of such and such rejoicing of such and such a god (see also chs. xviii.-xx. of the Book of the Dead, which are very instructive on this point). The whole leads to the final possibility of communicating with the dead throughout the whole year. Then the long series of magical dates, which had become useless, was eliminated. There remains a unique calendar, general for Egypt, where the festivals simply mark the most outstanding remains of the ancient elements of formation. The final product is almost reduced to unity by the Osirian theme, which substitutes for the pre-historic raisons d'être of these dates explanations drawn from anniversaries of the life. death, and resurrection of Osiris. It is precisely this theological work, accomplished almost entirely in the time of the Memphites, which makes the discovery and real meaning of the original festivals so difficult. The search for these offers a large scientific reward to the person who will undertake

IX. Conclusion .- What has been said above may perhaps suffice to show that the calendar in Egypt played an important part in the degree of perfection reached by the evolution of religious thought in that country. If, as everything indicates, the material supplied by the gods and the concepts at the disposal of the ancient Egyptian cults was no better than that still employed by the groups of less civilized races of the rest of Africa, we must find out the reason why Egypt was able to profit more by it. And if, in a similar fashion, the organization of worship is one of the most important factors, it seems clear that the calendar, as it was instituted in that country, was one of the most powerful forces in ensuring this organization. The question leads to the search for the causes which favoured the perfecting of the calendar and gave it the form and the value which have been examined above (p. 97). conditions of geographical and meteorological surroundings were perhaps not the only favourable elements in this first cause. They were certainly

elements of the first rank.

Considering now not the causes but the consequences, we see that the calendar succeeded in identifying, dating, and, in definite mythologies, fixing, the limits of the apparent incoherence between the appearance of the perceptible world and its incessant struggles between good and evil. The intervention of man, foreseen and organized on certain fixed dates, arranged and defined relations with the gods, and multiplied the connexions with them, then the obligations towards them, at the same time as the rôle of the gods became more noble. It matters little that originally this human intervention was grossly magical; the essential fact was the possibility of man's helping the powers that were regarded as good to struggle against those regarded as evil. To define, in a gradually more elevated sense, the words 'good' and 'evil,' and to reach the duty of being morally a partisan of the good gods, was the long-protracted effort of thousands of years of Egyptian thought. The final notion of dualism, with its wholesome lesson of energy, existed in germ from the very day on which the year of the religious calendar definitely

specified the rôle of each person, and the certain effects of the acts of man, in the ceaseless struggle in which he takes part.

It marked the race for ever with its stamp. Even after Egypt became Christian, it will be found that it kept this stamp and is distinguished by it from the rest of the peoples who believe in Christ. For the Copts, St. Michael and St. George on high every day conduct the celestial hosts to battle against the soldiers of Satan's armies. They seize them, heat them, hang them; but they do not destroy them, for 'their honr is not yet come.' In this way the Egyptians reconcile the new dogma and the ineradicable conception of the perpetual celestial battle, in which the worshipper, by his acts and prayers, comes to the assistance of his Protectors on high.

Literature.—Roughly speaking, the bibliography of the Egyptian calendar exceeds a thousand publications, articles, etc., not including those dealing exclusively with astronomy, astrology, or pure chronology. A selection being necessary there is given below a list which will be found to contain all the literature that is essential on the subject. Only a lew items have been extracted from the long list of articles which items have been extracted from the long list of articles which have appeared in Egyptian periodicals, e.g., Z.4, O.L., FSBA, RTAP, and Sphinz. Such a bibliography, in view of the great variety of questions involved, would not be of much service if simply arranged alphabetically or even chronologically. A classification according to the subject matter has appeared advisable. We have included also a list of the documents properly so called, i.e., the list of ancient monuments published

classification according to the subject-matter has appeared advisable. We have included also a list of the documents properly so called, i.e. the list of ancient monuments published with or without translation or commentaries, but without a synthetic article on the calendar. A list of the chief ancient authors who wrote on the subject has also been added. The most important authorfites have an asterisk prefixed.

GEORGE FOUCART.

CALENDAR (Greek).1-1. The day (nuéva. later νυχθήμερον).—As in English, so in Greek, the word 'day' is ambiguous, and may mean the time between sunrise and sunset, or the time occupied by one complete revolution of the earth on its axis, or, on the ancient theory, of the sun around the earth.<sup>2</sup> The latter is the strict meaning of ἡμέρα earth.\* The latter is the strict meaning of  $\eta\mu\epsilon\rho a$ —hence the later coinage,  $\eta\nu\alpha\beta\mu\epsilon\rho\sigma\nu$ , to avoid ambiguity, though in popular speech the former meaning prevailed.\* Hence, in official reckonings, a day is a day and a night. It began, like the Jewish day, at twilight; e.g., by Greek reckoning,  $\lambda$ —lie 0 begins at twilight of Jule 1. July 2 begins at twilight on July 1.4

Divisions,-Unger thinks-we have not been able to discover on what grounds—that the Bab. division of the day into 12 hours, by means of the gnomon and sun-dial, reached Greece as early as 550 B.C. or thereabouts. In common parlance, however, ĕρα did not mean 'hour,' but only 'scason,' till much later. The ordinary way of measuring time was, if any accuracy was required, by the water-clock (κλεψύδρα), while the popular divisions of time were, for the day : los (dawn, including morning twilight), πρωί, μεσημβρία (midday), and δειλή (late afternoon), to which we may add άγορὰ

4 i.e. 'civic' not astronomical twilight (see Ung.).

5 Theophrastus, De sig. temp.

 $\pi \lambda \dot{\eta} \theta \omega \sigma \alpha$ , i.e. about mid-morning, and the Homeric βουλυτός, which, despite its name, indicating the end of the day's farm-work, does not seem to signify a very late hour; and, for the night: έσπέρα, άφαί (lamp-lighting), μέσαι νύκτες, ὅρθρος (the dark hour before the dawn), and cock-crow,¹ which was the labourer's hour of rising.2 Such a division of time, though very rough, corresponded to objective natural phenomena, and to the routine of daily life, and did well enough for popular use.

 The month (μήν).—It is a somewhat vexed question 3 whether the month or the year came first, i.e. whether the Greeks, of their own invention or by foreign (Babylonian?) influence, divided one year into 12 months, or whether they put 12 months together to form one year. Certain it is that both year and month, as well as the names of the seasons, occur in Homer, while Hesiod has a complete account of the reckoning of the month, The present and of lucky and unlucky days. writer's view is that both year and month, being natural divisions of time, are of native origin in Greece, and sprang up simultaneously. For, quite apart from the keen astronomical observation, aided perhaps by outside influences, which is so marked a feature of the Works and Days of Hesiod, the facts that it is about 30 days from one new moon to the next, and that 12 such moons bring us back to the season we started from, are common property, shared by such backward races as the N. Amer. Indians before the coming of the white man.

Divisions .- The 'moon' was divided not into quarters, but into thirds; μὴν ἰστάμενος (waxing), μεσῶν (central), and φθίνων (waning). Hence the usual reckoning of the days, say of Boedromion at Athens, was (after the 1st) 2nd, 3rd, etc., ἰσταμένου; 11th, 12th, 3rd 'after the 10th'  $(\epsilon \pi i \ \delta \epsilon \kappa \alpha)$ , '4th after the 10th,' etc.; 20th, and then, by a curious inversion, 10th, 9th, etc., of the wane, counting backwards, to the 29th (δευτέρα φθίνοντος); though a direct method of counting (δευτέρα μετ' εἰκάδας, . . . τριακάς) was also used. 'First tenth' and 'second tenth' were also used for 20th and 21st in Attica, while the 30th was ένη και νέα (see below, 'Year').

Both the month and its divisions are connected with certain vague beliefs of a religious nature or perhaps 'magical' would be a more accurate word to use. Just as with us superstitions people regard Friday as unlucky, so the Greeks regarded both the 4th and the 24th as dangerous days for some enterprises; the 5th as utterly unlucky; the 16th as an unlucky birth- or marriage-day for a girl; the 14th as a good day to break in cattle, etc., and so on through the whole month; 'one day is like a step-mother, another like a mother.'s But especially—this is probably a belief of later origin—certain days are sacred to certain gols. Thus the 7th  $^7$  is  $\Delta$ pollo's birthday, the 4th is that of Hermes and of Herakles, and so with several other delities. The great festivals of the various delitions are successful. deities were yearly, though often on the god's particular day of the month. Obviously the mere question of expense prevented a costly feast to Apollo or Zens being celebrated monthly; but it is at least probable that the old monthly holy days were recognized to some extent in the regular temple-worship, just as every Sunday commemorates, by its position in the week, the Resurrection, although Easter Sunday occurs once only in the year.8

See Aristoph. Nub., ad init.
 Lucian, Gallus, ad init.

3 See Ung., and contrast Mom. p. 3.

This term is very rare.

5 At least, Hesiod's compatriots; Op. et Di. 765 ff.

6 ib. 825. 7 ib. 770 ff., with Gottling's notes. 8 It must be remembered that, as the Greeks had no week, any superstitions or practices connected with days occurring oftener than once a year would naturally be monthly only.

3. The year (eros, evantos). - Very early in the history of Greece, either by native observation or by imported science of a rudimentary kind, a smattering of practical astronomy became fairly widely diffused. Hesiod indicates the beginning of the reaping-season (summer) and the ploughingsenson (antinum) by the rising and setting of the Pleiades—a constellation which had attracted the attention of many primitive races 2-and frequently makes similar observations. This, together with the observation of the equinoxes and the solstices.3 provided them with the material for calculating a solar year. At the same time it led to endless confusion, for the lunar month was adhered to throughout: i.e., whereas our (Julian) year is purely solar, and the new moon may or may not fall on the first day of any particular month, without in any way affecting our calculations of dates,4 the Greek year was soli lunar—almost a contra-diction in terms, since the solar year is roughly 3651 days, and the lunar month about 294 days. This gives a lunar year of 354 days—a discrepancy which more exact calculations, such as the Greeks of the historical period could and did make, render still more apparent. But the month, with its holy days, was a fixture. To a Greek, it would seem wholly unsatisfactory to celebrate Christmas on the 25th day of the last calendar month of the year: he would think it necessary to celebrate it, nominally at least, 5 days from the end of the last moon of the year. Similarly, a New Year's day which was not a day of new moon would seem an absurdity, even if it coincided exactly with a solstice or an equinox.

Soistice or an equinox.

'It was, 'says Gem., 'the endeavour of the ancients to conduct
the months in accordance with the moon, but the year in
accordance with the sun. For the direction given by laws and
oracles, to "sacrifice according to the ancestral rites," was
interpreted throughout Greece in those terms. Now, to conduct
the year according to the sun means to offer the same sacrifices the year according to the sun metals to oner the same scarning to to the gods at the same seasons of the year, e.g., always to offer the spring sacrifice in spring; which is impossible, unless the solitices and the equinoxes fall always in the same months; while conducting the month in accordance with the mon-merans to name the days in accordance with the planes.

Hence, despite all difficulties, the sofi-lunar year was adhered to persistently in Greece proper, and even in the Middle Ages we find Byzantine pedants speaking of it as if it were still in being. Thus Tsetzes, Posthom, 770 (13th cent.), gives the Attic month Hekatombaion the equivalent it would have had in his day if the Attie calendar had still remained in use. Apart from this trifling, which reminds one of Bélise begging the notary to 'dater par les mots d'ides et de calendes,' we have the evidence of Julian that in the 4th cent. the Roman and Egyptian solar ealendars were not in use among the Greeks.

The Greek year of 12 lunar months contained, as has been said, 354 days, the months having alternately 30 days (μήν πλήρης) and 29 days (μήν κοίλος). The former was regarded as the normal number, hence the last day even of a 'hollow' month was generally called τριακάς, or 30th. In Athens, however, the name ern kal véa ('old and new') was frequently used to denote the day which belonged half to one month of 293 days, and half to the next. This year, being It days too short,

to the next. This year, being requested and Myth, 16p. th, 1883, 015.

<sup>2</sup> Such as the Australian blacks (see Lang, Custom and Myth, London, 1885, 'Star-Myths').

<sup>3</sup> The latter—βλίου τροπαί—are several times mentioned in

Hesiod.

4 The movable date of Easter is an interesting survival of

<sup>4</sup> The movable date of Easter is an interesting survival of more ancient systems.
<sup>5</sup> Gen. viii. 37 gives the limar month as 29½+½ days, or 29 days 12 hr. 48 wini. 28 sec. nearly. The impossibility of adapting this period, for practical purposes, to the solar year is obvious. He is speaking, of course, of the 'synodic' month, from one σύνδος, or true new moon, to the next, of Gen. viii. 6-10, somewhat abbreviated. The last sentence refers, as he goes on to explain, to such names as νουμηνία for the 1st of the month.

the 1st of the mor

led at a very early date 1 to an attempt at reform. The years were arranged in groups of eight (beraerno(des), containing 3 leap-years (3rd, 5th, and 8th), each of which had an extra month (μην ξαβόλιμος) of 30 days. This gave a total of 2922 days; whereas the actual total of 99 hunar months is roughly 29231 days. The next stage was to add 3 intercalary days in 2 obtacterides. This in turn resulted in getting 30 days ahead of the solar year in 160 years. This was rectilied by leaving out one intercalary month.

Thus, by correcting alternately for the sun and the moon, something like a reasonable system of Throughout Greek reckoning was arrived at, history we meet the oktavteris, which, it would seem, they came to regard as a natural period of time, like the solar year itself. At any rate, various festivals are arranged in relation to it. Thus, the Olympian games were celebrated every four years (half an oktaeteris), and the Pythian at the same interval, always coming in the 3rd year of an Olympiad; the Nemean fell in the 1st and 3rd, and the Isthmian in the 2nd and 4th years of the Olympiads. From the Olympian games came the familiar system of reckoning, which enables us, from 776 B.C. onwards, to extract fairly exact dates from Greek chronological notices. various cities, however, all had local methods of reckoning-Athens dating by its archors, Argos by the priestesses of the temple of Hera, and so on. Even the Olympiad was not exactly reckoned in Athens, but was fitted to the local calendar, by being made to begin on the 1st of Hekatombaion. whereas it really began on the 18th. We mention these facts, a little out of their order, to indicate why the oktaeteris was so tenaciously adhered to in spite of its fundamental errors.

For it was fundamentally wrong, owing to the constitution of the year, which always consisted of alternate 'full' and 'hollow' months.3 Averaging as they did 29½ days, they gave a lunar year of 354 days, the real length being about 354 days 8 hours; i.e., the difference between 8 lunar and 8 solar years is not 90, but 873 days, so that the 3 intercalary μηνες πληρείς made the oktacteris 2 days 16 hours too long. It would take some little time to notice this, as there was little exact science in Greece, but in the end it made itself felt-some of the festivals were clearly on the wrong days. Hence comes the bitter complaint of the Moon in

the Clouds of Aristophanes:

'For,' say her messengers, the Clouds, 'she is abominably ill-For, say her messengers, the C10408, who is abominably in-teracted, after all her kindnesses to your—ral kindness, not just topsychrey, . . . when you ought to be sacrificing, you rack witnesses and try cases; and often, when we gods are keeping a fast, in memory of poor Memnon, or of Sarpedon, you pour out libations and laugh. 'I

If the Moon had just cause to protest, the Sun got no better usage. The Athenian year was supposed to begin with the summer solstice: but. as its first month must begin with a new moon, it never did, unless the two events happened to coincide. So serious did the whole matter become, that we actually find in late inscriptions a double system of dating, κατ' έτος (in accordance with the civic year) and κατά θεόν (in accordance with the actual position of the heavenly bodies). The latter was the method used for dating the prytanics, The year, in trying to be both solar and hinar, succeeded in being neither.

! There are allusions to it in various myths, as that of Cadmus' 8-year penauce (see Ung. for a full discussion). For a brief account of the δκταστηρές, see Gem. vii. 27 ff. The inventor is said, however, to have been Cleostratus (latter half of 6th cent.); Athen. vii. 278.

2 See below, 'Divisions of the year.'

2 See below, 'Divisions of the year, 3 Intercalary days were not dated; they were named by the date of the preceding day, with the word ἐμβολιμος added. Hence they could not make a 'hollow' mouth 'null.'

4 Nub. 610 ff., with Blaydes' notes.

In order to give a clearer idea of what the Greek year was like, we append an outline calendar of the civic year at Athens. The first month (Hekstombaion) began nominally at sunset on the day of the summer solstice (end of June); actually, on the next new moon, which might be the middle of July :-

Hekatombaion, 30 days; Metageitnion, 29 days; Boedromion, 30 days; Pyanopsion, 29 days; Meimakterion, 30 days; Poseideon, 29 days. Then second Poscideon, 30 days (in leap-year only); Gamelion, 29 days; Anthesterion, 30 days; Elaphebolion, 29 days; Munychion, 50 days; Thargelion, 29 days; Shirophorion, 30 days. year, Hekatombaion, 29 days, and so on. In later times, Poseideon 'the second' was called Hadrianion, after the Emperor. Other States repeated the twelfth month in a leap-year; but it was always twelfth or sixth. This example shows clearly enough the continual inconveniences to which the fixed alternation of 'full' and 'hollow' months subjected the Greeks; for the average number of days in a year was frequently one too few or too many, owing to the clamsy device of the intercalary month; hence the necessity for intercalary days.

Athenian astronomers were not slow to perceive the practical and theoretical disadvantages of the oktacteris, and one of them - Meton - brought forward, in the year 432 B.C., a reformed calendar which, with the later improvements of Callippus of Cyzicus (a contemporary of Aristotle) and Hipparchus of Nicara (2nd cent. B.C.), is surpassed in accuracy only by the purely solar calendars. He arranged the years in eyeles of 19, with 7 intercalary months, giving a total of 6940 days, and allotting 29 d. 12 h. 45 m. 57 s. to the average month, and 365 5 days to the average year-only 30 m. 10 s. too long. Callippus combined 1 of these cycles into one, and subtracted one day. securing an average year of 3651 days, and an average month only 221 sec. longer than the actual lunar month. By a repetition of this process, Hipparchus, with a cycle of 304 years minus I day attained almost absolute accuracy, but, it should be noted, still at the expense of anything like conformity with the sun; for, while the arrage year was accurate, any actual year was always til days too short, or else 183 days too long.1

But these cycles were merely theoretical; the oktucteris was never, so far as we know, actually abandoned by any Greek State. Indeed, no State save Athens, for whose calendar it was calculated, could adopt Meton's cycle, and the evidence of Aristophanes (loc. cit.) and of late inscriptions as to double dating (see above) indicates that Athens did not. Diodorus, indeed, says that 'most of the Greeks' accepted Meton's calendar; but this clearly refers only to individuals, for whose use, also, the almanaes (παραπήγματα) of which we occasionally hear 3 were constructed. The frequency of pentacteric 4 feasts kept the oktacteris in Hence, as has been already mentioned, the old imperfect calendar remained officially in use, getting farther and farther from the actual dates, until we find Macrobius equating Anthesterion (February, roughly speaking) with April.

Divisions of the year .- The Attic months have already been given. Other years, which began at the same time, were the Delian, whose months were Hekatombaion, Metageitnion, Buphonion,

<sup>1</sup> We omit small fractions; of course, 5651 is a little more than the actual length of the solar year. 2 xii. 36.

<sup>4</sup> We should call them quadrennial. They came every four years, i.e. on the first and fifth of each period of five years, as the Gricks looked at it; hence twice in an oktaeteris. Sec. c.g. (Aristotle), 'Ad. HoA. liv. 6, 7.

Apaturion, Aresion, Poseideen, Lenaion, Hieros, Galaxion, Artemision, Thargelion, and Panenos; and the Pelphic (Apellaios, Bukatios, Boathoos, Heraios, Dadophorios, Poitropios, Amalios, Bysios, Theoxenios, Endyspoitropios, Herakleios, and Ilaios). Bootia began its year at the winter solstice (January), but the order of the months is somewhat obscure. Achaia, Phocis, and Laconia began in October (antumn equinox)—the first two simply numbered their months; the Spartan calendar is not yet re-constructed. After the rise of Macedon, their year (Dios [October], Apellaios, Audynaios, Perities, Dystros, Xandikos, Artemisios, Daisios, Panemos, Doos, Gorpiaies, and Hyperberetaies) came into use in Asia Minor; while the Ptelemys used the Egyptian solar ealendar (see CALENDAR [Egyp.]), as did also some astronomers outside Egypt.

A glance at the names of the months will show A grance at the names of the months will show that they gather around and are named after certain festivals. Thus Boedromien is 'the menth of the Helpers' (βοηδρόμοι), i.e. the gods and heroes who give victory in battle. Accordingly, we find most of the Athenian anniversaries of victories eelebrated in them (see art. Festivals [Greek], 'Attie ecclesiastical calendar'). Apellaios is connected with the name of Apollo; Dios with Zeus; Lenaion with Dionysos Lenaios, 'god of the wild women'; Galaxios recalls the Athenian feast of Galaxia, held in honour of Cybele; and Hyperberetaios is 'month of the Hyperboreans,' those 'earriers round' of the sacred offerings to Apollo, whose name in ancient and modern times alike gave rise to so much false etymologizing till Ahrens' masterly explanation finally threw light on the mystery.1

The position of the feasts, and consequently of the months named after them, depended very largely on the season of the year; for, in the long run, nearly every Greek festival or fast has an agricultural origin.2 By whatever name the Greek might call his mentlis, and however he might calculate the year, he divided it, in early times, into summer ( $\theta \epsilon \rho os [\tilde{u}_{\mu\eta\tau} os]$ , later  $\omega \rho a (a)$ , and winter (χειμών); or into spring (ἔαρ), summer,

antumn (φθινόπωρον), and winter.

Alltimm (potrorapor), and winter.

H. J. POSE

H. J. Rose. CALENDAR (Hebrew) .- I. Adaptations to meet astronomical difficulties .- As with other peoples, the basis of the Hebrew calendar was astronomical. The year was, roughly speaking, the solar year; the month was a moon period or lunation; the week comprised very nearly a quarter of a lunation; and the day was, of course, the period of the earth's rotation on its axis. The chief difficulty arese, as in other cases, from the fact that these periods stood in no distinct ratio to each other. The true solar year was not an exact number of moons, weeks, or days. The lunation was not an exact number of either weeks or days. The week of 7 exact days, whatever its origin may have been, had become a purely conventional measure of time. As the solar year is nearly 3654 days, and the 12 lunations over 3544, the lunar year of 12 lunations was about 103 days short of the solar year. The difference was at a later period, at any rate, adjusted by the insertion, about every 3 years, of an intercalary month; and, finally, by adopting a regular cycle of years,

1 See Farn. iv. 102.

the slight irregularities were kept within bounds (see Calendar [Jewish]). The 12th lunation was ealled Adar, the intercalary month we-Adar ('and Adar'). Some such arrangement, though not so definitely systematized, must have been in vogue from early times. Similarly, as a lunation averages a little over 29½ days, the month must have averaged 29 and 30 days alternately, with the further occasional omission of a day.

It has sometimes been assumed that there was no system among the ancient Hebrews for determining the commencement and duration of each month, and that it was merely a question of observa-tion, the month practically beginning when the new moon first became visible—that is, about 2 days after the real new moon, and that without any calculation of the number of days since the previous new moon. There are two very strong, if not absolutely fatal, objections to this view. (1) The Feast of the New Moon was evidently of very early and general obligation (see 1 S 205.18, 2 K 4<sup>23</sup>, Am 8<sup>5</sup>, Is 1<sup>13, 14</sup>). It was practically necessary that it should be known beforehand when it would ocenr. That this was in fact the case we know from 1 S 20<sup>5, 18</sup>, where Jonathan and David act on the knowledge that the next day would be the New Moon feast. (2) The fact that, even in early times, the months were definitely distinguished and had their several names (see below, 2. A. (2)), points obviously in the same direction.

It may be further questioned whether there ever was among the early Hebrews any attempt to adapt the week of 7 days to the lunation. is some ground for such a supposition, in the fact that in the most ancient Babylonian calendar every 7th day of the moon-the 7th, 14th, 21st, and 28th -was a dies nefastus, on which no public or official work could be done (Sayce, Higher Crit., 1894, p. 74). The similar treatment of the 19th day has been ingeniously explained as due to the fact that it was  $49 (=7 \times 7)$  days after the previous new moon; but this would be true only for artificial months of 30 days. It would seem, then, that the old Babylonian month was practically a period of 4 weeks, with one or two intercalary days added at the end to make it agree with the lunation. As to whether this system was ever adopted by the Hebrews we have no direct evidence; but, were it so, its obvious inconvenience must sooner or later, as with the Babylonians, have caused the substitution of the regularly recurring conventional week of 7 days.

2. History of Hebrew calendar.—It is not unlikely that the Hebrew calendar varied considerably at different times, and possibly in different places. We can at any rate, with considerable probability, make a broad distinction between the systems prevailing before and after the Exile.

A. (1) In pre-exilic times the year, depending, as naturally it would with an agricultural people, on the yearly course of the crops, appears to have ended with the ingathering of the vintage, 'the end of the year, when thou gatherest in thy labours out of the field' (Ex 23<sup>16</sup>). This is confirmed by but of the heat (Ex 23.7). This is commind by the fact that the Sabbatical year (Ex 23.0.11 [E], Lv 25.1.7. 18.22 [II]) and the year of jubile (Lv 25.8.17 [II and I]) were natural agricultural years, sowing, pruning, reaping, and the vintage being mentioned in their order. As regards the last, the enactment that the trumpet was to be blown on the 10th day of the 7th month shows that the idea of the year beginning in the autumn survived into a time when it could be called the 7th month.

It has been contended that, while for religious purposes, depending as they did on the agricultural purposes, depending as any and on the agricultural seasons, the year continued to begin with the autumn ploughing, the civil year, on the other hand, from about the beginning of the monarchy,

<sup>See FESTIVALS (Greek).
See Hes. Op. et Di. 383 ff., with Gottling's note.</sup> 

began in the spring. This view is based chiefly on the phrase, 'at the return of the year' (2 S 11, 1 K 20<sup>22, 26</sup>), which is used with reference to the resumption of hostilities, and is followed in the lirst quotation by the curious remark, 'at the time when Rings go forth.' But the first phrase, האַסָּ הבַישה, might mean 'at the turning-point,' בנ. the middle of the year—the idea being that the year moves forward to a certain point and then goes back; or what was intended may have been a year from the time of speaking (cf. Gn 1810, where this is obviously the meaning of a somewhat similar phrase), and the words, 'at the time when kings go forth,' taken by themselves, merely state the obvious fact that military operations commence in the spring.

(2) During the same period the names of the months were probably adopted from the Canaanites. Two of the four pre-exilie names which occur in the OT have been found in Phoenician inscriptions—Bul thrice, and Ethanim twice (cf. CIS i.

No. 86a). The four names are:

(a) Ethanim (1 K 82, where the editor, following later usage, calls it the 7th month). It is explained by Oxf. Heb. Lex. as 'month of steady llowings,' i.e. the month in which only perennial streams contain any water.

(b) Bul ('the eighth month' in 1 K 638), prob.

= 'rain month.

(c) Abib (Ex 134 2315 3418 [JE], Dt 161), in P (e.g. Ex 122) the first month. The name, which means an 'ear of corn,' was no doubt derived from the fact that it was the beginning of the harvest (cf. Dt 161. 9).

(d) Ziv ('the second month' in 1 K 6<sup>1-57</sup>), 'splendour,' with reference, Gesenius supposes, to the beauty of the flowers; but it might be to the general beauty of Nature at this season. before vegetation has suffered from the summer

drought.

There are, besides, in Phonician inscriptions several other names of months which are not actually found, or at any rate with this significance, in OT, but were not improbably used by the early Hebrews. Thus we have Marpeh, Phauloth, Mirzah, Mapha', Hir, Zebah-shishim. But we have no means of ascertaining definitely to what months these names belong. On the other hand, Abib and Ziv have not yet been found on any Phoenician

inscription. B. (1) After the Exile the religious year, at any rate, began about the vernal equinox, or, to be more exact, with the first lunation of which the full moon fell after the vernal equinox. This was at least the intention. But very probably, with the early arrangement of intercalary months, as certainly with the more systematic adoption of definite cycles at a later time, it sometimes happened that what was regarded as the first full moon either slightly preceded the equinox or was in reality the second after the equinox. The whole eyele of feasts, according to the laws of the Priestly Code, depended on this theory. The first lunation was what had been known as Abib (see above), The express provision that this was to be the first month of the year (Ex 122 [P], cf. 134 [J]) suggests what was at the time a new departure, but came to be regarded as an ancient tradition.

It is at least possible that, through Assyrian or Babylonian influence, the custom of reckoning the year from the spring for secular purposes had come into use a little before the Exile. That it was so reckoned in the record of Jehoiakim's treatment of Jeremiah's roll (Jer 36) is evident from the fact that there was a fire in the brazier in the 9th month (v.22). But this by itself is not conclusive, because the record was probably taken from a biography of Jeremiah, which may well have been

written in the time of the Exile, when the new custom had come in

(2) As a rule, the months were now, for religious purposes, designated in the order of their occurrence as the first, second, third, etc. (Gn 7<sup>11</sup>[P] 8<sup>4</sup>[P], Lv 23<sup>5f.</sup> [11], Hag 1<sup>1</sup> 2<sup>1</sup>, Zee 1<sup>1, 7f.</sup>). With this we may compare the similar designation of the months by their numbers, by the Society of friends. As in the latter case, the object was probably to avoid names which had a heathen association

For civil and historical purposes the Babylonian names of the months were now adopted. Of these, 7 only are mentioned in the OT and the Apocrypha.

Nisan (1st mo.), Neh 21, Est 37, Sivan (3rd mo.), Est 89, Elul (6th mo.), Neh 615, 1 Mac 1427, Eisker (4th mo.), Neh 11, 1 Neh

Etti (5th mo.), Neh 123, 1 Mac 14-7. Kisler (6th mo.), Zec 71, Neh 12, 1 Mac 42-2, 2 Mac 12-18 105. Theteh (10th mo.), Zec 17, 1 Mac 1014. Skebat (11th mo.), Zec 17, 1 Mac 1014. Adar (12th mo.), Ezr 615, Est 37-13 S12, 1 Mac 743-49, 2 Mac 152.

The other  $\delta$  months were : Tyyar (2nd mo.):  $Tamm\bar{a}z$  (4th mo.), cf. Ezk 8<sup>13</sup>, where the name appears as that of a god; Ab (5th mo.), Tiksrl (7th mo.), Tiksrl is short-shown (8th mo.), Tiksrl is short-shown (8th mo.), Tiksrl in the Habiltonian names of the months were regularly employed the Babylonian names of the months were regularly employed

in the religious calendar.

(3) Before the Exile, beyond the weekly festival of the Sabbath or the 7th day of the week, and the New Moon on the 1st day of the month, it is doubtful whether any sacred day or season was absolutely fixed (see Festivals and Fasts [Heb.]; cf. Dt 16 with Lv 23), unless we are to suppose that the regulations of Lv 23 [II] imply that some provisions of the kind were made at the close of the monarchy. From the Priestly Code, including H, we find that a definite religious calendar was certainly in use in the Second Temple. Thus we have, in addition to New Moons and Sabbaths, from the 14th to the 21st of the 1st month the Feasts of Passover and Unleavened Bread (Lv 235-8), including also the sheaf-offering on the 1st day of the week which fell within this period (Lv 23<sup>(0-14)</sup>. Seven weeks after the latter, on another Sunday falling within the 3rd month, was the Feast of Weeks (Ly 2315-21). In the 7th month were three important celebrations—the Feast of Trumpets on the 1st day (Lv 2324, 25, Nu 291-6), the Great Day of Atonement on the 10th (Lv 16. 23:7-32), and the Feast of Booths, 15th-22nd (Lv 2334-36. 39-43),

Certain other fasts, which had come to be observed during the Exile (Zee 73. 5 S19), commemorating, it is said, events connected with the siege and capture of Jerusalem, were no longer enacted by law. On the other hand, some feasts were afterwards added, viz. that of Dedication, which commemorated the re-dedication of the Temple after its defilement by Antiochus Epiphanes (I Mac 459). This lasted for 8 days from the 25th of the 9th month (Kisley), The Feast of Nicanor, on the 13th of the 12th month (Adar), was appointed to celebrate the victory of Judas over Nicanor (1 Mac 749). The Feast of Purim, on the 14th and 15th of the same month, was, so it was said, appointed to commemorate the vengeance taken by the Jews on their enemies, as recorded in the Book of Esther (915-32; but see Festivals and FASTS [Heb.]).

CALENDAR (Indo-Chinese). — I. ANNAM (Cochin-China, Annam, Tongking). -The peoples of French Indo-China, as a rule, use a calendar of Indian origin, although Chinese influence (see Calendar [Chinese]) is clearly seen in the calendar that is peculiar to the Annamese. There are three cycles employed by the Annamese to express their dates: the duodenary cycle, or cycle of the twelve animals (ox, tiger, hare, dragon, serpent, horse, goat, monkey, hen, dog, pig, rat), which is of Turkish origin; the denary cycle, the ten 'trunks'2 of which have the names of the five elements and the five cardinal points; the repetition of the first cycle five times, combined with six repetitions of the second, makes the great eyele of sixty years.

The year is a lunar one, and is composed of twelve months of 29 and 30 days alternately, making 354 days; to this they add a thirteenth intercalary month every three or four years arbitrarily. In a period of 19 years there are therefore

seven years with thirteen months.

The first month of the year has always 29 days;

of melons (qua ng.); the eighth, the month of einnamon (que ng.); the ninth, the month of chrysanthemnms (che ng.); the tenth, the month of rest (nhan ng.); the eleventh, the month of the solstice (gia ng.); the twelfth, the month of offerings (lap ug.).

The civil day begins at midnight, and contains 12 hours, each equal to two hours of our time. The last day of the month is called the 'day of darkness'  $(\hbar \hat{\sigma} i n h \bar{q} t)$ —an allusion to the waning of the The Annamese night is often measured, according to the Chinese custom, by five watches: the first begins at 7 p.m., the second at 9 p.m., the third at 11 p.m., the fourth at I a.m., the fifth at 3 a.m.

The farmers' calendar in Annam, as in China, has, besides the four chief seasons, twenty-four

smaller intermediary seasons.

An Annamese almanac indicates, in short, the current year in the great eyele and in the other two cycles; the full, incomplete, and intercalary (if there are such) months; the day of the month, with its order in the year; the name of the one of

in the Chinese astronomical year it begins on the 22nd of December; in the civil year, it always begins between the 20th of January and the 19th of February. The month has a regular division into three decades, but this division is being gradually superseded by the European division into weeks of seven days.

As a general practice, the Annamese name their months by successive numbers from one to twelve (first month, second month, etc.). But there is another system of names, which is employed only in the literary world: the first month is always designated by the number one (chin nguyệt, 'first month'); the second is the month of flowers (hoa nguyēt); the third, the month of peaches (đảo ng.); the fourth, the month of plums (môi ng.); the fifth, the month of cakes (bò ng.); the sixth, the month of heat (thu' ng.); the seventh, the month

the five elements or of the twenty-eight constellations that corresponds to it; the accepted sign for lucky and unlucky days; the phases of the moon; eclipses of the sun and moon; the one of the twenty-four seasons of the year in which each month falls; the things that are permitted and forbidden on each day; and the days of civil observance. For some years now, the Chinese-Annamese almanac has also indicated the corresponding day in the European almanac.

II. CAMBODIA,-In Cambodia there are in use three eras of Hindu origin, and three cycles that come from China.

1. Eras.-There is a religious era, or 'era of the Buddha' (Khmer prah put sakrāt = Skr. buddha-šuk trāja), dating from the death of the Buddha (543 B.C.), which is commonly used in religious writings; a political or 'great cra' (Khmer maha sakrāc= Skr. mahāšakurāja), still used in the editing of

<sup>1</sup> See Edouart Chayannes, 'Le Cycle ture des douze animaus,' in Temappon, series it, vol. iii. No. 1.
2 In accordance with Chinese ideas, the denary cycle is regarded as having ten 'heavenly trunks,' the twelve 'earthly branches' of which form the dondenary cycle.
2 8kr. sampledhie "completion."

royal annals, which is the Hindu era named after śaka and beginning A.D. 78; a civil or 'lesser era' (Khmer côl sakrāć=Pāli chullasakarāja). employed by the Khmers in everyday actions, transactions, and correspondence, which is of astronomical origin, and dates from A.D. 638.

astronomical origin, and dates from A.D. 658.

2. Cycles.—The principal cycle is that of the twelve animals (see above, I.), with names as follows: chit, 'rat'; chlan, 'ox'; khōl, 'tiger'; thās, 'hare'; rōn, 'dragon'; msnā, 'serpent'; momi, 'horse': momi, 'gont'; rok, 'momkey'; roka, 'cock'; chu, 'dog'; kōr, 'pig.' The names of these animals are not Khmer, but seem to belong the seam diabet of the sauth of China. This cycle. to some dialect of the south of China. This cycle, repeated five times, is combined with a secondary cycle of ten years, the years in which are distinguished by means of ordinal numbers borrowed from Pali. In other words, the series of the twelve animal-names (the principal cycle), repeated five times in succession in the same order, gives a period of sixty years, which is divided into six decades (secondary cycles). It is the same system as the one brought by China into Annam, except that the denary cycle is not named in the same way. The foregoing table gives an idea of the composition of the Cambodian cycle.

3. Year and months. - The Cambodians have a lunar year. It contains twelve months, of 29 and 30 days alternately, with the following Indian names: (1) cct (Skr. chaitra); (2) pisak (Skr. names: (1) cet (Skr. chatra); (2) pisak (Skr. vaišákha); (3) èvs (Skr. javshha); (4) ásáth (Skr. ásádha); (5) sràp (Skr. šrávana); (6) photrabát (Skr. bhādrapada); (7) ásáð (Skr. ášvayuja); (8) katek (Skr. kārttika); (9) mākvsīr (Skr. mārqasšvaya); (10) bås (Skr. pausa); (11) mākh (Skr. mārqasšvaya); (12) phátkik (Skr. plausa); (13) mākh (Skr. mārqas); (12) phátkik (Skr. plausa); (13) mākh (Skr. mārqas); (14) mākh (Skr. mārqas); (15) phátkik (Skr. plausa); (15) mākh (Skr. mārqas); (16) mākh (Skr. mārqas); (17) mākh (Skr. mārqas); (18) mākha); (19) mākh (Skr. mārqas); (18) mākha); (19) mākh (Skr. mārqas); (19) mākha); (19) māk

fifteen days: the period of the waxing moon (clear fortnight), and the period of the waning moon (dark fortnight). The Buddhists of Cambodia keen the eighth and, more especially, the fifteenth day

of each of these periods as holidays,

The year begins in &t (March-April); but although the New Year festivals are celebrated in this month, it is the custom not to begin the year until the month of pisak (April-May), or sometimes even makosir (Nov.-Dec.), in memory of the death of the Buddha. As the Cambodian year has only 354 days in all, an intercalary month is inserted astrologers, by doubling the month of asath (June-July); hence there is a first and a second àsáth (prathomosáth, tütiyűsáth = Skr. prathamus., dvitīya-āsādha). A period of nineteen years thus contains seven years with thirteen months.

4. Days .- The names of the days are also of Indian origin: thinni atit (8kr. aditya), 'Sunday'; t. can (8kr. chandra), 'Monday'; t. ankar (Skr. angāraka), 'Tuesday'; t. pūt (Skr. budha), (SKr. angaraka), 'Tuesday'; t. put (SKr. budua), 'Wednesday'; t. prahas (SKr. brhaspati), 'Thursday'; t. sök (SKr. sakra), 'Friday'; t. son (SKr. sanaischara), 'Saturday'; no day is a holiday in

itself.

5. Hours. - The Cambodians divide the day into two parts of twelve hours each: the part from 6 a.m. to 6 p.m. is day, and that from 6 p.m. to 6 a.m. is night. In Cambodia, from 6 to 7 a.m. is 1 a.m., 7 to 8 a.m. is 2 a.m., 11 to 12 mid-day is 6 a.m., mid-day to 1 p.m. is 1 p.m., 1 to 2 p.m. is 2 p.m., 5 to 6 p.m. is 6 p.m. The hour is divided into bot, each of which is equal to five minutes. The night is sometimes divided into four watches (you ; Skr. yama, 'watch') of three hours each ; the first from sunset to 9 p.m., the second from 9 p.m. to midnight, the third from midnight to 3 a.m., and the fourth from 3 a.m. till day time. i.c. 6 a.m.

6. Seasons. - The Cambodians have three seasons (rodar, khc): (1) rainy season (rodar phlich, khć prah vosa [= Pali vassa]); (2) cold season (rodoz ronar, khi romho' i); (3) dry or warm season (rodov pran, r. kdau).

7. Almanac. - The name given to the almanac in Cambodia is mahasankran (Skr. mahasankranti, great transit'). The Skr. expression samkranti is used to designate the passing of one sign of the zodiac into the next sign; as the 'great transit' is the one that marks the beginning of the new year, the derivation of the Cambodian expression is

The linears, or royal astrologers, arrange the Cambodian calendar year by year. For each month it gives the relation of the days of the week to the 1st, 8th, and 15th days of the waxing moon (kbr), to the 1st and 1sth days of the waxing moon (kbr), and to the last day of the month (kbr dabc). It is followed core, and to the last day of the month (the due). It is followed by a public notice gaving various internation on the beginning of the year, and rules connected with the position of the different orders of the State, with the temperature, rain, harvests, rise of the river, prices of commodities, echases of the moon, and, lastly, faing the mittal day of the rassu, or retirement of the religious, during the rainy season.

L. Finot (see Lit. below), from whom these details are borrowed, adds that the basis of the Cambodian almanac is Hindu, and that the very language it employs is a witness to the deep and

persistent influence of Indian science.

LITERATURE.—G. Jeannean, 'Notice sur le calendrier cambodicion, in Annuaire de le Cochmehine, 1850; 'Un Almanach cambodicin', 'Ir. Ph. Hahn and L. Finot in Review Indo-Chimber, Hanot, 1964, pp. 183-143; Moura, Vocabulaire français-cambodigien-i et cambodigien-i grangais-cambodigien-i et cambodigien-i grangais, Paris, 1878, pp.

111. CHAMPA.—It is probable that in ancient times the Chams, like their neighbours the Klimers, had a calendar of Hindu origin, but they have lost it and have also completely forgotten the saka era (A.D. 78) which their ancestors employed in inscriptions. Nowadays they simply use the Chinese. Annance calendar for the needs of daily life, the only difference being that their year starts in April-May.

1. Cycles.—(1) Sexagenary cycle.—The Chanis adopted the Chinese-Annamese sixty-year cycle.

(2) Duodenary cycle.—This is the cycle used for aming and calculating the years. The twelve naming and calculating the years. The twelve year-names are borrowed from animals, but—a peculiarity which is worthy of remark-they are pecularly which is worthy of remark—they are also the names employed in ordinary everyday language. The names of the twelve years are: (1) tikah, 'rat'; (2) k how, 'buffalo'; (3) rimanh, 'figer'; (4) tapain, 'bare'; (5) nōgarah, 'fargon'; (6) ulā ann'h, 'fittle senpent'; (7) asaih, 'horse'; (8) sahaha (18) (18) (18) (18) (18) (18) (8) palacity, 'goat'; (9) krā, 'monkey'; (10) mönuk, 'hen'; (11) asān, 'dog'; (12) palacit, 'pig,' (3) Eight-year cycle.—There is another Cham

calendar based on the eight-year cycle, called winds by the Javanese, and probably introduced into Champa by Musalman missionaries from Java. In Java, the Javanese-Musalman civil year is lunar, and it originated from the Indian luni-solar year; hence it differed somewhat from the real Arabian lunar year. Efforts were made to bring these years back to correspondence, and the means employed was the windu, or cycle of eight years. We need not enter into details here, but it may be noticed that in Java the years of the winds have the following Malaysian names:  $alip_i$ , che, jaq aval, je or  $dz^i$ ,  $d\tilde{a}l$ ,  $b\tilde{e}$ ,  $v\tilde{e}u$ , jim  $ah\tilde{e}i$ , and are represented by the Arabic letters: a, h, j, dh, d, b, w, f. The Chanis have the same names slightly modified; aliah, hak, jimaral, cii. dal, bak, wan, jugathir, and represent them by the same letters, though sometimes substituting h for h, and z for dh in their calendars, and often parting the figures 1, 4, 6, etc., meaning 1st, 4th, 6th day, under the 1 A ph-50typic reproduction of a perpetual Chain calendar will be found in the present writer's article, 'Les Chains musul-man del Hudo Chine,' in *Revive du monde musulman*, April 1907, No. 6, p. 175.

Arabic names of the days ahud, arba, subt, etc., instead of writing out the days of the Cham week in full.

As the Chams combined their 12-year cycle

two series was covered, in theory, by means of an embelismic year, and more simply by adopting the corrections of the Chinese-Annaurese calendar.

Predictions based on coincidences of years and days, analogous to the angara-kasih of the Javawith the windu, or 8-year cycle, the years in which are designated by letters, it follows that three 8-year series and two 12-year series the cycles of the 'rat' and the 'pig' coincide in

year and days, there will be a great number of births that year, and flocks and herds and rice in abundance: under the opposite conditions the year will be unlucky.

2. Months. The Cham year, whether full or incomplete, is divided into twelve lunar months; it begins in April-May. The first ten months are simply distinguished by numbers, while the last

two have special names of Indian origin.

The Bani, or Musalman, Chams borrowed the names of their lunar months from the Arabs with slight alterations. The lunar months of both peoples, which have alternately 30 days (full month) and 29 days (incomplete month), are divided into two fortnights, according as the moon is waxing or waning-the second fortnight sometimes counting fifteen, sometimes fourteen days; but, owing to complications which are not easy to explain, the days of the months of the Brahmanist Chams do not coincide with those of the Musalman Chams. Official documents are dated according to the days of the Annamese month.

3. Days .- The Chams have our week. names of the seven days correspond exactly to ours, are of Sanskrit origin, and are borrowed from the planets. The Musalman Chams, especially in Cambodia, sometimes use the names of the days of the Arabian week with modifications.

5. Mystical speculations of the Chams concerning the calendar .- According to the mystical speculations of the Musalman Chams, which are adopted also by the Brahmanist Chams, each year of the cycle comes from a part of the body of Muhammad. The year of the Rat, e.g., comes from the left ear, the year of the Buffalo from the left nostril, the year of the Tiger from the right ear, etc. Allah created the year of the Serpent first of all; among the months Ramadan was first, among the days junuat, 'Friday.' The first three days of lunation are presided over by the three favourite wives of Muhammad. The seven days of the week come from the seven parts of the Prophet's body; the first four Muhammadans— Ubakar (Abū Bakr), Umar ('Umar), Uthamön ('Uthmān), and Alī ('Alī)—are the angels of Allāh's glory and the four *imāns* of the cardinal points. The watches of the night or day are male or female. Of the hours of day the first comes or tenane. Or the nours of day the list counts from Allah; the second from Muhammad; the third from Gabriel; the fourth from 'Ali; the fifth from Phwatimöh (Fāṭima); the sixth from Hasan; the seventh from Unsain; the eighth comes back to Allah. The thirty days of the month come from the thirty teeth of Adam : the upper jaw is the origin of the fifteen days of the waxing moon, the lower jaw gives the fifteen days of the waning moon. Adam's other two teeth are of the waning muon

Months of Brā	hmanist Chams.	Months of Musalmān Chams.

(Skr. āditya), 'Sunday'; 2. som (Skr. soma), 'Monday'; 3. mar (Skr. nigāraka), 'Tnesday'; 4. but (Skr. budho), 'Wednesday'; 5. jp (Skr. jīva), 'Thursday'; 6. šuk (Skr. šukra), 'Friday'; 7. sančar (Skr. šanaišchara), 'Saturday.'

(b) Week of the Musalman Chams: 1. ahat (Arab. al-ahad); 2. ōśsanai (Arab. ōl-ithmain); 3. asalasak (Arab. ath-thalāsā'); 4. rośbuā (Arab. (Arab. al-jūm'a), 'day of Assembly'; 7. sabat, söttö (Arab. as-sabt), 'Sabbath day.'

4. Hours.—The day is divided into twelve hours, each equal to two hours of our time. One text even says that a day and night contain eight hours

The hours are reckoned from the first (each). cock crow; those between sunset and sunrise are called 'night hours,' and correspond to the five

watches of the night.

The hour again is divided into eight parts, each equal to our f hour. The time is told by means of equal to our 4 mon. I more than 2 mm; 'the cock grows'=1 a.m.; 'the cock jumps to the ground'=2 a.m.; 'the sun is risen'=6 a.m.; 'the sun is a perch above the horizon'=6.30 a.m., etc. The twelve hours of the day are also reckoned by giving each the name of one of the animals of the cycle—tuk tikuh, 'hour of the Rat'; tuk kuhav, 'hour of the Buffalo'; tuk rimaun, 'hour of the Tiger,' etc.

1 Cf. the Malaysian bulan puwasa (= Skr. upavasa), 'the month of fasting,' 'the fast of Ramadan' VOL. 111.—8

the seats respectively of Lord Muhammad and Lord 'Ali, etc. The root of all these speculations must lie in Islam.

LIFERTURE.—E. Aymonier and A. Cabaton, Diet. bam-français, Paris, 1996, p. xxis R.; A. Cabaton, Noncolles Recherches sur les Chans, Paris, 1991, p. 39ff., also 'les et hams mosulhans de l'Indo-Chine française,' in Ierne du monde musulhan, vol. il, April 1997, No. 6; E. M. Durand, 'Notes sur les Chans,' in Bulletin de l'Ecole française d'Extrême-Giorne tolte Don 1997, 259f Orient, July-Dec. 1907, p. 332 ff.

IV. LAOS.—The Laotians have a calendar very like that of the Siamese, which is also the calendar of the Khmers, and is of Indian origin (see above, H. (Cambodial, and CALENDAR (Siamesel).

I. Eras. -These are the same as among the

Siamese and the Cambodians.

2. Cycles.—The Laotians give to the animals of the duodenary cycle names very like those adopted by the Siamese, and not belonging to the every-day language. The names they use to denote the years of the denary cycle are ordinal numbers from Pāli.

3. Years and months.-The Laotian year is lunar, begins in December, and contains twelve months of 29 and 30 days alternately. In a series of three years, the first has 354 days, the second has 355 days, and the third is a compensating year with thirteen months = 384 days. It is the duty

<sup>1</sup> Lactian, which is a Tai dialect like Siamese, bears so close a resemblance to the latter that the art. Curreal (Siamese) may be referred to for the technical expressions.

of the bonzes to arrange the calendar so that the festivals shall fall at their proper seasons, and to determine how many days the intercalary month is to have. This is done without fixed rules, and according to the necessities of the case.

The months have no special names, but are merely numbered in order from one to twelve, as in Siam. The month is divided into two periods of fifteen days; the eighth, and especially the fifteenth, day of each period of the waxing or waning moon is a holiday; hence the growing custom in Laos of

reckoning by weeks.

4. Days.—These are the same as among the Siamese and Cambodians: 1. võn (=day) thit (Siam. văn athit); 2. văn can (Siam. v. căn); 3. văn khañ (Siam. v. ăikhan); 4. văn phut (Siam. v. phùt); 5. văn pāhat (Siam. v. pra:hāt); 6. văn suk (Siam. v. sūk); 7. văn sau (Siam. v. sắo). Văn thit (Sunday) always appears four times every month; a day is sometimes added and sometimes omitted, in order to make the eighth and fifteenth days of the waxing or waning moon always fall on a Sunday.

5. Hours.—The Laotians, like the Khmers and Chams, reckon their hours by dividing the day into two parts of twelve hours each: from 6 a.m. to 6 p.m. is day, and from 6 p.m. to 6 a.m. is night. Mid-day corresponds to the end of the sixth hour of the day; midnight to the end of the sixth hour of the night. This is the Siamese system; formerly the day (from sunrise to sunset) was divided into eight niam of 11 hours' length, and mid-day corresponded to the tifth niam. A niam was equal to ten bat, or about nine minutes of our time: a but was equal to ten nathi, and a nathi almost equal to live and a half seconds of European time.

Tournier, Resident Superior, Hanoi, 1900, pp. 186-185; Pionnier, 'Notes sur la chronologie et l'astrologie au Siame tau Laos,' Anthropos,

iii. 489-507.

V. NORTHERN TONGKING.—There is a mass of little known ethnic groups, more numerous than important, ranged on the borders of Tongking and China, China and Laos, and Laos and Burma, which are classed together in French Indo-China under the administration of the military territories of Tongking and, in the case of a very small portion, under that of Northern Laos. These people seem reducible to a few ethnic groups: Tibeto-Burman, South Mongolian, and Indonesian. We may mention the Tais or Pou-Tais (divided generally into white, black, and red) and Noa-Tais; the Pon-On, the Ynn; the Man, the Mo, the Pa-Teng, the Kö-Lao, the Lolos, etc. They all use the Chinese or Laotian calendar more or less according to locality. Alongside of, and a degree below, these mixed peoples of the frontiers of Tongking are several semi-savage groups, possibly aboriginal, called by their neighbours of Annam, Cambodia, and Laos respectively mọi, phnon, or khã, i.e. 'savages.' These peoples, who are slowly tending to disappear, are continually being driven back into the mountains and uncultivated parts of the eountry by the forward progress of the more civi-lized races surrounding them, and have scarcely begun to be the object of serious study. have the various names of Bahnars, Sedangs, Jarais, Kalangs, Chnrus, Rongaos, Bolovens, Lovés, Samrés, Pors, Kuy Dek, etc. They do They do not seem to have a fixed calendar; all their computation of time is oral, empirical, and purely agricultural, based on the return of the principal seasons of rain and drought, and the sowings and harvests that bring round the return of certain rites. The year is lunar, the day is divided into several parts, according to the position of the sun

or to the various occupations, and the time is told by means of such expressions as 'at the first, or second, cock-crow,' 'sunrise,' 'sunset,' 'when children go to bed,' 'after a first sleep,' 'the time of smoking a pipe,' 'the time of cooking rice,' etc.

Lunet de Lajonquière, Ethnographie du Tonkin septentrional ..., Paris, 1996 (an important place is given in this volume to the partly unpublished works of Commandant Bonifacy); Bonifacy, Les Groupes ethniques du hassin de la Rivière Noire, in B&AP, 5th July 1907, and Monographie des Mins, Bul-Ban, Céc on Su'ing, in Rev. indo-Monographie des Mins, Bul-Ban, Céc on Su'ing, in Rev. indo-Monographie des S. 84-85; Dourisboure, Dut. behard Trayquat, Monchantes S. Hongkong, 1889. A CABATON.

CALENDAR (Japanese).-The Japanese have several ways of reckoning the days, months, years, and other periods. They have both selar and lunar time; Japanese, Chinese, and Occidental time; two national calendars, and several special periods; so that they have literally 'a time for everything, and, in some cases, they are very particular to do a certain thing on 'time.' Of the two Japanese calendars, one reckons from the mythological founding of the Japanese Empire by Jimmu Tenno in 660 B.C., and is known as kigen (historybeginning); and the other is the system of special

periods called nengo.

1. In the old style of reckoning, the years were named according to the twelve signs of the Chinese zodiae, taken in conjunction with the ten 'celestial stems' (jikkan), obtained by dividing into two parts each of the five elements (wood, fire, earth, metal, water). These elements are known in Japanese as ki, hi, tsuchi, ka (for kane), and mizu; and the subdivisions are called e (or ye) and to, of which the former is said to represent the active element and the latter the passive element. Rein's explanation is as follows: 'They [the Japanese] distinguish accordingly (with special Chinese signs) ki-no-ye, wood in general, and ki-no-to, worked wood; hi-no-ye, natural fire (of the sun, volcanoes), and hi-no-to, domestic fire; tsuchi-no-ye, raw earth, and tsuchi-no-to, manufactured earth; ka-no-ye, native metal, and kano-to, worked metal; mizu-no-ye, running water, and mizu-no-to, stagnant water.' This will all be made clear by reference to the table on p. 115.

2. The lunar year was divided into 12 months of 29 or 30 days each, and thus contained only 354 or 355 days; but this discrepancy from the solar year was made up by adding to certain years of every lunar cycle an intercalary month of varying length. An intercalated year contained 383 or 384 days. The months were named numerically, as follows:

Ichigatsu				First Moon
(or Shogatsu	ι.			True Moon).
Nigatsu .				Second Moon.
Sangatsu.				Third Moon.
Shigatsu.				Fourth Moon.
Gogatsu .				Fifth Moon.
Rokugatsu				Sixth Moon.
Shichigatsu				Seventh Moon.
Hachigatsu				Eighth Moon,
Kugatsu .				Ninth Moon.
$J\bar{u}gatsu$ .				Tenth Moon.
$J\bar{u}$ ichigatsu				Eleventh Moon.
Jünigatsu				Twelfth Moon.

The months had also poetical, but no less practical, appellations, as follows:

- 1. Mutsuki (Social month), Umutsuki (Birth mouth), or Taro-zuki (Eldest-son month).
- 2 Taro-21kit (Eddess-son monon),
  2. Kisaragi (Putting on new clothes).
  3. Yayoi (Great growth).
  4. Uzuki (Hare month), or Mugi-aki (Wheat harvest).
  5. Satsuki (Early moon).
- Minazuki (Waterless month [period of drought]).
   Fumizuki (Rice-blooming month, or Composition month).
   Hatsuki (Leafy month), or Tsukimi-zuki (Moon-viewing
- month).1 9. Nagatsuki (Long moon), or Kikuzuki (Chrysanthemum month).

<sup>1</sup> Or Ina-agari-zuki (Month when the rice comes up), or Momijizuki (Red-leaves month),

10. Kannazuki (Godless month) 1 or Koharu (Little Spring) 2

10. Kannezuk (Gomess month), or Konaru (Latte Spring.).
11. Shinotaki (Frost month), or Vogetsu (Sunny month).
12. Shiwasu (Finishing-up month), or Gokugetsu (Last moon).
The appropriateness of these names will be more evident if one bears in mind that the New Year of

the lunar calendar begins from 3 to 6 weeks later

than January L.

The four seasons of spring, summer, autumn, and winter were recognized; and there were 24 periods of 14 or 15 days each, which to a great extent indicated the weather, and which the farmer carefully followed in planning his labours. These were as follows, beginning in February, about the time of the beginning of the New Year (Old Cal.):

	or the beginning or the	2 * 10	(a) T (.)	ar (com c
1.	Risshun (Rise of Spring)			Februar
2.	Usui (Rain Water) .			rebruai
3.	Keichitsu (Awakening of In	sects	) .	March.
	Shumbun (Vernal Equinox)			j maren.
	Seimei (Clear and Bright)			April.
	Koku-u (Cereal Rain) .			1 Mpine
				May.
	Shoman (Little l'illing)			1
				June.
	Geshi (Summer Solstice)			f state.
	Shosho (Little Heat) .			July.
12	Taisho (Great Heat) .	_		, Jan.

official holiday, and with names adapted from the Occidental names, as follows:

Nichiyobi ! (Sun-day) - Sunday. Getsuyobi . (Moon-day) = Monday. (Moon-day) = Monday, (Mars-day) = Tuesday, (Mercury-day) = Wednesday, (Juppiter-day) = Thursday, (Venus-day) = Freday, (Saturn-day) = Saturday, Kwayobi . Suiyābi Mokuvābi Doyobi

There was, moreover, another division of the month more or less common even at the present By it each month is divided into three periods, called jun, of about ten days, known as jöjun, chūjun, and gejun (upper, middle, and lower decades).

5. The days of each month were named, not only in numerical order, but also according to the sexagenary tables mentioned above in connexion with the names of the years in 'a cycle of Cathay. And the latter names were perhaps more important than the numerical ones, because, according to these special names, a day was judged to be either lucky or unlucky for particular events

## Synopsis of the Sexagenary Cycle.

was not until the present era [Meiji] that the ichiroku, or holidays on the 'ones' and 'sixes' of each month,' were introduced. This was speedily abandoned for the week system, with Sunday as an

<sup>1</sup>The Shinto gods (kami), except Elisu (god of wealth), who is deaf and does not hear the summons, were all supposed to leave the other parts of the country and to assemble in 'annual conference' in their ancestral home of Planne, And as the conference in their successful none of reasons. And as the gods had thus neglected their usual business of watching over the people, it was not considered of any use to offer prayers or sacrifices, and that month was called kami-naki-tsuki, or kanna-zuki, or kanna-zuki.

Corresponding to 'Indian summer.'
There were also 72 periods, more minute.
Ist, 6th, 11th, 16th, 21st, 26th, 31st.

6. The hours were named both numerically and

6. The hours were named both numerically and zoologically. The first plan was as follows: Kokomotosu-doki (finith hour). 11 p.m. 1-m. and 11 a.m.-1 p.m. Valsa-doki (eighth hour). 3-a.m. and 10 a.m. and 13 a.m.-2 p.m. Valsa-doki (eighth hour). 3-a.m. and p.m. Motosu-doki (eighth hour). 3-a.m. and p.m. Motosu-doki (eight hour). 7-2 a.m. and p.m. Motosu-doki (eight hour). 7-2 a.m. and p.m. With reference to this old-fashioned way of marking the hours, we quote further words of explanation from Chamberlain's Thims Japaness (p. 470):

Why, it will be asked, did they count the hours backwards? Acase of Japaness chost-driven do count from six to one, instead of legiming at so arbitrary a number as mine? The reason as there were six hours, not count from six to one, instead to legiming at so arbitrary a number as mine? The reason to warn people that the hour was about to be sounded. Hence, if the numbers one, two, and three had been used to denote any of the actual hours, comission might have arisen between them and the preliminary strokes—a contission analogous to that which, in our own still imperfect method of striking the hour, leaves us in doubt whether the single stroke we lear is indiquat twelve, one other of the numerous twelve, one o'clock, half-past one, or any other of the numerous half-hours.'

These names are directly derived from the names of the

pianess.

<sup>2</sup> In reckoning the hours, a distinction was sometimes made between the morning and evening, as follows: ake-mutsu (6 a.m.) and kure-mutsu (6 p.m.).

We may add that this style of computation is based on multiples of 'nine'  $(1\times9=9,\ 2\times9=18,\ 3\times9=27,\ 4\times9=36,\ 5\times9=45,\ 6\times9=54)$ , and in each case the 'tail' figure of the product was chosen as the name of the hour  $(9,\ 8,\ 7,\ 6,\ 5,\ 4)$ .

The second plan, based upon the heavenly

menagerie, was as follows:

1. Hour of the Rat, 11 p.m.-1 a ru. ,, ,, Ox, 1-3 a.m. 3-5 a.m. 5-7 a.m. 4. ,, ,, Hare, ., ., Dragon 7-9 a.m. " Serpent, 9-11 a.m. .. ,, ,, Horse, . 11 a.m.-1 p.m. 11 , Goat, Monkey, 1-3 p.m. 3-5 p.m. 5-7 p.m. 9. 22 , Cock, 11. , Dog, 7-9 p.m. 17 9-11 p.m. Boar.

By both of these systems, each 'hour' was 120 minutes in length; but it was also divided into jôkoku and gekoku (upper and lower koku), each of which was thus equivalent to 60 minutes.

There is also a division of the night into watches

 $(k\bar{o})$ , five in number, as follows:

Shokō, First Watch—Fifth Hour, 7-9 p.m.

Nikō, Second Watch—Fourth Hour, 9-11 p.m.

Sankō, Third Watch—Ninth Hour, 11 p.m.-1 a.m.

Shikō, Fourth Watch—Eighth Hour, 1-3 a.m.

Gokō, Fifth Watch—Seynth Hour, 1-3 a.m.

7. Festivals and holidays demand some attention

in connexion with the calendar.

The go-sckku, or five festivals, were, and are, carefully observed, although their dates have been changed to fit the new solar calendar. on the first 1 (or, as some say, seventh) day of the first month, the third day of the third month, the lifth day of the lifth month, the seventh day of the seventh month, and the ninth day of the ninth month. They have various names, of which the most general are those made from the names of the months, such as Shōgatsu-no-Sekku (First Moon's Festival), etc. But these names are not so commonly used as more specific ones, which describe more or less particularly the nature of the festival. For instance, the festival of the Third Month is well known as Jōmi-no-Sckku (the Girls' Festival), or Hinamatsuri (Dolls' Festival); that of the fifth month is the famous Tango-no-Sekku (the Boys' Festival), or Nobori-no-Schku (Banner Festival); that of the seventh month is commonly called Tanabata-no-Sekku (Festival of the Star Vega); while that of the ninth month is called Chōyō-no-Sekku (Indian Summer Festival), or Kikuno-Šekku (Chrysanthemum Festival). Moreover, the Girls' Festival is also called Momo-no-Sekku (Peach Festival), and the Boys' Festival is called Shōbu-no-Sekku (Sweet Flag Festival).2

The national holidays are as follows:

Shihōhai January 1. January 3. January 30. Genii-sai Kömei Tennö Sai Kigen-setsu. February 11. Shunki Körei Sai Jimmu Tennō Sai Shūki Kōrei Sai , . April 3. (about) September 24. . October 17. Kanname Sai Tenchő-setsu November 3. Niiname Sai . November 23. Shihōhai means 'four-sides-worship,' i.e. from Niiname Sai

the four points of the compass, or from all sides. Genji-sai means 'first-beginning-festival.' Tenchōsetsu is the Emperor's birthday. Kigen-setsu was originally a festival in honour of the ascension of Jimmn, the first Emperor, to the throne, and was thus the anniversary of the establishment of the Old Empire; but it is now observed also as the celebration of the promulgation of the Constitution (Feb. 11, 1889), and is thus the anniversary of the establishment of the New Empire. The Jimmu Tenno Festival, on April 3, is the so-called anniversary of the death of the Emperor Jimmu. The Kanname Festival in October celebrates the offer-1 Originally so established in the reign of the Emperor Uda

(A.D. 883-897).

<sup>2</sup> See also the present writer's Japanese Floral Calendar, and J. Conder's elaborate paper in TASJ, vol. xvii. pt. ü. pp. 1-96.

ing of first-fruits to the ancestral deities, and the Niname Festival in November celebrates the tasting of those first-fruits by the Emperor. The Spring and Autumn Festivals, in March and September, are adaptations of the Buddhist equinoctial festivals of the dead, Higan, and are especially observed for the worship of the Imperial ancesters. The Emperor Kömei was the father of the present Emperor, Mutsu Ilito, and reigned from 1847 to 1867. The 16th of January and July were and still are special holidays for servants and apprentices. The 17th of each month is a regular holiday for Tōkvō barbers.

Another special occasion is that known as Setsubun, which directly marks the end of winter and indirectly the end of the year. Theoretically, the two should correspond, but they do so only once in a few years. And yet Sctsubun is a kind of 'New Year's Eve' and is an important festival. It is the time when beans are scattered around in every house to scare away the devils, and the following formula is also supposed to be effective: O-ni wa soto:1 Fuku wa uchi.

'Out with the devils: In with good fortune.' This is also the occasion when 'each person present cats one more [bean] than the number of the years of his age.' The food eaten then is known as azukimeshi, and consists of red beans mixed with rice. This was likewise eaten in olden times on the 1st, 15th, and 28th of each month, which were the 'three days' (sanjitsu) then regularly observed as holidays. For a fuller description of Setsubun, see Hearn's Glimpses of Unfamiliar Japan, vol. ii. pp. 498-503; and for interesting notes on the New

Year's Festival, see pp. 493-498 of the same volume.
8. A few words of explanation of the system of nengō may be interesting. Those eras do not regularly, but only occasionally, correspond with the reigns of the Emperors, because 'a new one was chosen whenever it was deemed necessary to commemorate an auspicious or ward off a malign event.' But hereafter the era will correspond with the reign of an Emperor. The names of some of these eras are quite famous, like the Elizabethan or the Victorian Era in English history. As the first era was a time of great reforms, it is known as the Taikwa Reformation; the Engi era, in the tenth century, is eelebrated for important legislation; the Genroku era, in the seventeenth century, was 'a period of great activity in various arts'; and the Tempo era, of recent days, was 'the last brilliant period of feudalism before its fall.' This name was also given to the large 8-rin piece coined in that era. The Wadō era, in the fourteenth century, was so named on account of the discovery of copper; and the second era, Hakuchi, commemorates a 'white pheasant' pre-sented to the Emperor. The present era is known as Meiji, which means 'enlightend rule.' The names of these periods are formed by the various combinations, more or less appropriate, of 68 Chinese words of good omen.

9. An explanation is necessary concerning the Japanese method of reckoning, which is 'inclusive. Moreover, in the case of ages, the computation was made from New Year's Day, which thus became a kind of national birthday, as the birthday of the individual was not considered of sufficient importance. Thus a child born on the last day of a year would be considered two years old on the first day of the next year, because he had lived in both of these years. Therefore, in case of inquirboth of these years. Therefore, in case of inquiring a person's age, it would be very important to know whether the reply gave 'Japanese years' or full years. Ignorance or forgetfulness of this

 $^1$  But in shipping and express companies it is unlucky to repeat the first stanza, because o-ni may mean 'bonourable freight,' or 'baggage.'

distinction has often led to mistakes, and quite serious ones, in the case of historical records. chronicles, and genealogical tables. The inclusive reckoning must also be carefully noted in such expressions as 'ten days ago,' 'ten days later,' 'for ten days,' etc., which may mean what Occi-

dentals would express by 'eleven days.'

There is now, of course, considerable confusion between the old and the new calendars, of which the latter is official, but the former is popular and still observed in country districts. This confusion naturally leads to some Indicrons anachronisms For instance, the 7th day of the 1st month (o.c.) was known as Nanakusa ('Seven Herbs'), because the people were wont to go out into the fields and gather seven certain kinds of vegetables for use on that day; but January 7 is too cold and too early. In some cases, however, the old day is retained, no matter whether it fits the new calendar or

ERNEST W. CLEMENT. CALENDAR (Jewish). - 1. Historical. - The Exile in Babylon had considerable effect upon the calendar used by the Jews, as upon so many other features of their religious life. It was during the Exile that they became acquainted with the names of the months which they retain to the present day, and to which a Bab. origin is actually assigned by the Talmud (Jerus, Rösh Hashshāuu, I. fol. 56d, l. 13 from bottom). Our earliest authority for these names is now the Assuan Papyri (ed. Sayce-Cowley, London, 1906), which make mention of the following months: Ab (Pap. P), Elul (A, H), Tishri (G), Kislev (B, C, D, E, J), and Shebat (K). In the later discovered papyri edited by Sachau (Berlin, 1907) we find, further, Tammūz (Document i. 1. 4. 19) and Marcheshvan (ib. 1. 30; ib. ii. 1. 28). Of the former group the post-exilic books of the Bible mention Elul, Kisley, and Shebat, and in addition turnish the names Nisan (Neh 2), Est 37), Sivan (Est 8), Tebeth (216), and Adar (313 etc.). But the older practice of distinguishing the months by numbers must have remained in force alongside of the new nomenclature, and accordingly we find such expressions as 'in the first month, which is the month Nisan (Est 37), or simply 'in the first month' (312). is the case likewise in I Mac., where we find 700 μηνός τοῦ ένεάτου οὐτος b μὴν χασέλευ ( $4^{62}$ ), and also τοῦ μηνὸς τοῦ πρώτου ( $9^{3}$ ), etc. (cf. Schürer,  $GJV^{3}$  i. 32). A complete list of the twelve months-Iyyar being added to the foregoing names—is given in the so-ealled Megillath Ta'anith ('Roll of Fasts'), which probably dates from the beginning of the 1st cent. A.D. (cf. Schürer, i. 745; JE viii. The name of the 13th, or intercalary, month is first met with in the Mishna (Měgilli, i. 4: Nědôrim, viii. 5), occurring there as the wat (\* second Adar'). In the Mishna, too, the number of days in a lunar year is fixed at 354, and in a solar year at 364 (cf. esp. Tosefta Nazir, i. 3, ed. Zuckerman-From which some of the material here used is taken by

permission.

del, Pasewalk, 1880, p. 284, l. 5); but this would, of course, apply only to common years.

As regards the intercalary month, it has been maintained, especially by Mahler (cf. Schirer, i. 748, n. 2), that, as the Babylonians had an intercalary cycle of 19 years, this may well have been adopted by the Jews. But the investigations of Oppert (ZDMG li. 138) and Weissbach (ib. lv. 195) have shown the futility of the assumption.1 The Assuan Papyri yield ample proof of the fact that at the time after the Exile no such fixed cycle was in use among the Jews, and this would appear to be true also of the Talmudic period.<sup>2</sup> An eight-year cycle (oktaoteris) is probably referred to in the Book of Enoch (7413-16), and Sextus Julius Africanus (early 3rd cent.) says that both the Greeks and the Jews intercalate three extra months every eight years (cf. Poznański, JQR x. 156); but the statements are somewhat indefinite (Schürer, i. 751). Explicit mention of the nineteen-year cycle is first made in post-Talmudic writings (see below).

In two pseudopigrapha which date probably from Maccahaan times, viz. the Book of Enoch (loc. cit.) and the Book of Jubilees (ch. 6), it is assumed that the year consists of 364 days, i.e. 52 complete weeks.3 In each case the reckoning is by solar years, but it is hardly likely that this method was in general use at that time. It is recorded by David b. Merwan al-Mikmāş (or al-Mikānimeş), a writer of the 9th cent., that the Sadducees observed months of 30 days, i.e. solar months (Poznański, REJ, vol. l. p. 19). This testimony, however, adds the disadvantage of obscurity to that of lateness.

It finds no support in Talmudic sources.

Records dating from the closing years of the Second Temple inform us that the time of newmoon was fixed on the evidence of observers who declared that they had descried the crescent in the sky. This would imply that no one knew beforehand whether the month was to have 29 days (hence called 'defective,' חסר 30 days ('full,' יסיא וואס מענדי (fi. Bornstein, op. cit. 26 ff.). The regulation of the month was probably at first in the hands of the priests,4 and was afterwards committed to the Sanhedrin. Similarly, a leapyear was decided upon only when required, the main factor in the question being the state of the young crops, as it was desired that the Passover

1 Also the hypothesis that this cycle was observed in ancient

1 Also the hypothesis that this cycle was observed in ancient Babylonia, as held by Winckler, Jeremias, and others, must be unequiverally rejected (cf. Rogler, Sterikunde und sterndlenst in Bubel, Munster, 1907 ft., n. 192; Ungnad, in ULZ, 1910, 6.). Moreover, to judge from the data collected by kugler (c. 212), the regular employment of a nineteen-year cycle cannot be attributed to the Babylenians 11d the Seljik (era, by Gregoria) and the sterile of the second of the secon related in the Talmud (Sanbedrio, 120) that Akille (first half of 2nd cent, Anb) recknot drave successive years as intercalary—a fact which proves the non-existence of any intercalary eyele at that time. The same thing took place among the Karaites, who relinquished the method of computing the calendar for that of observing the moon (see below), as is attested by Levi by Yefeth (beginning of 11th cent.; cited in Finsker, Lekkute Karlamonte, Vienna, 1804, it. 20.

3 Aveording to Tpaten (REJ wii, 11; Ehlad har-Dani, 1892, p. 156(f), the Book of Juddhees has a two-fold determination of the year; the civil, with 12 months, right of which had each 120 stays. But the theory has not yet been finally confirmed.

4 See Auckermann, Materialian var Kanbriek, see alljuid Zeitschung fin Talmud (Breslau, 1882), p. 7. This work contains a careful and exhaustive compolation of the data supplied by the Talmudic the rature with reference to the method of determining both the ordinary and the intercalary month

should coincide with the earing of the corn (חרש ;1 the interealary month was therefore always an Adar. It was not till a later day that the position of the sun was also taken into account (הקיבה, tequfa; cf. Tosefta Sanh. ii. 7). This procedure was continued after the destruction of the Temple, though we are informed that the Patriarch Gamaliel II. (c. 100 A.D.), when examining the first observers of the crescent moon, made use of drawings of the lunar phases (Rosh Hashshānā, ii. 8). He is also said to have fixed the duration of the month at 29½ days, § of an hour, and 73 parts of an hour, but the last two terms are undoubtedly a late interpolation (cf. Schwarz, Der jud. Kalender, Breslan, 1872, p. 20; Slonimski, Yesode ha Ibbūr 3, p. 34). In course of time less and less attention was paid to the evidence of observers, and various devices of computation were increasingly resorted to, though the Patriarch and his council still continued to fix the time of new moon in the traditional way. This constituted, in fact, one of the strongest elements of cohesion amongst the Jews of the Dispersion, and, as a special prerogative of Palestine, it was most jealously guarded. An attempt made by the Babylonian Jews to free themselves in this regard from the domination of Palestine proved altogether abortive (cf. the story about Hananya the nephew of Joshua b. Hananya [1st half of 2nd cent.] in the Jerus. Nědarím, viii. 13 fol. 40 a, l. 30, etc.; also Bacher, Die Agada der Tannaiten, i. [Strassburg, 1903], 385).
At first the beginning of the month was an-

nonneed to the various communities by fire-signals, but, as the Samaritans and Boethuswans would sometimes deceive the watchers by false signs, the tidings were afterwards conveyed by special messengers (Rosh Hashshana, ii. 2). As the messengers, however, could not always reach the communities outside Palestine in time to announce whether new moon would fall on the 30th or the 31st of the old, these outlying groups of Jews kept on the safe side by observing their festivals both on the day appointed by the Scriptures and on the on the day appointed by the interpretation and of following day, the latter thereby acquiring the name מין מון בו שור בין "Second feast-day of the Diaspora"). The Day of Atonement, however, was celebrated on the 10th of Tishri only, and thus formed an exception to the rule (but cf. Jerus.

Hallā, i. 1, fol. 57c, 1. 14).

In the period of the Amoraim, of whom some were resident in Palestine, and others in Babylonia (3rd-5th cent.), we hear with increasing frequency of calculations and regulations for the calendar. One of the most eminent workers in this field was Samuel, 'the astronomer' (first half of the 3rd cent.), who taught in Babylonia, and who, it appears, sought to systematize the calendar, but was unable to carry out his design (Schwarz, op. cit. p. 32, n. 1). He is said to have drawn up a calendar available for 60 years (Hullin, 95a), and was the first of his nation to maintain that the year consists of 3651 days ('Êrûbîn, 56a), though he was still unaware of other essential principles of the calendar (Rosh Hashshana, 20b). One by one, however, these principles were adopted, though the general practice remained somewhat capricious in its adhesion thereto (see, c.g., Znckermann, op. cit. 46). One of the Palestinian Amoraim, Simon by name (c. 300 A.D.), speaks of 'calculators of the calendar' (אלין דמחשכן; Jerus. Sukkā, iv. 1, fol. 54b, 1. 17; cf. Zuckermann, p. 61); while another, Huna b. Abin (middle of 4th cent.), enjoined that, in deciding upon an intercalary month, regard should be had exclusively to the position of the sun (tequia: Rosh Hushshana, 21a), etc. Political

occurrences and the constantly increasing despotism of Rome simply forced the Jews to devise a means of determining the times of new moons and feasts independently of eye-witnesses. It is even recorded that during the campaign of Gallus (from A.D. 351 onwards), who dealt very harshly with the communities in Palestine, an intercalary month was inserted after Ab instead of Adar (Sanhedrin, 12a; cf. Graetz, Gesch. d. Juden, 1868-78, iv. note 31). It is also stated by Jose, an Amora who lived about this time, that the Feast of Purim (celebrated on 14th Adar) must never fall upon a Sabbath or a Monday, as in that case the Day of Atonement would fall upon a Friday or a Sunday—a contingency which on many grounds was forbidden (Jerus. Měgillā, i. 2, fol. 706, l. 23). By that time, therefore, the sequence of months from Adar to Tishri must have been precisely laid down. Jose is also reported to have sent a fixed order of festivals to the communities of the Diaspora (Jerus, Érûbîn, iii. end fol. 24c, l. 24). These varions items, however, form but the rudiments

of a continuous calendar.

Such a continuous calendar, according to a tra-dition that goes back to Hai Gaon († 1038), was constructed by the Patriarch Hillel II. in A.D. 359 (or, according to another version, 500, though by this time the day of Patriarchs was past). But the tradition, which stands quite alone, is confronted with grave objections. Of these the following two are of special weight: (1) The supposed calendar is never referred to in the Talmud, which received its final redaction at the end of the 5th cent. A.D. Nothing whatever is said there about the length of the month or the nineteen-year cycle, or anything else of the kind. (2) It is psychologically improbable that the Patriarch would of his own initiative divest himself of his highest privilege, and likewise of his most powerful means of influence amongst the Jewish communities both in Palestine and beyond it. Moreover, from the early post-Talmudic age we have dates which cannot be reconciled with the regular calendar in use to-day. 1 In point of fact, everything goes to indicate that the calendar, like all other productions of the kind, passed through a developing series of forms, and that it assumed its final shape in the schools of the official representatives of Judaism (called Geonim) in Babylonia.2 To the period of the Geonim, say the 7th and 8th cents., likewise belong two tractates relevant to the subject. One of these is entitled Pirke de Rabbi Eliezer, and contains almost all the elements of the modern calendar (caps. 6-8), but it shows so many instances of self-contradiction that we must assume the presence of various interpolations (cf. also Zunz, Gottesdienstliche Vorträge2 1892, p. 287 ff.). The other, Baraitha de Samuel (cd. princeps, Salonica, 1861), is wholly engaged with astronomy, and yields a single date, 776 (beginning of cap. v.; cf. below, and JE ii. 520), but says nothing at all about regulations for the calendar.

In the 7th and 8th cents., again, Judaism in the East was disturbed by the rise of various sects, many of which refused to recognize the existing calendar. One of its outstanding assailants was Anān b. David, the founder of Karaism (2nd half of 8th cent.), who abandoned the method of computation, as being repugnant to Scripture, and reinstated that of lunar observation (see art.

1 One such date is the year 506, and another the year 776; cf. Bornstein, מחלקת רב סעריה נאון ובן מאיד (Warsaw, 1904),

cf. Bornstein, the property of the Jewish 2 The first to indicate Eak, long as the birthplace of the Jewish 2 The first to indicate Eak, long as the birthplace of the Jewish and the continuous calcular had its origin in Babylonia during the post Talmudic period is furnished at the earliest by the proceedings of Ben Meir (see below), the inferences therefrom having been drawn by the present writer (JQR N. 152 ff.), and then elaborated by Bornstein in the treatise just cited.

<sup>1</sup> Cf. the story told of Gamaliel I. (at a time, therefore, when the Temple was still in existence) in Tosefta Sanhedrin, ii. 6 (p. 417 f.).

KARAISM). It is said, however, that in taking this step Anan simply wished to make a concession to the predominant power of Islam, and thus ingratiate himself with the Khalif (cf. Poznański, REJ xliv. 167). He is also said to have maintained that the intercalary month might be inserted as legitimately after Shebat as after Adar (Kirkisani, Kitāb al-amwār, ed. Harkavy, p. 313, l. 7; al-Birūni, Chronology of Ancient Nations, ed. Sachau, Leipzig, 1876-78, p. 59 [Arab. text]=p. 69 [Eng. tr.]). One of 'Anan's successors, Benjamin al-Nahawendi (9th cent.), states that there are two kinds of months: religious or hunar months of 29 or 30 days, which serve to fix the dates of feasts and fasts, and civil or solar months of 30 days. In order to allow for the residual five days (he ignores the odd hours altogether), he proposes that a month be intercalated every six years, so that after a cycle of 42 years (7×6) the months will again begin on the same day (cf. Poznański, REJ That the 1st of the month, or the feast-day, should always coincide with the same day of the week—as would be possible only if the year contained an integral number of weeks, or 364 days was a desideratum also of the sect of Maghariya ('eave-dwellers'), whose period remains unascertained, and the Okbarites, whose founder, Meswi al-Okbari, lived in the latter part of the 9th cent. (REJ, loc. cit.). Jehnda the Persian, another heretic of that age, affirms that the Jews had always reckoned by solar months (ib.). The importance attached to the recognition or repudiation of the then existing calendar may be gauged by the fact that the official circles of Judaism were free to intermarry with the Isawites,1 who actually recognized Jesus and Muhammad as prophets, but not with the Karaites, the ground of distinction being simply that the former received the calendar while the latter did not  $(JOR \times 159)$ .

Against all these sectaries and heretics a stand was made by the Gaon Saadya b. Joseph al-Fayyūni (892-942). In order to safegnard the existing system of calendar, he broached the remarkable theory that it was of immemorial antiquity, and that months and festivals had always been determined by calculation. He maintained that observation of the moon was introduced only in the time of Antigomus of Socho (3rd cent. B.C.), as heretics had arisen who questioned the accuracy of the calculations, and that this step was taken simply to show that calculation and observation were in perfect accord (see REJ xliv. 176). I was an easy matter for the Karaites to quash this theory by means of data from the Tahmud (cf. Voznański, JQR x. 271; also The Karaite Literary Opponents of Saudiuk Guon, London, 1908, pussim), and the majority of Rabinical anthorities had likewise to admit that

Sandya's contentions were absurd.

The last great controversy regarding the validity of the now universally recognized calendar broke out in 921. In that year, Een Meir, a character otherwise unknown, made his appearance in Palestine, claiming to be a descendant of the Patriarchs. He sought to restore the prerogative of the Holy Land in the fixing of new moons and festivals, the means to be employed, however, being no longer observation but calculation. He proceeded to modify one of the most important regulations of the calendar. It had been laid down that, if the conjunction of sun and moon which marks the

 $^1$  The founder of this sect, 'Abu 'Isâ al-Isfahâni, arose c. 700 a.b., and adherents were still to be found in the 10th cent. (cf. Poznański, JQRxvi. 770).  $^2A$  second theory was advanced by Maimonides († 1204). viz.

beginning of Tishri took place after noon on a particular day, the statutory beginning of that month should be transferred to the day tollowing, and that, if the latter happened to be Sunday, Wednesday, or Friday, on none of which Tishri could legally begin (see below), a delay of two days should be made. Now, Ben Meir professed to have a tradition to the effect that the month of Tishri is to begin on the day of communication, save only in the case where that event takes place 642 parts of an hour after midday—the hour comprising 1080 parts (see below). On this principle the variation in fixing the months and festivals might amount to one or even two days. A case in point occurred in the years 921-923, and a cleavage between the Palestinian and the Babylonian Jews was the result. This dispute is referred to by the Karaite Sahl b. Masliah (end of 10th cent.; see Pinsker, Likkute Kadmoniot, ii. 36) and the Syrian Elia of Nisibis (Frag. syr. u. arab. Historiker, ed. Baethgen, Leipzig, 1884, p. 84), neither of whom, however, mentions Ben Meir by name. The Jewish exilarch of the day invoked the aid of the young but erudite Saadya al-Fayyūmi, who disputed the position of the innovator with complete success. definite interval selected by Ben Meir, viz. 642 parts of an hour, is, no doubt, traceable to the fact that. while the Jewish calendar was based upon the meridian of Babylonia, Ben Meir and his predecessors reckoned from that of Palestine. Now, in Palestine the year began with Nisan; in Babylonia, with Tishri. But the particular new moon of Nisan which formed the starting point of the Palestinian reckoning fell on a Wednesday at nine hours of the day and 642 parts of an hour. When this number was transferred to Babylonia the fractional part was dropped, and hence the variation introduced by Ben Meir. In any case, the controversy shows that the Jewish calendar had its origin in Babylonia during the period of the Gaons; and this conclusion is abundantly confirmed by other facts, which will be further discussed below, in the systematic part. But even Ben Meir never ventured to propose a return to the method of lunar observation.

The sole adherents of the latter were the Karaites, who had reverted in all respects to the ancient practice of determining the time of new moon by observation, and intercalating a thirteenth month when required by the state of the crops, i.e. the ripening cars ('Abib). One of the earliest of that seet, Daniel al-Kumisi, held, indeed, that all recourse to astronomical calculation was mere cloud-peering and star-gazing, quoting against it Dt 18<sup>16</sup> (Harkavy, Studien u. Mitteilungen, VIII. i. 189), and his example was followed by nearly all the Karaites. Only if the atmospherical conditions rendered observation impossible was it allowable to resort to approximative calculations (Heb. דקרבה ef. Bornstein, Chronological Data, p. 38). Not till the 14th cent, did they accept the nineteen-year eycle, and even then only for regions far away from Palestine, such as Byzantium, the Crimea, Poland, etc. In Egypt, for instance, as late as the 17th cent., we still find the practice of intercalating a supplementary month as necessity required (cf. Gurland, Ginze Israel, Lyck, 1865, i. 5). But the Karaites, scattered as they were in various countries, fell into confusion in the matter, and celebrated the same festival on different days. They were thus convelled gradually to fall back upon the expedient of calculation, and to construct astronomical tables for the purpose. One of the first to draw up such tables was Elia Bashiatchi of Constantinople

<sup>&</sup>lt;sup>2</sup> A second theory was advanced by Maimonides († 1294), viz. that the method of calculation was always known, but could be legally resorted to only if the northod of observation were abandoned, i.e. if there should no longer be a Sanhedrin in Palestine (see Bornstein, op. cit. 151).

<sup>1</sup> The first to call attention to this matter was Bornstein in the monograph already cited. The strictures of Epstein (Hangtorea, v., 1993, 118-142) are incompetent. Cf. also Joffe in the Heb. Encyc. Osur Isracl, s. v. Ben Meir' (iii., New York, 1993, p. 100ff.).

(† 1490), whose book was called Adderct Eliyahu (cd. princeps, Constantinople, 1531). A thorough-going reformer appeared in Isaac b. Salomo of Chufut-Kale, in the Crimea (1755-1826), who, in his Or ha-Lebana (Zitomir, 1872), maintained that perpetually repeated observations were unnecessary. He takes as his starting-point the new moon of Tishri 1779, when the so-called limits of visibility, i.e. the sum of the elongation and the arc of vision (areus visionis), amounted to 13° 7', and makes this the minimal limit, so that the day for which that particular result is given by calculation is thereby constituted the beginning of the month. He lays it down as a necessary condition that the moon shall not set before the sun. His followers, however, have discarded even the latter provision, and, in fact, take into account only the clongation, whose minimal limit is fixed at a little over 4° (cf. Jehuda Kokizov, Binā la Ittīm, ii., Odessa, 1879, p. 2 ff.). Among the Karaites of the present day, accordingly, the determination of new moons and festivals depends wholly on the interval between conjunction and sunset, thus approximating—in theory-very closely to the method of the Rabbanites. In practice, however, the difference in the dating of festivals may amount to one or even two days. Nor do the modern Karaites recognize the so-called dehiyoth, 'displacements' (see below).

2. System and principles.—The Jewish calendar now in use is based upon a luni-solar system. The months are lunar, but provision is made for a periodic adjustment with the solar year. This is effected by the device of intercalating a month seven times in a cycle of 19 years, viz. in the 3rd, 6th, 8th, 11th, 14th, 17th, and 19th years (see below). As in all calendars of this type, the day commences with sunset, but the calendar day is reckoned from 6 p.m., and comprises 24 successive hours. The hour is divided into 1080 halagim, 'parts,' the heleq being thus equal to 31 seconds. This division is presupposed in works referring to the above-mentioned controversy between Ben Meir and Saadya (A.D. 921), but its origin is assigned to the sons of Issachar, who are said to have pursued the study of astronomy.2 The number 1080 was fixed upon probably because it has many different sets of factors (Schwarz, op. cit. p. 48). Now, as the days of the week are distinguished in Hebrew not by names but by ordinal numbers, any definite point of time is commonly indicated by three numbers, specifying day, hour, and heleq respectively. Thus, e.g., 3 d. 17 h. 480 p. (Heb. 7'n 1''' ''2) signifies Tuesday, 11 h. 26' 40'' a.m. In one particular instance, viz. the so-called tequia of R. Adda-to be mentioned later-the heleq itself was divided into 76 rega'im.

The duration of the synodical month, i.e. the interval between one conjunction (molad) and the next, is 29 d. 12 h. 793 p. (מרשל מי"ב מיש"ב ביש"ב)=29d. 12 h. 44' 3'' 20'''. But, as the calendar month must have an integral number of days, it has either 30 days (never 31), and is then called 'full' (מלא) or סמכבר), or 29 (never 28), in which case it is called 'defective' (ככה In the calendar now in use the months Nisan, Sivan, Ab, Tishri, and Shebat are always full, while lyyar, Tammūz, Elul, Tebeth, and Adar are always defective. Marcheshvan and Kisley may be both full or both defective; or, again, Marcheshvan may be full and Kislev defective.3

1 A Karaite, still [1910] Ilving (see Poznafisk], Die karaische Literatur der letzten. 20 Johre, Frankfort, 1910, p. 10).
2 C.L.e.g., the passage from the Sefer Honour given in Schwarz, p. 21, n. 2. The tradition regarding the astronomical knowledge of the sons of Issachar was derived from 1 Ch 122. Saulya Gaon appealed to the same verse as an evidence of the high antiquity of the continuous Jewish calendar, and was on Their antiquity of the continuous Jewish calendar, and was on The Karait Assalted by the whole Karaite school (cf. Poznafiski, 25 & We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say why the Fandaria Garon, 30 We cannot well say which we will be say when we will be say which we will b

In order to ascertain the exact time at which a year begins, it is necessary first of all to fix the conjunction which ushers in its first month, Tishri. This again involves the selection of a definite point from which the reckoning shall proceed. Now, as the world, according to a Talmudic tradition (*Rōsh* Hashshana, 11a), was created in the month of Nisan, and as the recognized era is reckoned from that event, an attempt was made to calculate the date of the conjunction which began the first Nisan of history, the result thus arrived at being 4 d. 9 h. 642 p., i.e. Wednesday, 3 h. 35' 40" after midnight. The conjunction fixing the first Tishri could then be determined in two ways. One was to calculate half a year backwards from Nisan, giving the result 2 d. 5 h. 204 p. (ברר"ר); such was the practice in Palestine, and the formula thus found is that in general use. The other method was to calculate the date of the conjunction beginning the following Tishri, with the result 6 d. 14 h. (7"1)—the formula used in the Bab. schools (Bornstein, Mahloket, p. The imaginary conjunction is called 'the 112). molad of nothing' (molad tohu). Accordingly, if the conjunction of any particular month has been ascertained, it is an easy matter to fix that of the month following, as the date already known needs but to be supplemented by 29 d. 12 h. 793 p., or, as month.

Now the year comprises 12×29 d. 12 h. 793 p., or 354 d. 8 h. 876 p., and a leap-year 13×29 d. 12 h. 793 p., or 383 d. 21 h. 589 p. But as the year, like the month, must have an integral number of days, an ordinary year has either 354 or 355 (but sometimes, as we shall see below, 353), and a leap-year 383 or 384 (sometimes also 385). Hence, if the date of the conjunction of Tishri in any given year is known, we have simply to eliminate the complete weeks, i.e. 350-or 378-days, and then add, for a common year, 4 d. 8 h. 876 p. ("ynn 'n 'n), and, for a leap-year, 5 d. 21 h. 589 p. (צ'כ"א חקב"ה). These two sets of numbers are called 'remainders' (הרמות), and each forms the 'char-

acter' of its kind of year.

In order to fix the beginning of the year, i.e. the 1st of Tishri, the date of its conjunction must be calculated. But four possible cases may thus occur, the New Year being delayed by one or even two These four contingent delays (dehiyoth) are davs. as follows:

1. The New Year cannot begin on a Sunday, or a Wednesday or a Friday (לא אר"ו רא"ן). The last two days were excluded or a Friday (FNT) 1 M 87). The last two days were excluded because otherwise the Pay of Atonement (the 10th of Tishri) would fall on a Friday or a Sunday. As early as the Talmudic period, however, the Pay of Atonement, for various ceremonial reasons, was not observed on the day immediately before or after the Sabbath (Rosh Hasshafina, 20a). The Sunday, again, was excluded because otherwise the so-called Fallm-day (Hoshāma Rabba, the 22nd of Tishriy would also fall upon a Sunday—a Concurrence flewing prohibited on ritual grounds (Surka, 45b).<sup>2</sup> In such contingencies, therefore, the New Year is transferred

In such contingencies, therefore, the New 1 car is transferred to the following day.

2. Similarly, the New Year must begin a day later when the conjunction takes place after 12 o'clock noon, i.e. after 15 hours of the calendar day, the reason heigh that the crescent of the new moon is not visible on that evening. A conjunction of this character is called 'old modad, and the rule hearing upon it already given in the Talmand (Kosh Hanshdand, 200). But, if already given in the Talmand (Kosh Hanshdand, 200).

ever, to regulate exactly the months from Nisan to Tishri inclusive, so that the dates of the festivals might be easily ascertained; the irregularities could then be confined to the two

Lance; the irregularities could then be connect to the two months which follow immediately after Tishri.

The reason for placing the limit lower in the case of the common year, and higher in that of the leap-year, was probably that the numbers 353 and 355 respectively approximate more nearly to the actual duration than do the numbers 356 and 382.

The reasons for which the variation was made were this of "The reasons for which the variation was made were this of "The reasons for which the variation was made were this of 141 ft.) has "rightly recognized. The attempts that have been made to already Madmonides; cf. Schwarz, p. 54 ft.) to give an astronomical explanation of the variation must be regarded as too artificial.

the following day be a Sunday, a Wednesday, or a Friday, the New Year is delayed by two days.

3. If in any year following upon a common year the conjunction of Tishri takes place at or after 3 d. 9 h. 201 p. (7"7 '2 '2), the New Year cannot begin on that day or on the following day the New Year cannot begin on that day or on the following day—Wednesday (by 1)—and in that case is delayed till Thursday. For, if 3 d. 9 h. 29 h. De added to the 'remainder' of a common year, i.e. 4 d. 8 h. 8 f. 8 p., the result is 7 d. 18 h. As the Tishri of the following year, however, must not begin on Saturday (by 2) or Soulday (by 1), it would have to be delayed till Monday. But in that case the current year would have 356 days, which exceeds the statutory limit.

4. If the conjunction of Tishri in any year following upon a horacter that the property of the 2 d. 15 d. 15

leap-year takes place at or after 2 d. 15 h. 589 p. (ב" מ"ו הקפ"ט), the New Year must be transferred to the Tuesday. For, if from the New Year must be transferred to the Phostay. For, it from these figures, or rather from 7 d. +2 d. 15 h. 589 p., i.e. 9 d. 15 h. 589 p., the 'character' of a leap-year, viz. 5 d. 21 h. 589 p., be subtracted, the result is 3 d. 18 h. The Tishri of the previous suntracted, the results a d. 15 h. The Instit of the previous year must, therefore, have begun on a Thursday, as Tuesday is excluded by (2), and Wednesday by (1). But if the current year were made to begin on Monday, the previous (embelismic) year would have only 352 days, which falls short of the lower statu-

tory limit.

The duration of any particular year, i.e. the number of days in it, may accordingly be determined as follows: Calculate the date of the conjunction of Tishri, and also of the Tishri in the year following, allow for the 4 dehiyoth, and observe whether the year-if an ordinary year-has 353, 354, or 355 days, or, again—if a leap-year—whether it has 383, 384, or 385 days. If the number be 353 (or 383), the months of Marcheshyan and Kisley are both defective, and the year itself is in that case also called a 'defective' one (הזרה, abbreviated ה). If it has 354 (or 384) days, Marcheshvan is defective

between two leap-years.1 The various items have been set forth in a table, as given below.

The use of this table may be explained by an example. The gebia' no denotes a year which begins on a Monday (2) and has 353 days (n = anon, 'defective'). The earlier limit is 7 d. 1- h., 333 days (fi=5787), 'thefective'). The earlier limit is 7 d. 1. s. h., for, if the conjunction takes place after 12 o'clock noon on Saturday, the New Year cannot begin on Saturday (dehiyar), but must be delayed till Monday. If the year under consideration be a common year, as, e.g., in tiroups II-IV, the Globwing year will begin after 333 days, i.e. on a Thursday. But this, again, is permussible only if the conjunction of the corresponding Tishri takes place at or before 5.4.17 h. 1079 p. Now, if we subtract from this formula the translated of a common year, at 4.4.8.8.5.6. the could be very constant of the corresponding the subtract from this formula the translated. of a common year, or 4 d. 8 h. 876 p., the result is 1 d. 9 h. 203 p. But if this 'limit' be exceeded, i.e. if the difference amount to Id. 9 h. 204 p. or more, the conjunction of the following Tisht will take place at 5 d. 18 h. In that case, however, the following year will not begin before Saturday (by dehiyoth 1 and 2). i.e. after 355 days, and the year under consideration would then be 'complete' (r). Its qebia' would thus be no longer na, but ra. Hence the 'limits' for na in a common year are, on one side, 7 d. 18 h., and, on the other, 1 d. 9 h. 204 p.

The term tryufa ('course of the sun') signifies the moment at which the sun arrives at the equinoctial or solstitial point, or, in other words, the mean beginning of one of the four seasons. Thus we have tequfat Nisan (beginning of spring), tequiat Tammūz (beginning of summer), tequiat Tishri (beginning of autumn), and tegufat Tebeth (beginning of winter). The interval between two tegufoth was fixed in the 3rd cent. A.D. by the Amora Samuel (see above) at 91 d. 7½ h., the starting-point of the enumeration being made to coincide with the beginning of Nisan, and the first

## QEBI'OTH.

'regular' (היברה, abbr. ב). Finally, if the number be 355 (or 385), Marcheshvan and Kisley are both full, and such a year is called 'complete' (azbe, abbr. v). Hence, as the first days of all the other months are determined on antecedent grounds, the complete segnence of festivals and seasons is now known. It is also usual to specify the day of the week on which the Passover begins, and the symbol employed is combined with symbols for New Year's Day and the length of the year in order to indicate the *qchia'* of the year. Thus, for example, the *qchia'* spassignifies that New Year begins on Monday (n=2nd day of week), that the year is defective (n=2nn, i.e. Marcheshvan and Kisley with 29 days each), and that the Passover begins on Tuesday (1=3rd day of week). It may be shown without difficulty that there can be only 14 types of yearly ealendars, 7 for common years, and 7 for leap-years. בחג ,וחא ,נכה ,הכו ,בשה .השא ,ושג : For common years

For leap-years: חשר, ושר, נכו, נכו, נכו, נכו, נכו, החא, החא, וחג

But the gebia of a year can also be determined without calculating when the ensuing Tishri shall begin. All that is necessary is to take cognizance of the extreme 'limits' (2522) within which the conjunction of Tishri must fall. It must then be noted whether the year is a leap-year (Group L) or a common year; and if the latter, whether it immediately precedes (Group II.) or immediately follows (Group III.) a leap-year, or, finally, occurs I See the detailed proof in Schwarz, p. 62 ff

and Kislev full, the year being then designated as | tequifue of the series fixed exactly at 4 d. 0 h. (Tuesday, 6 o'clock p.m.), 7 d. 9 h. 642 p. ('b 't מרמ"ב) before the conjunction of the new moon of Nisan. This interval is precisely one quarter of the Julian year. The first tequia, however, moves forward every successive year by  $7\frac{1}{2}$  h.  $\times 4 = 1$  d. 6 h., which in 28 years amounts to 1 d. 6 h. x 28 = 5 weeks, so that, after a period of 28 years, the first tegufa falls on the same day of the week and at the same instant of time as before. This period was therefore called the 'solar cycle' (mahzor hamma) or the 'great cycle' (mahzor gadol). Now, according to Samuel, the length of the solar year is 4 × 91 d. 7½ h., or 365‡ days. But it was observed that this did not quite agree with the astronomical facts, and accordingly we find still another teguta, named after Rabbi Adda, which gives 365 d. 5 h. 997 p. 48 rg. (heleq = 76 rege im), or 365 d. 5 h. 55' 25 44°, as the length of the year, and places the first togufat Nisan only 9 h. 612 p. (ב"חרם"ב) before the conjunction. This corresponds very closely with the Ptolemnie year, in which the odd seconds are given sometimes as 10, sometimes as 12. But although the figures of the Rabbi Adda are nearer to the facts than those of Samuel, yet they too

I These limits were at a very early date grouped in the so-These limit were at a very early date grouped in the scalled 'four gloss' (Abdah Shéatran), corresponding to the four days of the works Monday, Tuesday, Thursday, and Saturday on which alone the New Year could begin. So tar as we know, the earliest witer to apply the ne thod was Sandya Gaon; cf. Poznadski, Red. M. S., and Bornstein, Madbolot, show an error, as the precise length of the year is

only 365 d. 5 h. 48' 48'

The earliest known reference to the 'tequifa of R. Adda' under that designation is made by Isaac b. Baruch Albalia of Cordova (A.P. 1035-1041; cf. Abraham b. Hiya's Sefer ha-'Ibbūr, iii. 4), but the periodit indicates is already referred to by al-Birmi (Arab. text, p. 183 = Eng. tr. p. 163). He states that, when

the Jews wish to determine the year precisely (الدا دفقوا),

they recken its length as 365 d. 53 $^{18}_{18}$  h, which corresponds exactly with the tept/a of R. Adda. But this tept/a must go still further back, as it agrees with a date (770) mentioned in the Baraitha of Samuel (see above). Moreover, the intercalary system in common use among the Jews, of which we shall treat presently, could never have been framed except on the basis of R. Adda's—not Samuel's—topt/a '' In all probability, therefore, its duration was calculated about the 8th cent. A.D., i.e. at the period in which the Jews in the East began to study astronomy, and became acquainted with the Almagest.3

As already indicated, the Jewish year is a composite arrangement. Its months are lunar, but from time to time an extra month is intercalated in order to effect an adjustment with the solar year. This was done even before the establishment of the continuous calendar. It was regarded as a matter of special importance that the month of Nisan should not begin before its tequfa (beginning of spring), and a second Adar was intercalated as required; but at that time nothing was as yet known of a regular and periodic intercalation, recurring according to definite rules. Such an arrangement was in all probability first introduced along with the continuous calendar itself, when the Metonic cycle was adopted. It had been observed that 235 lunar months are equal to 19 solar years. But, as 235 ÷ 19 gives the quotient 12, with 7 as remainder, an additional month, a second Adar, was intercalated 7 times in the period of 19 years, which was called the 'little cycle' (maḥzor gāṭān). But while, according to the majority of scholars, the leap-years of both the Metonic and the Callippic system are the 2nd, 5th, 8th, 10th, 13th, 16th, and 18th years of the cycle (cf. JQR x. 161), in the Jewish calendar they are the 3rd, 6th, 8th, 11th, 14th, 17th, and 19th (as in the Heb, formula n"iz מארו"ם). The most probable explanation of the Jewish order is that the position of the heavenly bodies at the time when the intercalary system was instituted did not require the supplementary month till the 3rd year of the cycle, then the 6th, 8th, etc.; and, as has been said, exact astronomical calculations show that this sequence is in harmony with the tegufa of R. Adda. We have also information to

tequifa of R. Adda. We have also information to 1 It is here stated, at the beginning of Section V. In the san and moon and years of release and toppinth were readjusted. In A. 4363, and that tequifat Tibiri (of A. A. 4367) toke these on Tuesday, towards the end of the day, and 2 hrs. before the conjunction of the month of Tishri, which occurred at the beginning of Wednesday (= Tuesday, 6 p.m.). This was the Tith of September, A.D. 776. The teguifa of Saunel, however, fell 6 d. 11 h. later, i.e. on the 24th of Sept. 3 a.m. Now, if we calculate the tepqiat Nisson of the Creation by the measurement of R. Adda, we get 1 d. 13 h., which differs from Bornstein ( $Mabloket_1$ , E. This has hend fully emphasized by Bornstein ( $Mabloket_1$ , E. This has been duly emphasized by Bornstein ( $Mabloket_1$ , E. 20).

2 As the Feast of the Passover could not take place before the Settining of the tegqiat Nisson (beginning of spring), i.e. the 26th of March, then, according to Sannel's tegqia, an intercalary month would already be required at the end of one year, and thereafter at successive intervals of 3, 3, 2, 3, 3, 3 years. This intercalary sequence would not be the ordinary one (E''in Na'');

intercalary sequence would not be the ordinary one (נו"ח אדו"ם, see below), but ב"ח ינו"ם. A similar system is found among the Samaritans, who, in fixing the Passover, take account only of the tenufa, and had thus, during the 16th cent., the intercalary sequence n'ur i"nz.

calary sequence n'12' n'72,

3 The carliest known Jewish astronomer, Mashallah, lived in
the reign of the Khalif al-Maush' (A.D. 754-775; cf. Steinschneider, Die arab. Literatur d. Judea, 1982; p. 15). Here,
therefore, we find a corroboration of our theory that the contherefore, we find a corroboration of our theory that the conThe calculation of conjunctions, for instance, control have
been finally established even as late as A.D. 779, for, according
to the Baravitha of Sanned, the conjunction of Tishri in that
year took place at 4 d. 0 h.; while, according to the modern
reckoning, it did not occur till 4 d. 3 h. 363 p. This fact is
of great imperfance in the history of the Jewish calendar
(cf. Bornettin, loc. cf.).

the effect that there were other intercalary systems in operation, viz. "ur " = (2. 5. 7. 10. 13. 16. 18), נה"ח ארו"ם בה"ו (1. 4. 6. 9. 12. 15. 17), and גה"ח ארו"ם בה"ו (3. 5. 8. 11. 14. 16. 19). But all these are in reality forms of the normal sequence, the variation depending or the normal sequence, the transcol appearance simply on the particular year of the cycle with which the intercalation begins. Thus, if the ligures of the first formula be increased by 1, those of the second by 2, and those of the third by 3, the result in each case is the ordinary formula. Hence we ought to speak, not of different intercalary series, but of different mnemonic formulæ.

The length of the year as fixed by the tequfu of Samuel (= the Julian year of 3651 days) is not an exact measure of the 19-year cycle, as in that period it shows an aggregate excess of 1 h. 485 p. even the tequifu of R. Adda, which was adapted to this cycle, does not fully agree with the facts, as the exact duration of the year is 365 d. 5 h. 48′ 48″, not 365 d. 5 h. 55′ 25′ 44″. Thus, while 235 lunar months are equivalent to 235 × 29′ d. 12 h. 793 p. = 6939 d. 16 h. 595 p. = 6939 d. 16 h. 33′ 34″, 19 (true) solar years amount only to 6939 d. 14 h. 27 12", the former quantity being in excess by 2 h. 5' 51". In 1000 years the cumulative error is 4.6 days, and in 2000 more than 9 days. But this discrepancy

was simply left out of account.

The 'remainder' of a common year, as already stated, is 4 d. S h. 876 p., and that of a leap-year 5 d. 21 h. 589 p. But in the cycle of 19 years (12 common and 7 leap-years) the conjunction of the molad of Tishri moves forward by 2 d. 16 h. 595 p.  $(\pi'' \text{spn} \ ''' \ 'z)$ , and in 13 such cycles  $(13 \times 2 \text{ d. } 16 \text{ h.})$ 595 p. = ) 34 d. 23 h. 175 p., or by discarding the complement of full weeks, 6 d. 23 h. 175 p., which falls short of an additional week by only 905 p. Ignoring the odd parts (such fractions having in many cases no influence upon the determination of the months), we have thus a cycle of  $(13 \times 19 = )$ 247 years, after which the gebi oth of the years might recur. But they can never recur exactly, as it sometimes happens that even a single part (heleq) alters the qebia'; thus, e.g., 17 h. 1079 p. +1 p. is a so-called 'old molad.' An exact repetition of qebi'oth would ensue, in fact, only after 36288 19-year cycles, or 689472 years—a period of no practical use. A perpetual Jewish calendar that would be serviceable in any real sense is thus out of the question.

A partial approximation to such a calendar, however, is furnished by the so-called 'Table of the 61 beginnings' (מות בעל מ"א ראשים), which exhibits the qcbi oth of a complete 19-year cycle. saw above, there are 7 varieties of *qebi oth*, and, therefore, in a cycle  $(7 \times 19 =) 133$ . But in actual practice it is found that 72 of these combinations

<sup>1</sup> Such apparently dissimilar intercalary series are given by Jana by Alan (4th or 16th cent, ; see the bibliography at the end), al-Biruni (ed. Sahuan, p. 57 (text), p. 64 (ftr.)). Hai Good (1938) in Abraham b. Hiya, p. 97, and Isaac Israeli (in an ancient Barathle in 17-65d (16th), w. 2). Al-Biruni says that the first two series were in use among the Jews of Palestine ( )

not of Syria, as Sachau translates), while the third

was the universally received order, and emanated from the

Jews of Bahylonia (الثل الدابل: not Bahylonians, as rendered by Sarhau). Cf. also JUR x. 197 ff.

2 The above computation is said to have been made by the

recur, so that there remain only (133-72=) 61 possible forms, which are duly calculated and set forth in tables (cf. e.g. Schwarz, p. 79).

There exist also formulo and tables for synchronizing Jewish dates with the Julian and the Gregorian calcular, with which devices, however, we cannot deal here, and must simply refer to the books and tables cited at the end of this article. A formula for assimilating Jewish dates with the Muhammadan reckoning has recently been devised by A. Frankel (Zischer, J. matterna, v. naturnizsensch, Unterricht, 1908, pp. 508-605; MGWJ, 1900, pp. 730-743).

3. Eras .- After the return from the Exile the Jews reckoned by the years of the Persian kings This is the practice in the newly discovered papyri of Elephantine (ed. Cowley-Sayce, and also Sachan), and in the post-exilic books of the Bible (e.g. Hag 1), Zee 11.7, Dn 91, Ezr 11 etc.). Subsequently they made use of the era of the Seljuks, or the so-called 'contracts-era' (minyan shetaroth), which began in the autumn of 312 s.c., and is first cited in 1 Mac. (cf. c.q. 110). This era was in use among the Jews in the East till the 16th cent., and is still observed by them in Yemen (cf. Saphir's 'Travels, Eben Sappir, i. 62b). During the period of independence under the Maccabees, dates were indicated by the year of the reigning prince, and a national epoch was found in the year when Judea gained its freedom under Simon (1 Mac 1342; cf. Schürer, i. 242), i.e. 170 ar. Sel. = 143-142 p.c. After the Jews lost their independence and their national rulers, they probably reckoned by the years of the Roman governor or consul. The Book of Jubilees fixes its dates by jubilee periods of 49 years divided into 7 year-weeks of 7 years each, but it is unlikely that this method was ever followed in practical life. The Talmud, however, may possibly allude to such an era in Sankedvin, 97b (cf. Isr. Lévi, REJ i. 110).

After the destruction of the second Temple. dates were reckoned from that event (Le horban habayit; ef. Seder Olam, cap, 30, Abadā Zārā, 9-10), as also, especially in documents, by the years of the reigning Emperor, or perhaps of the eponyms (see Bornstein, Mahloket, p. 65); both methods were in vogue in Palestine, and the former also in Southern Italy (Ascoli, Iscrizioni invedete, nos 24-33). In Babylonia, on the other hand, and generally throughout the Diaspora in the East, the Jews continued to use the era of the Seljüks, which, as said above, is still observed in some districts. In the Talmud, moreover, in the tractates just cited, the era of the Creation (Li-bri'ath 'olam; in a later epoch it is called Li-yeşira) is mentioned, but it was not used in ancient times, except, at most, in learned works (e.g. the Baraitha of Samuel), nor do we know when it was adopted. Ruhl's conjecture (in Doutsche Ztschr. fur Geschichtswissen-schaft, 1898, p. 185; referred to in JE, s.v. 'Ern'), that the introduction of this era was coincident with the change from the 8-year to the 19-year eycle, which is said to have taken place between A.D. 222 and 276, conflicts with the view advanced here regarding the gradual development and relatively late establishment of the continuous calendar among the Jews, and, what is more, it is at variance with historical facts, as nothing is known of this method of dating even in Tahuudic times (cf. Harkavy, Altjud. Denkmuler aus d. Krim, p. 161). In Europe it is first met with in epitaphs in the catacombs of Venosa, dating from \$22 and \$27 (Ascoli, op. cit., nos. 25, 31); thereafter we find it used by Sabbataj Donnolo, also of Southern Italy, in the year 925 (cf. his Commento sul Libro della Creazione, ed. Castelli, p. 3); likewise in a document, of date 1034, from Kairwan (JOE xvi. 576). The beginning of this cra coincides with the year 3760 s.C., but its accuracy was questioned in the 16th cent. by Azaria de Rossi in his *Mear Enayim* (cd. princ., Mantua, 1531). The well-known Karaite Firkowitch professes to have discovered another mundame era in epitaphs from the Crimear this begins 151 years before the ordinary Jewish era, i.e. in 3911 B.C., but is undoubtedly spurious (cf. Harkays, op. cit. 152). An era reckoned from the captivity of Samaria, which is assumed to have begun in 596 n.c. (Legalutherus), and found in similar epitaphs, which are said to date from the years A.D. 6, 30, 55, 89, and 360 (Firkowitch, Alma Zikkuron, nos. 1-4 and 25), is likewise a fabrication, as is conclusively shown by Harkavy (p. 144E). In recent times the Zionists also have adopted the era of Legalutherus, but in this case the term denotes the destruction of the second Temple, which they assign to A.D. 70.

LIERATUR—A complete catalogue of works upon the Jewish calendar will be found in the relative passages of Steinschneider. 19ie Mathematik bei d. Juden' (Hobiathere Mathematica, 1892–1901); Abband, zur Gesch, d. Mathematik, ix, 473–482; MGWJ, 1995–1997). The oblest surviving treatise is that of Joshua b. Alan (9th or 10th cent.), preserved in a work (ed. Harkay, in Happfern, iv. 75–79; et. Poznański, Zischer, f. beb. Hobilog, vii. 180–130) ie ben Mashia), a Karatic (1st half of 10th cent.). The 180–180 ie ben Mashia, a Karatic (1st half of 10th cent.). The Kitlà al-tibbar; see, most recently, Poznański, loc. et. xii. 182, no. 27, and Marx, RFJ Viii. 29. The first complete and systematic account that has come down to us is that given in systematic account that has come down to us is that given in systematic account that has come down to us is that given in systematic account that has come down to us is that given in writer on the subject in Europe was Hasan ha-Dayyan of Cordova (fl. 97.2); three works on the calendar are attributed to him, but survive only in a few quotations. The treatise of lost, but hirly large quotations therefrom are found in the work of Abraham b. Higa of Barcelona theginning of 12th cent.), whose Sefer ha-Tibbar (ed. Filipowski, London, 1851) is one of the most important on the subject. A short treatise learing the same name was composed by Abraham hin Ezra (192-1167; ed. Halberstam, Lyck, 1874); Moses Maimonides (1153–1904), at the age of 23, writes a small monograph entitled Michaelm of the Bolie (ed. prine, 1185); Germ, by Dumner, Lie, which, however, is of little value; but the relative section of this Religious Code (Hilchoth) Qidulach ha-Hodesh (Germ. trs. and edd. by Hildesheimer (1811), Mahler (1899), Baneth (1859–1903) is of eminent value. A work dealing with principles, Yesód Oldin, was written in 1310 by Isaac b. Joseph Israeli in Toledo (ed. prine, 1861), Effective contains an anonymous Heb. work upon the calendar with Munster's Lat. tr. 1830, 161–1610. The following also deser

1013-15), and Scaliger, de Emendatione Temporum (3rd [best] ed. 1629).

CALENDAR (Mexican and Mayan).—The ancient Mexicans and Mayas, as well as the Zapotecs, who inhabited the tract of country lying between these peoples, represented the same general type of civilization, and used a calendar essentially the same in character. We are more conversant with this calendar than with any other of their institutions; and, especially in regard to the Mexican and Mayan hieroglyphics, where it plays a commanding part as a medium of divination, it forms in reality the basis of all our knowledge. For its reconstruction we are indebted mainly to the researches of E. Seler and E. Förstemann, but we possess as yet no conclusive answers to the following vital questions: (1) To what shall we trace the tonalamatl (Mex. 'book of days') of 260 days, which, in conjunction with the solar year of 365 days, forms the foundation of the calendar? (2) Was provision made for intercalations in the solar year? (3) How are the dates of the Dresden Mayan MS<sup>1</sup> and the Mayan monuments to be adjusted to our own chronology?

I. The tonalamatl, one of the two main constituents of the calendar, consists of 260 days, reckoned by means of 20 distinct symbols of days in combination with the numbers 1 to 13. The peculiar nature of the arrangement may be learned from the accompanying table, as found in the Mexican Codex Borgia<sup>2</sup> and the related hieroglyphics. (For the sake of convenience the order of sequence is given here as from left to right and downwards, instead of from right to left and up-wards, as in the original. The Roman numbers

represent the several day-symbols.)

MAYAN (YUCATAN).

XIII. Acatl XIV. Ocelotl XV. Quauhtli XVI. Cozca-Been reed. worn out. jagnar. eagle. great hawk Men maker perfumery. (sarcoquauhtli rhamphus

papa) XVII. Olin XVIII. Tecpati Caban motion. what is exuded (?). flint. E'tznab (E'tz) bard (?) XIX. Quiauitl XX. Xochitl storm. flower. Ahau king, sun.

Were we to compare the names and symbols current in Mexico with those of the other Mayan dialects, the correspondence in meaning, so far recognizable from the above lists, would be rendered clearer still.

This period of 260 days is most probably to be explained as the equivalent of nine lunar revolutions, especially as the days of the tonalamatl are conjoined-often continuously-with representations of nine gods, the so-ealled 'Lords of the night,' who may thus be regarded as the original deities of the nine lunar months; nine revolutions of the moon, however, may well represent the approximate duration of pregnancy. Then, as the numerical system of these peoples was based upon 20, the number of days in a tonalamati may be represented as thirteen twenties. This explanation seems more probable than any other that has been advanced. (1) The factor 13 has been derived from the period during which the moon was actually observed to wax or wane; but this would not vield a continuous reckoning, as it ignores the interlude of invisibility at new moon. (2) The number 260 has been explained as indicating the period of visibility of the planet Venus as an evening star. The actual period of visibility, however, whether as a morning or as an evening star, amounts only to some 243 days. (3) The tonalamath has been derived from the fifty-two-year cycle, since

This arrangement of five superincumbent ranks of day-symbols also preponderates in the Mayan bicroglyphies, but there the tonalamatls are not transcribed in full, and begin with any of the 52

columns. The names of the day-symbols are represented in the hieroglyphies by pictures, and have come down to us in the following sequence:—

MEXIC	AN.	MATAN (YUCATAN).			
I. Cipactli II. Eccatl III. Calli IV. Guetzpalin V. Coatl VI. Miquiztli VII. Maçatl	crocodile (?). wind. house. lizard. serpent. death. stag.	Imix Ik Akbal Kan Chiechan Cimi Manik	female breast (?). wind. night. copious (?). biting snake. death. that which hurries along.		
VIII. Tochtli IX. Atl	rabhit. water.	Lamat Muluc	that which is heaped up.		
X. Itzeuintli XI. Oçomatli XII. Malinalli	dog. monkey. a herb.	Oc Chuen Eb	monkey. row of teeth.		

1 ed. Forstemann (2nd ed. 1392). 2 ed. Duc de Loubat, fol. 1 f.

 $52 \times 365 = 20 \times 13 \times 73$ . But to regard it as the subdivision of a longer period fails to do justice to its primordial character, as it forms the basis of the calculation of the solar year, and must therefore

have been in force before the latter.

2. The solar year.—There was no serial enumeration of tonalumatl periods, and it was impossible to distinguish one tonalamatl from another, as the continuous representation of dates by means of cipher and symbol resulted simply in an exact re-petition after every 260th day. Nor were the solar years of 365 days (Mex. tonalpoualli, 'numbering of days') enumerated from any particular starting-point. Nevertheless, in a prolonged succession of tonala matls it came about that, during a period of 52 solar years (Mex. xippoualli, 'numbering of years'), a particular day of the tonalamatl, discriminated by a particular combination of cipher and symbol, coincided with the beginning of the year, thus rendering it possible to distinguish one year from another. As the tonalamatl contained 13 × 20 = 260 days, and the year had  $18 \times 20 + 5 = 28 \times 13 + 1 = 365$ <sup>1</sup> Zelia Nuttall, 'The Periodical Adjustments of the Ancient Mexican Calendar,' American Anthropologist, vi. 495, 500.

days, any given entry in the former moved forward upon the annual reckoning by five symbols and one cipher. Only 4 of the 20 symbols, therefore, coincided with New Year's Days, while the ciphers could vary 13 times; whence it follows that the tonalamatt provided distinctive combinations for the first days of  $4 \times 13 = 52$  successive years. But the New Year's Days fell, not, as might be expected, on the days indicated by the tonatomatt symbols I (Cipacti), VI (Miquiztli), XI (Oconatli), and XVI (Cozeaquauhtli), but upon XIII (Acatl), XVIII (Tecpati), III (Calli), and VIII (Tochtli), and thus the lifty-two-year cycle may be represented as follows .

1	XIII	XVIII	111	VIII
2	XVIII	111	VIII	XIII
3	111	VIII	XIII	XVIII
4	VIII	XIII	XVIII	III
5	XIII	XVIII	111	VIII
6	XVIII	111	VIII	XHI
7	111	VIII	XIII	XVIII
8	VIII	XIII	XVIII	111
õ	XIII	ZVIII	111	VIII
10	XVIII	111	VIII	XIII
11	111	VIII	XIII	XVIII
12	VIII	XIII	XVIII	III
13	XIII	XVIII	111	VIII

Similarly, in the Dresden Mayan MS and the Mayan monuments the years begin in regular order with days XIII (Been), XVIII (E'tznab), III (Akbal), and VIII (Lamat), while in historical times, according to tradition, the years were reckoned in the order: IV (Kan), IX (Mulnc), XIV

(Ix), and XIX (Cauac).1 As the tonalamatl datings, however, simply repeated after 260 days, and could not therefore delinitely fix a particular day even within the year, the system was supplemented by a division of the year into 18 twenties, with 5 residual days. We give here the usual enumeration of these periods of twenty days, but it should be stated that the Mexican and the Mayan lists did not synchronize:

OILL	.20.	
	MEXICAN.	MAYAN (YUCATAN).
1.	Atl causio or Quauiti eus.	I. Pop.
2.	Tlaeaxipenaliztli.	2. Uo.

17.	Tititl.	17. Kayab.
18.	Izcalli.	18. Cumku.

These 18 'months' (Mayan, uinal) are followed by the five residual days (Mex. nomontomi, 'supernumerary'; May. xma kaba kin, 'days without name') at the end of the year.

At the time of the conquest, according to Sahagun, the beginning of the first (Mexican) month, Atl canalo, coincided approximately with that of onr February,2 and this would harmonize with the succession of Nature-festivals assigned to the several months, and necessarily associated with the seasons of the year. The first (Mayan) month, Pop, began about the middle of our July.<sup>3</sup> But, as no intercalations were made—so far as known -for relatively short periods, the reckoning fell behind by one day in four years. This being Denind by one day in four years. This being duly allowed for, the statement that the Mayan 1 Landa, Relacion de las cosas de Yucatan, ed. Brasseur de Bourbourg (1864), p. 206.

2 Sahagin, Historia general de las cosas de Xueva España, ed. Bustamente (Mexico, 1820), i. 50.

3 Landa, op. ct. p. 276.

year began with the 1st of Pop has been authenticated and found correct, while the earlier notices of Atl canalo as the first month of the Mexican year do not accord with our calculations. According to these, in fact, the Mexican year began with the 1st of Toxcatl. i.e. at the beginning of May. when the sun in his northern journey passed through the zenith, and was revived by the sacrifice of his hmman counterpart. But if we may argue from the fact that there was among the Mayas a festival covering the five residuary days at the close of the year, that people likewise must at some carlier period have begun their year with other months, viz. Vaxkin and Pax—two dates, that is, in force at the same time, and separated from each other by 180 days,2 Allowance having been made for the neglected intercalary days, the beginning of the Mexican year-the 1st of Toxeatl-synchronizes with our reckoning as follows

Year I Acatl. .... .4th May 1519-1520. Year 2 Tecpatl.....3rd May 1520-1521. Year 3 Calli.. ..... 3rd May 1521-1522, etc.3

Although, as has already been said, there is nothing to show that the calendar was adjusted by means of intercalary days, the statements of the early writers having proved to be altogether illusory, yet, as the sequence of the Nature festivals must have corresponded with that of the months, it is absolutely certain that the discrepancy was compensated for in some way. As yet, however, the hieroglyphics have yielded no quite incontrovertible evidence to show that the Mexicans gave any theoretical recognition to the difficulty. This also holds good of the katan-periods of the Mayas, with which we are now to deal, and in connexion with which we shall discuss the problem of synchronism in fuller detail.

3. The Katun-periods of the Mayas .- The Mexican calendar was quite inadequate for any term beyond 52 years, as after that period the characterization of dates began simply to recur, and there was no successive enumeration of the 52-year cycles. The Mayas, however, had a supplementary reckoning by means of katun (periods of  $20 \times 360$  days), the subdivision of 360 days being called a tim ('stone'). These periods were designated according to the days on which they severally began, and, while this first day always coincided with the same one of the 20 day-symbols, viz. Ahau, its numerical coefficient increased by 11 in every

successive katun, as  $\frac{20 \times 360}{10} = 553 + 11$ . It was 13

therefore possible to discriminate 13 such periods by prefixed numerals as follows: 13 (Ahau), 11, 9, 7, 5, 3, 1, 12, 10, 8, 6, 4, and 2. Chronological references that pass beyond the resultant cycle (c. 13 × 20 years) do not merit serious regard. The calculations of Scler,5 which are based upon the identity of 2 lx, 1 Pop with 14th July 1543, yield the following synchronism:

Katun.	Year.	First Day of Katun.	Date of the Julian Calendar.
8 Ahau	11 Ix	7 Ch'en	99th January 14'95
6 Ahau	5 Ix	7 Zo'tz	15th October 1456
4 Ahau	11 Mulue	12 Kayab	3rd July 1475
2 Ahau	5 Mulue	12 Ceh	19th March 14'95
13 Ahau	12 Mulue	12 Yaxkin	5th December 1514
11 Ahau	6 Mulue	12 Uo	22nd August 1534
9 Ahau	12 Kau	17 Muan	9th May 1551
7 Ahau	6 Kau	17 Yax	2th January 1574
5 Ahau	13 Kau	17 Tzec	16th October 1593

 $^4$  Seler, Gesammelte Abhandlungen, i. 1774.  $^2$  ib. i. 703.  $^3$  Cf. the table given by de Jonghe, 'Der altmexicanische Kalender,' in ZE (1906) p. 512.  $^4$  Seler (iii, 1994) has made an attempt to prove intercalations

in the hieroglyphic 5 Op. cit. i. 583 f.

In the Dresden MS and upon the monumentsespecially the stell of Copan (Honduras), Quirigua (Gnatemala), and Palenque (Chiapas)—eras of still longer duration are referred to by simple chumeration of the days that had elapsed from a certain mythical date indicated by the expression 4 Ahau, 8 Cumen. But as the terminating date that is to be fixed is likewise specified by the day of the tonalamatt and the year, it is plain that the sum of the simply enumerated days will represent the period lying between the termini. Here the figures carry us beyond a total of 9×20×20×360 days, i.e. more than 9 x 20 katuns, or 9 cycles, or 3550 × 365+250 days. But the dates of the monuments themselves all fall within the following or 10th cycle, and are all embraced within a span of little more than 350 years, or-if we also take into account the most extreme dates in the Leyden nephrite plinth (from the frontier of Honduras and Guatemala), which belong to the 9th cycle, and in the stele fragments from Sacchaná (Guatemala) -560 years. Unfortunately, however, this chronology cannot be brought into relation with our own, for the simple reason that, as already noted, in Yncatan during historical times the years were designated by a different series of day-symbols,

4. The Venus-period .- Both in Mexican and in Mayan MSS the periodic time of the planet Venus is indicated by means of the tonalamatl symbols and the dates of the month respectively. Leaves 46-50 of the Mayan MSS in Dresden exhibit 5 such revolutions of 584 days each, which, corresponding approximately to the sum of the two periods of visibility and the intermediate intervals, are severally divided into stages of 90, 250, 8, and 236 days. In the Codex Borgia, foll. 53-4, however, there is noted, along with other Venns-periods, one of 5 x 13 = 65 revolutions.2 Now 5 revolutions amount to  $5 \times 584 = 8 \times 365$  days; and 65 revolutions to  $65 \times 584 = 2 \times 52 \times 365$  days, i.e. twice the Mexican

eyele of 52 years. Then, as  $\frac{584}{20} = 29 + 4$ , and  $\frac{584}{13}$ =44+12, the symbol and eigher of the tonalamath move forward upon each successive revolution of Venus by 4 and 12 days respectively, so that the first day of each revolution will recurrently coincide with only 5 of the 20 day-symbols, thus:

THE 65 VENUS-PERIODS.

CALENDAR (Muslim).—Although the era of Islâm begins with the 15th (16th) of July A.D. 622 (Buhāri, iv. 248 t.), the lunar year, peculiar to the Muslims, was not established till the year A.H. 10. When Muhammad in that year (A.D. 631) made his last pilgrimage to Mecca (hijjat-al-wada'), and in a solemn address (hutba) enlightened his following of believers concerning the essentials of Islam, he arranged, among other matters, that the year should consist of 12 lunar months of 29 (28, 30) days each, and that intercalation (nasi') was to be forbidden (Qur'ān, ix. 36 ff.; Ibn Hishām, p. 968; Vakidi-Wellhausen, p. 431; Buḥāri, ii. 212, 9 f.). Four months, Dhū-l-qa'da, Dhū-l-hijja, Muharram, and Rajab, were to be inviolable (hurum), i.e. were not to be disturbed by internecine warfare (Qur'an, ix. 36; Buḥāri, vi. 224, 3f.). It is evident from this arrangement alone that the Arabs, or, more accurately, the Meccans, had had a more or less perfect solar year. This assumption finds support also in the names of the months, which in part indicate clearly certain definite seasons of the year-a situation, in the case of a changeable lunar year, evidently out of the question. If we take the etymology of the names together with historical, literary, and elimatic data, we shall have the following arrangement of the pre-Islamic year:

The two Jumādā months indicate the real winter, from about the middle of Dec. till the middle of Feb. Then the two Rabī months, which signify etymologically the grazing season, must indicate the time of year when the herbage of the desert and the steppes, springing up after the autumn rains, affords the herds of the nomads a glorious relief from the summer's discomforts; i.e. from the middle of Oct. to the middle of Dec. In agreement with this, the month Safar (Sept.-Oct.) is the transition from the height of summer autumn. The preceding month, with which the year begins, reveals its character in its name al-Muharram; it is the sacred month, in pre-Islamie times sacred perhaps on account of the harvest and the vintage, with which the Hebrews (Ex 2316 3422) also connected a festival. Instead of Muharram - Safar, one may also say 'the two Safars'; so that for the first half of the year we have not 6 months, but 3 double months. Proceeding from Jumādā, the etymologically obscure months Rajab, Sha ban, and Shauwal must in-elnde, respectively, Feb.-March, March-Apr., and May-June. Ramadan, suggesting heat, indicates the coming of the warmth of summer (April-May). The month Rajab was, before Islām, and has remained in Islam, a holy month. Perhaps the original reason for this is that it designated the springtime and the firstborn. Ewald and W. Robertson Smith were right in seeing in it a parallel to the Hebrew pesah; Rajab and Sha'bān together are called also ar-Rajabāni. The names of the two last months, Dhū-l-qa'da and Dhū-l-hijja, indicate the time of rest and of pilgrimage. Islāmic festival of sacrifices is celebrated in the latter month (cf. FESTIVALS [Muslim]). The pagan festival that lies at the basis of it had probably some solar significance. This is indicated by the Islamic name ( $adh\bar{a}$ , etc.), which in itself has nothing to do with the sacrificial animal, and also by the part which the *Shaitān* plays in it, for *shaitān* meant originally the heat of the snn (\shyth), though in Islām it became identified with Satan. It is important to note that the Arabs, like the Hebrews, began their year in autumn and always celebrated spring and autumn festivals.

Besides the above-mentioned names of months, there have come down to us also some archaic ones which have a local significance; cf. Lane's Lez., 1863-9, 1, 1612\*, s. a. Shuth; ', Ideler, Handbuch der Chronologic, ii. 495 (tollowing Golius). It Islam such names of months as are not distinguished by I or II usually received pious epithets, as: al-Muharram al-haram;

<sup>&</sup>lt;sup>1</sup> Forstemann, Erlauterungen zur Mayahaudschrift der kgl. offentl. Eihl. zu Dresden (1886), p. 652.
<sup>2</sup> Given also in the allied Codex Vaticanus, No. 3773, foll.

Safar al-bair, 'the bringer of good,' cuphenistically, because it was held to be the month of ill-lack; livinh al-ford, 'the isolated,' because it stond apert from the other holy months, or R. al-assumm, 'the deat,' because it heard no clash of R. al-assumm, 'the deat,' because it heard no clash of ams (r); Shwebran al-miracyan or also-basif;' Shawada al-miracyan. The mames used in the Maghrib (western North Karram. The mames used in the Maghrib (western North Karram. The mames deswince, in that the months there are mancel atter the Islamic festivals; 'Ashura' Mindara Rahi', Shaye' Ashura. Nafar; al-Mallad Rahi'; Shaye' Ashura. Safar; al-Mallad Rahi'; Shaye' al-Mallad Rahi'; Shaye' al-Mallad Rahi'; Shaye' al-Mallad Rahi'; Dind-brijb; It is noteworthy that the custom of reckoning three double menths in the first half of the year (see abov) has been there preserved. of the year (see above) has been there preserved,

The Arals adopted the week (cf. Festivals [Muslim]) from the Jews and Christians. Besides archaic names for the days of the week, they generally use the designations that are current in the Christian Church (F. Rühl, Chronologie, p. 58); i.e. from Monday to Thursday=days II V; Sunday=I; Friday is called ol-jun'a, 'the meeting' (for worship); Saturday = as-sabt, the Sabbath.

Moreover, the Arabs had and still have more general designations for the seasons, based on the constellations, rain, and temperature. But these names change according to the country and the climate (cf. Lane's Lex. iii. 1254, s.v. 'Zaman';

A. Soein, Dīwān, 1900, i. 291).

If what has been said above makes it quite certain that the Arabs once knew a solar year, it is just as indubitable that they originally and locally followed the lunar reckoning down to the time of Islâm. The old Hebrew custom, as well as the traces of moon-worship among all the Semites, makes this quite probable. Especially may be cited the ritual expressions hallala, ahalla (Heb. hillel, 'to praise' [God]), which is explained by hillel, 'new moon,' 'crescent.' Moreover, Muhammad could not have ventured to establish an institution of such weighty consequences if he had not found a popular basis for it. There has been much speculation as to the reasons why this step was taken by him. These can hardly have been other than religious. As we have seen, the heathen festivals were connected with the solar year. Further, the nomadic Arabs observed the stars closely, and explained natural phenomena by their influence. Through a radical separation from these conditions, Muhammad wished to draw the believers away from Nature to his God (Allah) as the creator, causer, and preserver of all things (Lisān al-'Arab, i. 172, s.r. 'Nau'). While the Christian Church did not succeed in doing away with the 1st of January as the beginning of the year, which day it condemned as 'antiquus error,' Muhammad accomplished this, although with disastrons consequences. So patent are the evils of a purely lunar year whose length varies (cf. Festivals [Muslim]), owing to primitive methods of observation and determination of the new moon, that efforts to correct them have never ceased from the beginning to the present day.

Apart from the determination of the times of prayer, there lies in this the main cause why astronomy so flourished among the Muslim peoples. The festivals, which have thus been detached from their natural bases, run now through all the seasons of the year; and in about 33 solar years the Arabic year returns to its starting-point. era was formed by Friday (Thursday) the 16th (15th) of July, 622 A.D., i.e. the 1st of Muharram of the year in which Muhammad finished his Hijra (emigration) from Mecca to Medina. Of this beginning Ideler says: 'The 15th is to be accepted when it is a matter of astronomical observations. but the 16th when it is a matter of bringing about an agreement between the cyclic reckoning, the appearance of the moon, and the popular Arabian calendar.' A new month begins when two trust-worthy Muslims have observed (ar-ra'yā) the crescent moon (hilot) in open field or on mountains and notify this to the authorities, the Hakim or

the Qādī. The day is reckoned from one sunset (maghrib) to another. The days of the month are counted either consecutively or in the same way as in the mediaval consuctudo Bononiensis, which took its origin in upper Italy in the 8th cent. A.D. and spread from there to France and Germany (cf. Du Cange, Glassarium, s.r. Mensis'; Ruhl, Chronologic, p. 75f.; Wright, Arab. Gram.<sup>3</sup>, 1875, ii. § 111; Caspari, Arab. Gram. 5, 1887, § 476).

As a remedy for the vague duration of the purely popular lunar year of the Muslims, the astronomers have established a cyclic year, which has been adopted also by historians. The months are reckoned alternately as 30 and 29 days. The ordinary year contains 354 days. The intercalation, which in pre-Islāmic times was attended to by the Fuqaim, a clan of Kinana, is now carried out in the following fashion: In a cycle of 30 years, the years 2, 5, 7, 10, 13, 16 (15), 18, 21, 24, 26, 29 add a day to their last month. Such a year is called sana kabisa, but the common year sanu basita. As in this case scholars, so also many enlightened rulers of Islām, endeavoured, in the face of the prohibition of the Prophet, to substitute for the purely lunar year a solar year that would meet better the needs of the peasantry, the collecting of taxes, and the administration of the State. In this connexion may be mentioned the efforts of the Fatimid al-'Azīz, about 366 A.H., whose reform lasted until 501; further, the efforts of the 'Abbasid Khalif at-Ta'i' (ruling 363-381 A.H.), whose reform continued even under the Ottomans; of the Seljüq Malik Shah, about 471 A.H., who reformed the old Persian calendar with the help of the well-known poet 'Omar Hayyam and other astronomers; several attempts under the II-Hāns, the Persian Mongols, and the partial reform by the Ottoman Government in the 19th century. In Egypt, at present, the Gregorian calendar is used for non-religious purposes. Frequent use is also made of the Coptic calendar in Egypt, and of the old Greek calendar in Syria. Among the Berbers of the Maghrib the Julian names of the months have remained in use down to the present day.

Since the 18th cent, efforts have been made to repare for scholarly purposes a concordance of the Islamic and European chronologies. It was after an attempt in L'Art de verifier les dates (1821-44) that Ideler first fixed astronomically the relation between the two systems. The tables published by Wüstenfeld in 1854, and the numerous reprints of them, make a knowledge of Islamic lunar dates accessible now to all. The Genevan physicist and numismatist Fr. Scret has laid down a very handy formula for converting the one date into the other (Lettres sur la numismatique musulmane, 1864, p. 34 ff.): Given the year of the Hijra (A), if we wish to know the Christian year (X) the formula

 $A = \frac{3 A}{100} + 622 = X$ 

18 A. 100 + 6022 — X.

CALENDAR (Persian).—The ancient Iranian calendar falls into two distinct categories-the Old Persian and the Avesta-which differ from each other in important respects, although the former system, dating, at least, from the period of the Achamenians (q, v), shows certain tendencies which were later fully developed in the Avesta reckoning

I. The Old Persian calendar was divided into twelve months, but the names of only nine of these are known, and their exact sequence is a matter of doubt. The Old Persian inscription of matter of doubt. Darius at Behistün records the names as follows: Garmapada ('footstep of heat'), Thūravāhara Garmapada (\*1001step of neut ), Indias dana ('mighty spring'), Thàigarei ('garlie-gatherer' [?]), Bagayādi ('homage to the deities'), Adukani ('digging of the eanals'), Athriyādiya ('worship of the fire'), Anāmaka ('nancless'), and Viyakhna ('ice-free' [?], 'assembly-month' [?]), to which the Kew Elamitie version (iii. 43) adds Markazanash (Old Persian \*Margazana, 'brood of birds'). It is clear, from a comparison of the Old Persian and Babylonian versions of the Behistun\_inscriptions, that Thuravahara 30 corresponded to Tyyar (April-May) 30, Thaigarci 9 to Sivan (May-June) 9, Athriyadiya 26 to Kislev (November-December) 26, Anamaka 27 to Tebeth (December-January) 27, and Viyakhna 14, 22 to Adar (February-March) 14, 22. Several divergent orders of the Old Persian months have been proposed, particularly by Rawlinson, Oppert, Unger, Justi, and Prašek (and King and Thompson), whose sequences are thus tabulated by Ginzel, Habeh. d. mathemat. und techn. Chronologie, i. (Leipzig, 1906) 276:-

in any classical author to the Iranian calendar: 'Magos trecenti et sexaginta quinque iuvenes sequebantur puniceis amiculis velati, diebus totius sequentian meets aments char, about some anni pares numero; quippe l'ersis quoque in totiden dies descriptus est annus' (Quintus Curtius, 111. iii. 10). Nothing is known of any method of intercalation employed in the Old l'ersian calendar.

2. The Avesta calendar is much better known than the Old Persian, although the Avesta writings themselves contain no formal list of months. Afringan iii. 7-11, it is true, gives the names of five months and five days, and both the Sīrōzas give the names of the thirty days of the month; but the most reliable source for the month-list is the Pahlavi literature, which is supplemented to a eertain extent by Perso-Arabic writers and a few Byzantine chronologists. Thus Bundahiśn xxv. 20 (tr. West, SBE v. 97) states that 'the auspicious month Fravartin, the month Artavahist, and the month Horvadat are spring; the month Tir, the month Amerodat, and the month Satvaīro are summer: the month Mitro, the month Avan, and the month Atarō are autumn; the month Din, the month Vohūman, and the month Spendarmat are winter.' The days of the month were named as follows: Aŭharmazd, Vohūman, Arţavahišt, as Iolows: Almarımazı, Voluman, Artavamarı, Satvairo, Spendarmat, Horvadat, Amerodat, Din pa Ataro, Ataro, Avân, Xūrsēt, Māh, Tir, Göb Din pa Mitrō, Mitrō, Srōs, Rasīn, Fraveirin, Vāhram, Eam, Vāt, Din pa Din, Din, Art, Āsiāt, Āsmān, Zamyāt, Māraspend, and Anirān (cf. Bāndahisa xxvii. 24; Shāyast lā-Shāyast xxii. xxiii.; and the Mādigān-ī Sī-rōz, tr. Darab

Of all these series, Oppert's seems the most probable to the present writer, who has abandoned the view expressed by him in Geiger-Kuhn's Grundriss der iran. Philologie, ii. (Strassburg, 1904) 677.

The date at which the year began is as uncertain as the order of the months. Oppert suggests that it commenced with Bāgayādi (September-October), which is admitted by all to have corresponded with the Babylonian Tishri. This would, of course, correspond with the beginning of the Hebrew civil year (cf. Ex 23<sup>16</sup> 34<sup>22</sup>), and might receive a certain degree of support from the name of the month, 'homage to the deities.' It seems far more probable, however, that the year actually began with Garmapada (or, according to Justi, with Thūra vāhara), corresponding to Nisan (March-April). with Thūra-This would make the commencement of the old Persian year harmonize with both the Avesta and the Babylonian systems, as well as with the Hebrew sacred year (cf. Ex 1218).

The days of the month were numbered, instead of named, as in the Avesta calendar, except that the last day of the month was termed jiyamna, 'diminishing,' 'ending.' There were, apparently, thirty days in each month, as in the Avesta and the early Babylonian calendars. The year contained 365 days, as is shown by the only reference

Peshotan Sanjana, in Karaka, History of the Parsis, London, 1884, i. 134-144). This order. both of months and of days, receives abundant confirmation from the Arabic al-Biruni (Chronol. of Ancient Nations, tr. Sachau, London, 1879, p. 52 f.), Mas'ūdī (*Prairies d'or*, ed. Barbier de Meynard and Payet de Courteille, Paris, 1861-1877, iii. 413 f.), Ulugh Beg (Epochae celebriores ed. Gravius, London, 1650, pp. 23-26, 101 f.), and al-Farghani (Elementa Astronomica, ed. Golius, Amsterdam, 1669, p. 4), as well as from the Greek Isaac Argyrus and Theodorus Meliteniotes (Gray, Byzant. Ztschr. xi. 470), and from a MS said by Burton (Λείψανα veteris linguae Persicae, Lübeck, 1720, p. 6; cf. Lagarde, Gesam. Abhandl., Leipzig, 1866, pp. 229-232) to have been used by him at Lambeth, although all trace of it is now lost.

Lambeth, although all trace of it is now fost. The problem of the origin of the names of the Avesta months is a difficult one. Kuka (K. R. Cama Memorial Volume, Bomlay, 1990, pp. 54-73) and Gray (AJSI xx. 194-80) have sought explanations from divergent pointingly bean with Din, which taining that the problem of the problem of the problem of the bean set of the lack of a system of intercalation, until, by the time of the composition of the Bandahisn, Fravartin had become the commencement of spring); and the latter holding to the Bāndahisn, and endeavouring to trace a borrowing from the Bahylonian system on the part of the trainsns. While the arguments of Kuka have certain points in their favour, his fundamental assumption is doubtful. The entire evidence ad our disposal makes Fravartin (March-April) the first month of the

year, and the parallels with the Bahylonian calcudar, which kuha practically overlooks, are too striking to be ignored. For a full claboration of the position here taken, reference may he made to the study of Gray noted above, in which the name of the month Fravarin is interpreted as referring to the ghosts of the righteons dead; Arlavabils as the revivileation of the earth after its death in winter (cf. Dinkart VII. XXX. 14, VIII. XXXII. 14, XXXI. 14). Horvadaj as the vernal rains preparing for the coming harvest; Tir as the month of the rising of the dogstar; Ameroidal as the vergetation of harvest time; Satvairo as the month either of new ploughing, or, more probably, of building; Mitros at the sum month (cf. Samasah as as the rains of autumn; Ataro as the fire which protects against the cold winter; Din possibly in deflance of Abrimana, who created winter; Vohiman as the first-horn of Din=Ormazi; and Spendarmat as a fertility-deity of early spring. (For the naive etymologies of a Pausi rivayat, see Unvala, in Spiegel Memorial Unitem, p. 2024.)

3. In each Avesta month, followed by the Armenian system, there were thirty days, each named as noted above, and preserving, for the first seven days, the regular order of Ormazd and the Amshaspands, which was violated in the series of month-names, perhaps for the reasons just noted. The fact that the first, eighth, fifteenth, and twenty-third days of each month are named in honour of Ormazd has led some to suppose that the Avesta recognizes a sort of week. Of this there is no evidence whatever. It has been shown, however, by Nadershah (Cama Memorial Volume, pp. 246-249) that this order of names of the days rests upon Yasna xvi. 3-6, and that it comprises four groups, containing respectively the Amshaspands, the seven planets, moral objects, and religious objects, each headed by the supreme god Ormazd, the entire group primarily representing the twenty-seven lunar mansions (cf. Ginzel, op. cit. pp. 70-77). To the end of the year, which thus comprised 360 days, were added five Gathadays, each sacred to one of the five great divisions days, each sacred to one of the five great divisions of the Gáthás: Ahunavaiti, Ustavaiti, Spenta Mainyu, Vohu Xŝathra, and Vahištõišti (cf. al-Birūni, op. cit. pp. 53-54, 383; Ginzel, op. cit. p. 287). To allow for the quarter-day thus lost each year, a month was intercalated every 120

4. The Avesta year was primarily divided into a summer (horm) of seven months and a winter (zayan, zyam) of five (gloss to Vendidād 1, 3; Bāndāhiša xxv. 7). Spring and autumn seem not to be recognized in the Avesta. In later times, however, the year was divided into spring (zahār), summer (hāmīn), autumn (pātīz), and winter (zamīstān), each of three months (Bāndahīs), xxv. 20). The Avesta itself, on the other hand, has a division of the year into six unequal parts, called gāhanbārs, which, though later interpreted as celebrating the six periods of creation (Bāndahīsh, xxv. 1), were doubtless originally popular festivals.

The gāhanhārs were as follows: maibyōizoremaya, 'mid-spring' (corresponding theoretically to May 1-5), maibyōisoma, 'mid-summer' (June 31-July 4), paitislochya, 'grain-bringing' (Sept. 12-16), ayaʻoʻrima, 'home-coming' (Oct. 12-16), maibyāirya, 'mid-year' (Dec. 31-Jan. 4), and hamasyabmacēdaya, of uncertain meaning (Mar. 15-20); slightly varying days are given by others, depending on the day taken as the first of the year—March 8 or 15 (as by Bartholomae, Altiran, Worterb., Strassburg, 1904, coll. 11181, 1838, 160, 1117, 1776, and Ginzel, op. cit. p. 285). The gāhanhārs accordingly fell at varying intervals, so that maibyōizaremaya-maibyōisēma-945 days, maibyōisōma-paitishahya=60 days, paitishahya=30 days, maibyōisōma-paitishahya=60 days, paitishahya=15 days, yajōvima-maibyōizaremya=75 days, yajōvima-maibyōizaremya=75 days. Perhaps the best explanation of the gāhanbārs is that of Cama (Actes du vi. Congr. Internat. des Orientalistes, iii. 583-592), who com-

bines the twofold division of the year into a winter of five months and a summer of seven, and four seasons of three months each. The first, second, and fifth gahanbars, according to Cama, fell in mid-seasons, i.e. in the middle of the spring of three months, the summer of seven months, and the winter of tive months; while the third, fourth, and sixth gahanbars fell at the ends of seasons, i.e. at the end of the spring of three months, the summer of seven months, and the winter of three months. It may also be noted in passing that attempts have been made, as by Nadershah (op. cit. pp. 267–270), to establish a double year, one (sarréo) commencing with the vernal equinox and the other (yār) with the autumnal equinox. This, however, is extremely doubtful.

(gar) with the authorist equals ever, is extremely doubtful.

5. The day was divided into five parts, called gibs. These were hārani, 'time of preparation of the haoma' (dawn to noon), rapiberina (noon to 3 p.m.), uzaycirina, 'afternoon (3 p.m. to twilight), airessribirima aibipaya, of uncertain meaning (twilight to midnight), and usahina, 'dawn' (midnight to dawn). In winter, however, rapiberina was omitted, and hārani was extended from dawn to the middle of the afternoon. The night, in like manner, was divided into four parts, which were also included in the gābs. These were (Frāhany-i-ōim, ed. Reichelt, Vienna, 1900, p. 36; Jamaspi and Hang, An Old Zand-Pahlarai Glossary, Stuttgart, 1867, pp. 42, 76-77) hā frāšmödāiti, 'sunset' (sunset to darkness), recamrensa, 'turning of darkness' (darkness), recamrensa, 'turning of darkness' (darkness), encamrensa, 'turning of darkness' (darkness), encamrensa, 'turning of darkness' (darkness), encamrensa, and rocanhām frayati, 'coming forth of light' (grey awn to sunrise).

6. The Avesta year, as here outlined, is the ideal one. In the course of time the dates gradually fell behind, both in the normal method of reckening, and as a result of the neelect of intercalation in consequence of the troublons times which followed the downfall of the Sasanians on the death of Yazdagird (A.D. 651). In the very earliest period, according to al-Birûn (op. cit. 13), the Persian year contained but 360 days, one month being intercalated every six years, and two months every 120 years.

According to Persian tradition, moreover, the entire system of intercalation dates from the period of Zoroaster (ib. p. 55; Cama Memorual Volume, p. 235 f.). Seventy years before the death of Yazdagird, two months were again intercalated, despite the five epagomenal days of each year, one as the necessary proceeding, and the second 'with regard to the future, that no other intercalation might be needed for a long period' (ib. p. 38; ef. pp. 12, 54). The position of the intercalated month varied. Shah Khulji, quoted by llyde (Historia religionis reterum Persarum, Oxford, 1700, p. 203 ff.), states that the first month intercalated was put after Fravartin, the second after Artavahist, and so on, until after the lapse of 1440 years the intercalated month should normally come again after Fravartin. By the time of Shah Khulji, Ulugh Beg (Epocher cel. p. 23), Kuth-ad-din (ap. Hyde, p. 205), and al-Biruni (op. cit. 53), the tive epagemenal days, and, by implication, the inter-calated month, came after Avan. No attempt was made to correct the confusion of the Persian year until the reign of the Seljük sultan Jalál-ad-din Malik Shah (A.D. 1073-1092), who re-established the old system firmly, taking as the first of Fravartin, the New Year, March 15, 1079, and placing the epagomenal days in their original era, known as the 'era of Jalal ad din,' still remains in force among the Zoroastrians. There is, however, a sectarian division among the Parsis of India (although not among the Zoroastrians of

VOL. 111.-9

l'ersia), since, after the l'ersians lost their independence, they failed, for some reason, to make the proper intercalation, whereas those Zoroastrians who sought refuge in India had, according to tradition, made this intercalation while still in Khorasan. The Shahinshai sect, which claims that intercalation is allowable, is, therefore, one month ahead of the Kadmis, who regard intercalation as merely political in origin, not religious. difference is of importance as affecting the religious festivals, each sect denying the validity of the feasts of the other. The divergency was formerly the cause of bitter dissensions, which are now, happily, appeased (see Karaka, *Hist. of the Parsis*, i. 105-117).

7. The reduction of dates of the cra is somewhat addin' to those of the Christian era is somewhat involved, and varies by a day, unless the precise name of the day of the original calendar be given. If tables (noted in the Bibliography) be not at hand, the following method may be used (see Ginzel, op. cit. p. 3024f.). Multiply the expired year of the 'era of Jalāl-ad-din' (not the one of which the date is given) by 365-242535. Add to the product the sum of days of the unexpired year plus 393812 (the sum of days from 1st Jan. A.D. I to 15th March A.D. 1079, the beginning of the 'era of Jalal-ad-din'). Divide the sum by 1461 (the days in a four-year cycle, A.D.). Multiply the quotient by four, and add the remainder, reduced from days to years, months, and days of the Christian era. The result will be the corresponding date A.D. Conversely, to reduce dates A.D. to the 'era of Jalal-ad-din' (usually termed A.Y., i.e. Anno Yazdagirdis), divide the expired year A.D. by four, and multiply the quotient by 1461. Add to the product the number of days in the unexpired year A.D., and subtract from this sum 393812. Divide the remainder by 365-242535, the quotient being the years A.Y. Reduce the remainder to months and days A.Y.. and the result will be the corresponding date A.Y. which is desired.

corresponding date A.Y. which is desired.

8. Mention may be made in passing of two documents giving exact equivalents for dates A.Y. and A.D. The first of these is an anonymous Byzantine author (ed. Scaliger, Canones isagogiaee, Faris, 1658, p. 314 f.; Petan, de Doctrina Temporum, Ports, 1708, it 213, Gray, Pagant, Zobert, N. 4711, and Acesta, Jones, Bombay, 1904, p. 174 f.), who states that in A.D. 1443 (ed. A.Y. 812) Tri Ir corresponded to March 11, Mirt 20 to June 12, Din 24 to Sept. 14, and Fravarțin 18 to Dec. 12. The other text is an Oriental chronicle-table for A.D. 1687 (Ephemerides Persarum per totum annum, ed. Beck, Augsburg, Chephemerides Persaru 28, etc., thus indicating that between calendar had fallen behind two months.

9. The influence of the Iranian calendar was farreaching. Not only were the Cappadocian monthnames borrowed in toto from the Avesta-Pahlavi system (Benfey and Stern, Ucber die Monatsnumen einiger alten Völker, Berlin, 1836, pp. 76-120; Lagarde, op. cit. pp. 258-264), but many of the names of the months in the Armenian (given by Dulaurier, Recherches sur la chronologie arménienne, Paris, 1859, pp. 10-14). Chorasmian, and Sogdian (al-Bīrūni, op. cit. pp. 56 f., 82 f.; cf. SBA W, 1907, p. 465) menologies were taken from the Zoroastrian calendar, while sporadic borrowings may be traced in the month-names of Albania (given by Dulaurier, p. 167, Azaria of Julfa [early 17th cent.], op. cit.
p. 115 ff.), Seistan (al-Birfini, p. 52 f.), Bukhārik
(Bokhara [?]; al-Birfini, p. 82 f.), and Qubā (a
large city of Farghana, near Shash; ib. p. 82 f.). Those month names of these various calendars which seem to show Zoroastrian influence (the Old Persian system here plays no part, unless Marquart, Philotoques, Iv. 235, be right in explaining the Armenian name of the eleventh month, Margae, as a loan-word from the Old Persian Margazana), are as follows, summarized

from Gray, 'On Certain Persian and Armenian Month-Names as influenced by the Avesta Calendar, in *JAOS* xxviii. [1907] 331-344 :

in JAOS xxviii. [1907] 331-344:

1. Fravariine Chorasmian Nausării (this, like the four following names, representing the Avesta \*naca-sarcâa, 'new year'), Sogdian-Bukharik Nissard, Armenian Navasard, Albanian Navasardus, while the Sestanian Kavão may represent the Avestay theorem was in Sestandi (the Sestanian Kavão may represent the Avestay theorem was in Sestandi (taski xis, 65 ft., cf. delger, Ostranische Kultur, p. 411; Azaria of Julfa's Saos is borrowed from the Arabic sans, 'sun'). 2. Aravahist Chorasmian Ardinst (the Sogdian Fadi Nissard may be for Avesta \*patiti macasarcão, "atter the new year'). 3. Horvadaţe Chorasmian Harudâ (the Sogdian Nisan and Azaria of Julfa's Slati are loamatischian Trikyainë (uncertain socalization), Armenian Trê (if the Albanian Yilé be connected with Albanian ut, it, 'star 'lct theyer, Etymologisches Worterbuch der adhamsischea Spracke, Spracke, names from the Herew Catendary. 4. HT=Londsminal Te (G. Seitanian Tirk-Yainia (uncertain vocalization), Armenian Tre (G. Meyer, Etymologiches Worterbuch der albanesischen Sgrache, Strasburg, 1831, p. 460), it may possibly be a reminiscence of the Zoroastrian name of this month). 5. Amerôda; =Chorasmina Hamdad (Azaria of Julfa Sadmar is the Arabic qamar, moon h. 6. Satvairo=Chorasmina Axisarivari (the vocalization, except for the matres Jeclionis, uncertain, as in many of these names). 7. Mitro=Quban Mint, Armenian Hillestan Arabic qamar, moon h. 6. Satvairo=Chorasmina Axisarivari (the vocalization, except Chorasmina Fly (Turfan Bay(a)kaip) = Baya, "god," i.e., Mitras. 8. Avan=Sogdian Abail, 9. Ataro=Chorasmina Ari (read, with some of the variants, Adu), Armenian Ahekan (Lagarde, p. 9; Hibschmann, Armenische Frammatik, Leipzig, 1897, i.e., 1997, 1

follows: 1, Añharmazd = Chorasmian Bimāzd, Sogdian Xarmažd. Afharmazd = Chorasmian Ardisk, Sogdian Xaskir. 4, Satvairō = Chorasmian Avšarivarī, Sogdian Xaskir. 5, Spendarmaţ = Chorasmian Asharivarī, Sogdian Sahadārmaš. 6, Horvadaţ = Chorasmian Hardidā, Sogdian Radad (?), 7, Amerōda = Chorasmian Hardidā, Sogdian Radad (?), 7, Amerōda = Chorasmian Hardidā, Sogdian Radad (?), 7, Amerōda = Chorasmian Hardidā, Sogdian Max. 13, Directorasmian Jozdi, Sogdian Dast. 9, Afarō = Chorasmian Andrida = Chorasmian Andrida = Chorasmian Jozdi, Sogdian Tis. 13, Tire Chorasmian Jizi, Sogdian Tis. 14, Goš = Chorasmian Piūt, Sogdian Sruš. 18, Rašnā = Chorasmian Rašn, Sogdian Kan. 19, Fravartin = Sogdian Frib. 21, Ram = Chorasmian Rašn, Sogdian Rasm. 29, Vāj = Chorasmian Ama = Chorasmian Rašn, Sogdian Kan. 19, Fravartin = Sogdian Frib. 21, Ram = Chorasmian Rašn, Sogdian Kan. 24, Vāj = Chorasmian Ama = Chorasmian Rašn, Sogdian Afax. 27, Asmin = Chorasmian Ama = Sogdian Afax. 29, Attāj = Chorasmian Astāf, Sogdian Astāß. 27, Asmin = Chorasmian Asmān, Sogdian San. 28, Zamyāj = Sogdian Ramijd (read Zamjid). 29, Māraspānd = Chorasmian Marasband. The Sogdian Bakewise gave special names to each of the five

Rainjid (read Zamjid). 29, Maraspana—Unorasman Maraseau. The Sogdians likewise gave special names to each of the five epagomenal days (al-Birini, p. 57), and the Chorasmians had names for the six gåhandars (bb. p. 28, cf. p. 425, f.), while the Armenians, it has been suggested (Dubaurier, p. 13), also did so originally; but the exact meanings of the appellations, even when compared with their corresponding terms in the Zoroastrian calendar, are uncertain. According to al-Birini, moreover, both these nations, like the Armenians and Albanians (Dubaurier, pr. 115 ff. 167). Indeed the enagomenal daws at the end of the

trian calendar, are uncertain. According to al-Birâni, moreover, both these antions, like the Armenians and Albanians (Unlaurier, pp. 115 ff., 167), placed the epagonenal days at the end of the year, as in the early Avesta calcular, instead of violating this custom, as in the middle period of the Avesta system. The Chorasmians had, in addition, a series of eras, first from the commencement of their colonization of the country, 69 years become to the colonization of the country, 69 years become the commencement of their colonization of the country, 69 years become the commencement of their colonization of the country, 69 years become the colonization of the colon

tonese pronunciation; Mit (Sogdian Mir, 'Mithra'), Mok (Sogdian Max, 'Mah'), Wen-hon (Sogdian Wunxán, 'Bahram'), Tit (Sogdian Tir, 'Tir'), Wun-mut-si (Sogdian Wurmažd, 'Ormazd'),

(Sogram III, III, Munimutes, (Sogram wurmazi, Ormazi), and Nackit (Sogram Naih, Anahita). It should also he noted that mattempt was made by Yazdagird III, to give both the months and days of the Zoroastrian year entirely different names, but his innovations soon met the oblivion they richly merited (Hyde, Historia religionis veterma Persarum, pp. 195-200).

10. In conclusion, the comparative table given below 1 may serve to elucidate the mutual correspondences of the ideal Babylonian, Old Persian, Avesta, and Julian months.

LITERATURE. - The principal literature on the Iranian calendar, LITERATURE.—The principal literature on the Iranian calendar, together with the chief references to the original texts, is given by Gray, 'Der iranische Kalender,' in Geiger-Kuhn, Grundriss der iran, Philologie, ii. 675-678, Strassburg, 1904. Older works of importance, there overlooked, and later treatises are Ulugh of importance, there overlooked, and later treatises are Ulugh Beg, Epochae celebriores, ed. Gravins, London, 1850, Ephenaer-ides Persarum per totum annum, ed. Beck, Augsburg, 1959; Ussener, Adhistoriamastromanius symboda, Bonn, 1850 (valnable for Byzantine texts on the Persian calendar); Gray, 'Zd den by-zant. Angelsen uber den altiran, Kalender,'in Byzant. Zischer, xi. 485-472; 'Medieval Greek References to the Avestan Calendar', Areata, 'Palkari, and Ancient Persian Studies in Homour of . . . Simpina, Bombay, 1961, pp. 167-115, 'The Origin of the Nameson the Avesta Months,' in A. 25.2 xx, 181-200. On betatin Persian the Avesta Mortes, in AJDL XX, 191–201, 'On Certain Persian and Armenian Mouth-Mannes as influenced by the Avesta Calendar,' in JAOS XXVIII. 331–344; six studies in the K. Acama Memorial Volume, Bombay, 1900: 'Bharucha, 'Pazend and English Versions of a Chapter of the Pahlavi Dinkard, relating to the Solar and Luni-Solar Vears in the Zoroastrian Religion,' and English Versions of a Chapter of the Pahlavi Dinkard, relating to the Solar and Luni-Solar Vears in the Zoroastrian Religion, pp. 12-28; Kuka, 'An Enquiry into the order of the Parsi Months and the Basis of their Nomenclature,' pp. 54-73; Karkaria, 'The Parsi and the French Revolutionary Calendars,' The Parsi and the French Revolutionary Calendars,' The Parsi and the French Revolutionary Calendars, 'The Parsi and Nadershah, 'The Zoroastrian Montis and Years with their Divisions in the Montage of the Parsian Year,' pp. 241-273 with their Divisions in the Montage of the Parsian Montis and Years with their Divisions in the Montage of the Parsian Montis and Years with their Divisions in the Montage of the Parsian Montis and Years with their Divisions in the Montage of the Parsian According to an Old Parsee Manuscript,' p. 201 ff., and K. R. Cama, 'The Zoroastian Calendar', p. 230 ff.; Marquart, Philolomes, P. 238 ff., and Supplementband, x (1907) 199-215; F. W. K. Miller, 'Die Persischen' Kalendernastriack in minesischen Tripitaka,' SBA W, 1907, pp. 458-465; Inostrancey, Sasanidskie Etyudy, SBA W, 1907, pp. 458-465; Inostrancey, Sasanidskie Etyudy, SD, Comparative chronological tables of the Persian and Christian eras are given in the edition of Ulugh Eeg noted above, and in Schram, DWA W, mathematische Klasse, NY. 328-331, Vienna, Issa, and Kalendariographische und chronologische Topicha, Leipzig, 1908, pp. xxi-xxii, 159, 173-181.

CALENDAR (Polynesian), — The calendrical

CALENDAR (Polynesian). - The calendrical development of the islands of the Pacific was considerably higher than that of Africa, with which, however, it offers more than one analogue. In the western portion much influence has been exercised by higher civilizations. This is especially clear in Java, where the Muhammadan lunar year of 354 days is reckoned according to the Indian saka era (beginning with A.D. 78); the month, with Muhammadan names, is divided, in Indian fashion, into a 'light' and a 'dark' half; seven days of the week bear two sets of names, one being Muhammadan and the other Indian; and one of the two systems and the other Indian, and one of the two systems of intercalation is Arabic, while the other is Turkish (for details, see Ginzel, Handbuch der mathematischen und technischen Chronologie, Leipzig, 1906, i. 414-418).

A cycle of 210 days is formed by 30 seven-day weeks, each of which is ruled by an ancient Javanese deity and has its own name : Sinto, Landep, Wukir,

Kuvantil, Tolu, Gründierg, Warigo, Wariga-gung, Juling-wangi, Sungsang, Galungan, Kuningan, Laukir, Mondhosio, Juling-pujet, Palung, Kuru-welut, Marakik, Tanbir, Madhan-kungan, Maktat, Wuye, Manakil, Prang-bakat, Bolo, Wuyu, Way-ang, Kularu, Dhakat, and Walu-gunung; and this cycle (wuku) is divided, for purposes of divination, eyele (wakn) is divided, for purposes of divination, into periods of 10, 9, 8, 6, 4, 3, 2, and 1 days. Side by side with the wakn is the pasar, or marketweek, of 5 days—Pahing (or Pa), Pon, Wagé, Kaliwon, and Logi (or Manis)—which finds a parallel in the Yoruba week (see above, p. 64\*), and which is also observed by the non-Muhammadan Lampong of Sumatra. The days of the pasar are combined with the seven-day week of the wakn (Paddha, Kaliwon, Esperati Maria). the wukn (Buddha-Kaliwon, Respati-Manis, . Buddha-Paking, Respati-Pon, etc.), so that, after the thirty-fifth combination, the initial point (Buddhu-Kaliwon, etc.) is again reached. Six of these periods coincide with a wuku, and twelve give the wuku year of 420 days, an astrological year.

Besides this lunar year, the Javanese have the solar year, which is divided into 12 manasas (Skr. māmsa, 'time' [a meaning found only in the native lexicographers, not in Skr. literature), which vary in length: Kasa (41 days), Kuro (23 days), Katiga (24 days), Kupat (25 days), Kulima (27 days), Kanem (43 days), Kapitu (43 days), Kawolu (26 days), Kasanga (25 days), Kasadasa (24 days), Desta (23 days), Sada (41 days), this year of 365 days being that determined, after much previous irregularity in reckoning, by Sultan Paku Buwana vII. and beginning 22 June 1855. Every 4 years Kawolu is given an extra day for intercalation; and it is this solar year which is the one indi-genous to Java. The native Javanese day has only general divisions into early dawn, dawn, sunrise, forenoon, etc., but the five Muhammadan hours of prayer and the Indian astrological divisions are

also kept.

The funar year is observed by the inhabitants of the Tennger range in S.E. Java. This has 12 months (alternately 29 and 30 days in length), or 354 days, but in each last year of its five-year cycle a month of 30 days is intercalated. This windu, or cycle, accordingly has 1800 days, thus corresponding almost precisely to the Indian yuqu, which consists of 5 years or 1830 days. In other respects the usual Javanese system is closely followed: and the same statement holds good of the neighbouring island of Bali, except that here interealation is more irregularly performed, normally taking place at the expiration of 64 months, of which 30 have 20 days, while 31 have 30, this total of 1890 days corresponding to 9 Javanese wukus of 210 days each, and also to 5 Indian years of 378 days each (on this Indian year, cf. Ginzel, op. cit. p. 322). It is especially noteworthy that both in the Balinese and in the Javanese mangsus the first ten names, already listed, are based on the Javanese ordinals, while the last two (Desta or Yesta, and Sada, Sadha, or Asada) are borrowed from the Skr. month-names Jyestha and Asadha (approximately May-June and June-July).

Fravarțin

JULIAN March-April April-May May-June June-July July-August August-September September-October October-November November-December December-January January-February February-March

This may imply that the Isali-Javanese year originally had only by months (cf. Ginzel, op. cif. p. 425)—a curious phenomenon which is recorded for the Gilbert Islands by Hale (U.S. Exploring Expedition), Ethnography and Philology, Philadelphia, 1846, p. 1084.), and is seen also among the Maori and possibly in the Caroline Islands, although, as Gerland (Anthrop. der Naturcelker, Leipzig, 1809-77, vi. 724.) well urges, all these cases of alleged ten-month years may be based on error. At the same time, one involuntarily thinks of the Roman tradition that previous to Numa, who added Jan. and Feb., the year consisted of only ten months (cf. Plutarch, Vita Numa, xviii. I., and see below, n. 1849.) This may imply that the Bali-Javanese year originally had only and see below, p. 134a).

With diminishing influence from Hinduism and Muhammadanism goes a decrease in the calendrical skill of the Malayo-Polynesian and allied peoples. This comes out clearly in the case of the Sumatran Lampong and Achinese (the latter having an elaborate system of synchronizing the hunar year with the senson by kenongs evidently borrowed from the Indian nukşatra year [see Ginzel, Hāb. d. math. u. tech. Chron. pp. 428-430]), as contrasted with the pagan Battak, even though the latter show, in their names of the days of the month, reminiscences of the Indian names of the sevenday week (ef. the list given by Ginzel, op. cit. p. Yet these Battak, though they reckon their months from new moon to new moon, have no real era, but compute extra-annually by remis of from 9 to 12 years, while they do not even have a fixed period for the beginning of each year. The Battak year is essentially a terrestrial one, as contrasted with the lunar, solar, or luni-solar year, being determined by terrestrial phenomena such as the monsoons, the growth of vegetation, etc., though observations are also made of the Pleiades, Orion, Seorpio, and Venus. None of the Sumatran peoples are acquainted with the hour; the day receives, as already noted for Java, only general subdivisions for early afternoon, late afternoon, sunset, midnight, etc.

In Melanesia the system of reckoning time is most primitive. The standard of measure is, of course, the moon, but there is no indigenous concept of the year; tau or niulu, commonly used for 'year,' properly comoting only 'season' (as the 'tau of the yam,' the banana having no tau, since

it is in fruit throughout the year).

'It is impossible to fit the native succession of moons into a 'It is impossible to fit the native succession of moons into a solar year; months have their names from what is done and what happens when the moon appears and while it lasts; the same moon has different names' (Codrington, Medmessians, Oxford, 1894, p. 349). For example, the moons of the year on Mota, of the Banks Islands group, may be given as follows: Magota garo ('fresh grass,' corresponding to April), Magota rango ('wittered grass), Nago rare ('face of winter,' the rinra, or errythrina, flowering in the collection of the rinra, or errythrina, flowering in the collection of the rinra, or errythrina, flowering in the collection. It is for the rinra, or errythrina, flowering in the collection of the rinra, or errythrina, flowering in the collection. It is for the rinra, the rinra flowering in the collection of the rinra flowering in the collection of the rinra flowering at this fall moon). Under a ('great palolo,' the annelid appearing on the ref in immesse numbers on one night at full moon, this servto moon), Dr. 10 etc. I great panot, the animous prearing secre-red in immediate the horizontal properties of the properties of the result of the properties of the properties of the properties of the yam is barvested during this moon), Universet (\* rump of the palot), Pusiaru (when the wind beats the casuarina trees on the cliffs), Tetraneurie (when the hard winds detach fragments from the seeded reeds), and Lamasag noronoro ('rattling of dry

In the Caroline Islands a phenomenon is found, which is, in a sense, characteristic of the Pacific calendar, and which outside this region occurs only in the Armenian and Persian systems (see above pp. 70, 128)—the naming of the days of each month or moon. In Ponape, for example, the names of the 27 days of the moon are as follows (Christian, Caroline Islands, London, 1899, p. 387 f.): Ir, Leleti, Chanok, Chanok-en-kománi, Chanok-en-komána, Epenok-omur, Epenok-omoa, Chau-pot-mur, Chau-Epenok-omur, Epenok-omor, Cuau-pot-mur, Cuau-pot-mor, Arichau, Chatak-rur, Eu, Aradok, At, Arre, Echil, Apang, Alim, Aon, Eich, Anal, Malatuatu, Tukai-en-pai, Aro-puki, Olo-pua, Olo-mul, and Mat (similar lists for Lamotrek, the Mortlock Islands, Yap, and Ulcai are given by Christian, op. cit. pp. 392-395). In Ponape, moreover, as elsewhere in the Carolines, the month is

divided into 3 parts: Rot ('darkness,' 13 days), Mach ('new moon,' 9 days), and Pul ('waning mach (Thew moon, 9 days), and The (waning moon, 5 days). The number of months in the Caroline year is 12 (in Lamotrek, for example, Sarabol, Aramaus, Tumur, Mai-rik, Mai-lap, Scatta, Lakh, Kh, Ul, Alliel, Main, and Ich); and Freyeinet's record of only 10 (Voyage autour du mood, 19 de 19 monde, Paris, 1827-29, ii. 105) - Tungur, Mol, Mahelap, Sotu, La, Kuhu, Halimatu, Murgar, Hiolikol, and Mal—was probably based, as he himself suspected, on erroneous information, especially as each maram ('moon,' 'month') possessed but 30 days. In the Ladrones the same explorer (op. cit. p. 380] found 13 lunar months (pulan) in the year (sakkan): Tumequini, Maino, Umotaraf, Lumuhu, Magmamao, Mananaf, Semo, Tenhos, Lumamlam, Faguatu, Sumongsugn, Umadjanggan, and Umagahaf; and in the same group Chamisso ('Bemerkungen auf einer Entdeckungsreise,' Gesammelte Werke, Cotta ed. iv. 285) found time reckoned by days and moons, but in the Carolines by nights and moons.

Throughout Polynesia time was reekoned by the moon, from 28 to 30 nights forming the month, of which there were, as occasion required, 12 or 13 in the year. This year (or, rather, annual season, for the concept 'year' was searcely known in its strict sense in Polynesia) began at various periods corresponding to our May, June, March, late December, etc., while the names of the months varied from island to island, and even within the same island (cf. Ellis, Polynesium Researches 2, London, 1832-36, i. 86-89; for further details, with abundant references to older literature, see Gerland, op. cit.

p. 71 ff.).
In Tahiti, where the year (tàoo) began about March, the months (marama, malama) bore, according to Forster (Observations made during a Voyage round the World, London, 1778, p. 504 f.), the following names (cf. the slightly divergent list in Hale, op. cit. p. 169 f., where lists for Samoa and Hawaii are also recorded): O-porore-o-moòa, O-porore-omoòrce, Moorcha, Oohee-eiya, Hooree-àma, Taowa, Hooree-erre-erre, O-te-aree, O-te-tai, Warehoo, Waahou, Pipirree, and A-oo-noonoo. Each month had 29 days, all with individual names, special names also being borne by each of the six divisions of the day and the six of the night. In Lakemba, in the Fiji group, the 11 months recorded by Hale (op. cit. p. 68)—Scsē-ni-ngasāu-lailai ('little reed-flower,' corresponding to Feb.), Sesē-ni-ngasāu-levu ('great reed-flower'), Vulai-mbotambota ('moon of scattering' [the fallen leaves]), Vulai-kelikeli or scattering time rather leaves]], Vular-ketikeli ('moon of digging'), Kawakatangāre, Kawawakā-lailai, Kawawakā-leru (these three referring to the growth of the yam), Mbalolo-lailai 'little palolo [for the allusion, cf. preceding col.]), Mbalolo-levu ('great palolo'), Nunga-lailai ('little nunga' [a sort of fish]), and Nunga-levu ('great nunga')—recall by their grouping the seasonal nomenclature of the oldest Indian months—Sukra 'bright'), Suci ('burning'); Nabhas ('cloud'), Nabhasya ('cloudy'); Tapas ('warmth'), Tapasya ('warm'); etc. (Ginzel, op. cit. p. 316). In Rotuma Island, belonging to Fiji, we find a 'monsoon year' of 6 moons, the months being repeated semi-annually on account of the regular blowing of westerly and easterly winds: Gipapa (March, September), Taftáß, Häua, Kusépi, Föson-häu, and Abapuana (Hale, op.

cit. p. 169).

With this may perhaps be compared the Nicobarese custom of reckoning by the south-west monsoon (sho-hong, May-Oct.) and the north-east monsoon (fūl, Nov.-April), two shom-en-yuh, or monsoon half years, making approximately a solar year. At the same time, the kāhēs (new moons) are named consecutively throughout the year, not re-

peated semi-annually as in Rotuma (see, further, Ginzel, op. cit. p. 431 i.). In the Society Islands the year (matahiti) was similarly divided into half-years according to the position of the Pleiades : Maturii i nia ('Pleiades above' [the horizon]), and Matarii i raro ('Pleiades below' [the horizon]). Here again the nights of each lunar month, which were, as necessity required, 12 or 13 in number, and had 30 days each, were named individually, while various seasons (as Tetau, 'autumn'; Te-tau-mitirati, 'time of high sea'; and Te-tau-poai, 'season of drought and scarcity') were also recognized. Ellis (loc. cit.) further states that, while the Society Islanders were unacquainted with hours or weeks, they 'marked the progress of the day with sufficient accuracy, by noticing the position of the sun in the firmament, the appearance of the atmosphere, and the ebbing and flowing of the tide.' In like fashion the Hawaiians began their year when the Pleiades rise at sunset. During live months, beginning with *Kaelo* (Jan.), war might be waged, but peace was enjoined during the remainder of the year. Similarly in Tahiti, according to Wilkes (Nacrative of U.S. Exploring Expedition, Philadelphia, 1850, iv. 42 f.), the first three months were for war; during the fourth the opelu was taba, and in the fifth it was caught; the two moons following were for taxing; the eighth was devoted to prayers, games, and merriment; the ninth contained the annual feast for the payment of taxes; in the tenth the idols were carried about, and taxes were demanded; the eleventh was for the offerings to the dead and the catching of the boneta; and the twelfth for the lishing of the same fish. Elsewhere each divisions. Thus, in Hawaii, Elsewhere each month had analogous

'during each month there were four tabu periods of two nights and one day each, dedicated severally to each of the four great gods. All their religious rites, as well as their fishing, planting, etc., were regulated by the moon '(Alexander, Brief Hist. of the Hawaiian People, New York, 1891, p. 491).

In New Zealand the year also began with the rising of the Pleiades. According to Maori tradition, this year (thu, lit. 'season') originally contained only ten months, until Whare-patari, a magician, taught the people better (cf. the curiously parallel tradition of Numa, above, p. 132°), after which they had the customary Polynesian number which they had the customary to dynesian indiffice of 12 or 13: Te-tahi (June), Te-raa, Te-toru, Te-wha, Te-rina, Te-ono, Te-whitu, Te-warn, Te-irva, Te-ngahuru, Te-ngahuru-tahi, Te-ngahuru-raa, and Te-ngahuru-tahi-aralua (Shortland, Traditions and Superstitions of the New Zealanders<sup>2</sup>, London, 1856, pp. 219–222). These months had the following names for their days (Tregear, Maori-Palynesian Comparative Dict., Wellington, 1891, p. nesum Comparative Dict., weilington, 1831, p. 666, where similar lists are given for Hawaii, Tahiti, Rarotonga, and the Marquesas): Whire of trom whiri, 'twist,' 'plait,' because on this lirst night the moon looks like a twisted thread), Ticea (ct. tireat, 'peg,' 'stick'), Houtet ('long spear'), Onc., Okou (ct. uko, 'wooden look) or other open vessel' [?]). Tamatea-kai-ariki, Tamatea-ananga, Tamatea-aia, Tamata-whakapau, Huma, Ari-roa, Mawharu, Muurea, Atua-whakahachae, Turu, Rakau-nui, Rakau-matohi, Takirau, Oika, Korekore, Korekore turna, Korekore-piri-ki-Tangaroa, Tangaroa-amua, Tangaron-a-roto, Tangaron-a-kiokio, O-Tane (sacred to Tane), O-Rongo-nui (sacred to Rongo), Mauri, O-Mutu, and Mutuwhenua (ef. mutu. 'brought to an end').

In Australia, as one would expect, the lowest degree of calendrical development in the Pacific region is found. Here, in the words of Spencer-Gillen\*, p. 25 f.,

'time is counted by "sleeps" or "moons," or phases of the moon, for which they have definite terms: longer periods they reacon by means of seasons, having names for summer and winter. They have further definite words expressing particular times, such as morning before surrise (ingrunthaquuntha), . . . day after to-morrow (ingrunthairpina), . . . in a long time (ingruntha urbarmaninga);

The citation of additional data from the 1cmainder of the Pacific world would scarcely add new principles to the Polynesian calendar, which may be described, from the evidence already presented, as a system of lunar months (or 'moons'), 12 or 13 to what we should call a year (a concept developed only imperfectly, if at all, by the peoples under consideration), usually named according to the natural phenomena, the occupations, or the religious festivals connected with them, and-in many places subdivided into two or three periods of unequal length-having from 28 to 30 days, only roughly divided into parts (anything corresponding to the hour being quite unknown), but normally named each with a special designationthe latter being, in fact, the most striking superficial characteristic of this entire system of the reckoning of time.

LITERATURE.—Abundant references, in addition to those mentioned in the art, may be found in Waitz-Gerland, Anthropol. der Naturocker, Leipzig, 1890-77, v. a. 125, b, 89, v. 7.17-74, 013-015, 7031; Ginzel, Hundback der mathemat, und techn. Chromotopi, Leipzig, 1906, i. 341-352, 483.

LOUIS H. GRAY. CALENDAR (Roman).—The ordering of time at Rome was always a matter of religious importance, and, as we may conjecture with confidence, was also from the first in the hands of religious authorities. The reason of this is to be found in the nature of Roman religious ideas. In the life of the gens and family on the land, before the city-State came into being, each agricultural operation had a religious side, since the numen or numing concerned with it had to be propitiated at the right time in order that they might be of service to the husbandman or might abstain from injuring him. The proper times for agricultural operations and the rites concerned with them were learnt only from the nature of the season, and from the motions of the heavenly bodies, without (as we must suppose) any systematic arrangement of them in an annus, or ring of the solar year. When city life began, it was naturally found necessary to have a more exact measure of this annus and the religious events included in it. Agriculture was still the economic basis of the life of the people: and in keeping up the agricultural religious rites within the city it was convenient, if not absolutely necessary, to fix them to particular days. This was, beyond doubt, the origin of the earliest calendar of which we know anything. In this all religious festivals are permanently fixed in date (ferine stativa); only a very few, which did not concern the State as a whole, but certain component parts of it, e.g. the pagi (Paganalia, Compitalia), and the Instrutio of the ager Romanus, which had to be celebrated on the land itself, remained unfixed (feria conceptiva).

The process of fixation is entirely lost to us. was part of that transition from rural to city life of which we have no record, and of which archæology as yet hardly affords us a glimpse. When we begin to know anything about the Roman city-State, it is already a well-developed organization, provided with a calendar based mainly on the needs of the old agricultural life, but showing distinct signs of military and legal activity. year, or annus, to which this calendar applied was probably a lunar year; its length (354 days, 8 hours, 48 minutes) nearly coincides with a lunar year of 12 months. It was itself divided into 12 months, of which March, May, July, and October had 31 days, and the rest 29, except February. which had 28. All the months had thus an odd number of days, except the last, which was mainly devoted to the care or cult of the dead, following here the world-wide superstition, especially prevalent in Italy, that odd numbers are lucky, even numbers unlucky. This principle held good in the calendar throughout Koman history, and all religious festivals (with two exceptions, which can be accounted for) were lixed on days of odd number.

There was, indeed, a tradition, mentioned by Censorims (de Die Natali, ch. xx), and attested, according to him, by Varro and other writers (see also uvia, Fasti, 1, 27ft.; Macrobius, Sat. 1, 123; Pintareth, Vita Vum. xviii, L), of a year of ten months, called the year of ten months, and the property of the property of the state of the property of the state of the property of the state of the

The year of 12 months=about 3544 days must inevitably soon have called for modification. Being 11 days short of the solar year, it must before long have got out of harmony with the seasons, thus causing discrepancy between them and the dates of the religious festivals which marked agricultural operations. Such discrepancy would cause religio, or scruple and anxiety about the right relations between the citizens and the numina on whom they were dependent. necessary adjustment was probably one of the earliest difficulties which called into existence the body of experts in religious law, who throughout Roman history had charge of the calendar, viz. the pontifices, and who were doubtless originally advisers of the rex in matters of this kind (see ROMAN RELIGION [Second Period]). Some knowledge was necessary of the methods of adjusting the solar principle to a lunar year, and it probably came from Greece (see above, p. 106f.). There may have been a succession of such adjustments, the last of them dating from the Decemvirate, 450 B.C. (Macrob. i. 13, 21); but the Roman year, as we know it in historical times (which lasted till the revision of the calendar by Julius Cæsar), was based on a cycle of four years, of which the first had 355 days, the second 377 (obtained by an intercalation of 22 days after 23rd February [Terminalia]), the third 355, and the fourth 378. The whole number of days in the cycle was 1465, or about one day too many in each year; and the work of intercalation and occasional adjustment fell again to the pontifices, who, as is well known, neglected or misunderstood it, so that in the time of the late Republic the calendar was constantly out of harmony with the seasons, and all relation was lost between religion and agricultural operations.

The final adjustment was, therefore, a somewhat violent one: Cæsar and his astronomer Sosigenes extended the year 46 h.c. to 445 days, and started afresh on 1st Jan. 45 with a cycle of four years of 365 days each, to the last of which an extra day was added after the Terminalia. This cycle produced the solar year under which we still live, needing only an occasional adjustment. It brought no change in the dates of the religious festivals. Ten days were added to the old normal year of 355 days, but they were all placed at the end of months, viz. two at the end of Jamary, August, and December; and November, so that the festivals remained, as might have been expected from Roman conservatism, even under Cæsar as dictator and pontifes maxiams, exactly in the same positions which they had always occupied.

All the surviving fragments of the Roman calendar date from 31 B.C. or later, and thus re-present it as revised by Casar (see art. ROMAN Religion). After that revision the official year began with the month of January, and in fact, since 153 B.C., the consuls had entered on office on the first day of that month. But it is certain that the old religious year began with March, which marks the season when all living things, man included, break into fresh activity, and which bears the name of the deity who represented at once the agricultural and the military activity of the community. The names of the second and third, and probably of the fourth month—Aprilis, Mains, Junius (mensis)-indicate the processes of Nature, viz. opening, increasing, and maturing. After this the months are named according to their order, Quinctilis (July) being the fifth after March, and so on to December. The interval between and so on to December. December and March was occupied by two months, Januarius and Februarius, the first of which seems to be named after the ancient deity of entrances and beginnings, Jamus, perhaps indicating the natural opening of the annus after the winter solstice; the second takes its name from the word februum, an instrument of purification (see Paulus, 85, ed. Müller; Ovid, Fasti, ii. 19; Varro, de Ling. Lat. vi. 13), apparently because the festivals of the month, e.g. the Parentalia and Lupercalia, called for the use of such instruments. Like the Lent of the Christian calendar, this was the period in which the living were made ready for the civil and religious work of the coming year, and in which the yearly duties to the dead were performed.

The internal arrangement of each month had originally been based on the phases of the moon, and this system was maintained, for convenience of reckoning, long after all relations between these phases and the calendar had been lost. The two chief points in a lunar month are the first appearance of the moon's crescent (Kalenda), and the full moon (Idus); between the two is the point when the moon reaches the first quarter, which is an uncertain one. It originally was the duty of the rex, afterwards of the pontifices, as soon as the new moon was discerned, to let it be known whether the first quarter was to be reckoned for the fifth or the seventh day after the Kalends (Varro, Ling. Lat. vi. 27), and whether the Ides were to be on the 13th or the 15th day of the month. The Ides were always on the eighth day after the first quarter, which was called None, according to the Roman method of counting a period so as to include both the day on which it began and that on which it ended (Nonæ is thus the ninth day before the Ides). All Kalends were sacred to Juno, whose connexion with the moon is beyond question (Wissowa, Rel. und Kult. der

Rômér, p. 116).

Rômér, p. 116).

Owing to the uncertainty about the date of the Nones, there were no other religious festivals in the interval between Kalends and Nones, with the exception of the obscure Poplifugia on 5th July, nor were the Nones sacred to any particular deity. But the Ides were sacred to Juppiter as the supreme deity of the light of heaven, for on that day the two great heavenly bodies supplied continuous light during the twenty-four hours. On the Nones the rex, and, in the Republican period, his successor in certain religious duties, the rex sacrorum, announced the dates of the festivals of the month. These festivals are fully dealt with, and their religious significance explained, in art. ROMAN RELIGION. Here it will suffice to note that, like the Kalends, Nones, and Ides, they are alt, with one or two exceptions which admit of a possible explanation, fixed on

days of odd number, i.e., as noted above, on lucky This superstition is in many instances discernible also in their position with regard to each other. Where a festival occupies more than one day in a month, an interval of one or three days clapses between each celebration, making the whole number three or five. Thus Carmentalia occur on 11th and 15th Jan.; Lemuria on 9th, 11th, and 13th May; Lucaria on 19th and 21st July. In Angust and December we find traces of an arrangement by which different festivals, which seem to have some connexion with each other, are arranged on this principle; e.g. in August six festivals, all concerned in some way with the fruits of the earth and the harvest, occur on 17th, 19th, 21st, 23rd, 25th, and 27th. It has recently been suggested that e.g. these are arranged round one central festival, the Volcanalia on Aug. 23, which gives some kind of colouring to the rest (see von Domaszewski in ARW x. [1907] p. 333 U.); and that, where this principle does not hold, we may see traces of an older system unaffected by the superstition. on the whole, there do not seem to be sufficient

grounds for this ingenious conjecture. A principle of greater importance for the life of the Roman people is that whereby the days of each month were divided, so to speak, between the human and the divine inhabitants of the city. In the ancient so-called calendar of Numa, distinguishable by the large capitals in which it is reproduced in the surviving calendars of the Julian era (see ROMAN RELIGION [First Period]), a letter is pre-fixed to each day in each month. Where this is the letter N (or NP, of which the meaning is practically the same, though its origin is uncertain [Wissowa, on. cit. 3711), it means that the day is made over to the gods (nefastus dies), and that to perform eivil business on it would be a violation of fus, i.e. of that which is allowable under the ius divinum. The letters F and C, on the other hand, i.e. fustus and comitivelis, indicate that such performance will be fas, i.e. religiously permissible. Of the 355 days of the original Roman normal year, 109 days of the original rollina belonged to the Divine, 235 to the human, in-habitants of the city; the remaining 11 were divided between the two. Of these 11, 8 are marked EN, i.e. endotercisus, or 'cut into two parts'; the morning and evening being fustus, while the interval between the slaying of the victim and the placing of the entrails on the altar (porrectio) was nefastus (Varro, vi. 31; Macrob, i. 16. 3; and the note in the Fasti Pranestini for 10th Jan., believed to be the work of Verrius Flaceus). The letters Q.R.C.F. (quando rex comitivarit fus) occur on 24th March and 24th May, and also indicate a division of the day into sacred and profane (Fowler, Roman Festivals, p. 63). So, too, does the Q.St. D.F. (quando stercus delatum fas) of 15th June; for the explanation of this expression see Varro, vi. 32 (Fowler, op. cit. p. 146 ff.).

This brief account will have been sufficient to show that, as was said at the beginning of this article, the Roman calendar was based on the religions ideas of the Roman people, and mainly on the root-idea of the essential difference between the sacred and the profane, or that which legally belonged to the gods and that which belonged to man. For this reason it was in feat a part, and originally the most important part, of the institution, or religious law, which was itself a part of the law of the State (ins civile); and the word by which it was known, Fasti (unni Rometn), i.e. dies first, indicates that its main object was to set apart the days sacred to the deities from the days on which the citizens might go about their legal or other business. For this reason, too, the control of it was in the hands of a priestly authority, viz.

and for some two hundred years after that event it remained matter of their knowledge only, until if remained matter of their knowledge only, including the publication of the Fasti by the curule acidic Cu. Flavius in 304 B.C. (Livy, ix. 46). As the collegium of pontifices was, during this period, filled up by co-optation, it is easy to see how powerful a political influence that priestly authority must have exercised. The publication of the Fasti was in fact a most important step in the emancipation of the Romans from what threatened to become at one time a hierarchical oligarchy. Even after the publication, the fact that the pontifiers had the charge of the rectification of the calendar by intercalation gave them the means of interfering unduly in political matters; and it was not until the period of the Empire, when, from 12 B.C. onwards, the Emperor was always pontifex maximus, that the calendar finally ceased to be an instrument of aristocratic intrigue and corruption.

corruption.

LITERATER:—Apart from the ancient authorities quoted above, of which the most important is Gensorians, de Die Matali, ch. xv., and the tragments of the Allender of the Antali, ch. xv., and the tragments of the Allender of the Antalic College of the Antalic Colle

CALENDAR (Siamesc).—As a result of the constant intercourse between Cambodia and Siam, and of their having the same religion and civilization, the Siamese calendar is almost exactly the same as that of the Khmers (see CALENDAR [Indo-Chinese], II.). As in Cambodia, so in Siam three eras of Ilindu origin are used, along with three cycles of Chinese provenance.

cycles of Chinese provenance.

I. Eras.—The three cras usually employed by the Siamese are the following: (1) the religious era, or the era of the Buddha (phātthāsākhārāt sKr. hudhāsákhārāt), which begins at full moon, May 543 n.c.; (2) the great era (machāsākhārāt) sKr. muhāšakhārāt); this is the Hindu kāda era, established in A.D. 78, which used often to be employed in official and historical documents; (3) the lesser era (chūtāsākhārāt) = Pali chultusākarāja), beginning with the year 638 n.C., and whose exact commencement has been fixed by the astro-omer Dominic Cassini. This is the civil era, which has not yet been supplanted in everyday usage by the new era (see below, \$75).

In addition to these three eras, only two of which—the religious and the beset—are in current use, the present king, wishing to give his country a calendar in agreement with the European calendar, introduced a new era, on 1st April 1889, called rătlanakośnisok, or rātāna kösinthārā (or kösin) sākārāt (Skr. ratnakośnalrośnisokarāja), 'era of Indra's casket of pearls.' It begins at the tine when the capital of Siam, formerly established at Ayuthia, was transferred to Bangkok, i.e. 1st April 1781.

We may mention, in passing, two cras that are met with in the astrological writings of the Brahmans. The one, called on remeasible, begins in 643 n.c., i.e. 100 years before the religious era; the other, called remathin, starts 86 years before the same era, i.e. in 629 n.c.

2. Cycles. -These are the same as in Cambodia.

1 This era is also called phātthōsātsānākan, 'era of the religion of the Inddia.'

The following are the names of the animals of the duodenary cycle (the Siamese do not, any more than the Khmers, give them native names):  $xw^t$ , 'rat'; xalu, 'ox'; khar, 'tiger'; tho, 'hare'; that the Kinners, give them native halmes); what, 'rat'; kidu, 'ox'; khar, 'tiger'; tho, 'hare'; marxing, 'great dragon' or 'dragon'; maxsing, 'little dragon' or 'screent'; maxina, 'maxe' or 'horse'; maxina, 'goat'; vòk, 'monkey'; razka, 'cock'; cho, 'dog'; kūn, 'pig.'i These words bear a 'very close resemblance to those used by the Khmers to denote the twelve animals of the cycle, and probably they have the same linguistic

As happens among the Chinese, Annamese, and Cambodians, the duodenary cycle is combined five times with the denary cycle. These two cycles, called minor cycles, when counted concurrently and repeated as often as is necessary—in such a way that the last year of the denary cycle ecincides with the last year of the duodenary, a coincidence which occurs at the end of 60 years-

form the major cycle.

The years of the denary cycle are denoted by ordinal numbers borrowed from Pāli : čkasčk (1 ckasaku), 1st year; thôsŏk (Skr. \*dosaka), 2nd year; trisŏk (P. trisaku), 3rd year; chǎttŭsŏk (P. 5th year; xösök (P. chhasaka), 6th year; bānchasaka), 5th year; xösök (P. chhasaka), 6th year; sāttasök (P. sattasaka), 7th year; ătthasök (P. aṭṭhasaka), Sth year; na. vasök (P. navasaku), 9th year; sam-ritthisök (Skr. sampddhisaka), year of completion,

last year. 3. Year and months. - The Siamese year is lunar; the months have twenty-nine and thirty days (or rather 'nights') alternately, and are generally denoted by ordinal numbers: du'en nũng, 'irst month'; d. sông, 'second month'; d. sâm, 'third month,' etc. They have also Indian names: (1) chitra;màt (Skr. chaitra; P. chitto [Siam. màt=Skr. māsa, 'month']); (2) vīsākha:màt (Skr. vaiśākha; P. vesākho); (3) xètha:mùt (Skr. jyeştha; P. jettho); (4) asúthamát (Skr. āsādha: P. āsālho) (5) . ūsālho); (5) savāna:mat (Skr. śrāvaņa; P. Γ. ἀδιιμοί); (3) διευπαι. παι (18π.) στουταμ, 18 κάσκαρ); (6) phóthrabamát (5kr. ἀδιστηραία;
 Γ. potthapādo); (7) ασιὰστικά (5kr. ἀδιστημό;
 Γ. κατικό (5kr. kūrtika: P. kattiko); (8) katika: nāt (5kr. kūrtika: P. kattiko);
 (9) mikhosīra: māt (5kr. mārgaširṣu; P. māgasiro); (10) busoja:mát (Skr. pausa; P. phusso); (11) makha:mát (Skr. and P. māgha); . māgha); (12) phokhana:mat (Skr. phalguna; P. phagguno). The months with 29 days (odd: 1st, 3rd, 5th,

etc.) are called du'en khat, 'defective months'; those with 30 days (even: 2nd, 4th, 6th, etc.) have the name of d. thuen, 'complete months.

Each month is divided into two fortnights: the clear fortnight, or fortnight of the waxing moon (khàng khữn, 'waxing moon'), from new moon to full moon; and the dark fortnight (không rêm, 'waning moon'), from full to new moon. In official and exact writings, these fortnights are often divided into sūk pokos (Pāli pakāso, 'light,' 'lustre'), 'bright halt'; and kala pokos, 'dark half,' as also takes place in India.

As regards the practice of beginning the year in Visakha (April-May), of adding an intercalary month every two or three years so that seven intercalary months are introduced in a period of 19 years, and of increasing by a supplementary day the month preceding the commencement of the vasso, or Buddhist retreat, i.e. towards July, everything takes place exactly as in Cambodia. intercalary year, which is called pi a:thika:mat (Skr. adhikamāsa, 'intercalary month'), has 384 days or 13 months; it makes the agreement of the lunar and solar years possible by bringing the rotation of the seasons into regularity.

<sup>1</sup> Several official documents employ Pali names for these animals: mūsika, usabho, ryangho, saso, nāgo, sappo, asso, eļako, makkaļo, kukuļo, soņo, sikaro.

4. Days.—In Siam, as in Cambodia, the names given to the days are Indian in origin: văn athit given to the days are Indian in origin; van athit (Simn, van, 'day'; Skr, āditya), 'Sunday'; văn chăn (Skr, chandra), 'Monday'; văn ângkhan (Skr, angāraka), 'Tuesday'; văn phật (Skr, budda), 'Wednesday'; văn văhật (Skr, braspati), 'Thursday'; văn văh (Skr, šukra), 'Friday'; văn sắc (Skr. śanaiśchara), 'Saturday.

5. Hours.—The hours (nalika = Skr. nādikā) are divided into hours of day (mong) and hours of night (thum). The hour is subdivided into 10 bat, the bat into 6 (formerly 4) nathi (Skr. nādikā, '60th part of the sidercal day,' or Indian hour), the nathi into 60 vinathi (Skr. vinādī, 'a nādikā'), or 15 phexanathi. But this old method of measuring hours is giving way more and more to the European system of the hour equal to 60 minit (Eng. 'minute'); the word bat, besides, has now got the current meaning of 'quarter of an hour, 15 minutes.' The day-hours are from 6 a.m. to 6 p.m.; the night-hours, from 6 p.m. to 6 a.m., form four watches, or jam (cf. Khmer yām), each of three hours' duration.

6. Seasons.—There are three seasons (raidu,

rudu = Skr. rtu): (1) ra:du ron, the warm season, from March to the middle of May; (2) ra:du fon, the rainy season, from May to the end of October; (3) ra:du não, the cold season, from November to February. In the literature we find also the following names for these seasons: (1) khimhanta:
ra:du (P. gimhāna, 'warm season'); (2) va:sānta:ra:du (P. vasanto, 'spring'); (3) hēmanta:

ra:du (P. hemanto, 'cold season').

7. The new era .- As we have seen, the new era, or răttănakōsinsŏk, in use in Siam is based on the European era. The names of the months are taken from the signs of the zodiac. The list is as follows: (1) mesajon (Skr. mesa, 'Aries'), April; tollows; (1) mesajón (Skr. mesa, 'Arnes'), April; (2) phrůksphakóm (Skr. rzsa, 'Taurus'), May; (3) mithůnajón (Skr. mithuna, 'Gemini'), June; (4) kárakädakhóm (Skr. karka, 'Cancer'), July; (5) singhakhóm (Skr. sinha, 'Leo'), August; (6) känjajón (Skr. kanyā, 'Virgo'), September; (7) tälathóm (Skr. tula, 'Libra'), Oetober; (8) prů tehtajón (Skr. vřschíka, 'Scorpio'), November; (9) ber; (10) mākārakhōm (Skr. dhanu, 'Sagittarius'), December; (10) mākārakhōm (Skr. makara, 'Capricornus'), January; (11) kūmphaphān (Skr. kumbha, 'Aquarius'), February; (12) minakhöm (Skr. mīna, 'Pisces'), March. This solar, or rather stellar, year begins in April, and, as in Cambodia, the passing of one sign of the zodiae into the next that marks the beginning of the new year is called mahásángkránt (=Skr. mahāsamkrānti, 'great passage').

CALENDAR (Slavie).—Of all the Indo-Germanic calendars, that of the Balto-Slavs was unquestionably the least developed. Yet, for this very reason, it possesses a peculiar interest, for it is well known that the pagan Balto-Slavs preserved in many respects the most primitive conditions of Indo-Germanic times (cf. art. ARYAN Religion, passim). If we seek for analogical, though of course entirely independent, parallels outside the Indo-Germanic region, we may perhaps find them among some of the Polynesian peoples (cf. Calendar [Polynesian]), while within the

1 The terminations khôm (Skr. gama, 'going'), jôn (Skr. yāna, 'going'), phân (Skr. bandha, 'binding'), mean 'to enter into conjunction.'

Indo-Germanic race much may be gleaned from the Tentonic calendar  $(q, v_*)$ .

I. There appears to be no record of anything like an era among the Balto-Slavs, or any system of enumerating by a series of years. Nevertheless, the year and the seasons were well known. The year was named godň (lit. 'time' [cf. Miklosich, Etymolog, Worterb, der slav, Spruchen, losen, Etymony, I ortero, aer suc. Spicovis, Vienna, 1886, p. 61 f.; Berneker, Slave, etymolog, Worterb, Heidelberg, 1988 ff, pp. 316–318) among the Slavs, and metas (lit. 'time' [ef. 01d Pruss, mettan, 'year,' Albanian mot, 'year,' 'weather,' Schrader, Reallex, der indogerm, Altertumskunde, Strassburg, 1901, p. 390]) among the Lithuanians, At least four seasons have distinct names.1

Spring bears the name vesna in O. Church Slav. (cognate with Skr. visualit, Gr. εαρ, 'spring,' Lith. visualit, summer,' Skr. vis, 'shine,' etc. [see Schrader, pp. 258, 394]), and also, as in Slovenian, Czech, and Polish, the name yer (cognate with Eng. year [Miklosich, p. 100; Schrader. pp. 258, 395]). Summer was leto (connected probamy with Lith. lyths, Lett. letus, 'rain,' or possibly with Anglo-Sax. Liva, 'June-July' [cf. CALENDAR (Texterior)] sibly with Anglo-Sax. Liba, 'June-July' [cl. CALENDAR (Teutonic); and see Schrader, p. 782; Miklosich, p. 167]) in O. Church Slav., vasarà in Lith., and dagis (cf. Lith. dilgas, 'harvest,' Skr. nidāgha, 'heat,' 'summer,' dah, 'burn,' Goth. dags, 'day' [Schrader, pp. 782, 845]) in O. Prussian. Autumn was yeseni in O. Church Slav. assanis in O. Pruss. (both cognate with Goth. asans, 'summer,' O.H. Germ. aran, 'harvest'), and rudi (cognate with Lith, ruders, 'reddishbrown' [because of the colour of the leaves]) in Lith, (Schrader, p. 367). Winter was zime in O. Church Slav., zima in Lith., sima in Lett., and semo in O. Pruss, (all cognate with Skr. hemanta, Gr. χειμών, Irish gam, 'winter' [Schrader, p. 953]); and a special name for the season immediately preceding winter is implied in the Czech word podzimi and the Sloven. predzima, 'pre-winter (Schrader, p. 367).

2. It is in their names for the months (O. Church Slav. měseci, 'moon,' 'month,' Lith. minesis, měnu, 'moon,' 'month' [other Balto-Slavie words are given by Miklosich, p. 195], all cognate with the Indo-Germ, term for 'moon') that the Balto-Slavs display a wealth of nomenclature that is paralleled only by such primitive calendars as the Tentonic and Polynesian. To this subject a most valuable study has been contributed by Miklosich, in his 'Slavonische Monatsnamen' (DWAW xvii. [1868]), in which he makes a sixfold elassification, though only the first four classes concern us here, the month-names based on religious feasts being without exception of Christian origin among the Balto-Slavs, and those derived from numerical sequence (such as Goth, Fruma Jiuleis, 'Novem-[lit. 'first Yule-month']) not being represented in the Balto-Slavic calendar. The remaining four groups are: from plants, from animals, from natural phenomena, and from the operations of agriculture. These month-names, however, did not apply to months in the strict sense of the term until after the Roman period. Originally they denoted merely general seasons of the year, as is obvious both from their meanings and from the fact that the same name is given by different Balto-Slavie peoples to different months, sometimes separated by a considerable interval

The length of the Balto-Slavic month is quite uncertain; though perhaps there is some survival of primitive conditions in the practice of

The contention of Schrader, pp. 394-397, that the Indo-Germanic peoples knew of only three seasons, seems to the writer scarcely proven, especially as the theory is hased solely on the argumentum e silentin (cf., further, Hirt, Indogenane, Sitassburg, 1967, pp. 512, 749).

the modern Huzuls, who in many places reckon 30 days to all their months except the last (March), which has 33, their year thus having 363 days (Kaluzniacki, Archiv fur slav. Philologie, xxvii, 271). But among large numbers of the Balto-Slavic peoples calendrical reckoning is still in a most backward state; and the writer is informed by Mr. Hermann Rosenthal, Chief of the Russian Department of the New York Public Library, that he has seen in northern Russia the walls of a peasant's but covered with notches made to indicate the passage of the days.

Some idea of the richness of Bulto-Slavic nomenclature for the months may perhaps be gained from the following selection from the study of Miklosich just mentioned, the arrangement here being in the ordinary sequence of the Julian calendar, instead of according to etymological derivation, as in Miklosich

arrangement here using in the orinary sequence of the stima, arrangement instead of according to etymological derivation, as in January: 0. Church Slav, Prominet, Sloven, Prosince, Croat, Prosince Cime of increasing day-light'); Sloven, Secho, Seth. Syedani ('[wood-]entting time'); Sloven, Zimar, Lett. Movember: O. Church Slav. Gendinii, Russ. Gendeal, Huz. Hendeni ('clod month'); Sloven, and Pol. Listopad, Little Russ. Lystopad ('month of falling leaves'); Serb. Studeni

Russ. Lystopia C month of family leaves 1, octo. content ('cold month').

December: O. Church Slav., Russ., Little Russ. Studeni, Pol. Stycen ('cold month'): Czech Visnec, Upper Sorb Vyelti mėsne, Lett. Vilku mėnesis ('wolf month'); Little Russ.

Trusym, Lett. Putenu mėnesis ('month of snow drilts'); Serb. Prosinac, Czech Prosinec, Ituz. Prosynec ('time of increasing daylight'); Sloven, and Croat. Gruden, Lith. Grédnis ('clod month'); Ituss. Solnoverotū ('[winter] solstice'); Lower Sorb. Zymski ('winter month'); Ith. Sausis ('dry [frost] month'), and Sikis ('[wood]-jeutling time').

It will be obvious, from the examples just given, It will be obvious, from the examples just given, that many month-names are applied by the Balto-Slavs to different months of the Julian calendar. Thus, the 'birch month' may be March (Sloven. Brēžen), April (O. Church Slav. Brēžinā), or May (Lith. Berzēlis); the 'flower month' may be April (Croat. Cvitani), May (Sloven. Cvēten), or June (Lett. Zēdu mēnesis); the 'yellow month' may be May (Sloven. Zolto-pushāk) or October (Little Russ. Zolton), and pusnik) or October (Little Russ Zolten); and the 'clod month' may be September (Slovae, Hruden), November (Huz. Hruden), December (Little Grödlnis), or January (Czech Hruden).

3. The Balto-Slavic calendar originally had nothing corresponding to the week, the names for which properly mean 'Sunday' (O. Church Slav. Neddlya, Lith. Neddle [lit. 'day on which nothing is done'], O. Pruss. Sawaite [perhaps a loan-word from Gr. σάββατον]). The days of the week, which here begins with Monday, were numbered, in conformity with ecclesiastical usage, instead of being named, as in the Teutonic and other calendars. Thus the Lithuanian designations of the days of the week, which are here perfectly typical of the whole Balto-Slavie system, are as follows: Sunday, Nedčlė ('day on which nothing is done'); Monday, Panedičlis ('day after Sunday'); Tuesday, day, Panedidis ('day after Sunday'); Tuesday, Utárninkas ('second day'); Wednesday, Sereda ('heart' [i.e. middle of the week]); Thursday, Ketvergas ('fourth day'); Friday, Pētnyežia ('fifth day'); Satraday, Subata ('Sabbata'); For further details, see Schrader, pp. 963-965; Miklosich, 'Christliche Terminologie der slav. Sprachen,' in DWAW xxiv. [1876], pp. 19-21, where it is held that the Balto-Slavs borrowed their calendar through the Germanic people in their calendar through the Germanic peoples in Pannonia.

4. The Balto-Slavs divided their day (O. Church Slav. dini, Lith. dena, cognate with Skr. dina, 'day' [for inrther cognates, see Berneker, p. 253 i.]) into at least four parts: dawn, morning (Lith. mto at least four parts: dawn, morning (inter-auszrà, O. Pruss. angstainai; ef. Schrader, p. 2); 559); noon (Lith. pičtūs; ef. Schrader, p. 2); evening (O. Church Slav. vecerū, Lith. vokaras, O. Pruss. bītai; ef. Schrader, p. 1f.); and night (O. Church Slav. nosti, Lith. naktis; ef. Schrader, (O. Church Slav. nosts, Lith. nakts; cf. Schrader, p. 569); and they were early acquainted with some sort of hour, as shown by O. Church Slav. cash, 'hour' (properly 'time'; cf. the cognate O. Pruss. kisman, 'time,' Alban. kohe, 'time,' weather' [for further cognates, see Berneker, p.

137]).

Among the Russian peasants certain days receive special names. Thus Jan, 16 (the Feast of St. Peter's Chains in the Eastern Church) is called "Peter Half-Food," because by that time half the winter store of food has been consumed; Jan. 18 (the Feast of SS. Athanasius and Cyril) is 'Athanasius Break-Nose' (the cold then heing so intense as to freeze the nose still); Jan. 22 (the Feast of St. Timothy) is 'Timothy Half-Winter'; Feb. 2 is 'Meeting Day' (when winter and summer as supposed to meet); Apr. 12 is 'Take the Waggons out'; area supposed to meet); Apr. 12 is 'Take the Waggons out'; area then being sowth, etc. Many 16 'Backwheat Day' (this grain then being sowth, etc. Many 16 'Backwheat Day' (this grain then being sowth, etc. Many 16 'Backwheat Day' (this crain then being sowth, etc. Many 16 'Backwheat Day' (the burn' (of the sun), because in that month the sun begins to burn the earth (for abundance of further examples, see Adanastey, Portd., vezzr. Staryun na priodu' ['Poete' lives of the Slavs on Nature'], Moscow, 1869, jii. 670-679.

The months and seasons play some part in

The months and seasons play some part in Slavic folk-tales. According to a White Russian tradition, spring is a young and most beautiful maiden; summer, a sensually lovely woman; autumn, a lean and elderly man, three-eyed, and with unkempt and bushy hair; and winter, an aged man, with white hair, a long grey beard, barefooted and bareheaded, clad in white, and

bearing an iron club (Krek, Einleitung in die slavische Literaturgeschichte<sup>2</sup>, Graz, 1887, p. 519, with a reference to Afanasiev, op. eit. iii. 676-682).

0.10-082).
A lolk-tale 'of the twelve months,' of rather exceptional interest in this connexion, is recorded by Wenzig, Westslave, Marchenschatz, Leipzig, 1857, pp. 20-26. A certain woman had a daughter named Holena, as hateful in soul as in body. and a stepdaughter named Marushka, as good as she was beautiful. In the depths of the ice-month (December), Mabeautiful. In the depths of the ice-month (December), Ma-rushka was compelled by Holena, under threat of being killed if unsuccessful, to fetch her violets. After much wandering, Marushka sava light in the distance, and, following this, she 'comes to the top of the hill. Here a great fire burns, about the fire are twelve stones, on the stones sit twelve men. Three were grey-bearded, three were younger, three were still younger, and the three youngest were the handsomest. They groke not; they looked sheutly into the fire. The lee-Mouth sat at the head; he had hair and beard white as suow. In his hand he held a staff,' Marushka conducted herself with the utmost. heat; he had hair and beard white as snow. In his hand he held a staff, Marnshka conducted herself with the utmost respect for these personages, and, on learning of her quest, 'the held a staff,' Marnshka on learning of her quest,' the staff is hand, and said to 'Berther Macch, and the held he half is hand, and said to 'Berther Macch, and the held of the control her held of the held held of alternation. In this story the hill is plainly the sky; the fire is the sunch the held of th

In this story the hill is plainly the sky; the fire is the sun, which is warmer or cooler according to the various months of the year; and perhaps there may be a covert moral that the powerful seasons are to be treated with respect, or disaster will follow.

LITERATURE.—This has been given in the course of the article, and further references may be found in Krek, Einleit. in die stav. Literaturgesch.<sup>2</sup>, Graz, 1887, pp. 510-520.

LOUIS H. GRAY. CALENDAR (Tentonic) .- For the earliest and fullest account which we possess of any native Tentonic calendar we are indebted to Bede's treatise, de Temporum Ratione (ch. 15). Bede says that in former times the Angli calculated their months according to the course of the moon, whence the name (A.-S. mona), from mona). The months individually bore the following names:

Jan. Giuli. May, Thrimilei. Sept. Halegmonath, Feb. Solmonath. June, Lida. Oct. Winterfulleth. Mar. Rhedmonath. July, Lida. Nov. Blotmonath. Apr. Eosturmonath. Aug. Weodmonath. Dec. Giuli.

The meaning of these names was as follows. months called Giuli derived their name a conversione solis in auctum dici, since one preceded the solstice and the other followed it. Solmonath denoted month of cakes, which they used to offer at that time to their gods. Rhedmonath and Eosturmonath derived their names from two goddesses, Rheda (Hreð?) and Eostre (Eastre), to whom sacrifices were offered in these months. Thrimilei was so called because at that time the cattle were milked thrice a day, 'for such was once the fertility of Britain, or of Germany, from whence the English nation came to Britaiu.' Lida (Lida) meant blandus sive navigabilis; Weodmonath, 'month of tares, which were then most abundant; Halegmonath was mensis sucrorum. Winterfylleth might be rendered by the coined word hiemiplenium. Blotmonath denoted mensis immolationum, because they then devoted to their gods the live stock which they were going to slaughter.

The year began on Dec. 25, and that night (probably the preceding night) was called Modraniht ('night of the mothers'), on account (so

1 Reference may also be made to the Anglo-Saxon menology of the Vercelli MS (ed. Wulker, Bibliothek der angelsächsischen Poesie, Leipzig, 1894, il. 282-293).

Bede suspected) of certain ceremonies which they observed. In ordinary years three months were reckoned to each season; but when there was an intercalation—it is not stated how often this took place—the extra month was added to summer. Such a year was called Thrilidi, because the name Lida was then borne by three months. Another and more customary division of the year was into two sensons, winter and summer, calculated according to the relative length of the nights and days. The first month of winter (Winterfylleth) acquired its name, which was a compound of winter and 'full moon,' from the tact that winter was reckoned to begin from the full moon of that month

Some modern writers have taken exception to this account, on the ground that it presents an impossible combination of solar and lunar reckoning. The explanation, however, may be that the solar reckoning had begun to encroach on the other before the adoption of Christianity. Originally the year may have begun with the interlunium nearest to the winter solstice. The word Giali is elearly related to the A.-S. name for Christmas, Geohhol, Géol, 'Yule.' In a fragment of a Gothie feeding, Fed., The In a fragment of a Gothie calendar, dating probably from the 6th cent., we find Naubaimbair: fruma Jiuleis (i.e. 'the first Jiuleis'), which is the exact Gothic equivalent of the same word. Here also the name seems to have been given to more than one month (aftuma Jiuleis, 'the second Jiuleis,' probably being the name of Dec.), though apparently these months were Nov. and Dec., instead of Dec. and Jan.—a discrepancy which is due probably to the difficulty of equating lunar months with divisions of the Roman (solar) year.

Later English authorities show comparatively few variations from the list of month-names given by Bede. Dee, and Jan, are distinguished as sc drra Géola and sc aftera Géola respectively, as in Gothie; and a similar distinction is made between the two months called Lion. We find also Hyda for March, Searmonap ('dry-month') for June, Hörfestmönap ('threest-month') and Rugara (trobally 'rye-harvest') for September, and Iulmönap (Vule-month') for December.

The earliest Continental reference is a passage in Einhard's Vita Caroli Magni (ch. 20), where

The earnest Continental reference is a passage in Einhard's Vita Caroli Magni (ch. 29), where Charlemagne is said to have fixed German names for the months. Before his time they were called partly by Latin and partly by native names. The

authorized list was as follows:

1. Wintarmanoth, 5. Winnemanoth, 9. Witumanoth. 2. Hornung, 6. Brachmanoth, 10. Windumenanoth, 1. Lenzimmanoth, 11. Herbistmanoth, 4. Ostarmanoth, 8. Aranmanoth, 12. Heilagmanoth,

For Horning we find in later times der kleine Horn, and so also der grosse Horn for January. The name is probably connected with O. Norse hiarn, 'frozen snow.' Ostermanoth corresponds to the Anglo-Saxon name for April, but Herhistm. and Heilugm. to the two Anglo-Saxon names for September. Lenzinn., Winnem., Bruchm., Hewim., Aranm., Witum., and Windunem. appear to mean 'spring-month,' 'pasture-month,' 'fallow-month,' 'hay-month,' 'respictively.' 'wood-month,' and 'grape-gathering-month,' respectively.

Among German-speaking peoples in later times the Latin names appear to have been almost exclusively used for March, April, May, and Angust, in many districts also for January. The other names in common use were: for Jan. Hertmonet ('sharp-month') and several others; for Feb. Hornung, etc., and Sporkel, the latter word probably being borrowed from medicaval Latin spurcalls, 'Shrove Tuesday,' in allusion to the merriment, often very questionable, which characterized this day, especially as the Indicatus Superstitionum

(8th cent.) has a notice de Spurvadihus in Februario. For June we find Braehmanet, Bruehet, ort second May '(ander Meije, etc.); for July Houmanet, Houwot, or Hundemaen; for Sept. Herbest, or second August '(under Ougest, etc.); for Oct. Winmanet ('wine-month'), Herbest, or under Herbest; for Nov. Wintermanet, erste Winterm, dritta Herbest, Lauprise ('fall of the leat'), Wolfm., Hadegm. etc.; for Dec. Wintermanet, ander Winterm., Hartm. etc.

Concerning the form of calendar which prevailed formany in heathen times we have no definite information; but the fact that several of the above names are applied to different Roman months perhaps suggests that they originally denoted lunar

months.

The month-names used in the Netherlands, both ow and in the past, differ somewhat from the German. The following are the commonest varieties: (1) Lowemand (meaning doublful), Hardm.; (2) Sprokkelmand, Sprokd, Sille (the latter unexplained); (3) Lentemand; (4) Grasmand (\*grass-month\*); (5) Blovimand (\*blossom-month\*), etc.; (6) Comermand, etc.; (8) Congramand, etc.; (9) Horjstmand, etc.; (11) Slogtmand, etc.; (10) Wijamaand, etc.; (11) Slogtmand, etc.; The modern Frisian names practically all agree with the Dutch.

The native month-names used in Denmark are as follows: (1) Glagmanned ('window-month'?); (2) Blielemanned ('beefril-month') or Gojemanned ('giant-month'); (3) Tormanned ('winter-month'); (4) Faaremaaned ('sheep-month'); (5) Mejmaaned; (6) Sommermaaned or Skarsommer ('bright summer'); (7) Ormemaaned ('worm- or snake-month'); (8) Homaaned ('hay-month') or Histomaaned ('antamn-month'); (9) Fiskemaaned ('fish-month'); (10) Sudemaaned ('sowing-month') or Ridmaaned ('riding-month'); (1) Jule-month'); (1) Jule-month')

mauncil ('Yule-month').

In Sweden we find: (1) Thore ('giant-month'); (2) Gōja ('winter-month'); (3) Bludemānad, Blüde; (4) Vārant ('spring-work'); (5) Mai; (6) Mūdsommer; (7) Hōmānad, Hoant ('hay-making'); (8) Skordemānad, Skorlant ('reaping-work'); (9) Hōstmānad; (10) Blotmānad, Skuttmānad (cf. the A.S. and Dutch names for Nov.); (11) Vinter-

månad; (12) Julmånad,

In Norway a peculiar and apparently archaic calendar has continued in use down to the present time. The first three months are called respectively Torre ('giant'), Gjø ('winter'), and Krikta or Krine (the latter two unexplained). For the 4th and 5th months we find only the name Vocamonuer (spring-months'); for the 6th and 7th, Sumarmoonuer; for the 8th and 9th, Haustmoonner; for the 10th and 11th, Vinterstid; for the 12th, Jolemoone or Skemmtid ('short-time'). All these months are lunar. Jolemoone is said to denote the lunar month in which Yule (Christmas) falls, provided that it lasts until Jan. 6; otherwise the name is applied to the following lunar month. The Norwegian year is divided into summer and winter. The former begins on Apr. 14, which is called Sumarmual, and the latter on Oct. 14, called Vetternotter. This arrangement can be traced back to early times.

In Iceland the first month has always been called Theori, the second Gôi, the third usually Einmannow (supposed to mean 'one month' before the beginning of summer). After this there is much variation. SaSth (seed-time ') varies between 3 and 4, Egyth ('egg-time') and Steht-th ('fold-mannow ('sum-month') between 4 and 5, Sôl-mannow ('sum-month') between 5 and 6. We find also: (4) Gaukmánnow ('euckoo-month'), Harppo' (unexplained); (5) Stephe (unexplained); (6) Stephe

manaby ('mountain-pasture-month'); (?) Heyanni' ('hay-making'), Miòsemar; (8) Teimanaby ('houlle-month'), Kornskurðman, ('reaping-month'); (9) Haustman, ; (10) Gormán, ('slaughter-month'); (11) Fersman, ('frost-month'), Viir (supposed to mean 'howler,' but perhaps identical with the Anglo-Saxon Giuli); (12) Hrituman, ('ran-month'), Jölmán, and Mörsugr ('marrow-sucker'?). The majority of these mames can be Iraced back to the 13th cent.; but, with the exception of the first two

or three, they do not seem to have been much used. The Icelandic months are not lunar, but they do not really correspond to ours. The year contained 364 days, i.e. exactly 52 weeks, and was divided into winter and summer, the first three and last three months being included in winter and the rest in summer. Each month contained 30 days, except the third month of summer, which had an additional 4 days, known as Aukanætr. The beginning of the fourth month, i.e. the beginning of summer, tell always on a Thursday, between Apr. 9 and 15 (O.S.), while the beginning of winter fell always on a Saturday, between Oct. 11 and 18. These dates were called respectively Sumarmál and Vetrnætr (the Norw. Sumarmaal and Vetternætter), though in each case the name was applied to the first three days. 'Midsummer' proper was the beginning of the fourth month of summer, and fell always on a Sunday, between July 13 and 20, while 'mid-winter' was the beginning of Thorri, and fell always on a Friday, between Jan. 9 and 16. Every five or six years, a whole week, called Sumarauki, was intercalated after the Aukanætr, i.e. immediately before 'midsummer.' The usual method of dating was by the number of the week in summer or winter.

An attempt has recently been made to show that this peculiar calendar is mercly a modification of the Julian, determined by greater convenience in the reckoning of Easter. The number of dates on which Easter could fall was reduced thereby from thirty-five to five, while the beginning of summer coincided with the mean date for Thursday in Easter week. It is likely enough that Church influence did contribute towards the fixing of this date, but the assumption on which the theory as a whole mainly rests, viz. that the Northern peoples could not have known the week before they adopted Christianity, can hardly be admitted. According to native tradition, the Sumarauki was invented by a certain Thórsteinn Surtr shortly after the middle of the 10th cent., at a time when it was found that the year of 364 days, which was already in use, did not really coincide with the solar year, The week may very well have been adopted quite early in Icelandic history as the standard division of the year, in place of the lunar month. Such a change is probably to be ascribed to the isolation of the settlers, and the difficulty which they consequently found in determining or agreeing as to when intercalation should take place according to the lunar system.

In spite of the great variety of names shown by the above lists, there is yet an appreciable number of cases in which several Teutonic peoples agree in using the same term. These are, as a rule, derived from occupations peculiar to certain periods of the year, e.g. 'hay-month,' 'harvest-month,' 'slaughter-month'. 'Again, there is no doubt that some names have become obsolete in certain countries. Thus in some parts of Sweden the marsh-marigold is called trimpolksgräs, which points to the former existence of a month-name corresponding to the A.-S. Thrimtel, It has also been suggested that the A.-S. name Liba may be related to Oil Church Slavic Eda, 'summer.' If so, it must be very ancient.

The most important case of agreement, however, is that of Goth. Jiuleis, A.-S. Giuli, and perhaps

Icel. Ylir; for, though this word is clearly related to A.-S. Geohhol, Géol, O. Norse Jól, it is certainly not a recent derivative from it. The etymology of the whole series of forms is quite obscure, but there is no reasonable ground for doubting the antiquity of a midwinter festival among many, if not all, of the Teutonic peoples. Procopius, writing in the middle of the 6th cent., says (Goth. ii. 15) that the inhabitants of Thule (i.e. Scandinavia) were for forty days in winter without the light of the sun. When thirty-live days had passed, it was their custom to send messengers to the mountains, and, as soon as they heard from them of the sun's return, they began to celebrate the greatest of their festivals. This story as it stands is difficult to credit, for such a phenomenon could, of course, occur only in the extreme north of the peninsula; but, at all events, it gives evidence for the existence of a festival about the end of the first week in January, i.e. at precisely the same time as we find the Yule festival in later days. Apart from the sagas, we should notice especially a passage in the Chronicle of Thietmar of Merseburg (i. 9), where it is stated that the great nine-yearly festival at Leire (in Sielland) took place about the time of Epiphany.

Other festivals were doubtless held at various seasons in the year, and the assumption that uniformity prevailed everywhere is neither necessary nor probable. In the North, however, we hear frequently of two specially important festivals, one at the beginning of summer or 'towards summer, the other at the beginning of winter. The former may have coincided with the great festival at Upsala, which, according to a scholion (No. 137) in Adam of Bremen's *History*, took place every nine years about the vernal equinox, though this cannot be regarded as quite certain. The latter was doubtless held at 'the winter nights' (Vetrnætr) in October. We hear also of religious festivals among the heathen Old Saxons about this time, and the A. S. name Winterfylleth seems rather to suggest something of the same kind. Tacitus (Germ. 11) says that the ancient Germani usually held their tribal gatherings either at the full moon or at the new moon, and in another passage (Ann. i. 50) he mentions a religious festival which seems to have taken place at a full moon in autumn. It

is held by many scholars that the Teutonic year

originally began at this time; and, though in-

capable of actual proof, the view has much in its

favour, especially as the ancient Gauls also appear

to have begun their year in the autumn. As regards the interdependence between the festivals, Icelandic custom fixed an interval of ninety days (which points to the lapse of three full lunar months) between Vetrnætr and 'midwinter (the old Yule), whereas the English year would seem to have begun at the third new moon after the beginning of winter. This accounts for the difference between the two midwinter festivals, if we are to suppose that Vetrnætr was originally a mean date for the third full moon before the solstice, corresponding to the A.-S. Winterfylleth. The Scandinavian Yule may have been shifted from the solstitial new moon to the following full moon, in consideration of the obviously greater convenience which the latter would present in northern latitudes; but this, of course, can be regarded only as conjectural.

## CALF.—See Bull.

CALIFORNIA.—Fundamentally the religion of the Indians of California is very similar to that of savage and uncivilized races all the world over. Like all such peoples, they cherished animistic notions, attributing life, intelligence, and especially supernatural power, virtually to all things. Nor did they lack the beliefs and practices of shamanism, which is founded on the conception that certain men, through communication with the animated supernatural world, have the power to accomplish what is contrary to, or above, the events of ordinary experience. As 'elsewhere, belief in shamanistic powers circled mainly around disease and death, which were generally believed to be not only dispelled but entirely caused by shamans.

In common with the other American Indians. those of California made dancing, always accompanied by singing, a conspicuous part of nearly all their public ceremonies. They differed from almost all other tribes of North America in exhibiting a much weaker development of the ritualism and symbolism which are perhaps the most distinctive feature of the religion of the Americans as a whole. Practically all the approaches to a system of writing devised in North America, whether in Mexico, Yucatan, or among the tribes of the United States and Canada, are the direct outcome of a desire for symbolic religious expression. The California Indians, however, are remarkably free even from traces of this graphic tendency, alike in their religion and in the more practical aspects of their life. In many parts of North America there is a considerable amount of fetishism, not of the crass type of Africa, but rather as a result of over-symbolism. This fetishistic tendency is very slightly developed in California, and that in spite of-or, as an Americanist would more properly say, on account of-the generally rude and primitive condition of culture. By contrast, as actions and visible symbols are here a less important means of religious expression, words, both spoken and sung, are of greater significance.

As an ethnographic province, the greater part of California plainly forms a unit. Two portions of the present political State, however, were sharply distinguished from the remainder in point of culture during the native period, and these must usually be kept apart in all matters that concern ethnology and religion. One of these distinctive culture areas comprises the extreme N.W. corner of the State, in the drainage of the lower Klamath and about Humboldt Bay. The other consists of what is usually known as Southern California, extending from the Tehachapi Pass and mountains in the interior, and from Pt. Concepcion on the coast, southward to the Mexican boundary. The culture of the small N.W. area was in every way, and that of the larger Southern province at least in some respects, more highly organized and complex than that of the still larger and principal Central region, which comprised at least two-thirds of the State, and which, if such a selection is to be made, must be considered as the most typically Californian.

The religious practices of the Indians of California fall into three well-marked divisions; (1) such observances as are followed and executed by individuals, although their perpetuation is traditionary and tribal—that is to say, customary observances; (2) individual practices resting upon a direct personal communication of an individual

with the supernatural world—in other words, shannarism; (3) observances and practices which are not only the common property of the tribe by tradition, but in which the entire tribe or community directly or indirectly participates—in other words, ceremonics. After discussing these three divisions of their religious practices, we shall conclude with a fourth section on their mythology.

T. Customary observances. — These are as strongly developed here as farther north along the Pacific slope. This W. coast region thus differs as a whole from the interior and E. parts of the continent, where such observances are usually a less conspicuous feature than tribal ceremonies. By far the most important of the observances in California are those relating to death. Next come those connected with birth and sexual functions. Beliefs and practices centring in the individual's name are of importance particularly in so far as they are connected with the customs relating to death. There are also restrictions and superstitutions as to food.

Death was considered to bring defilement, and almost everywhere entailed purification cere-monies. In the N.W. region these were par-ticularly important, and among such tribes as the Hupa and Yurok the observance of this purification, the most essential part of which was the recitation of a formula, was the most stringently exacted religious custom. The method of disposing of the dead varied locally between burial and cremation, cremation being practised over at least half of the State. Air-burial and sea-burial have nowhere been found. Mourning, which consisted primarily of singing and wailing, began immediately upon the occurrence of death, and continued for about a day, although it was sometimes longer protracted by the nearest relatives of the deceased. Among some tribes this mourning commenced with full vigour some time before impending death, often during the full consciousness of the patient and with his approval. Mutilations on the part of the mourners were not practised to anv great extent, except that the hair was almost universally cut more or less, especially by the women. Mourning observances were almost always carried further by women than by men. Among some tribes of the Sierra Nevada the widow did not speak from the time of her husband's death until the following annual tribal mourning ceremony. Except in the case of the N.W. tribes, who possessed more elaborately constructed dwellings of wood, the house in which a death had occurred was not used again but was burned. Objects that had been in personal contact or associated with the deceased were similarly shunned and destroyed. The name of the dead was not spoken. Even the word which constituted his name was not used in ordinary discourse, a circumlocation or newly coined word being employed. It is certain that this stringently observed custom has been a factor in the marked dialectic differentiation of the languages of California. In N.W. California even the accidental mention of the name of the dead could be compensated for only by the payment of a considerable sum. Some property and food were buried with the corpse. The idea that the articles were for use in the world of the dead was not so strong a motive for such acts as the feeling that the objects had been defiled by association with the dead. and the desire to express sincerity of mourning,

On the whole, the immediate observances of death pale in importance before the annual public mourning ceremony, which is everywhere, except in the N.W. region, one of the most deeply-rooted and spectacular acts of worship.

Observances connected with sexual functions, including birth, are next in importance after those relating to death. The menstruating woman was everywhere regarded as unclean, and was excluded especially from acts of worship. Not infrequent was the conception that she contaminated food, especially meat. Among many tribes she was excluded from the honse and confined to a menstrual hut. Her refraining from all but the most necessary activity was sometimes deemed essential. All these observances were greatly intensified at the time of a girl's first menstruction, a condition for which most of the languages of California possess a distinctive word. The girl at this period was thought to be possessed of a particular degree of supernatural power. One of the injunctions most strongly laid upon her was not to look about her. She kept her head bowed, and was forbidden to see the world and the sun. Some tribes covered her with a blanket. Many of the customs in this connexion most strongly resembled those of the North Pacific coast, e.g. the prohibition against the girl's touching or scratching her head with her hand, a special implement being furnished for the purpose. Some form of public ceremony, often accompanied by a dance and sometimes by a form of ordeal for the girl, was practised nearly everywhere.

Religious customs connected with birth consisted in part of observances before the birth of the child, in part of observances after birth, and especially of restrictions imposed on one or both of the parents after its birth. Practices affecting the child itself, or the mother before its birth, related in great part to food. The newly-born child was usually washed, often repeatedly. The mother after a birth was regarded as more or less defiled. Either the mother was, or both father and mother were, usually inhibited from activity for some time after a birth. The couvade in its strict form, with restrictions imposed entirely upon the father to the exclusion of the mother, does not

seem to be found.

In N.W. California there is a special development of spoken formulæ, whose content is little else than a myth, and which not only constitute the basis and essential element of public ceremonies, but are connected with almost all customary observances. To such an extent had these formulae grown into the mind of these Indians as being what is most sacred and most efficacious in all aspects of religion, that they partly supplanted shamanism. Not only purification from death and other defilement, but luck in hunting and fishing, and success in felling trees and making baskets, in the acquisition of wealth, in short, in the proper achievement of every human wish, were thought to be accomplished by the proper knowledge and recitation of these myth formulæ.

2. Shamanism.—Shamanism, the supposed individual control of the supernatural through a personally acquired power of communication with the spirit-world, rests upon much the same basis in California as elsewhere in North America. In general, among uncivilized tribes, the simpler the stage of culture the more important the shaman. There is thus a contrast between the rude, simpleminded Indians of California and those of the Plains and of the South-West, where the supremacy of the shaman is rather obscured by that of the priest conversant with ceremonies.

The most common way of acquiring shamanistic power in California, as in so many other parts of the world, is by dreaming. A spirit—be it that of an animal, a place, the sun or other natural object, of a deceased relative, or an entirely unembodied spirit-visits the future medicine-man in his dreams, and the connexion thus established

between them is the source and basis of the latter's power. This spirit becomes the guardian-spirit or 'personal.' From it he receives the song or rite, and the knowledge, which enable him to cause or remove disease, and to do and endure what other men cannot. In California, with a few special exceptions, the custom of having an animal as guardian-spirit does not seem so prevalent as elsewhere. Occasionally it is the ghost of a person who has once lived, usually a relative. Perhaps more frequently it is merely a spirit as such, not connected with any tangible embodiment or form. In certain regions the waking vision, or trance, is recognized as a means of acquiring shamanistic power. A person is in a wild desolate place, perhaps hunting. Suddenly there is an appearance before him. He becomes unconscious, and while in this state receives his supernatural power (cf. also Communion with Deity [Amer.]). On his return to his people he is for a time de-On his return to his people he is for a time de-mented or physically affected. The concept of a guardian spirit is much less clearly defined among the N.W. tribes, with whom the posses-sion of 'pains'—the small material but super-natural objects which cause disease—rather than of true spirits, seems to be what is generally associated with shamanistic power. The majority of the shamans here, and those supposed to be most powerful, are women.

In parts of Southern California also the idea of the guardian-spirit does not seem to be well developed. Here the method of acquiring shamanistic power is almost exclusively by dreams. Among the Mohave, myths and not a personal meeting or communion with an individual spirit constitute the subject of the dreams. The Mohave shamans believe that they were present at the beginning of the world, before mankind had separated into tribes. They were with the great leader and semi-ereator Mastamho. They saw him singing, blowing, and rubbing over the body of a sick man, and from him they thus learned the actions and speeches which constitute their power. Mohave universally speak of having dreamed these scenes, but also state that they dreamed them before birth; in other words, that they were present in spirit form at the beginning of the world, at the time when all power, shamanistic and other, was established and allotted. It is obvious that, with this conception as the basis of their whole religion, there is but little room among them for any beliefs as to guardian-spirits of the usual kind. Of course nothing limits the shaman to one spirit, and among many or most tribes, such as the Maidu, a powerful medicine-man may possess a great number.

Frequently in Central and N.W. California there is some more or less public ceremony at which a new shaman is, so to speak, initiated before he exercises his powers. The body of initiated shamans do not form any society or association, nor do they otherwise appear to act in concert. The eeremony is rather an occasion that marks the first public appearance of the novice, in which he receives for his own good, and presumably for that of the community also, the assistance of the more experienced persons of his profession. This ceremony is usually held in the ceremonial chamber, and is accompanied by dancing. The efforts of the older shamans are directed towards giving the initiate a firm and permanent control of the spirits, which have only half attached themselves to him, and which are thought to be still more or less rebellious.

A special class of shamans, found to a greater or less extent probably among all the Central tribes, are the so-called bear-doctors-shamans who have received power from grizzly bears. Not only can the bear-shamans assume the form of bears, as they do in order to inflict vengeance on their nemines, but it is believed that they can be killed an indefinite number of times when in this orn, and each time return to life. The rattlessnake-doctor, who cured or prevented the bite of the rattlessnake, was usually distinct from other medicine-men. Among the Yuki, his power, like that of the rattlesnake, was associated with the san; among the Maidu, with the thunder. Among the Yokuts the rattlesnake-shamans annually held a public ceremony designed to prevent rattlesnake bites among the tribe. On this occasion they displayed their power over the snakes by handling them in a manner analogous to that of the Hopi, and by even allowing themselves to be bitten. Ratin-doctors were much looked up to in the southern half of California.

As everywhere else, the practice of shamanism in California circles about disease and death. It is probably more narrowly limited to this phase than in almost any other portion of North America. That the medicine-men who could cure disease were also those who must cause it, unless it were the direct consequence of an infraction of some religious observance or prohibition, was an almost universal belief. The killing of medicine-men was therefore of frequent occurrence. Among some tribes, as the Yokuts, the medicine-man who had lost several patients was held responsible for their death by their relatives. Among the Mohave also, murder seems to have been the normal end of the medicine-man. In the N.W. region the shaman who failed to cure was forced to return the fee

which he had received in advance.

Disease, as among most primitive peoples, was usually held to be caused by small material objects which had in a supernatural way been made to enter the body. Their determination and extraction was the principal office of the medicine-man, and, as elsewhere, extraction was most frequently accomplished by sucking. In certain regions, especially the South, the tubular pipe was brought into requisition for this purpose. The disease-causing object might be a bit of hair, a stick, an insect or small reptile, a piece of bone, deer sinew, or almost any other material. In N. California it was not an ordinary physical object working mischief by its mere presence in the body, but an object itself supernatural and called a 'pain.' These pains' are variously described, frequently as being sharp at both ends, clear as ice, and possessing the power of moving. In some cases two classes of medicine-men were distinguished, one diagnosing, the other treating the patient. Sucking is not always resorted to. The Mohave blow or spit over their patients and stroke or knead their bodies. Medicines and drugs are but little used, and in a manner that gives no opportunity for their physiological efficacy. Four or five drops—the number varying according to the ceremonial number of the tribe-of a weak decoction may be given to the patient or even applied to him only externally. Tobacco is employed to a considerable extent by shamans, but is of equal importance in other aspects of religion.

3. Ceremonies.—Apart from such public observances as the shanan-initiation, menstrual-dance, and victory-celebration, which, while generally participated in, are performed primarily for the benefit of individuals, the ceremonies of the California Indians which are of a really public or communal purpose and character fall into three classes: (1) mourning ceremonies; (2) initiation ceremonies connected with a secret society; and (3) a more varied group of dances and other observances, all of which have as a common aim the benefit either of the community or of the world at

large, as, for instance, when they cause a good crop of acorns and natural products, make the avoidance of rattlesnake bites possible, or prevent the occurrence of disease, carthquake, flood, and other calamities.

(1) Of these three classes the mourning ceremonies are at least as important as the others, and by far the most distinctive of the State as an ethnographic province, although neither they nor the secret society are found in the specialized N.W. area. The mourning ceremonies are absent also from the Athapascan, Yuki, and Pomo tribes in the coast region as far south as the Bay of San Francisco, but outside of this strip in the N. coast region they are universal in the State. Among the Maidu they are usually known as 'burning,' among the Niwok as 'cry'; among the Yokuts they have been called 'dance of the dead,' and among the Mohave and Yuma 'annual.' These cerethe atomive and Tunia annual. These cere-monies are usually participated in by a number of visiting communities or villages. They last for one or more nights, during which crying and wailing, sometimes accompanied by singing and exhortation, are indulged in, and find their climax in a great destruction of property. While those who have recently lost relatives naturally take a prominent part, the ceremony as a whole is not a personal but a tribal one. Among the Yokuts, and probably other tribes, it is immediately followed by a dance of a festive nature, and usually there is a delinitely expressed idea that this general cere-mony puts an end to all individual mournings among the participants. Participation in the ceremony is sometimes obtained by producing a membership-string or necklace, the receipt and the return of which are both marked by payments or presents. Among the Maidu the purpose of the burning of property is to supply the ghosts of the dead with clothing, property, and food. In some cases images are made to represent the dead, and are burned with the property offered.

(2) Initiation ceremonies, which result in something analogous to a secret society, are found in the whole State with the exception of the N.W. region and the agricultural tribes of the extreme S.E. There are usually no paraphernalia or insignia of a society, no degrees or ranks, no membership or other organization, nor is there the definite purpose of an actual society. In so far as a society may be said to exist, its principal purpose and its only public function is the initiation of boys as new members. To a certain extent the initiates are regarded as a class or council having a more or less indefinite authority over religious matters affecting the community. The precepts impurted to the initiates, other than ritualistic knowledge, seem to be of the most general kind. In many ways this initiation may be regarded as a puberty ceremony for boys, corresponding to the firstmenstruction ceremony of girls. Among the Yokuts of Central California and in S. California the initiation was accompanied by the drinking of toloache or jimson-weed, the stupor and visions produced by which were regarded as supernatural. In S. California boys were made to undergo severe tests of pain and endurance at

the initiation ceremony.

(3) The public eremionics other than mourning and initiation observances, in other words the tribal dances of California, differ entirely in the three culture regions, which must therefore be considered separately.

(c) In the Central area these dances were mostly held in the large assembly-house, and either lasted for a number of nights or consisted of a series of successive dances extending over a considerable period. Some of the dances were named after animals, and in these there was usually some imitation of the actions of animals. Actual masks were never employed. In the Sacramento valley and adjacent region there was some impersonation of mythical characters, as of the creator Taikomol among the Yuki, and of the mythical Kuksu ameng the Pomo and others. There seems to have been nothing corresponding to an altar. The dancers were painted, but erndely and with simple symbolism. An important character in most ceremonies was the clown or buffoon, part of whose duties was to caricature the more serious

performance.

The exact nature and relation of the various ances of most of the tribes of the Central region are very little known. Probably a typical example is furnished by the Maida of the Sacramento valley, who declare that their ceremonies were obtained from their neighbours the Wintun. Among the Maida the ceremonies were performed in winter, and constituted a series of fifteen or more distinct dances, coming for the most part in a definite order. These, so far as known, are the following: Hesi, Luyi, Loli, Salahıngkasi, Duck, Bear, Coyote, Creeper, Turtle, Alolingkasi, Yokolangkasi, Molokongkasi, Deer, Aki, Hesi. The majority of these dances were performed by men, but some by women only. Each has its characteristic paraphermalia. At least some of these seem to represent mythical characters. Farther to the south, among the Yokuts of the Tulare basin, such ceremonies do not seem to have been practised. Here the majority of the public ceremonies, like the rattlesnake ceremony which has been mentioned, are of the nature of shamanistic performances.

(b) In N.W. California the more important ceremonies can be held only at certain spots, and the performance of the same ceremony always varies somewhat in different localities. The pervaries somewhat in different localities. formers do not represent mythological or other characters, and do not imitate animals. essential religious portion of the ceremony consists in the recital of a sacred formula. These formulæ relate specifically to the exact locality at which the dances are held, and therefore vary considerably from spot to spot. The public portions of the ceremony, such as the dancing, are practically dissociated from this purely religious element. The dancers are mostly young men, without any knowledge of the ceremony other than of the simple dance-step and songs. The paraphernalia which they wear belong neither to them nor to the priests, but to wealthy men of the tribe, to whom the occasion is an all-important opportunity for the display of their wealth, which consists in large part of the dancing regalia, the possession of which is the chief condition of their social prominence. The most important ceremonies are the deer-skin dance and the jumping dance, the former held at six or eight, the latter at a somewhat larger number of places. The purpose of both dances is the good of the world, earthquake and disease being prevented and a food supply ensured by their performance.

(c) In S. California such ceremonies as partake of the nature neither of mourning nor of initiation rites are conspicuous by the prominence of the myth element. They consist essentially of long series of songs, occupying one or more nights, which recount, in part directly, but more often by allusion, a myth. In some cases dancing by men or women accompanies the singing, but this is never spectacular. Being only ceremonial recitations of myths, these ceremonies are not attached in their performance to specific localities; when dancing regalia are used, they are of the simplest character; nor is there opportunity for either altar or ritual. The predominance of the

mourning element in the ceremonies of this region is further shown by the fact that among some tribes, as the Mohave, these singing ceremonies, besides being performed independently, are also continued for many hours at every death.

The ecremonial chamber has a distinctive character in each of the three culture areas. In the Central region it is a large, circular, dome-shaped structure, partly underground and with a covering earth. It serves also as a place of assembly, and probably, at least at times, as a sudatory, whence its popular name of 'sweat-house.' In the N.W. the sweat-house is quite small, always entirely underground, and its roof consists of boards without a covering of earth. It is used primarily for sweating, and is the regular sleeping-place of all adult males. It is not used for public ecremonies except in the case of the dance at the initiation of shamans. In the South the ceremonial structure is not a house, but either a mere enclosure of brush, as among the Mission tribes, or a simple shade of brush on upright posts, as among the Mohave. This type of ecremonial structure is also found in the southern part of the Central region among the Yokuts.

4. Mythology. — In mythology an important difference between the three culture areas again appears. The N.W. mythologies are characterized primarily by a very deeply-impressed conception of a previous, now vanished race, which, by first living the life and performing the actions of man-kind, was the producer of all human institutions and arts, as well as of many of the phenomena of Second in importance are myths dealing with culture-heroes, more or less of the trickster type familiar from so many other parts of North America. In Central California, on the other hand, there is always a true creation of the world, of mankind, and of its institutions. The concepexploits are not usually connected with him.
Often there is an antithesis between this beneficent and truly Divine creator and a second character, usually the coyote, who in part co-operates with the ereator, but in part thwarts him, being responsible for the death of mankind and other imperfections in the scheme of the world. In the northern half of the Central region the creator is generally anthropomorphic; if not, he is merged into one personage with the coyote. In the southern half of the Central region the creators seem always to be animals, with the dignified and wise eagle as chief. The comparatively elaborate and consistent creation myths of Central California are ethnographically of significance, on account of the scanty development of such myths among the American Indians in general. The myths of the Central region, not directly concerned with creation, are mostly stories of adventure, of much the same type as European folk- and fairy-tales. They do not explain the origin of phenomena except in a casual, isolated way, and are only very rarely of ceremonial import. In S. California The various there are no real creation-myths. animate and inanimate existences in the world are believed to have been born from heaven and earth as the first parents.

The great bulk of the S. California origin-myth consists of a history of mankind, at hist as a single tribe, and later eentred in the tribe which tells the story. In the successive experiences of this group of people, which are accompanied by more or less journeying, the world is gradually brought to its present stage, and all the institutions of mankind are developed. The people are under the guidance of one or two great leaders—at least one of whom always dies or departs after giving his beneficent directions. The thoroughly

Pueblo and S.W. character of such myths is obvious. They are usually followed to a greater or less extent by migration legends, recounting the wandering and conflicts of different tribes or clans. The plots of the remaining myths are not very different in essence from the adventure stories of the Central region, but are both much longer and more elaborate, and at the same time distinctively ritualistic, forming as they do the basis or framework of the singing ceremonies which have been described.

The world is usually regarded as surrounded by water, sometimes as floating upon it. It is often secured by four or five pillars, ropes, or other supports. Beyond where earth and sky meet there is often another land. The dead sometimes go below, sometimes above, sometimes across the ocean to the west, and sometimes to the more or less distant parts of this earth. The entrance to the world of the dead is pointed out by some tribes. People who have temporarily died have been there and have returned to describe it. Dances constitute the principal occupation of the dead. No ideas of future rewards and punishments, based on conduct in this life, have been found; and if any As in exist, they must be but scantily developed. other parts of the world, there are occasional ideas of transmigration of souls into animals, but these are nowhere systematically worked out or of any religious importance.

religious importance.

CALL, CALLING (καλεῦν, κλῆσις).—I. The Biblical data.—In the XT and in Christian theology 'eal!' and 'calling' are technical terms to denote God's efficacious summons to individuals to partake of the redemptive blessings to which they have been appointed in His eternal purpose (Ro 828). The Divine call is the act in which the Divine election (q.v.) is revealed and realized. Those whom God ealls to salvation He has previously elected; those whom He elects He proceeds to eall. For this specific use of the word 'call. which meets us constantly in the Epistles, and, above all, in those of St. Paul, there are suggestions in the OT, in the employment of it to denote a Divine summons to a particular task or privilege or vocation-a summons which is not to be distinof vocation—a summons when is not to be distinguished from a Divine command or decree, as in the call of Abraham (Gn 12<sup>1</sup>; cf. He 11<sup>8</sup>), of Moses (Ex 3<sup>10</sup>), of Isaiah (Is 6<sup>3</sup>), of the people of Israel (Is 42<sup>5</sup> 48<sup>12</sup>). In the NT the word continues to be used in the sense of the summons of an individual to a particular duty or vocation (Ac 13<sup>2</sup>, Ro 1<sup>1</sup>, 1 Co 1<sup>1</sup>), and St. Paul still recognizes a peculiar calling of the Jews as a people, of which God will never repent (Ro 1129). But in their technical employment 'call' and 'calling' have reference, not to a particular duty or life-task, but to a place in the Divine Kingdom (1 Th 212); not to an inheritance of national privilege, but to the enjoyment of personal saving blessings that are proffered

not to the Jews only, but also to the Gentiles (Ro 924, 1 Co 124).

When we look more closely at the Christian's calling as it is set forth in the NT, we notice the following characteristics. It comes from God Himself († Co t\*), and for this reason it is described as a 'high calling' (Ph 314), a 'heavenly calling' (He 31). It comes to men through the revelation of God in Christ (Ph 314, 1 P 510), and is mediated to the individual by the message of the gostel (1 Th 2126, 2 Th 214). It is not conditional upon human works or merit, but is the outcome solely of God's eternal purpose and grace (Ro 828, 2 Ti 19). In the strict use of the word, the call is always an effectual call. The 'called' (κλητοί) and the 'eleet' (ἐκλεκτοί) are co-extensive and interchangeable terms (Rto 828, 1 Co 1246, 1 P 22, 2 P 119, Rev 1714). In the Gospels, it is true, we have the saying of Jesus (Mt 2214 [20166 is probably spurisaying of Jesus (M1 22" [2]" is probably spurrous, cf. RV]), 'Many are called (κλητοί), but few chosen (κλκετοί),' in which 'called' has a wider reference. It seems evident, however, that our Lord in this utterance is not using either Adaptol or έκλεκτοί in the technical way in which, mainly through St. Paul's influence, they came to be employed as theological correlatives. The preceding parable shows that in this verse the 'called' are all to whom the general invitation of the Divine love comes, while the 'chosen' are those who accept the invitation (v.10) and also show themselves worthy of it (vv. 11-13). This saying of Jesus justifies the distinction familiar in the old theology between the vocatio externa and the vocatio interna-the outward and the effectual call (cf. the Westminster Assembly's Larger Catcchism, QQ, 67, 68). There is a Divine invitation to the privileges of the Kingdom which is free and universal in its scope (Mt 22°, Ac 221, Ro 1013, 1 Ti 23. 4)—an invitation which men may either accept or refuse. But, apart from this verse in the Gospels, the soteriological use in the NT of 'call,' 'calling,' 'called,' appears to restrict the words to the sense of an effectual call—a call that issues in salvation.

The fact that this 'high calling of God in Christ Jesus' (Ph 314) is co-extensive with election and predestination (Ro 828-30) does not obviate the necessity of human conditions to its being realized. The primary condition is faith, which responds to God's call and grasps the offer of His grace therein conveyed (1 Th 2<sup>13</sup>, 1 Co 1<sup>21</sup>). The next is the moral and spiritual effort involved in the very nature of the calling as a holy calling (2 Ti 19), a calling to be saints (Ro 17, 1 Co 12). The Christian must press on toward the goal unto the prize of the high calling of God in Christ Jesus' (Ph 314). He must give diligence to make his calling and election sure (2 l' 110). The existence of these human conditions does not contradict the truth that the Divine call rests upon a previous election and predestination. God's eternal purpose of salvation must include all the elements, together with all the conditions, which enter into the process of realizing it; and so must leave room for the exercise of that moral freedom to which the NT bears constant testimony, and of which men are assured by their own moral consciousness. Yet, on the other hand, it must be borne in mind that even these conditions are themselves conditioned. Christians work out their own salvation because God Himself is working in them both the willing and the working (Ph 212.18). It is His Spirit that disposes them to respond to His call, that puts saving graces into their hearts, and so stirs up, increases, and strengthens those graces, 'as that they more and more die unto sin and rise unto newness of life' (Larger Catechism, Q. 75). St. Paul sums up this aspect of the matter when he says, 'Faithful is he that calleth you, who also will do it' (1 Th 524).

2. The historical development.—The starting-point here is provided by Augustine, whose doctrine of the absoluteness of predestinating grace led to a distinction between 'election' and 'vocation'-between a Divine decree which issues in salvation, and a summons to repentance and conversion which comes through the gospel and especially through the Church as the depository of Ordinarily the elect would receive the call through contact with the historical revelation in Christianity, but in the sovereignty of the Divine grace this might be dispensed with (de Prædest. ix. 17). On the other hand, it was only in the case of the elect that the call could issue in salvation (xviii. 37). Thomas Aquinas, who in his theological scheme adhered very closely to Augustine's teaching on predestination and grace, regarded the call as the means employed by God for giving effect to His sovereign choice (Summa Theol. i. Q. 23, art. 2), and distinguished between the rocatio exterior, which comes through the preacher, and the vocatio interior, which is a Divinely implanted impulse towards the good (Sentent. iv. dist. 17, Q. I. artt. 1, 2). See also art. Grace (Rom. Cath. doctrine of). In the post-Reformation theology, Lutheran scholasticism (of which Calovius and Quenstedt may be taken as types) represented the Divine vocation as inaugurating the process of salvation. A distinction was made between the vocatio generalis, which comes through the revelation of nature, and the vocatio specialis, which comes through the Christian gospel, especially as mediated by the word and sacraments of the Church. The vocatio specialis was further defined as seria, efficaz, and universalis. It was seria as being real and earnest; efficaz, inasmuch as the Spirit Himself is working inherently in the word, so that, where men do not resist and refuse, conversion is sure to follow; universalis, as coming to all men alike without distinction of time or place (Seeberg, PRE3, ii. 658). The last quality was specified in the interest of the desire to avoid that appearance of arbitrariness in the exercise of the Divine sovereignty which is suggested by the withholding of special call from so many individuals and peoples. It was assumed that as a matter of fact the offer of the gospel had actually been made to the whole world at three different points in human history: first, when the Protevangelium was announced to Adam; next, in the days of Noah; finally, during the age of the Apostles, by whom the gospel was supposed to have been carried throughout the whole inhabited world (cf. Hodge, Syst. Theol., 1872, ii. 645). That the knowledge of God's way of salvation and free invitation to accept it has since been so widely lost, is thus to be attributed not to the Divine purpose, but to the ingratitude and sin of man (Quenstedt, Syst. Theol., 1685, III. v. 1).

In the Reformed theology as represented by Calvin, the call is that in which the Divine election is first realized (Instit. III. xxiv. 10). A distinction is drawn, however, between two different kinds of call. There is an external call made through the preaching of the word, which is universal, not in the impossible sense that it is absolutely world-wide, but as being addressed without distinction to every one who hears it. There is, further, a special or internal call, whereby, through the operation of the Holy Spirit, the word preached is implanted in the heart as a seed of life (ib. 8). For Calvin the call is effectual, not, as for the Lutheran theologians, because the word carries within it an inherent converting potentiality, but because, through the power of the Holy Spirit working ab extra, it actually effects conversion

(ib. 1, 2). This is the view of 'effectual calling' which was adopted by the Westminster Assembly and is set forth in the Confession of Faith (ch. x.), the Larger Catcohism (Q. 67), and the Shorter Catechism (Q. 31).

CALVINISM.—By Calvinism is understood in this article the system of theological belief specially associated with the name of John Calvin, and embodied in substance in the Confessions and Catechisms of that section of the Protestant Church known as 'Reformed,' in distinction from the Lutheran. Calvinism might also be taken to include the system of ecclesiastical polity (Presbyterian) outlined by Calvin, and very generally found associated with his type of doctrine in Churches that have adopted the latter. Since, however, this connexion of doctrine and polity is by no means universal, it will be sufficient to consider polity only so far as it is a manifest outgrowth from the doctrinal principles. It will be found, as we proceed, that historically Calvinism has been associated with many forms of Church government and order. In the English Reformation, e.g., Calvinistic doctrines were allied for a time with Episcopalianism; so in Ireland; Calvin's doctrines moulded the Puritan theology; they were largely taken over into Congregationalism, and ruled it till recent times; there have been, and are, Calvinistic Baptists and Methodists. Presbyterianism itself exhibits many modifications. The differentia of Calvinism, therefore, must be sought not in polity but in doctrine.

Two things have to be borne in mind in judging rightly of Calvinism: (1) The first is that, while Calvinism has, to a greater extent than any other system, a unity of view arising from the presence of a great central, controlling idea, there is little in its particular doctrines, taken by themselves, peculiar to Calvin. Its predestination doctrine, e.g., generally regarded as its most characteristic feature, is at least as old as Angustine; it was upheld by most of the greater schoolmen (for Britain, cf. A. F. Mitchell, The Westminster Assembly, pp. 326 ff., 346); it was maintained by Luther and Zwingli as stoutly as by Calvin himself. For the rest, its doctrines of the Trinity and of the Person of Christ are those of the Ecumenical Councils, and its Evangelical doetrines-including the Atonement and Justification by Faith, without works or merits of the sinner's own-are in the main the common heritage of Protestantism. What Calvin did was to mould these doctrines into a logically articulated system, under the guidance of the great determining thought of God's absolute sovereignty in the worlds both of nature and of spirit, and to give them a form fitted to exercise the strongest influence on both intellect and will, in the individuals and peoples accepting them. second thing to be kept in view is that Calvinism, in its historical course, has, without abandoning its fundamental principles, undergone large doctrinal modifications. It has preved its vitality in the different shapes it has assumed in different countries, and under new conditions. Calvinism, as time has shown, is not immobile, but is, in some respects, the most plastic of all systems; hence its power of indefinite expansion, its capacity of throwing out new shoots and of adjusting itself to changing environments, and its ability to assimilate new ideas. It is not enough, accordingly, in depicting Calvinism, to expound the Calvinism of Calvin himself; it must be shown how his type of doctrine has worked itself out in subsequent

developments.

1. John Calvin and his influence.-Our sketch may properly begin with a brief account of Calvin himself, from whom, distinctively, the system takes its name. The place deservedly assigned to the commanding personality of Luther in connexion with the 16th cent. Reformation should not blind us to the fact that the spiritual movement which bears this name had not one origin, but several distinct origins. Lefèvre in France and Zwingli in Switzerland were preaching a pure Gospel before Luther's name had been heard of (on Lefèvre, cf. Doumergue, Jean Calvin, vol. i. bk. ii. ch. 2). Distinct in origin, the streams were kept still further distinct in their after-flow by the disputes which early arose between the German and the Swiss Reformers on the subject of the Sacraments. Luther had, properly speaking, no successor. At a later period the Swiss and the French Reformations found a point of meeting in Calvin, who, a Frenchman by birth, and a Swiss in virtue of his world-famed connexion with Geneva, fitly represented both.

represented both.

Joho Calvin was born on 10th July 1509, at Noyon, in Picardy, where his father, Gerard, was procurator-fiscal and secretary to the bishop of the diocese. He was transel for the Church, and through his father's influence obtained, when only twelve years of age, a chaplainey in Noyon Catherlat. In 1523 he proceeded to the University of Taris. The for the proceeded to the University of Taris. The for the proceeded to the University of Taris. The for the proceeded to the University of Taris. The for the proceeded to the University of Taris. The for the proceeded to the University of Taris. The for the proceeded to the University of Taris. The for the proceeded to the Chapter of Taris of the proceeded to the Chapter of Taris. The proceeded to the Chapter of Taris of the proceeding the proceeding to the proceeding to the proceeding the proceeding to the proceeding to the tendency of the new study of Philosophy and put to the study of the new doctrines that were being taught; that it was not till a late time that, after many spiritual struggles (cf. his answer to Cardinal Sadolet), he was brought, as he expresses it (Pref. to Prasinas), by a sudden conversion to a nethude and each able frame of hind. Considerable induces seems to hastle the Taris of hind Considerable induces essents to have the Cardinal Sadolet), he was brought, as he expresses it Christian Calvin's conversion is uncertain. Some place it as early as 1529, while Calvin was yet at Orleans or Bourges, others as late as 1522, after the publication of his first work—a commentary on Seneca's de Clementia. His father had ded in 1531. But whenever or however the change was brought about, its effects were immediate on the young scholar's plans of life. His place was breathed about, its effects were immediate on the young scholar's plans of life. His place was the heady of the Scriptures. This shock was the public schools. At Paris he taught, preached, and event took place which in 1533, according to some authorities, composed for Nicholas Ch

making books, like Newton's Principia in science, or Kant's Kritik in philosophy, the interest of which is enduring. Hitherto no book had appeared which took commanding rank as an exhibition of the doctrines of the Reformed Churches in their systematic unity and connexion. Melanchthon's Commonplaces hardly served the purpose. Yet this was a work requiring to be done, both as a satisfaction to the mind of the Church, and in order that the Reformation might have something to oppose to the great and compact systems of the Middle Calvin undertook the task, and accomplished it with decisive success. Albrecht Ritschl has spoken of the *Institutes* as 'the masterpiece of Protestant theology.' Originally Calvin had contemplated nothing higher than the preparation of an elementary manual of doctrine. A fresh outbreak of persecution in France led him to give to the book the grander form of a vindication of his wronged brethren. Prefixed to it is a preface, addressed to Francis I., which is justly regarded as one of the *chefs-d'aucer* of literature. This being the purpose of the book, the spirit that pervoles it, as one can imagine, is anything but a dry compendium of 'dogmas.' Its motive gives it the dignity of an eloquent Apologia.

The book, as originally published in 1536, was a small work, which subsequent editions enlarged to four or five times its original size. The additions made to it gave it architectural completeness, but wrought no change in its essential contents. The wrought no change in its essential contents. plan (in the final edition of 1559) is simple, following the order of the Creed. The first book treats of the knowledge of God the Creator, the second of the knowledge of God the Redeemer, the third of the work of the Holy Spirit. Here Calvin treats of faith and repentance, of free justification, of the sanctification of the believer, and, towards the close of the book, he unfolds his doctrine or eternal election to salvation, with its logical counterpart, in his view-the reprobation of the wicked. It ought to be noticed that, however fundamental this doctrine is in Calvin, it is brought in, not at the head of his system, as it is, c.g., in the scheme of the Westminster Confession, but rather as a corollary from what has been shown of the dependence on Divine grace of all that is good in man. The fourth look treats of the Church, of Church government, of the Sacraments, and of the province of the civil ruler.

The sensation produced by the publication of the Institutes was immense. The book was speedily translated into the languages of Europe, and passed through innumerable editions. As an evidence of its popularity, it may be mentioned that versions of it exist in modern French, Italian, Spanish, Dutch, German, English, and eyen in the language

of Hungary, in Greek, and in Arabic.

Calvin's name could no longer be hid, but the thought of entering upon public life was as far from him as ever. It was as if by accident—the result of a detour occasioned by war—that, late in Ang. 1536, he entered Geneva, intending to remain only a single night. As it proved, with the exception of a short interval of banishment, he never again quitted it. The city had revolted against its bishop, and, under the preaching of Farel, a pupil of Lefevre, had accepted the Heformation. Every thing, however, was in a state of disorganization, and Farel, feeling deeply his control of the cont

It is not necessary to follow in detail Calvin's after career and work in Geneva. Libertinism reared its head acain in 1540, this time in connexion with partheistic and athesise dectrines itsentions. Some state of the control of th

men have always imputed the guilt of that funeral pile which he

men have always imputed the guilt of that funeral pile which he wished had never heen reared.

The nine years that remained to Calvin from 1555 was the period of the control of the contr

tended to severity, though the story that, when young, his schoolmates fastened on him the nickname of 'the Accusative' is shown to be a fable (Doumergue, i. 74 f.). He specially blames himself for impetuosity of temper, and begs forgiveness of those whom he may have wounded by harsh and uncharitable expressions. He lacks Luther's geniality, rich overflowing humour, and human many-sidedness. But he is Luther's equal in unbending loyalty to conscience, and in greatness of intellect is incontestably his superior. The three powers that appear in him in almost naked severity are intellect, conscience, and will. Yet Calvin, as many tender friendships show, was not cold. He had a gennine appreciation of poetry and music, and the remarkable range and acuteness of his mind appear in his Commentaries, which anticipate the best works of their class in their freedom from prejudice and in their honest desire to ascertain the exact sense of Scripture. His system, as we shall presently see, was, in a very real sense, the reflexion of his own mind—severe, grand, logical, and daring in the heights to which it ascends, yet humble in its constant reversion to Scripture as its basis. Its influence on posterity has been yet more remarkable. It passed through the Creeds into the thoughts of men, moulded the life of nations, became the soul of Puritanism in England. of Republicanism in Holland, of the Covenanting struggle in Scotland, of democratic institutions in America, identifying itself in every land to which it went with the undying principles of civil freedom (cf. the remarkable series of testimonies to Calvin's greatness in Schaff's Swiss Ref. i. 272-275).

2. System of Calvinism .- From the man we turn now to the system, sometimes spoken of simply as Calvinism, sometimes more generally as the Theology of the Reformed Church. And here it is necessary in the first place to arrive at some clear conception of the principle on which the system depends, and from which it derives its distinctive character and unity. There is general agreement that the theology of the Reformed Church is more objective in character than that of the Lutheran, is less anthropological, and leans more directly on God and llis words than on the experience of faith in man. This, however, is at best a formal distinction, and drives us back on the search for a deeper fundamental principle. That principle, probably, most would be disposed to find, with Principal Cunningham, in the doctrine of absolute predestination (cf. Reformers and the Theology of Reformation, pp. 121, 424); but even that doctrine does not carry us to the ultimate basis of Calvinism, or express its regulative principle with sufficient generality. On the other hand, the view of Schweizer, which finds the contrast between the Lutheran and the Reformed Churches in the fact that the former was 'anti-

Judaic' in its protest against the theory of work-righteousness in the Church of Rome, and the latter 'anti-pagan' in its protest against all creature worship and idolatry as corruptions of pure Christianity (cf. Hastie, Theology of the Reformed Church, pp. 34, 146), is too wide. Schweizer came nearer the mark when, following Schleiermacher, he defined the theological principle of the Reformed Church as 'the consciousness . . . of the absolute dependence of man upon God alone in all that pertains to his religious life and to the salvation of his soul' (Hastie, p. 144). Baur observed that this was still too anthropological, and widened it to 'the idea of the absolute causality of God, as the one and only principle that determines and causes all things absolutely and un-conditionally, by and of itself' (ib. p. 147). Similar to Baur's, but taking in the twofold aspect of nature and grace, is J. H. Scholten's formulation of the principle as 'the recognition of God's absolute sovereignty in the natural and moral worlds, and especially the absolute sovereignty of His free grace as the only ground of human salvation' (ib. p. 157). The defect of these definitions is that they seem to leave little place for human freedom, which yet, as will be found, has very real recognition in the Reformed Theology (predestination is no fate). Nevertheless they touch the essential point, that the Reformed Theology, comprehensively considered, affirms the entire dependence of all things in nature and grace, in their being, ordering, and capacity for good, on God (cf. further, on the principles of Calvinism, and the working of it out in its different relations, A. Kuyper, Calvinism). We are next to see how this principle is developed in the leading parts of the theological system.

(1) The first word in Calvinism is God, and it is important to observe how God Himself is conceived of by Calvin and his followers. It is contended by Calvin in the Institutes that a knowledge of God is naturally implanted in the mind of man, and that the Creation also is a glorious revelation of the essential attributes of God. But man is blinded by his state of sin, and needs the fuller revelation given in Holy Scripture. The character of God displayed in Scripture is presented summarily in the disclosure of His name in Ex 346f. ('The Lord, the Lord God, merciful and gracious, etc.). Moreover, the perfections thus enumerated are just those which we saw shining in the heavens, and on the earth-compassion, goodness, mercy, justice, judgment, and truth' (*Inst.* bk. i. ch. x. 2). Loving-kindness is united with judgment and righteousness. In a later book of the *Institutes* Calvin connects redemption with this general

character of God.

'God,' he says, 'who is perfect righteonsness, cannot love the inquity which He sees in all. All of us, therefore, have that within which deserves the hatred of God. . . But as the Lord within which deserves the hatred of God. . But as the Lord wills not to destroy in us that which is His own, He still finds something in us which in kindness He can love. For, though tis by our own fault that we are sinners, we are still His creatures; though we have brought death upon ourselves. He had created us for life. Thus, mere gratuitons love prompts Him to receive us into favour, 'etc. (bk, ii. ch. xvi. 3).

(2) The Creation depends absolutely and continuously on God, who fosters and guides it by His secret inspiration (immanence: 'I admit, indeed, that the expression, "Nature is God," may be piously used, if dictated by a pious mind' [bk. i. ch. v. 51): yet God is in no way to be pantheistically identified with His works (transcendence). The world He has made God unceasingly rules by His providence in pursuance of a purpose (telcology). Here first we enter the sphere of foreordination, though not yet that of special predestination. Hastie states the doctrine unexceptionably:

'The fundamental idea of the Reformed Theology is that the world, in all its parts and processes and stages and forms of

life, is the outcarry line in time of one Divine plan, conceived in the eternal reason of the Godhend and realized by Creative power and wisdom and love. . . The dominant idea of the Recorned system is therefore the relation of the Divine purpose in eternity to its execution in time; and its point of view is universally purposive or teleological '(op. ci. p. 1821.).

This, however, requires a little elucidation for the avoidance of misconceptions. It is a misconception, first, if it is supposed that this inclusion by Calvinism of all acts and events in the sphere of the Divine purpose is tantamount to the doing away with, or denial of, the reality of the operation of second causes—especially of human freedom. The contrary is the case. The operation of second causes is constantly presupposed, and, where necessary, insisted on (cf. Calvin, *Inst.* bk. i. ch. xvii. 3, 4, 5, 6, 9, etc.). Freedom of will also, as a natural endowment of man, is carefully guarded. The purpose, or 'decree,' of God is executed, not in disregard of causes, or by overriding the nature of disregard of causes, or by overruing one mature of causes, but, as the Westminster Confession puts it in the chapter on 'Providence,' 'according to the nature of second causes, either necessarily, freely, or contingently '(ch. v. 2). Events take place, that is, in the case of necessary (natural) causes, necessarily; in the case of free causes, freely; in the ease where one event depends contingently on another, in that order of dependence. If it be urged, as it sometimes is, that, in reality, however it may be in words, freedom in man is rendered nugatory by such all-embracing 'foreordination. this points to a second misconception, on which a few words must now be said.

No one can reasonably question that the Re-formed Theology affirms in clearest language the reality of human freedom (as a natural endowment), and of man's responsibility for his voluntary actions (cf. Calvin against Pighius on Free Will, and Inst. bk. i. ch. xv. 8: 'To this [intellect] He has joined will, to which choice belongs. . . In this upright state, man possessed freedom of will, by which, if he chose, he was able to obtain eternal life. . . . Adam, therefore, might have stood if he chose, since it was only by his own will that he fell, 'etc.; cf. bk. ii. ch. i. 10). The Westminster Confession is again studiously explicit on this point. In ch. iii. 1, on 'God's Eternal Decree,' it is declared that 'God . . . did . . . freely and unchangeably ordain whatsoever comes to pass: yet so as thereby neither is God the author of sin, nor is violence offered to the will of the creatures, nor is the liberty or contingency of second causes taken away, but rather established'; in ch. ix. 1, on 'Free-Will,' it is laid down that 'God hath endued the will of man with that natural liberty, that it is neither forced, nor by any absolute necessity of nature determined, to good or evil see also the passage on 'Providence' above, from

How then is the apparent paradox or, as it may seem to some, contradiction resolved? We do not urge that 'freedom' itself is a notion which requires careful analysis, and is not off hand to be identified with arbitrariness, lawlessness, or incalculableness. which would conflict as fatally with God's foreknowledge as with His purpose (some, as Rothe, Martensen, and Martineau, with the older So-cinians, think they can save man's freedom only cinians, think they can save man's recoon on, by surrendering God's foreknowledge of free actions). But two considerations may help to throw light on the Calvinistic point of view. (a) The first is that freedom, view it as one may, is only one factor in the complicated web of human life. There is always the other and concurrent factor of external Providence. Man has the decision of what he will do in a given situation, but only in a limited degree does he create To a certain extent, of course, he the situation. makes or unmakes his circumstances, but never

wholly. In every case there is an admixture, generally a preponderance, of causes over which he has no control. He did not, e.g., choose his own parents, his station in life, the course of events that brought him into contact with this one and that one, gave him his opportunities, led to his relationships, etc. This evidently cuts very deeply. At every point we are touched by forces we did not make, while the slightest change at any point in outward Providence would alter the whole complexion of the future for all the individuals affected, and for those coming after them. In this power, then, of creating or modifying the external situation, Providence is seen entering as an essential factor in the shaping of the lives of men. Ilad Joseph, e.g., not been sold by his brethren into Egypt, not only would a particular act not have been done, but the whole line of Joseph's volitions in that country would have been cut off, and a totally different series of volitions would have taken their place, with what different results to Joseph himself, to Israel, and to the world !-(b)But, next, on the Divine side, what are human volitions, prior, if we may so speak, to the Divine plan which takes them up as elements into the future course of the world? Obviously, to a Divine prescience, only possibilities. But of this infinity of possibilities which lie before the Creative Mind, who but God shall determine which shall be permitted to emerge as actualities? Here, as the Westminster Confession says, the liberty and contingency of second causes is not taken away, but established, for it is only by Divine decree that these are permitted to enter and operate as causes in the actual world at all. From this Eternal point of view there seems no evading the conclusion that the ultimate responsibility for the plan of the world must rest with the infinitely wise Creator. Even evil cannot enter, or run its mischievous conrse, save as, in infinite wisdom, He has resolved

(3) This raises the last important question in the Calvinistic view of Providence, viz. the relation of Providence to sin. Sin. it is consistently held. springs from the will of the creature. What, then, is God's relation to the sinful act? Is it enough in this connexion to speak, as is frequently done, of 'permission'? It might seem so; yet reflexion, probably, will convince us of the inadequacy of this conception. We say, and truly, that God permits sin. But (a) how should such an act have been there at all to permit, since the slightest change in the course of God's providence would have prevented its emergence? And (b) Scripture and reason alike teach that sin is not only per-mitted by God, but is manifoldly bounded, regulated, and overruled by Him, in subserviency to His holy ends. Sin is not simply permitted to enter, and then done with; once it has entered, it brings with it a train of consequences. It lies with God in His providence, in this view, not simply to permit sin, but in His wisdom to say when, where, and how sin in humanity shall be permitted to break out; in what forms, along what lines, in what persons, to what heights, it shall be allowed to develop; and how its results, when these arise, shall be disposed of. The Westminster Confession, again, states the doctrine in admirably guarded torms thus .

COTINE UTILS:
God's 'almighty power, unsearchable wisdom, and infinite
goodness... manifest themselves in His providence' in relation
to sin, 'not by a hare permission, but such as hath joined with
it a most wise and powerful bounding, and otherwise ordering
and governing of them, in a manifold dependation, to His own
holy ends; yet so as the sinfulness thereof proceedeth only from the creature, and not from God, who, being most boly and righteous, neither is nor can be the author or approver of sin'

(4) Man is viewed by Calvinism as made, a pure being, in his Creator's image, but now as fallen and corrupted through his voluntary defection from the good. This corruption of nature proceeds from the first parents of the race to all their posterity, man's natural gifts, as Calvin phrases it after Augustine, being corrupted by sin, and his supernatural gifts withdrawn (Inst. bk. ii. ch. ii. 12). In regard to the question how the fault of one should render all guilty (ch. i. 5), Calvin seems to favour what later was called in theology the theory of 'mediate' imputation, viz. that the members of Adam's race are condemned, not directly for Adam's sin, but on the ground of their own pollution, so that he can say (cf. ch. i. 5, 6, 7, and especially 8):

and especially 8):

'Being thus perverted and corrupted in all the parts of our nature, we are, merely on account of such corruption, deservedly condemned by God, to whom nothing is acceptable but righteousness, innocence, and purity. This is not liability for another's sin the length of the more clearly than the content of the nother's sin the he may more clearly seen that it is the individual's own sin, and the Apostic most distinctly testifies that "death passed upon all men, for that all have sinced "(Ro 642); that is, are involved in original sin and polluted by its stain.

are involved in original sin and polluted by its stain."

The question is still not answered—On what ground is the posterity of Adam condemned to this pollution? Calvin would probably say—through the natural constitution of the race, in which, germinally, all were originally in the one. In its doctrine of hereditary corruption, universal depravation, and complete loss of spiritual freedom on the part of man, Calvinism takes over almost Yet this unchanged the doctrine of Augustine. doctrine of human depravity also, as Calvinism apprehends it, needs to be guarded against serious misconceptions. It is by no means the case that the doctrine of 'total depravity' (i.e. depravity of man in all the parts or faculties of his nature) is held by Calvin to imply that every human being is as bad as he can be, or that there are not wide distinctions of character among men, or that there are not natural virtues, capabilities even of splendid achievement, among the heathen or others who are yet unregenerate. Some of the most interesting sections in Calvin are those in which he illustrates these very truths (cf. Inst. bk. ii. ch. ii. 12-17, 22, 23, ch. iii. 3, 4; bk. iii. ch. xiv. 2, etc.). virtues and endowments he explains partly through what remains of the natural image of God in man, partly through restraining grace preventing the full development of corruption, but especially through a work of God's Spirit bestowing gifts on men in all spheres of existence.

men in all spheres of existence. We give only two specimens of his language on a subject which is treated with great fullness. "Therefore,' he says, 'in reading profane authors, the admirable light of truth displayed in them should remind us that the human mind, however much fallen and perverted from its original integrity, is still adorned and invested with admirable gifts from its Creator. If we reflect that the Spirit of God is the only fountain of truth, we shall he careful, as we would avoid offering insult to Him, not to reject or outent truth wherever it, amears. In desuising to reject or contemn truth wherever it appears. In despising the gifts, we insult the Giver' (bk. ü. ch. ii. 15). 'First, then, I deny not, that whatever excellent endowments appear in un-believers [in French ed. 'in the life of infidels and idolaters'] believers [in French ed. 'in the like of infidels and idolaters'] are Divine gifts. Nor do I set myself so much in opposition to common sense as to cootend that there was no difference hetween the justice, moderation, and equity of Titusand Trajan, and the rage, intemperance, and cruelty of Caligula, Nero, and Domitian; between the continence of Vespasian and the obscene justs of Tiberius; and (not to dwell on single virtues and vices) between the observance of law and justice and the contempt of them (bd. lil. ch. Niv. 2; he goes on to argue that these 'virtues on balever kind, are Divine gifts'; of Kuyper,

Calvinism, p. 159 ff.).

Still, these virtues, or 'images of virtue,' though God is pleased to visit 'with many temporal blessings those who cultivate virtue' (ib.), lack the root of true godliness, and in no way possess the character of spiritual righteousness, such as alone is truly well-pleasing to God. Neither in knowledge nor in righteousness can man of himself attain to salvation.

(5) The Calvinistic doctrine of Christ as Mcdiator follows, in respect of the Person of the Redcemer,

the lines of the older theology, and need not be dwelt on. Enough here to say that Calvinism, on this head, separates itself from Lutheran speculations on the 'ubiquity' of Christ's humanity, as a result of the communicatio idiomatum, and, generally, from the later Lutheran theories of 'Kenosis. Its Christology is more sober and practical, if perhaps tending, on the other side, to hold the Divine and the human in Christ too severely apart. On the doctrine of Atonement, again, original Calvinism had little that was distinctive, though this became a fruitful subject of discussion at a later time. Calvin, despite his strong emphasis on the doctrine of election, keeps himself clear of theories of a limited Atonement, and, with slight exceptions (cf. Com. on 1 Jn 22), suggests no limitation of the universal expressions in regard to the scope of Christ's propitiatory death (cf. Com. on Jn 316).

Christ, and perish in undedler; thus is not owning to addy eter-or insufficiency in the sacrifice offered by Christ upon the cross, hat is wholly to he imputed to themselves' [185], Michell, Westm. The Death of Christ'; [c. Schaff, iii. \$86], Michell, Westm. Assembly, p. 386; Cunningham, Hist, Theol. ii. 331; C. Hodge, Syst. Theol., 1872, ii. 54416.

(6) The crux of Calvinistic doctrine is reached when we come to the application of redemption. We may here pass by the treatment of such topics as faith, repentance, justification, etc., in which there is little, essentially, to differentiate the Calvinistic position from the Lutheran, and fix attention at once on that which gives Calvinism its distinctive character, viz. its view of the work of the Spirit of God in conversion (generally treated under 'vocation,' or 'effectual calling'), and, as connected with this, and in a manner arising out of it, its doctrine of unconditional predestination. Calvin's predestination doctrine has, as already noted, close resemblance to Augustine's; yet there are important differences which should be noticed. Augustine, it must not be forgotten, was a Catholic Churchman of a very pronounced type—the bishop (cf. A. Kuyper, Calvinism, p. 55); Calvin was as strongly a Protestant, repudiating the claim of the Church to come between the soul and God, and emphasizing the general priesthood of believers (ib. p. 56). From this followed certain consequences for doctrine. First, regeneration is for Augustine an act effected through baptism; for Calvin, it is effected through the agency of the word and spirit of God. Next, Augustine's doctrine of predestina-tion was necessarily crossed by his doctrine of

baptismal regeneration. If all baptized persons are regenerate, it plainly follows that regeneration alone cannot be made a test of election. The regenerate person may fall from baptismal grace, and finally be lost. For Augustine, therefore, the test of predestination to life, or of election, was found, not in regeneration, but in perseverance. The elect have given to them the grace to persevere. Calvin entirely separates himself from this view. Regeneration is a spiritual work wrought in the souls of the elect, and of them alone. The elect persevere, but the seed of their perseverance is already implanted in them in regeneration. The sacramentarian element is completely purged out from this doctrine.

There is one more distinction. Augustine, with justice, confines predestination to salvation; it is, In every case, predestination to *life*. The word is thus synonymous with election. Calvin, on the other hand, speaks boldly of a twofold predestination—a predestination to salvation and a predestination to destruction (cf. bk. iii. ch. xxi. 5, etc. : 'The predestination by which God adopts some to the hope of life, and adjudges others to eternal death, no man who would be thought pious ventures simply to deny'). The majority of later Calvinists have preferred to follow Augustine's more cautious and Scriptural usage. Even in Calvin, however, as in the Calvinist Creeds, it will be seen below that there is an essential difference-another point on which there is great misconception-between the Divine decree as it relates to the salvation, and as it relates to the destruction, of men. The term 'unconditional' may be applied to it in both aspects, inasmuch as, in Calvin's system, the will of God must contain in itself the last reasons of all that is, and even the passing by of the unsaved, however mysterious, must be traced back to an origin in the eternal Divine will. But in another sense there is a conditionality in the rejection of men which does not apply to their salvation. Men are saved, in Calvin's view, by an act of absolutely free, unmerited grace on God's part, without regard to good works (these are the fruit of grace, not the cause of it); men, on the other hand, are never condemned, save on the ground of their own sin. Calvin strongly urges this (cf. Inst. bk. iii. ch. xxiii. 3, 8, 9, etc.: 'Wherefore, let us in the corruption of human nature contemplate the evident cause of condemnation (a cause which comes more closely home to us), rather than inquire into a cause hidden and almost incomprehensible in the predestination of God' [ib. xxiii. 8]). For the present it may be sufficient to quote the emphatic words of the Synod of Dort:

The Synod denounces it as a calumny against the Reformed Churches to assert that they hold 'that God, by a mere arbitrary act of His will, without the least respect or view to any sin, has predestinated the greatest part of the world to eternal damnation, and has created them for this very purpose; that in the same manner in which the election is the fountain and anse of faith and good works, reprobation is the cause of un-belief and impiety' (cf. Schaff, Creeds, iii. 506; Mitchell, Westm. Assembly, p. 386; Cunningham, Hist. Theol. ii. 430). The Westminster Confession also, in speaking of the foreordination of a part of mankind to dishonour and wrath, is careful to insert the words 'for their sin' (ch. iii. 7).

While in order of thought, in Calvinism, the Divine predestination logically precedes the call to salvation, and so properly belongs to the doctrine of God, under the head of the Divine purpose or decree ('if you want to understand this you have to go back from predestination to God's decree in general, . . . Belief in predestination is nothing but the penetration of God's decree into your own but the penetration of tools decree into your own personal life; or, if you prefer it, the personal heroism to apply the sovereignty of God's decree-ing will to your own existence [Kuyper, Calvin-ism, p. 148]), the doetrine, practically, has its real root in the conviction of the sovereignty of the

grace of God in personal salvation (ef. Hastie, on. cit. pp. 165 f., 235 ff.). Augustine and Calvin are here at one. The work of renewal being viewed by both as, in the nature of the case, wholly of God .a work of grace from first to last. - the doctrine of predestination is simply the assertion that what God does in time in the salvation of the believer. He willed to do in eternity.

'It is the salvation of the believer viewed, if we may so say, sub It is the salvation of the believer viewed, if we may so say, sub-specie eternitatic. . . Thus regarded,—whatever speculative difficulties may attend it,—it is simply the expression of an ex-perience which lies at the root of all genuine Christian con-sciousness, viz., that in this matter of personal salvation, the last word is always grace, not nature; that it is not one willing and running which has brought us into the kingdom of God, but His merc; that it is 16 who first enkindled in us the desire after Himself, who drew us to Himself, who bore with us desire after Himself, who drew us to Himself, who bore with us in our waywardness and resistance to His Spirit, who step by step overcame that resistance, and brought us finally into the number of His children, and that all this was no afterthought of God, but an eternal counsel of His love which has now effectuated itself in our salvation. This is the religious interest in the doctrine of predestination which gives it its abiding value. As a religious experience, no one would think of questioning that the fundamental attitude of the Christian spirit is one which ascribes all to grace in its salvation; that any thought of a divided claim—of a partitioning out of so much to God, and so much to self—is abhorrent to sound Christian feeling ' (Orr, Progress of Dogma, p. 152 f.).

It is in accordance with the above view that, as already said, Calvin treats of predestination not in bk. i. of his Institutes, but in bk. iii., after an exposition of the work of the Holy Spirit in the soul, and its effects. It is also in this connexion with the doctrine of efficacious grace (the 'Effectual Calling' of the theologians) that predestination ought, in justice, to be considered. The doctrine of the effectual operation of the Spirit in regeneration, accordingly, may be ealled the pivot of Calvinism in a soteriological relation. Man's will, being wholly disabled for spiritual good by sin, can be restored to freedom and goodness only by an omnipotent act of God's grace. Such a conception has obviously 'election,' or 'predestination' to life. as its necessary correlate. It is important, however, for the avoidance of objections, to understand again precisely what this doctrine means. When, e.g., Divine grace in the work of human renewal is spoken of as 'irresistible' (i.e. as certainly effectuating its result), one is apt to feel as if human freedom were overborne or annihilated. But that is by no means the intention, nor is it really the effect of the doctrine. Grace is certainly not 'irresistible' in the sense that the natural will cannot resist grace; for that is what, in the Calvinistic view, it is constantly doing (cf. Cunningham, Hist. Theol. ii. 408 ff.). When Calvin, with Augustine, speaks of efficacious grace, what he has in view is not a grace which overpowers the will, or puts any foreign force or pressure upon it, but a grace which renews the will, and restores it to its true freedom-which so acts upon it that it freely chooses the good. With this we may compare Augustine, Rebuke and Grace, 17, 38: The freedom of the will is defended in accordance with the

grace of God, not in opposition to it; because the human will grace of God, not no opposition to it; because the human will does not attain grace by freedom, but rather attains freedom by grace. . . Because by the Holy Spirit their will is so much enkindled that they therefore can, because they so well, they therefore so well, because God works in them to well. The writer of art, 'Pelagins' in Smith's BCB (iv. 25%) is therefore wrong when he says; 'The Augustinian theory made the action of grace entirely independent of the will; it was an irresistible power which forced the will."

As little does 'efficacious grace' mean that God can or does override the laws of human nature which He has Himself ordained, or converts by a sheer act of power, without the use of appropriate means. What is meant is that God can use such means, can so deal with the individual in Providence and grace, can bring him under such outer and inner discipline, as, in harmony with, nay, through the laws of human freedom, to overcome his resistance. If it be asserted that, even when grace has done its utmost for a soul, there is still a possibility of resisting it, Calvin, with Augustine, would reply that there is a higher freedom still—that in which even the desire to resist the good is overcome, and which therefore certainly, but none the less freely,

chooses God (cf. Orr, op. cit. p. 151).

(7) The doctrine of predestination in Calvinism is hard and difficult enough, but it has a deeper philosophical and religious basis than many apprehend (flastic's Theol. of Ref. Church is specially valuable here; cf. also Kuyper's Calvinism), and many of the objections to it certainly rest on miscommon objection that it represents predestina-tion as a perfectly arbitrary act of God—the decree of a will acting on no ground but its own good pleasure. God's own 'good pleasure' is the ground assuredly, but not in the sense of arbitrariness. God's sovereignty is upheld as a truth, the evidences of which are abundantly manifest in nature, as in grace; but, while it is contended that the ultimate reasons of God's determinations in the government of the world and in salvation are to us inscrutable, it is none the less maintained that they are assuredly the outcome of an eternal wisdom, righteousness, and love. Calvin upholds this as strongly as any one.

We give, be says, 'no countenance to the fiction of absolute power, which, as it is heathenish, so it ought justly to be held in detestation by us. We do not imagine God to be lawless (\*zdvx)... The will of God is not only free from all vice, but is the supreme standard of perfection, the law of all laws'; only, 'the procedure of Divine justice is too high to be scanned by human pressure, or comprehended by the feedbears of y human measure, or comprehended by the feebleness of uman intellect' (bk. iii. ch. xxiii. 2, 4; cf. Cunningham, Hist. by human

Theol. ii. 450).

Further, while the reasons of God's election to salvation are declared to be inscrutable, it is held fast that the ground of His condemnation of others is their corruption and sin (ch. xxiii. 3). Thus the Divine justice is thought to be vindicated in the

passing by of the nnsaved.

Just here, however, the supreme difficulty arises for the Calvinistic doctrine of predestination and reprobation. Justice, in some sense, may be vindicated on the lines of Augustine and Calvin, but not love; for, if God could save, why did He not? Why leave any to perish? Probably these questions can never be satisfactorily answered, even with the admission of inscrutability, without a double transformation of the doctrine, while still conserving its essential Calvinistic basis. (a) Election must be removed from the purely individual basis and treated more organically. does not mean that election is not still individual, i.e. personal, but means that it is now viewed in connexion with a developing purpose or plan of blessing, to which the election of the individual is related as means. Abraham, e.g., was chosen, but it was for the blessing of the whole world (cf. Orr, op. cit. pp. 167 ff., 292; Hastie, op. cit. p. 262 ff.). (b) Sovereignty must be interpreted in terms of God's character as love, rather than love in terms of sovereignty. Love, indeed, can work out its designs only by gradual stages, and in harmony with righteousness, and with the laws of human nature and freedom. Still, love, in the light of the Christian revelation, must be viewed as lying behind the whole plan, and as marking out the end In the carrying out of its aims, nations and individuals have their gifts bestowed on them (as Lange says, election presides at the making of its object, as well as at the using of it), are prepared for service, and in due season are called to their Yet this election of God is never disjoined from its place in the context of God's whole purpose, which, in its largest scope, embraces the widest possible blessing for humanity (cf. Orr, op.

cit. p. 292 ff.).
(8) The Church polity which springs from the scheme of Calvin, as now expounded, is necessarily

one which lays stress on the equality of all believers before God, even while recognizing special gifts bestowed on individuals for service in His The Church invisible is the hody of the clect as these stand before the eye of God; the Church visible is the company of professing believers, locally distributed, and organized on the principles of God's word. Calvin went further here than Luther, or even Zwingli. 'With him Scripture alone had anthority. Neither traditions nor observances, however anthorized by custom, were spared; unless they could stand the proof, they fell beneath the sword of God's word' (Henry, Calvin, i. 368).

The ministerial office has two branches-pastors and teachers. The former includes the whole office as exercised in particular Churches in the ministry of the Word, the sacraments, and discipline; the latter is confined to the work of instruction (Inst. bk. iv. ch. iii. 4). In the constitution and government of Churches three permanent offices are recognized: those who exercise the ministry of the Word, called indiscriminately bishops, presbyters, and pastors ('on the authority of Scripture, which uses the words as synonymous' [ib. ch. iii. 8]); elders, or lay presbyters, who share with the pastors in the government ('By these governors I understand seniors selected from the people to unite with the bishops in pronouncing censures and exercising discipline' [ib. ch. iii. 8]); and deacons, entrusted with the care of the poor. The system thus, as Schaff says, 'rests on the principle of ministerial equality, and the principle of lay-representation by elders or seniors in the government of the Church' (Creeds, i. 462). The mode of appointment might vary, but, whoever had the power of nomination, ministers were regarded as legitimately ealled only 'when those who may have seemed fit are elected on the consent and appro-bation of the people' (*Inst.* bk. iv. ch. iii. 15). Calvin's principles were only imperfectly carried out in the 'ordinances' of his own city Geneva, and Calvinistic doctrine, as before said, has been associated with very diverse systems of Church government. The genius of Calvinism, however, is Presbyterian, and the scheme is perhaps seen in its greatest purity in the (old) French and Scottish Churches, and in America.

3. Development of Calvinism .- In its historical development doctrinal Calvinism has passed through many phases, some of which are alluded to below in the notices of Calvinism in the dif-Three leading points may here Calvinism after Calvin's death ferent countries. be glanced at. became more scholastie, and tended in certain quarters to extreme forms, which, as inevitably,

provoked reactions.

(1) A dispute which developed among Calvin's immediate followers is that known as the Supralapsarian and Sublapsarian (on its special history, see artt. under these heads). The controversy relates to what is termed 'the order of the Divine decrees' (order in thought, not in time), viz., whether, in electing some to eternal life and reprobating others, the decree of God is to be regarded as preceding or as following the consideration of man as fallen. The very statement of the question shows in how abstract and transcendental a region the discussion moves, and how great is the peril of falling into error through overhold speculation. On the former supposition—the Supralansarian—the decree of election or reprobation comes first, then the fall of man (or of angels) is decreed as a means of accomplishing that end. Calvin never went so far as this, strong as his language sometimes is, but always viewed election as from a 'mass' already in condemnation, while, of course, recognizing that the fall of man

also was embraced in the providence of God. Beza separated himself from Calvin on this point, but the great majority of Calvinists have always preferred the milder—or Sublapsarian—view. The latter is the view taken by the Canons of the

Synod of Dort in the Arminian dispute.

(2) A second important controversy, or group of controversies, emerging in Calvinist circles, but likewise distinguishing the more rigorous Calvinism from Arminianism, relates to the question of the universality or the limited character of Christ's Atonement. This also is, in form, a question of the order of the decrees. Did God first elect a certain portion of mankind to salvation, and then give His Son to die for them to redeem them? Or did He first decree to provide an Atonement of infinite efficacy for mankind, viewed as fallen, without restriction, and then elect those who should be actually brought to faith and participation in Christ's salvation? It might be shown that underlying both forms of the question there is a mistaken conception of the nature and aims of election. But, apart from this, it has been seen that the question becomes very much one of words when, irrespectively of the order of decrees, it is admitted that Christ's sacrified has an infinite sufficiency, and is the ground of a universal proclamation of mercy to mankind. Arminianism contended for the universality of the Atonement, but with denial also of particular election (see Calvin himself, as we saw, did ARMINIANISM). not suggest limitation in the Atonement. controversy assumed a somewhat acute form in the 17th cent. through the advocacy, in the writings of Moses Amyraut of Saumur (works from 1634 to 1662; see AMYRALDISM), of the view of 'hypothetical universalism,' i.e. the doctrine of unlimited atonement, with particular application, in God's sovereign purpose, to the elect. This mediating view, though warmly combated in Geneva and other centres of Calvinistic orthodoxy, was officially condoned in the French doxy, was obtained and many able supporters. Richard Baxter in England upheld it; the younger Edwards in New England adopted it; Ralph Wardlaw in Scotland, and Albert Barnes, the commentator, in America, with many more, contended for it. The whole trend of the discussion on the Atonement in recent times has passed into such different phases, that little, comparatively, is now heard of this question, so long a touchstone of purity in Calvinistic faith, and little disposition is shown on any side to deny the love of God to the whole world in the gift of His Son for its salvation (cf. the Declaratory Acts of the Presbyterian Churches in Scotland, England, and America; on the controversy in its older phases, see Cunning-lam, *Hist. Theol.* ii. 323 ff.; Schaff, *Creeds*, i. 480 ff., 772).

(3) A third influential development in Calvinistie theology is in the doctrine of the Covenants, usually associated with the name of Coceeius, in Holland. The leading ideas of the Federal Theology, however, are of much earlier date. Apart from Scottish (Rollock) and Anglo-Dutch (Amesius) writers, as early as 1570, Olevianus, one of the compilers of the Heidelberg Catechism, had published a work treating of the eternal covenant between God and believers. The Westminster Confession, which is based on the contrast of a 'covenant of works' and 'covenant of grace,' appeared in 1647, a year before the publication of the work of t'occcius on the subject. Cocceins, however, undoubtedly gave the idea a systematic development which raised it to a place of importance in theology which it had not formerly occupied. A still better known work on the Covenants is that of Witsins (cf. Mitchell, Westm. Assembly, p. 371 ff.; Schaff, Creeds, i.

773 f.; on the value of the doctrine, see Hastic, op. cit. p. 191 ff.). See COVENANT THEOLOGY.

'4. Calvinism in different countries.—Much space would be required to trace the history of Calvinism in the different countries which received it, and the kind of influence it has exercised on each; but a few notes may be given. In general it may be claimed for Calvinism that its influence has been an elevating and invigorating one. Abasing man-before God, but exalting him again in the consciousness of a newborn liberty in Christ, teaching him is slavery through sin, yet restoring his freedom to him through grace, and leading him to regard all things in the light of eternity, it contributed to form a grave but very noble and elevated type of character, and reared a race not afraid to lift up the head before kings.

Froude may well ask how it came to pass that, if Calvinian is indeed the hard and unreasonable exceed which nodern ism is indeed the hard and unreasonable exceed which nodern ism is indeed the hard and unreasonable exceed which nodern attractions in past times for some of the greatest men that develived. And how—being, as we are told, fatal to morality because it denies free will—the first symptom of its operation, wherever it established itself, was to obliterate the distinction between sins and crimes, and to make the moral law the rule of life for States as well as persons . . . why, if it be a creed of intellectual servitude, it was able to inspire and sustain the bravest efforts ever made by man to break the yoke of unjust similar testimonies might be quoted (cf. Kuyper, Cultivism, pp. S-10), but we cite only two, less frequently noted. Writing of the Dutch struggle for independence, Motley says: 'It would be idiculous to deny that the aggressive, uncompromising, self-sarrificing, intensely believing, perfectly fearless spirit of Calvinism had been the animating soil, the motive power of Calvinism had been the animating soil, the motive power of Calvinism had been the animating soil, the motive power of the great revolt. For the Provinces to have encountered spain and Rome without Calvinism, and relying on nuncipal enthus sasan only, would have been to throw away the sword and search of the contract of the con

Calvinism has found acceptance chiefly among the Latin and Anglo-Saxon races, while Germany has remained predominatingly Lutheran. Yet the Reformed Church gained an important foothold in Germany also, which it has never since lost. Its presence in all the countries into which it travelled has been marked by the rise of Creeds, or, more

properly, Confessions. (i) In Switzerland the Reformation had received its democratic and severely Scriptural character from Zwingli and other Reformers before the advent of Calvinism. The principal pre-Calvinistic Confessions are the First Confession of Basel (1534; still in use in Basel) and the First Helectic Confession (1536; 'the first Reformed Creed of national authority'). After Calvin's death, in 1566 came the Second Helvetic Confession, composed by Bullinger-the most widely adopted, and hence the most authoritative, of all the Continental Reformed symbols, with the exception of the Heidelberg Catechism' (Schaff, Swiss Ref. i. 222). It is in strictness a Zwinglian Symbol, but trans-fused with Calvin's influence. Its tenth chapter treats of predestination, but strikingly declares that we must believe in the love of God to the world, as attested in Jn 316. More local in interest are three documents drawn up by Calvin himself the Catechism of Geneva (1541), the Consensus of Zurich (1549), and the Consensus of Geneva (1552; polemical). In the Genevan Catechism predestination is not mentioned; the Genevan Consensus, on the other hand, is devoted to that doctrine.

(2) It has already been mentioned that the Reformation in France was indigenous. Calvin, however, did much to forward the movement (congregation formed at Poitiers, 1534; 'Calvin's grotto'), and it was under his influence and that of Beza that the French Church was, later, organized. Despite severe persecution, the adherents of the Reformation numbered some 400,000 in 1558. The first National Synod was held at Paris in 1559, when the Church was formally organized by the adoption of the Galliean Confession of Faith (drafted by Calvin), and of an order of discipline on the Calvinistic model (ef. Quick, Synodicon, 1692, vol. The Church continued to hold national Synods (29 in number) till 1660, when their meetings were prohibited by Louis XIV., and in 1685 came the Revocation of the Edict of Nantes. Not till 1872 was the 30th Synod held, when a new and simpler declaration of faith was adopted (cf. Schaff, Creeds, i. 498 ff.). Calvinism spread into the Waldensian Church, and the Waldensian Confession of 1655 is based on the Gallican Confession of 1559 (on literature on the Reformation in France, ef. Schaff, Swiss Reformation, ii., Appendix).

(3) Germany, as we have said, was naturally Lutheran; but the views of the Swiss Reformers gained favour in certain of the free Imperial cities, four of which (Strassburg, Constance, Memmingen, and Lindau) presented at the Diet of Augsburg in 1530 a separate Confession, known as the Tetrapolitan. At a later period a mild Calvinism gained the ascendancy in the Palatinate and in Brandenburg. The chief Reformed Symbol is the justly celebrated Heidelberg Catechism, drawn up at the instance of the pious and tolerant Frederick III., Elector of the Palatinate, on the basis of drafts by two young divines of the Reformed persuasion, Ursinus and Olevianus. It obtained in 1562 the approval of a Synod at Heidelberg: hence its name. No other catechism has ever had such popularity. It does not obtrude the Calvinistic peculiarities: the doctrine of election, e.g., is incidentally implied in a few of the questions rather than expressly stated (cf. Schaff, Creeds, i. 529 ff.). Brandenburg also had its Confessions, which subsisted till the Union of the Lutheran and Reformed Churches in

Germany in 1817.

(4) The Netherlands first received the Reformation in the Lutheran form, enduring severe persecution, but later, as exiles from other countries flocked into the cities, a change took place, and the Calvinistic or Reformed type became predominant. A Church gradually shaped itself, with the Belgie Confession and the Heidelberg Catechism as its acknowledged Symbols. The Catechism has just been spoken of. The Belgie Confession, composed by Guido de Brès in 1561, was based on the Gallican Confession of 1559. It was revised in 1562, and soon after was publiely adopted by Synods of the Reformed Church (1566, 1568, 1574, 1577, etc.), and finally by the great Synod of Dort in 1619. Its Calvinism, like that of the Heidelberg Catechism, is mild in character. The new faith was the inspiring power in the heroic struggle which ended in the proclamation of the Independence of the Seven Provinces in 1581. While, however, Calvinism was the avowed faith of the Church, there were always those who maintained a protest against its doctrines, especially its doctrine of predestination. Calvinists themselves were partly to blame for the reaction, owing to the extreme lengths to which some carried their views (see Supralapsarianism). Ultimately the smouldering opposition found utterance in the teachings of Arminius and the Remonstrants (see Arminianism). The controversy that ensued led, after much aerimonious disputation, to the Synod of Dort (1618-19), the decisions of which have al-

ready been adverted to. Holland subsequently became the chief home of the Covenant theology. The 'Modern' School in Holland has departed far enough from Calvinism, but the Free Churches have revived it as the basis of their Constitution

(cf. Kuyper, Calvinism).

(5) Doctrinally, the English Reformation was deeply influenced by Calvinism. Henry VIII., indeed, prohibited Calvin's books (1542), but even then and in succeeding reigns the English Rethen and in succeeding reigns the Engins Re-formers were strongly Calvinistic in sympathy. 'It is not too much to say,' observes Schatt, 'that the ruling theology of the Church of England in the latter half of the 16th and the beginning of the 17th cent. was Calvinistic (Creeds, i. 604; cf. Cunningham, Refs. and Theol. of Ref. p. 168 ff.). This is sufficiently evidenced by the Elizabethan Articles, the Lambeth Articles, and the Irish Articles (see below). The Dean of Chichester, librarian to King Edward VI., wrote to Bullinger in 1552, while the Anglican Articles were under consideration: 'The greater number among us, of whom I own myself to be one, embrace the opinion of John Calvin as being perspicaous and most agrecable to Holy Scripture' (Cunningham, op. eit. p. 181). The Thirty-nine Articles are themselves moderately Calvinistic. The soul of English Puritanism was its Calvinism. Neal (in Schaff, i. 703) defines a Puritan as 'a man of severe morals, a Calvinist in doctrine, and a Nonconformist to the ceremonies and discipline of the Church, though not totally separated from it. Later, the Church of England came to be predominantly Arminian and, until the Tractarian Movement, latitudinarian.

(6) It will be questioned by none that the Scottish Reformation was Calvinistic from its beginning. The Scottish Confession of 1560 'exhibits a clear, fresh, and forcible summary of the ortho-The Scottish Confession of 1560 'exhibits dox Reformed faith, as then held in common by the Protestants of England, Switzerland, France, and Holland' (Schaff, i. 683). Though 'decidedly Calvinistie,'it is free from the extreme statements of some forms of later Calvinism. This native Symbol was superseded in 1648-49 by the Confession of was superseded in 1643-49 by the Confession of Faith drawn up by the Westminster Assembly, 1643-46. A. F. Mitchell has conclusively proved (Minutes of Westminster Assembly, p. Xiviff: The Westm. Assembly, p. 380) that its famous ch. iii. 'Of God's Eternal Decree' closely, and in part verbally, follows Art. III. of the Irish Articles of Archbp. Ussher (1615). Its place in the fore-front of the Confession, and its exceptionally strong and imperfectly qualified statements, give an aspect of severity to the Confession as a whole, and create stumbling-blocks at the outset—which is to be regretted. The chapter itself is an attempt at compromise between 'Supralapsarian' and 'Sublapsarian' modes of statement - only with the result, however, of introducing inconsistency into the total presentation. In recent years means have been taken, in both British and American Churches, to soften its offensive harshness by 'Declaratory' Acts and Statements. With the Westminster Confession are usually associated the Westminster Larger and Shorter Catechisms—the latter the best known popular Calvinistic manual.

(7) Congregationalism in New England was originally Calvinistie, but, with Jonathan Edwards, underwent modification, giving rise to the type of doctrine known distinctively as 'New England Theology.' This modified orthodox Calvinism in many essential particulars. Its ramifications may be traced in Fisher's Hist. of Christian Doctrine,

1896, p. 394 ff.

From the side both of philosophy and of science, with their accompaniment in enlarged Biblical knowledge, new influences have entered into theo-

logy in most countries during the last century, which have had the effect of largely transforming all doctrinal schemes. Christianity is increasingly apprehended more from its human, ethical, and spiritual sides, and the tendency is to withdraw interest from the transcendental and speculative aspects of doctrine. This naturally affects Calvinism in an especial degree. The perennial elements of truth in Calvinism will no doubt survive, but it may be questioned whether it will ever occupy so dominant and exclusive a place in the future as it

may be questioned whether it will ever occupy so dominant and exclusive a place in the future as it has done in many periods of the past.

CAMBODIA.—The present kingdom of Cambodia, the remnant of the ancient Khmèr empire, is bounded on the W. by the Gulf of Siam and the kingdom of Siam, on the N. by Laos, on the S. by French Cochin China, and on the E. by the Annamese empire. Its area is more than a third of that of France, and it has a population of 1,500,000 inhabitants, three-fourths of whom are of the Khmer race, the other fourth representing Chinese, Annamese, Cham, and Malay elements, not to mention several aboriginal races: Plinong, The Cam-Samrè, Kuy, Pohr, Jarai, Radè, etc. bodians reckon also that there are about 500,000 of their race scattered throughout Cochin-China and Siam.

and oriani.

1. Origin.—The origin of the Cambodians, or Khmers, as they call themselves, is obscure; it seems probable that they belong to the family of Mön-Khmer races, to which their language undoubtedly belongs. They also bear the strong impress of the strong Hindn civilization.

indontiedly belongs. They also bear the strong impress of Hindo civilization.

2. History.—What is known with far greater certainty about the glorious past of the Khmèrs is that, as far back as in the 10th cent., they possessed a large empire, extending from the 10th cent., they possessed a large empire, extending from the conquered after force conflicts with the Chancy Commission of Siamese, and mentioned with respect by the Chance annalists. Their splendid capital, Angkor-Thom, 'Angkor the Great,' in the province of Siem Reap frecently remitted to Cambodia, was undoubtedly built in the end of the 9th cent, and completed during the first half of the 12th cent. by the erection of the same sendars are inclined to think that the grandeur of their empire was due to a Hindu colony which governed the country from the Sth to the 14th century.

In the 13th cent, the Khmèr cupire began to decline, under the attacks, first of the Siamese, and then of the Annancese, the control of the control of the control of the state of the

In the language of the natives, the name of Cambodia is srok Kampuéa (Kambuja) or srok Khmèr (srok = country, 'kingdom'). <sup>2</sup> Wat in Khmèr (Siamese vat) means 'Buddhist monastery.'

In the transcription of Khmer words we have followed, as far as possible, that of Finot (see Literature). The consonants have almost the same sounds as in the usual Sanskrit transliteration. It is the same with the vowels, with the exception of  $\tilde{a}$ , which  $= \epsilon a$ , and o', which  $= \operatorname{German} \tilde{o}$ .

3. Physical appearance and modes of life of the people.— 3. Physical appearance and modes of life of the people-of average height, and well-huilt, strong, and vigorous, appearing to the observer either slender, with straight nose, or thickset, with fattened nose and Mongolian aspect (two types which survive in Cambodia like the persistence of two different races), the Khmèr, in spite of his dark colour and his large, slightly almond-shaped eyes, is a fine specimen of humanity. The women are smaller, and as a rule have heautiful figures. Very proud of their nationality, even-moints, careless, even thoughtless, but gentle, patient, very hospitable, yet never allowing a dworking and patient in rural build their houses, very hand working and patient in rural build histories of the patient with the control of the patient when the control of the con nevertheless, capable of great internal solidarity, are very gentle and affectionate in their family life, with great love for their princes and their traditions, pious even to superstition, but having the greatest tolerance for others.

having the greatest tolerance for others.

The men wear a sappid—a piece of cloth rolled het ween the legs and round the loins so as to form wide breeches—and, very often, a straight bottomed jacket. The women also wear the suppod (and sometimes, in the provinces far removed from the capital, a petitiona, or largifal, forming a skirt), and a tunit tight at the waist and wrists and open at the breast. Very often the piace of this tunie is taken by an accordion-pleated sear, of a bright colour, which leaves the lawk and the arms succeeded by the piace of this pure of the piace of the p

large nones percent in tiera cars, in which they were accounted study; this custom shows a tendency to disappear commetal study; this custom shows a tendency to disappear commetal study; the custom shows a tendency to disappear commetal study. The Cambodians prefer to live in the plain, on the lanks of their great river, the Mekhong, and its chief tributaries, or by the side of the Toule Sap—the name given to the large freshwater lake—and the arm which joins it to the Mekhong. Their luits, built on piles, are often large and well kept. The furniture is clean and very simple, however rich the owner may be, except perhaps at Phnom Pénh. The building of honese involves special ricks. When the Cambodians go to the forest to cut with any obstacle, citized furning its fall or on the ground. If it met with any obstacle, either during its fall or on the ground. If it met with any obstacle, it would be abandoned, as being likely to bring misortune. The sorcers determines the site, the orientation, and the day propitions for the building. The holes for the foundation pillars are not dug until a sacrifice has been offered to the spirit of the earth, as if to beg his parton for encreaching upon his domain. The pillars are set up while the encreaching upon his domain. The pillars are set up while the encreaching upon his domain. The pillars are set up while the encreaching the interval of the exact has the work of the control mining in Stad first, to the absolute the work. sorecere looks on, and are covered at their appears and which of manulest, in order to drive away the cvil appear that might still be dwelling in the wood. The central pillar is finding the sound of musical instruments. boors, windows, and expension all the odd in number. Women must not enter a house in process of construction; they would bring misortume to the future inhabitants. Bonzes come and bless the house when it is almost finished. On its completion, first of all a cat is put into it, then the owner appears, laden with pieces of furniture. Before he crosses the threshold, a friend, purposely stationed there to intercept him, asks him where he comes from. He replies that, when coming from Lańsk (Ceylon) he was shipwrecked and cast upon the shore, and, being homeless, he has come, with all that he has managed to rescue, to take up his abode in this house, which is not inhabited. After this little comedy he need not fear the evil spirits.

house, which is not inhabited. After this little comedy he need not fear the evil spirits.

The Cambodian house, which is nearly always surrounded by an orchard, has never more than one storey. In fact, a Khmèr would never consent to live under anyhody—a custom which is so deep-rooted that no one has the right to put even a handenfied prisoner under the raised floor of a house. It may be for a similar reason that the Cambodians do not allow any person to pass his hand over, or lay it ou, their heads. In the case of an adult, this familiarity is a serious insult; such cares agree to a child may bring misfortune.

The ladder which serves as the entrance to the house is at its

The ladder which serves as the entrance to the house is, at its inauguration, bound with cotton thread. This ladder is supinaugmration, bound with cotton thread. This ladder is sup-posed to be given into the charge of the male spirits, while the females inhabit the interior of the hut. In the evening, when the ladder is drawn up, so that the house may be isolated during the night, the last rung must be left sticking out, so that the guardian spirits may take their stand on it, and prevent ghosts or hostile spirits from entering. The rungs of this ladder are always odd in number; the ladder used for exhuming the dead being the only one that has an even number, of rungs the dead being the only one that has an even number of rungs. Worm-out rungs must not be disabinahily thrown away or put in the fire. When a ladder breaks during a marriage ceremony the celebrations are continued; but the marriage is not consummated the same day, else the risk is incurred of seeing one of the newly-married pair die within the year.

The Cambodians, like almost all the raves of the Far East, are extremely fragal, their chief food being ruc. Fresh or salt fish, tolerous and leavantinous plants, and sometimes pork, are also catton. This tast-diese fare is highly seasoned by means of prabbe,

cated. This tasteries tare is naginy seasoned by means of prains, a condiment of fermented salt fish, the sickening smell of which is most disagreeable. The Cambodians drink water or tea, very seldom alcohol. They use tobacco and chew betel; the use of opinm is a vice confined to a few of their rich mandarins. It opain is a vice confined to a few of their rich mandarius. It should also be mentioned that the Khmèrs eat fruit without wating until it is ripe. The Khmèrs, being of sedentary and rather lazy habits, confine themselves chiefly to cultivating the products which their

country readily offers; they are mostly fishermen and farmers, hunders and wood-enters. They cultivate a good many varieties of rice, l each enormous quantities of fish, to be consumed fresh, salted, or fermented, and extract yearly about 3,000,000 kilogr, of palm-usugar. Their industry and commerce are not very brisk; but they weave silk and cotton materials which are very harmonious in colouring and design, they are very elever silver-smiths, and they manufacture splendid canoes out of sincle texe-trunks.

4. Religious beliefs.—The Cambodians, although very religious, are absolutely tolerant. At the present day the official religion of the Khmèrs is Sinhalese Buddhism. Their sacred books are written in Pali, the language that they call Bolti Mokoth (= Pali Magadha, 'Pali of Magadha). They have preserved manifest survivals of ancient Brāhmanism, and ritual practices which are un-

doubtedly aboriginal.

i. Buddhism.—It seems now to be generally agreed that the Buddhism of the North was introduced into Cambodia between the 5th and 7th centuries. From the 7th to the 13th cent, tainted by Saivism, it struggled hard everywhere against brahmanism, which was the official cult of the Khmèrs. It seems to have triumphed at the beginning of the 14th cent., but probably did not implant indestructible roots in the hearts of the Khmèrs until towards the 15th cent., through the introduction of the Pali canon and the doctrine of the Sonth, which completely supplanted that of the North. We need not repeat here what is said elsewhere under art. CEYLON BUDDHISM.

(1) Clergy.—Although the Buddhism of Cambodia is that of Ceylon, it does not follow that its clergy recognize the supremacy of the Ceylon Church; they regard it as the seat of the perfect doctrine, and sometimes send monks to be taught in Nandrov Calcube. But should be the season of the season o

Kandy or Colombo, but admit no other connexion. The chief official of Buddhism in Cambodia is the king, who is its temporal head as well as the most devont worshipper. He can neither alter its doctrine nor confiscate its property. The heads in spiritual matters are two monks: the somdad prath's smightrate (= SKr. sangharaja), 'the king of the assembly of monks,' who appoints superiors to the monasteries on the 'right,' and the lok prath sokkin, 'thord Bishop,' who nominates superiors for the monasteries on the 'left.' Each superintends a monastery, and they rule almost equal parts of the kingdom. The second is inferior to the first, but is not at all dependent upon him, and never consults him. Under them are the elected provincial superiors, the abbots or heads of monasteries. The members of this hierarchy possess purely disciplinary power, and are in no way subordinated to each other.

The teaching of the young is entirely in the hands of the monks, or bonzes, who are called loke sorin, 'lords of the assembly' (snighta). They teach children of from six to eight years of age. A boy at the age of twelve is received into intimate communion as a 'disciple' (Khm. stonate = Pāli samāṇarea), and may then wear the yellow robe. On reaching his twenty-lirst year, if he can give certain moral, physical, and social guarantees, he may be ordained by a chapter of at least twenty monks, and then receives the name of phik (Pāli bhikkhu = Skr. bhikṣṇ, 'mendicant'). Any monk may leave the Order, after obtaining permission from his superior, who can never prevent his final withdrawal, except for a short time.

The bonzes in Cambodia enjoy great privileges; they are exempted from public work, military service, and taxes—in a word, from all civil duties. They cannot raise actions at law, and they give witness only by conventional signs. In cases of

<sup>1</sup> The Annamese have names for eighty-nine varieties.
<sup>2</sup> Produced by the troit (Borassus dabelliformis, Murray).
<sup>3</sup> Prith (Burm. bhurôh, Cham bira, Jav. bra, Siam. phrah;
cf. Skr. vara) is an honorific title placed before the names of divinities and kings.

crime or very serious fault (fornication, use of fermented drinks, etc.), the monastery hands the offender over to the secular power. The life of the bonzes is occupied with prayer and the instruction of the young. They subsist by means of voluntary alms, and take only two meals a day, between sunrise and midday. Very gentle, tolerant, and, as a rule, pure in their lives, they are much respected, and no one would dare to prepare a meal without laying aside a share for them.

The name of  $d\delta^{o}$   $\dot{\epsilon}_{0}^{c}$ , religions women, 'nuns,' is given to certain girls or married women, who, after a form of taking of vows, wear white clothes, and live near the monasteries, in the most saintly way possible, rendering such services to the monks as can be performed outside the monasteries. Some wildows, in order to show their deep sorrow, even submit themselves to this life for three years, which

ealls forth great regard for them.

(2) Monasteries, temples, and pagodas.—These are far from equal in magnificence to the Brahmanical temples of the ancient Khmèrs. The only stone temples, and the most beautiful ones, are some rather small, ancient Brāhmanical temples which have not been used as such for centuries. monastery (wat) is nearly always in the middle of a park planted with Ficus religiosa and other large trees. Behind the pagoda there are small thatched cells, or koth (Skr. kutī), where the monks live : in front is the sálá (Pāli sálā = Skr. sálā, 'hall'), a public hall which is used both as a meeting-place for monks and people and as a shelter for travellers. The pagodas, properly so called (práh vihār=Skr. vihāra, 'monastery'), or temples containing a statue (frequently a huge one) of Buddha, are built on small terraces or rectangular platforms, supported by thick walls, and especially by strong inside pillars of carved wood, and feebly lighted by a few narrow windows. They are especially distinguished by the elegance and lightness of their storeyed or sloping roofs, the corners of which end in a finial in the shape of the reared-up tail of a serpent or dragon. Some pagodas, and particularly that of Udong, are covered with earthenware painted with fine artistic effect. The entrance, with very few exceptions, is on the eastern side. The interior of the pagoda is adorned with mural paintings representing various legendary scenes, and contains a profusion of European petroleum lamps hung near the altar of the Buddha, whose statue is gilded. A wooden pulpit, supported by garudas, completes the furniture of the pagoda.

Besides the temples there are sometimes éctèiy (l'ali chetiya=Skr. chāitya, 'monument,' 'shrine'), large bell-shaped structures of dried brick which contain the ashes of great and saintly people.

ii. Beāhmanism.— Brāhmanism, which prevailed in Cambodia for such a long time, could not disappear without leaving material and moral survivals, in the first rank of which we must mention the ruins, sometimes very magnificent, of the ancient temples (Angkor Wat, Angkor Thom, etc.), the remains of Brāhmanical statues, the lingus which are still found in Buddbist temples, and the caste of bakus, or prām (= Skr. brāhmana), also called barohit (Skr. purohita, 'household priest').

(1) Bakus.—Although it is still difficult to give a satisfactory etymology of the word baku, it seems certain that the bakus, are direct descendants of the ancient Brähmans. The title barohët (purohitu) marks their functions as palaec-chaplain. The easte of bakus includes from nine hundred to a thousand male persons. Obliged formerly to marry only among themselves, the bakus at the present day may marry a woman of any race whatever, but they do not readily marry outside their caste. Although they are Buddhists like

the other Cambodians, they are distinguished from them by certain observances and real privileges, the relies of their former power. They still render a very marked cult to Visnu and to Siva, and have not the same scruples as the bonzes about killing any animal, or causing it to be killed. On the other hand, they are bound to perform all sorts of parifications; they cannot touch any cooking or table utensil without covering their hands with a cloth to avoid defilement, and they do not willingly eat of any dishes except those prepared at their homes, unless they have made sure that the person who has prepared them has been well purified previously. The bakus wear their hair long, and, rather than give up the custom, they prefer never to become officials. Forty years ago all bakus were exempted from taxes and public works; gradually the kings cut down these privi-leges for the good of their treasury. In case of nisdeneanour or crime. bakus may be brought only before their peers. In the case of a capital crime, the baku is not executed, but is exiled to a distant province under supervision; if he is sentenced to the chain, he receives it from the head of the easte, and suffers his term of imprisonment in the house of one of the other bakus.

The bakus are exempted from the law which adjudges as perpetual servants of the king all the twins born in the kingdom, and, if any one of them dies childless, his property goes to the corporation, and not, as is usual, to the royal treasury. They may marry princesses. One of their chiefs in the burlesque festival of  $m\partial kh$ (=Skr. magha), the 11th lunar month, which corresponds to Jan.-Feb., used to become king of Makh, and for three days enjoyed the semblane of royalty, and the very appreciable privi-lege of receiving the revenues of the kingdom during that time. Norodom (= Skr. Norotama), the predecessor of the present king, did away with this curious custom, but the seven or eight great dignitaries of the bakus still receive annually all the traditional presents-butfaloes, rice, etc.-from one of the great provinces of the kingdom. There is a belief deeply rooted in the popular mind, although not inscribed in any act, that, in the case of extinction of the direct royal line, the bakus have a right to the throne in preference to distant members of the royal family. The bakus claim that these privileges are nothing in comparison with those which they formerly enjoyed. The bakus are obliged to take charge, in turn, of the Brāhmanical statuettes, and the palladium of Cambodia (the Prah Khan)—the sacred sword preserved in a building adjoining the royal palace. They are all qualified to share in this, but whereas the majority among them practise agriculture or commerce in order to live, their seven or eight chiefs, with pompous titles of Sanskrit origin, are the barohets (purohita), or royal chaplains, and the only real priests of Cambodia.

It is the bakes who offer the lustral water in sca-shells to the king during the great New Year festival, and, in his absence, themselves wash the Brahmanical idols. It is they who, during the coronation-festivals, at the cutting of the fore-locks of princes, and at the great water-festivals, play the principal part. They also present the lustral water to the king on the part. They also present the lustral water to the king on the victory, some drops of which they throw also on each army corps to ensure their success; they follow the king in the field, carrying with them the sacred sword, the glit of Indra, and the Brahmanical idols. This explains how the worshipped weapon happened on two occasions (1812 and 1810) to fall into the hands happened on two occasions (1812 and 1810) to fall into the hands the control of the cath which every mandarin must drive water of the cath which every mandarin must drive was considered upon this duties and at the coronation of every new sovereing upon the drive water of the cath which every mandarin must drive was considered.

the dath when every mandarm bust drink when entering upon its duties and at the coronation of every new sovereign. Being the guardians of all purity, the bakes, standing at the top of a specially constructed platform, at every official entry of a new white elephant into Phom Penh, sprinkel it, bustral water, in order to purify it from the defilements of the

forest. When one of the king's wives becomes pregnant, the bakks come and put a gold chain, the gift of the king, round her neck, and rectic charms over it. It will then preserve her from the accidents of pregnancy. The new mother keeps this chain ever afterwards, as a sign of honour and iertifity.

(2) Acars (Skr. āchārya, 'teacher').—Below the bakus we might rank the ācars, who very often take their place in the midst of the family for the cutting of the fore-lock, and who are lay-devotees, versed in theology and traditions, irreproachable in their mode of life, and held in veneration by the people for their knowledge and their holiness.

iii. POPULAR RELIGION. - Although all the Cambodians are very much attached to Buddhism, a very pure and very strict religion is not to be expected of them. The mass of the people, besides the cult which they render to the Buddha, worship Brāhmanical relics preserved by the bakus or kept in certain pagodas, without realizing what the words imply. All their superstitions piety is directed in the first place to the good or evil spirits and genii who animate all space. Under Buddhist names, so far as the bonzes and the very small minority of learned men (who try to identify these genii with the pret [=Skr. preta], 'ghosts,' the yākkh[=Pāli yakkha, Skr. yaksa], 'ogres,' the rāc yākkh [=Pāli yākkha, Skr. yākṣa], 'ogres,' the rāc sēi [=Skr. rāja sinha], 'fabulous lions,' the krāth [=Skr. garuda], 'mythical birds,' and the  $n\bar{a}k$  [=Skr.  $n\bar{a}ga$ ], 'fabulous serpents' of India) are concerned, the people unconsciously perpetuate the aboriginal cult—primitive Animism. It is this religion of very inferior ideas that dominates their whole daily life.

(1) Nak tà.—In the first rank of good spirits must be placed the nak ta, who seem to be local tutelary divinities, set apart, the Khmèrs say, by Práh In (Indra) to guard a particular portion of land, or a certain mountain, river, or tree. According to some, the nak ta would correspond to the Hindu pitris (mancs). They dwell in the fine old trees which nobody would dare to cut down. and which are called ansa srok, 'the trunks, the roots of the country.' There is always one for each province, and sometimes one for each village. It is under the canopy of their foliage that the people come to worship the spirit, who can take the most diverse forms-a stone, a strangely shaped root, the ruins of a Brahmanical statue, etc. nāk tā are involved in cases of serious illness, epidemics, prolonged drought, or too heavy rainfalls. The oblations which they love are of three kinds: offerings of living animals, which, in the name and presence of the nak ta, are given their liberty; offerings of food; and sacrifices of living animals. In the last case the buffalo or ox chosen is slaughtered in the midst of a large assembly of the people, who terminate the festival with a meal and rejoicings. At the installation of a governor in his new province a butfalo is always sacrificed to the nāk tā. In this case the animal is killed with great cruelty, its neck being sawn for a long time, as the duration and intensity of its bellowing

time, as the duration and intensity of its bellowing are signs of prosperity for the new governor. In former times the ndk  $t\bar{t}$  had to be honoured by more cruel offerings, for in certain provinces of Cambodia, about 1840, it was the custom to sacrifice to them those who had been contained to death. And even at the present day, persons who have been condemned to death are excented in the presence of become offerings to the spirit as well as victums pumbed for their misdeeds. In this there is very probably a reminiscence of human seartifice.

(2) Arāk.—Alongside of the nāk tō we find the ārāk (= Pāli ārākkla-dezatī, "tutekary deities"), good spirits, or tutekary genii, who dwell in trees or in houses, and take special care of individuals. The ārāk seem to be the human ancestors, as the family is nearly always a relative or friend long dezd, who has constituted himself the protector of the group loved by him. He is the best and the

most precious of the don ta (= ancestors, in the sense of grandfathers) of his proteges. The arak is invoked especially in cases of illness, as this is almost always, in the eyes of the Khmèrs, the work of evil spirits. Then a kru (=Skr. guru, 'spiritual preceptor') is called in, i.e. a sorecrer, male or female, who gets into close communion with the arak of the sick person, causes him to become incarnate in himself, and, armed with his power, asks who is the evil spirit that is torturing the patient. Then, to the sound of songs and a small band, he exorcizes it by spraying rice-wine that he has in his mouth over the patient in very minute drops. The patient is also slightly pricked or gashed, in order to chase away his tormentor. Every year, in Jan.-Feb.-March, a great festival in honour of the draks takes place. It is called lo'n rôn, 'the exaltation of the shed.' To this feast the kru gathers all his pupils, i.e. all the clients cured by him, and in their presence he proceeds to call up all the ardks, and becomes possessed by these spirits, with much stamping and a fit of hysterics, which is apt to infect his andience. Blossoms from the frangipani tree (Plumeria alba, Linn.) are offered to the araks. Many of the Cambodians have really no other cult than that of their arak.

(3) Práy, khmôc práy.—Nák tả and àrák have a hard task in combating the evil spirits, or pray. Perhaps the most dreaded are the khmôc pray, 'wicked dead,' and, among these khmôc, women who have died in childbed. These, hidden in the trees, frighten people by langhing and by throwing stones, and try to make them mad, or to kill them. The woods are also inhabited by elves, who are supposed to cause incurable diseases among men.

(4) Běisać.—The Cambodians must also beware of people who have died a violent death, the běisaé (=Pāli pisācha, Skr. piśācha, 'goblin'), famished souls, stripped of everything, who return from the hells to demand food, and, if any one refnees to pay heed to them, take revenge by inflicting all sorts of evils on him. They are appeased by the placing of rice and other food for them among the brushwood, while the pray will not accept offerings unless they are laid on a winnowing fan.

(5) Směr.—There are also terrible wer-wolves male and female, known by the name of smer. Sometimes these are, according to Aymonier,2 'men who, as the result of certain magical incantations, are endowed with special powers and properties, e.g. being able to swallow dishes. In order to deprive these wer-wolves of their power it is necessary to strike them with a hook on the shoulder.' Sometimes they are women, who, after being rubbed, voluntarily or involuntarily, with oil consecrated by a sorcerer, lose their reason and flee to the woods, where, after seven days, they change into wild tigresses, unless a man skilled in sorcery, and rubbed with the same oil, gives them a knock on the head with a bar, while repeating magical words, and brings them back to reason.

(6) Sorcerers, sorceresses, and soothsayers. - The popular religion of the Khmers, by its very character, implies belief alike in magic, astrology, and the most minute performances in order to find out whether the apparently simplest action in daily life does not run the risk of being unlucky. Wizards and soothsayers are the indispensable priests of the popular religion of the Cambodians. A distinction is drawn between the sorcerer-soothsayers, ap thmop, who foretell destinies and days, sell philtres and charms, and make use of spells either from wickedness or avarice, and the

medicine-sorcerers, or kru (=Skr. guru), who add to these many gifts those of curing and exorcizing, and thus being able to counteract the wicked power of the up thmop. These two kinds of offices may be lifted indifferently by sorcerers or sorceresses (mî thmôp). To cause a person to fall ill, or die, they have several processes: by means of incantations they transform a buffalo skin and some grains of rice, or some shavings of wood, into a huge black beetle, or into worms which enter the stomach of the victim, cause him to become ill, and kill him, unless a more skilful sorcerer intervenes to save him. Areca nuts, and certain pratal, or tubers, after conjurations by the sorcerer, also cause a slow and most painful death to the person who touches them. Two human skulls, whose upper parts have been removed, placed one upon the other (top to top), and secretly laid (after certain ineantations) under the bed of a man who is perfectly well, have equally disastrous results. The sorcerers also cast spells over people by means of a little wax figure which they prick with a needle at the spot where they wish to affect the person against whom they have a grudge. On the other hand, they sell protective amulets and lovephiltres, or khnoc, small phials of baked earth filled with consecrated oil, which scenre the favour of the king, success at play, or with women, for the man who is rubbed with it.

(7) Ghouls or sorccresses .- Lastly, there are the srei ap, a kind of ghouls or sorceresses, some of whom become so involuntarily, and others as a result of studying magic. At night their heads, accompanied only by the alimentary canal, wander about to feed on excrements, in search of which they will even look among the intestines of people who are asleep. Recognizable by their bloodshot and haggard eyes, these ghouls can throw a spell over any one by merely wishing it, and on this account they are dreaded far more than the sor-cerers. If a  $sr\check{e}i$   $\grave{a}p$  is denonneed in a village, either the authorities condemn her to a penalty —exile or death according to the gravity of her alleged misdeeds—or the inhabitants of the village themselves destroy her. The same fate was formerly shared by some of the thmop.

5. Medicine. - It is natural that in the state of mind above described the doctor in serious cases is always the kru (=Skr. yuru), or sorcerer-doctor. As regards the doctor, properly so called, or kru pêt, his whole science is summed up in the knowledge of simples, the combination of medicines, and the recitation of mantras ('charms') at the time of administration. His medicine books are merely treatises similar to the ancient Antidotaries, including, besides a few clinical references, a great many very complicated formulas of medicaments, followed by their method of administration and preparation, according to the symptoms of the various kinds of diseases. Medical skill is generally transmitted from father to son, but sometimes practitioners instruct in their art intelligent young men, who then become their disciples. Like the Chinese, they attach great importance to the examination of the pulse in the diagnosis of diseases, and think that the latter are due to the evil winds that circulate through the whole system of mankind. Their medicines are borrowed from all countries, but consist chiefly of vegetable species. Various kinds of Strychnos, the Cannabis indica, the Datura, the gamboge, the rayed aniseed (Illicium anisatum), etc., are extensively used. The horn of a stag or a rhinoceros, an elephant's tooth, pangolin scales, etc., are supposed to be efficacious in smallpox and certain fevers. Bezoars and gall-stones are reputed febrifuges. The medicines vary according to the part of the body where the disease starts, the build of the person, and the day on

<sup>&</sup>lt;sup>1</sup> This festival is always held in a temporary shed, specially built for the purpose.

2 In Cochinchine française, xvi. 183.

which he is to drink the potion. In a ease of dysentery, one is advised to cut the bark of the pon (?) on the tree itself, at a height a little above that of the navel of the invalid. In heart disease a decoction of the heart of ebony wood and iron wood, or a decection of ivory and ploughshare, is prescribed. Eagle-wood is regarded as being especially pleasing to the spirits. In external maladies the part affected is rubbed with it; in internal, the sides of the vessel containing the potion to be drunk. Massage, pinching the skin, and the use of moxas are extensively resorted to. Surgery is not practised. In fractures, co-apitation is never attempted; but care is taken simply to keep the dislocated limb in place by ingenious splints of straight bamboo blades covered with carefully kneaded potter's clay. Before administering any medicine whatever, the physicians invoke Dhanvantari, the physician of the The doctor is never paid until after a cure, and he almost invariably receives five arms lengths of white calico, four betel leaves, some areca, four handfuls of cooked rice, and a waxcandle stuck on a slice of bamboo-trunk.

(1) Smallpox,-All that is done is to place some annilets beside the patient, and lay him on banana-leaves near which a fire is kept burning. Care is taken to avoid speaking of itchiness, mats are not shaken before him, so that he may avoid scratching himself, and a white linen cloth is laid beside him to make his pustules whiten by sym-pathetic magic. The medical formularies do, indeed, include remedies for the different stages and accidents of smallpox, but they are seldom

employed.

(2) Phthisis.—Consumptives are never cremated, but buried, with a piece of broken earthenware on their faces, so that the evil spirit which is in them may not pass to their children. They are not exhumed in order to be burned until several years have elapsed, and then only if none of their heirs

has suffered from the terrible disease.

(3) Births.—These take place with the help of matrons. In eases of difficult delivery a special potion is administered, and areea, betcl, prepared betel-quids, and fragrant joss-sticks are offered to the 'god of medicine,' after which the mid-wife recites mantras. If a woman dies without being delivered during the 7th, 8th, or 9th month being delivered during the 7th, 8th, or 9th month of pregnancy, this is believed to be due to the vengeance of the pray; she and her fetus become dreaded ghosts. When a miscarriage takes place, the sorcerer is hurriedly called. He puts the fetus in an earthenware jar, and, armed with a sword in his right hand, with which he threatens the jar in order to prevent the evil spirit of the fetus from coming out, goes to the nearest stream, pronounces imprecations, breaks the jar with a blow of the sword, and leaves everything in the water. Usually, however, the sorcerer makes a pretence of this ceremony, hides the fetus, which is supposed to be animated by a spirit as intelligent as it is powerful, roasts it over a fire isolated by seven cotton threads stretched round the hearth, coats it with soot and varnish, and sews it into a little bag which he will always carry with him. Henceforward he will succeed in all his enterprises, and in cases of danger his kon pray, 'son of the spirit' (the name given to the fetus prepared in this way), who considers him now as a tather, saves his adoptive parent by his warnings. The adoptive father is obliged merely to give a few grains of rice at each meal to the spirit, who otherwise would take flight, thinking himself badly treated. This belief has such a strong hold on the mind of the Cambodians, that sometimes, we are told, sorcerers, or simply bold men, come, three days after the burial, to the grave of a

woman who has died with child, to demand from her and take the fetus which is still in her womb. in order to make a kon pray of it by means of the above-mentioned ceremony.

3000ve-limitions a ceremony.
Faith in the supernatural power of the fetus led formerly, and apparently still leads (but only in quite exceptional cases, which are rightly regarded as errors punishable by law), to unnatural acts. The power of the fetus is specially great when it is the first, child of a couple married for the first time. In it is the first child of a couple married for the first time. In order to get possession of such a fetus, the husband used to ask his wife, as if in jest, about the fifth or sixth month of preg-nancy, for the possession of the future child. If the woman entered into the joke, and repied, without thinking, 'It is yours,' the husband would lead the unfortunate woman to a suchuled spot and kill her in order to get the fetus, which, when cooked and blackened as by the sorverer, rendered him henceforward invulnerable and successful in his smallest under-tailings. This about this is the state of the property of the pro This detestable practice must have been fairly wide takings. This detestable practice must have been tarry wine-spread, for, even at the present day, in a case of first pregnancy, the parents of the woman, with whom as a rule the young couple live, anxiously and constantly watch the shortest absence of the future mother.

6. Astronomy and astrology.-At one time astronomy was held in great honour in Cambodia, where special experts, the nak hora (Skr. hora; ef. Gr. ώρα), 'astronopiers,' 'soothsayers,' determined the solar and lunar eclipses, noted the variations of temperature, and fixed the calendars. At an early period these studies took the form of astrology, and treatises on this subject are plentifnl in Cambodia. At the present day, horas, beaded by two respected and well-renunerated chiefs, are connected with the royal palace, and each year compose a calendar or sankran (Skr. sankranti, 'passage of the sun or other planetary body from one zodiacal sign to another'), including body from one zonacat sign to another i, menuing —besides the usual particulars, such as eras, eclipses, etc.—predictions about rain and fine weather, or the returns of the crops, etc. The Khmers apply to them to learn the best time for a marriage, the naming of a child, a journey, the building of a house, the success of an enterprise, illness and its issue, the sex of an unborn child, the next betrothal, war and peace, rain and fine weather, etc., all of which the horas determine quite readily by consulting tablets similar to the Malay Moreover, by means of formulæ and kotikas. prayers, they can prevent the evil effects which they foretell. Among the common people the horas are called kru mol, 'the teachers who see,' for, independently of the official astrologers of the king's palace, there are other horas scattered throughout the whole kingdom.

The belief in lucky and unlucky days exists in Cambodia as in the neighbouring countries. Friday, for instance, is regarded by everybody as a particularly lucky day for putting on new clothes for the first time, or finishing a piece of work which has been begun; this day is chosen for cutting the

thread of a woven piece of cloth.

Eclipses are attributed, as in India, to Rāhu; 1 hence the expression ra (= $r\bar{a}hu$ )  $\dot{c}an$   $\dot{c}an$ , the monster is seizing the moon '= ' there is an eclipse of the moon.' At the time of an eclipse, monks and bakus assemble at the royal palace, where, in anticipation of a possible catastrophe, which an eclipse may produce, the king is purified and gives abundant alms. On the other hand, shaving a child's top-knot of hair at this time ensures good fortune for him. Pregnant women render worship to Rāhu, to prevent their future children from being deformed or weakly. In the same way, if an eclipse occurs, the pillars which have been set up for the building of a house must immediate ately be placed on the ground and covered so as to be hidden from the eclipse. If they were used without this precaution, misfortune would

7. Superstitions and various beliefs. -(1) Natural objects.—The Cambodians ascribe powers either beneficent or dangerous to almost all natural ob

1 This belief is general in the Far East.

jects; hence the reverence and fear which they inspire, and the complicated rites and practices to which they give rise.

Dew (answm) is supposed to be vivifying. During the dry season, for predicts an epidemic. Reviling the wind would cause uleers, tumours, or humps. Pre-listoric objects of stone or bone (Khm. kām rāndāh, 'thunder-bolts') are regarded as bringing good fortune, especially flint asse, which are carefully preserved in the house. Trees whose roots spread under the house bring bad lock to it. When one wishes to get in marriage house bring load lock to it. When one wisness to get in marriage a virgin, and not a licentious woman or a widow, he mist offer buds to the Buddha, and not full-blown flowers on which the bees have already alighted. The first fruit of a tree mist never be gathered, for fear it should bear un more, and the people should be careful not to beat down the next crop with a bilt hamboo pole, lest henceforth the tree max produce fruit at thin as the pole. Indian hemp (chinda) must be gathered with laughing and jesting, and leigning the intoxication it is to cause, in order to preserve its full power. The cotton-plant (krabas) and the hamboo (rosk') should always be planted far from the house; else, as soon as they have grown higher than the hut, they would like, in order to show their gratitude, to serve as firmeral cushion and matting for those who planted them. So the young people always leave the work of planting hem to an old man, who puts below what he has just planted a piece of jar or earthenware and ways to the tree. It hamarind (ampih) and the francipani tree (fongré) possess powerful virtues, so it is unlucky to see them growing too near the house. A stick of tamarind-wood allows its owner to wander fearlessly during the night under the protection of the prâty. A box, or the finger-board of a musical instrument, made from the heart of a tamarind or françipani tree, serves to gain the love of women and the favour of the king. A bamboo pole, lest henceforth the tree may produce fruit hin as the pole. Indian hemp (kànéhà) must be gathered to gain the love of women and the tavour of the king. A knife-handle made from the wood of a tamarind which has grown near a house would lead the pray of the tamarind to devour the fetus in the womh of the mistress of the house, and

devour the fetns in the womh of the mistress of the house, and to make all her pregnancies miscarry. So married nen keep this tree at a distance from their houses. The koki (Hopea deabsta, Hanco), the king of trees, must be planted only by precious wood, they must first invoke the spirits, and light some sweet-seceted rods on the beam of the cart. Although the tiger (kia) is very much dreaded by the Cambolians, who helieve his whiskers to be a strong poison, and regard his appearance in a vidinge as a sign of coming epidemics, the elephant (danyref) is greatly revered, especially the rivalled bringer of good fortune—an idea which is held also by weighbouring peoples, since, at the time when Cambodia was rivaneu pringer or good fortuoe—an idea which is held also by meighbouring peoples since, at the time when Cambodia was the vassal of Siam and Anoam, it had to give to its two suzerains all the elephants of that colour caught in its territory. The French intervention has secured for it the free disposal of these venerated antials. The Khmèrs, like the Malays of Java, absolutely refuse to kill the monkey (svá) or to est its flesh; they show prest displacative on assion; it busted here of Java, absolutely refuse to kill the monkey (\$v\$a\$) or to eat its flesh; they show great displeasure on seeing it hunted by Europeans. The khith pos, 'serpent bisoo' (Bos gaurus, H. Smith), is considered to be very redoubtable. The Khmèrs think that it feeds on serpents, which it kills by squirting its asilva on them. A ring onade from a khith's horn is an antidote against reptiles' bites. Care must be taken, however, not to gather the hairs of its head, which sting as dungerously as serpents. The bones of a hare (tonsit) which has died a matural (crabby) and coven (&o) which, on entering or leaving their field, scrape up the earth, and throw it in the direction of the field, foretell good fortune for their master: but if they throw it in scrape up the earth, and throw it in the direction of the field, foretell good fortune for their master; but if they throw it in the opposite direction it is a sign of adversiby, and the master must get rid of them. The goose (kinkan) should be reared only by well-to-do people. To the poor it would bring an increase of wretchedness. Little chickens with curly feathers (mān 6) should be reared only by a man who, without appeared cause, has lots several children, by way of a preservative for the coming children; or by a man in intimate relationship with the arxix, in order to be offered in sacrifice to them. The with the arak, in order to be offered in sacrifice to them. The kite (hhkh) hovering over a house signifies misfortane, and warns the family to abandon it. The same thing is forefold by the entrance unawares of the little plant-tree at Csciurus palmarum, kön-prok). When a large butterfly (mé ambb) comes flying into a house, it is a bad omen; a grashopper (kandop), on the other hand, on the thatch of the roof foretells a piece of luck. The crow (kark), according to the direction of its cry, foretells the return of an absent one, or a reverse of fortune. Cranes (krall, rout) flying and crying in a flock above a village denoted that there will soon be some pre-escapastes are the control of 
fammed) foretell death.
(2) Various objects.—A winnowing-fan cannot be made by an
unmarried man without bringing him misfortune. The person
who carelessly sits down on a winnowing-fan will later lose
his way in the woods. Although cracked metal objects, e.g.
gonzs, must never be kept in the house, but have to be thrown
away, a curse would fail on the person who threw a worn-out
caulifron among the rubbish below the house; it must be hung
up in the house or thrown into the river. A pillow which has
become useless must also be committed to the water, for it is a powerful vehicle of misfortune. A broken hearthstone meets with the same fate. On the other hand, when there is a storm

or an excessive rainfall, a knife is placed among the cinders on the hearth. Any one whe, when is a foreign country, negliculty throws away rubbis, such as a pice of an old worn-out garment, lays himself open to reverses. Again, when one is abroad, the water with which the mouth is rinsed must be swallowed, or it will facilitate the attack of cvil spirits. To will the face, even inadventently, with white cotton, like the dead, or the condenaned at the place of execution, is to draw down a very grave insistrumes. Instruments of forms, so the dead, or the condenaned at the place of execution, is to draw down a very grave insistrumes. Instruments of forms, school, but must be left in the open air under a tree; and the executioner, after beheading a man, must guickly turn away his eyes, lest some day he be overtaken by the same fate. When a hunter wishes to secure a good hag, he must, before settling his net for wild actimals, hold a traditional dialogue with a talt vere, on the north side of which he places his net. He himself the tree's permission to take some of its flock. Then he places of offering of bananas at the foot of the tree, sets the trap, and returns home, taking care not to shake or break asy big branches on the way. If, however, the net remains empty, ad one-ring of datasets at the coor of the tree, sets the trap, and returns home, taking care not to shake or break any high branches on the way. If, however, the net remains empty, the hunter takes off his clothing and pretends to hang himself, as if by mistake, in the meshes of the bet which he has just

as if hy mistake, in the meshes of the net which he has just est. After this bis hunting is sure to be successful.

The following is a similar superstition. In May, on the day he proposes to begin ploughing, the farmer invites a few friends to his house. He puls his oxen to the plough is front of thouse, after placing on a piece of white cotton heside it a brass bowl containing water, betel, holled rice, this hrine, a bolichicken, and a bottle of rice-spirit. He sits hrine, a bolich of this

bowl containing water, betel, holled rice, fish brine, a boiled chicken, and a bottle of rice-spirit. He sets a portion of this food at each of the four corners of the plough, and invokes the glosts of his accessors in these words: "Itsaten, all ye departed protection, may our own and buffaloes escape all diseases, and our ploughmen all shocks." The old men in the company now drick the rice-spirit, the young ones eat the food, and then work goes forward without mishap.

During harvest, a reaper must not use a sickle whose bandle is made from the horn of a domestic animal, such as a cow or fatigue in ploughing. Any one who neglects this rule will bring trouble oo himself. When the proprietor of a stable means to castrate a bull or a buffalo, he must first warn the animal by tellinglit not to think that he performs this operation capriciously, but with good reason, and then beg it not to bear him a gradge either in this or in any future life. The operation is preceded by a sacrifice to extend the purpose of the control of the c animal in question.

animal in question.

(3) Metamorphosis.—The Kinners, like the Annamese, believe in the transmutation of species and in metamorphosis. Thus the fresh-water tortoise (kanthāi) may apring from a heap of worms which have collected during rain. Sometimes the snake (anthbi) is boro from induced (troks), which grows beside water, and can then change itself into a skdr, a kind of brown weasel. The Cambodians believe also that noctornal birds, such as choughs, owly, screech-owls, are hor from the four material substances of the 4-di. (5) mad or that work of the control of the co

days into tigresses.

Festivals.—Indolent, gay, careless, and very religions, the Cambodians are extremely fond of festivals. Most of these assume to-day a distinctly Buddhist character, although it is possible to find in some of them quite a different origin, doubtless aboriginal.
(a) The following are the chief periodical re-

ligious festivals :-

(1) Thườ bồn có chnam, 'Festival of the entrance into the year,' takes place in the first month of the Cambodian year (15th March-15th April). The festival lasts three or seven days; it recalls the New-year festivals of the West.

On the first day the pagoda undergoes a thorough cleansing both outside and inside. Then eight phnom, or heaps of sand, are raised in honour of the devata (Khm. tepoda), or protecting deities. On the second day the faithful flock together, dressed in their hest clothes, and laden with fine sand, sweet-smelling in their nest coolies, and adeal with mis sound, sweet-successing classified, and tapers. They make an offering of the wands and tapers to Buddha in the temples, and theo march in procession round the pagoda, scattering their sand on each of the phonon. The whole night is spent in singing, playing, and dancing within the preciocts, so that they may be able to keep watch, wer the mounds, as in the wopular estimation asy dranage done to them would lead to great misfortunes by driving away tipode or tievolas. On the third day the women come, carrying provisions and kitchen utessils, and install themselves in the enclosure, not of the pagoda this time but of the monastery, to prepare the presents destined for the tronks, and the dishes for their own families to consume. From eight until eleven o'clock in the morning, set prayers are said by the bonzes in the builtanty illuminet pagoda, better all the functionaries and the people. When these are performed, the bonzes come ontside to receive the presents of the latty, and, after offering the first of their rice to the animals and birds, partake of a neal in public, which lasts for a quarter of one. The latty sait and play all afternoon in the enclosure. On this day, too, the rich give large alms to the poor. In the evening the statue of Butthia is washed, and so poor. In the evening the statue of Buddha is washed, and so are the borness and naives; in the houses the children and grand-children respectfully wash their parents and grandparents, in pious households all sexual relations are broken of during the first three days of the year. For the first-seven days no living being or animal may be killed, no business matter concluded, neing or animal may be killed, no business matter concluded, all insults or controversies must be avoided, neither lies told nor hardness shown to any one, if the year is to be well begun, and therefore stand a good chance of also ending well.

(2) Thườ bốn bambuos phikkh, 'Festival of the ordination of a monk' (Pali bhikkhu); (3) Thườ bon branchios nen, 'Festival of the ordination of a novice'; (4) Theo' bon son prah, 'Festival of the erection of a statue to Buddha'; or Theo' bon bok práh nét práh, 'Festival of the opening of the sacred eyes of Prah' (=Buddha). These ceremonies may take place only during the 2nd, 3rd, and 4th months of the ordinary year, and also during the 5th month of an intercalary year, that is to say, from 15th April to 15th July, or else from 15th

April to 15th August.

The first two festivals may last from three to nine days, with feasting and games at the expense of the parents of the candifeasing and games at the expense of the parents of the caudi-date, who himself takes only a very passive part in the proceed-ings, which end in his ordination. The candidate, dressed in white or else in his best clothes, rdes in great pomp on horse-back, preceded by an orchestra and shaded by a parasol of honour, right through the village from his own house to the monastery amid the joyful cries of the crowd, in spite of the army of Māra (=Mārn), Buddha's semeny, symbolized by a few masked figures, who try to stop him on the way. After the pradiation (Ser, pradiaks) gap, or smovise circumambalation of the whole gathering round the temple, and a last intervention of Māra and his followers, the candidate enters and takes his of Mara and his followers, the candidate enters and takes his place in front of the statue of Buddha, lacing the ordainer, who addresses to him the ritual questions, gives him the customary advice, and consecrates him. The festival for erecting a statue to Buddha also lasts three days, the first being employed in making an enclosure round the statue and in pretending to shave it and to open 'its eyes with two long needles. The other two days are specially devoted by the people to the worship of the statue. This festival, being somewhat rare, always attracts many of the faithful and deyout.

(5) A still rarer festival is the Thro' bon bancoh sema, 'Festival for the burying of the sema,' which recalls the laying of the foundation-stone of a church in the West. It is held only on the occasion of the erection of a new pagoda, or the building of a new monastery. These semo, or carved stones, which serve as the evidences of the inauguration ceremony, are nine in number. One of them, the sema kel, 'baried sema,' is placed in a hole in the ground four cubits deep, in front of the principal altar inside the pagoda, into which the believers have first thrown new clothing, jewels, gold, musical instruments, hair, parings of nails, and even a few drops of their blood.

The feast lasts at least three days, during which the crowd The feast lasts at least three days, during which the crowd-eat, sing, and rejoice, after making the necessary of frings of food to the bonzes. On the last day, at an anspicious time de-termined by the debt, the bonzes begin to pray; and nine men, at a signal from the debt, place the zenak kel to its hole, and cover it up amid cries of joy from the crowd. As soon as this is performed, several other men go to place outside the pagoda the eight able zenal, or 'leaves of zenal'—stones carved and one eign sew sema, or 'leaves of sema'—stones carved and often hollowed out to form niches, in which the faithful light sweet-scented sticks. These stones are placed at the four corners, and at the middle of the four sides of the pagoda, to form the pillars of the invisible rampart which will defend the form the pillars of the invision ranpart which will detend the pagoda from evil spirits and demons. The expression 'eight leaves of sema' recalls an ideal lotus-flower, of which the sema huried within the pagoda would be the heart (alabastrum), and the stek sema the petals. These last also represent the eight regions of space.

(6) Theo' bon col prah vosa, 'Festival of the beginning of the vosa' (= Pali vassa, 'rainy senson' or 'season of retreat'), takes place about 1st July, and is a time of fasting, meditation, and prayer, lasting three or four months. The faithful bring to the monks cuttings of cloths, and an enormous eandle which has to burn incessantly during the whole time of retreat, under the care of the

(7) Thro' bon kan bên (Skr. pinda, 'ancestral cake'), 'Festival of the customary pinda,' is the festival of the nak ta, considered as the ancestors of the Khmers. They are presented with offerings

of food.

(8) Thườ bốn phảom bên, 'Pestival of re-union round the pinda, or cake, offered to the ancestors, is the occasion when the faithful bring to the pagoda cakes and delicate foods, which, placed round the altar of Buddha with candles and sweetsmelling rods, rejoice the don ta, or ancestors of the family, and call down benedictions and prosperity upon its members,

(9) Thườ bỗn c'cũ práh vosa, 'Festival of the end of the season of retreat,' is celebrated tifteen days after the preceding, that is to say, about the end of September. It consists of offerings of rice to the bonzes and the launching on the river of little rafts, made from the trunk of the banana tree, laden with provisions, zine coins, and some lighted candles, and leaving them to follow the course of the water, after saying to the ancestors, who are believed to have their places on them; 'Go to the country, to the fields you inhabit; to the mountains, under the stones that serve you for houses; go! return!' whereupon the souls of the dead

regain their mysterious dwellings. (10) Thro' bon hè kak tān (Skr. dāna, 'generosity'), 'Festival of the procession of the abounding gifts (to the priests),' one of the most picturesque ceremonies of Cambodia, lasts only one day for

each monastery.

All the inhabitants of the province or village, headed by their chiefs and decked in their most beautiful clothing, proceed to carry to the pagoda the numerous and varied presents which the governor has bought with the money of the faithful. These presents—parasols, phastres concealed in a candle, fans, stuffs, fruits, etc., are carried on litters; shaded by a parasol, and preceded by an orchestra, they lead the procession. Behind come the governor and the mandarins with all the insignia of come the governor and the mandarins with an the insignation their rank, then the women, in hierarchical order, all grouped behind the prapon thom, 'the chief wife,' of the governor.

(b) Two Buddhist festivals have still to be

noticed :--

(11) Thườ bốn hệ phka, 'Festival of the flowers,' is the pilgrimage which a family, or more usually a whole village or district, makes to some famous pagoda to offer llowers, fruits, provisions of all sorts, and yellow cloth on bamboo hand-litters. The village visited would be dishonoured if it did not immediately provide an abundant feast and

rejoicings in honour of its pious guests.
(12) Thvô' bốn nimont lok sainkh cék oi sampôt sa, 'Festival to invite (nimont=Pali nimentanie, 'invitation') the monks to a distribution of white cloth,' may take place any time during the year; before accepting the cloth, the bonze spreads it out on the heads of the donors and sometimes of all their relatives, at the same time repeating prayers conferring great blessings on them. Those who are too poor to make an offering of their own try at least at this time to touch the cotton cloth in order to share in the blessing pronounced.

(c) Festivals of Brahman origin are the following :-

(13) Thườ bon ankam bok sampah prah khé, 'Pestival of paddy pounded to render homage to the moon,' is celebrated in the 8th month of ordinary years, and the 9th of intercalary years, sometimes in the monastery, but more frequently in the village.

In the VHage.
Each housewife broils and pounds a bowl of glutinous rice
(tryza glutinosa, Linn.). This bowl is exposed to the rays of
the moon in the midst of trays belon with cakes and fruits,
amongst which there must be one or two coco-mits. On some matting on the ground is laid a cushion covered with five cubits

<sup>&</sup>lt;sup>1</sup> Or better, Thvô' bòn hê kathên (Pāli kathina, 'robe made for a Buddhist priest within a single day and night'), 'Festival of the procession of gitts of clothing to the monks.'

of white cotton cloth, on which is placed a young banana-leaf rolled up to resemble a hards ears. Two posts are fixed three cubits from one another, and with them is connected a horizontal stick, turnished with five areas leaves, five hetel leaves, some flowers, five bees'-wax candles, and five sweet-scented sticks. At the end of each post are attached horn-shaped bags made from banana leaves, called "horns of plenty". Letween ground, thrie raise their lands, spined together, as high as their laces, towards the bright moon. Then, one after the other, they go and kneel on the cushion, take up the leaf shaped like a hard's cars, and salute the moon three times, saying: "Today is the full moon of the month of kradick (Skr. kurlika, Oct.-Nov.); to-day, in every family, they do as we do. We invite all the divinities of heaven to come and take their share of these come and drink of the water of these coeo-auts and protect us; grant that we may be happy during this life, and that our possessions may increase in our hands." When they have finished, the head of the family takes a lighted candle and lets the wax which runs down drop into a vase full of water. The drops, and, accordingly, more or less abundant harvests; so the whole the young men convey the presents offered to the divinities to the mouths of the maidens, and soon the whole gathering is eating and laughing and praising the moon.

(14) Mention may also be made of the bon phek the saéa, 'Ceremony of the drinking of the water of the oath'; the bon èvat prâh nikal, 'Ceremony of the opening of the furrow'; and the anniversary of the birth of the king. The eighth day of each moon, waxing and waning, and the day of full moon of each month are also feast days (bon set).

(15) The 'Festival of the entting of the top-knot (Pāli Chūļā-kantana-mangala) is common to the Cambodians, the Siamese, and the Laotians of the countries bordering on Cambodia and Siam, and is compulsory on girls and boys of all ranks in their 9th, 11th, 13th, or 15th year (never during an even year), and marks their transition from childhood. Without it boys cannot enter monasteries as novices. Of Brāhman origin, this custom has become an essential rite of the Buddhists. It is preceded in the first month after the birth of each child by a shaving, without any pomp, of all the hair, called kor sak prei, 'shaving of the wild hair.' This shaving is followed by many others, in which care is taken to leave a little tuft of hair on the top of the head; this tuft is usually rolled on a valuable pin, and surrounded with a little crown of white flowers, giving a most charming effect. It is this tuft which must be shaved with such ceremony. Only 77 or 78 days in the whole year are favourable for this operation, and the particular day is fixed by the hora or the acar.

The corrony usually takes place in May, and for princes are considered with the court of honour at the palace, an artificial meaning into the court of honour at the palace, an artificial meaning is built, made of painted wood and cardboard, with grass and branches of shrubs stude on to imitate vegetation. Two paths, oriented the oce to the east and the other to the west, for the king, who officiates, lead to the top of the mountain Round the mount are trays laden with offerings dedicated to Vision, the Devatas, and the Buddhas. At the top of the mountain countries of the branches of the contribution of the contribution of the contribution of the mountain countries of the contribution of the contri

of erown placed on white cotton cloth.

About flive o'clock on each of these three evenings there is a
very brilliant procession, in which the candidate is borne in
great state in a pakaoquin lavishly ornameted with gold, surrounded by all the functionaries and court ladies, to make the

produktijna round the palace. Each time the bakus go in front of him, sounding a cone he for frighten away the evil spirits, and he descends from his portable throne and takes his seat on the carpet, leaning on the little pillow set opposite the borace, with the bakus on his left hand. The king, who follows him, does not anced his kirone, but takes his place on a cashion in the borace, the altar of Siva, and Month Meru a salutation which results the alphafot of the fillodus. The borace section to enable the results he alphafot of the fillodus. The borace section formulas in Pali, which those present repeat in a low voice. After some rather lengthy prayers the king and prince withdraw to their apartments, and the boraces to their pagedas, with presents from the king. On the fourth day this procession takes place in the morning, when the prince in his gilded palangula, dresses credit the most part of the prince in his gilded palangula, dresses recite the most important of their prayers while the bakus sound the conch to keep away the evil spirits. Then the bakus sound the conch to keep away the evil spirits. Then the bakus sound the conch is most important of their prayers while the bakus undo the prince's hair, divide it into three locks in honour of the Trimarit (triad of Brahmy Vigun, and Siva), and tie acal bok round a golden rine; the king, armed with a pair of golden stroke of the razor; the bakus again sound the conch, and the boates repeat a text in Pali. After this ceremony the whole assembly goes to the court beside the structure representing a montain. The recipient, clad in white cotton, along with where, from the spray placed at the top of the mountain, he receives on his head, shoulders, and body a heavy shower of Mekhong water (the name signifies' the mother of waters'). Then the king pours on his bead five jug-fulls—in memory of the morning and the onch and the perfumed lustral water, and a crown of raw cotton is piaced on his head.

The festival terminates with great banquets which the king gives to all his functionaries, and the receiving of presents—rolls of piastres and bars of silver—which these functionaries give to the young prince. On the occasion of the cutting of the top-knot, whether of the high or of the lowly, the hero of the festival receives presents from all his friends and relatives. Those which are presented to a prince, the son of a king, are carefully inscribed with the names of the donors, so that the king may be able to give them equally valuable gifts when they themselves celebrate a similar ceremony. The prince on this occasion receives a new name, which is inscribed on a leaf of gold, but which he will nover bear in ordinary life.

(16) A water-festival, Löi práh tip, 'Festival of boating games, 'a kind of regatta, is held every year at l'hnom-l'einh, in October, when the waters of the Mekhong begin to abate. Only the bakus play a prominent part, and the king invokes Práh hám Sramöt, 'the god of the seas' (Varuna'i), asking him to keep the overflowing Mekhong within bounds so that it may fertilize and enrich the country.

The testival is held on the right bank of the river facing the royal whart. A buge rat bearing a big shed decorated with rich draperies is built for the king and his court. All the rich royal canoes and nearly all the vessels of the whole kingdom are there, freshly painted and befagged, and filled for the most part either with spectators or with competitors for the regatta. The racing boats, of a special shape, are drawn up at a fixed place, ready to go. The festival lasts three days and three nights, with no respite except in the mornings. The regattas take place to the sound of royal music and the guttural cries of the rowers, excited by the jovial bantering song improvised by a solior standing up in the boat. The unmber and the rapidity of a solior standing up in the boat. The unmber and the rapidity of rotach race is given by a bakk dressed in green, who, followed by the canoes, goes in a boat, a swerd in each hand, and cuts a strip of black leather, an object held sacred by all, placed between two canoes. He makes three attempts at it, as though full of fear of committing a sacrilege, murmurs a prayer in Sanskrit, cuts the cord, and hurricidly departs. While the race-boats are taking their flight, anid innumerable cries, the left of the bakus offers the king and all the members of the royal tannily a couch containing some of the water of the river, turnished with lighted candles and offerings to the spirits and loots, which illuminate the whole river. The night is spent, on board the royal raft as well as on the other boats, in feasting, games, and music.

9. Organization of family life.—(1) Relation of the sexes.—The organization of the family in Cambodia is strongly knit, and their morals are stricter than those of most other peoples of the

<sup>&</sup>lt;sup>1</sup> This represents Mount Kailasa in the Himālayas, which, as we know, is the heaven of Siva.

Far East. As soon as the boys have undergone the cutting of the top-knot, if they are going to be educated or to become novices, they sleep in the monastery. Afterwards, until their marriage, they pass the night in the sallo, or common house. Until they are of marriageable age the girls are called prokmocárší (= Pall brahmachárň, 'chaste'), and are booked upon as brides of Práh Fin (= Indra, With the first signs of puberty they take the name of kramän, 'young girl,' and they 'go into the shade' (col mclóp). The relatives tie cutton thread round their wrists, and offer a sacrifice to the ancestors to announce the event to them. On the same day, to the north-cast of the house, they plant a banana tree, the fruit of which may only be eaten by the young girl or sent to the monks.

To behave herself correctly and according to tradition, the young girl must not now allow herself to be seen by any strange man, nor must she look on any man even by stealth; like the monks, she must abstain from food from midday onwards, eat only rice, salt, coco-nuts, peca, sesame, and fruit, but neither fish nor flesh of any kind; she must tabte only after dark when no one can see her, and never without her sisters or friends; she must work only in the house, and never go out even to the pagoda. This strict retreat lasts only for a few days among the poor, somework of the strict of the same of the property of the same of the same of the same of the courter of the same of the sam

It can be understood that under these conditions seduction is rare; or, if a case occurs, abortive potions help to hush up the matter. But, as a general rule, Cambodian girls are very reserved, go out little, and conduct themselves well. Boys and girls usually marry when about sixteen. riage between too close relatives is forbidden; it is allowed between first cousins only when the father and mother of the bridegroom are older than those of the bride. The incestuous union of a brother and sister, even when born of different mothers, is forbidden, under penalty of a heavy fine or confiscation of goods, and obligatory separation. Formerly, the incestuous couple were beaten with rods, tied to a raft, and abandoned to the mercy of the river, where they soon died of hunger; for no one would consent to help them out of pity. The king alone, who in Cambodia is above the law, may marry his aunt or even his half-sisters.

(2) Marriage.—A marriage is often arranged by the parents without the young people being acquainted with each other, but is scarcely ever carried out without their consent. Three female intermediaries from the home of the boy go to that of the girl and sound the relatives, with becoming deliberation and circumlocution. If the signs are favourable, new official intermediaries of a more exalted character come to make the official demand, and bring the presents of the suitor on trays. The girl has been approached beforehand, and her silence is taken for a formal acquiescence. After inquiry has been made into the parentage of both young people, if the omens are favourable, they

are officially betrothed. The fiance, who has not yet put in an appearance, is now brought to live with his future parents in law to 'do service' (thvô' bamro'). He has to sleep in the kitchen, carry the water and the wood, and he under the command of the parents of the girl, who, in return, is expected to menare his food and his betel. This stage lasts only a few months in the case of people in easy circumstances, for fear of a too speedy pregnancy; one or more years with the pool, who often have two or three children before marriage. For, on the other hand, marriage in Cambodia is a very onerous affair. The obligatory betrothal presents include 100 areca nuts, 200 betel leaves, a pound of gambier, a gonrd of wine, a pound of gaintier, a goird of while, a pound of tobacco, not to mention the building of a new cottage, near that of the young girl's parents, to shelter the young coulde. The presents of the marriage proper, always borne, according to the ancient custom, by the bridegroom, are fixed at 5 piculs (±300 kilogr.) of pork, 50 hens, 30 ducks, 100 bottles of rice-wine, 30 special cakes, not to speak of jewels, cloths presented to the fiancée, and a sum of money called khân sla, 'presenting the areca and the betel,' which, under the name of a marriage present to the bride, is in reality handed over to her father. The tiance must also give to the girl's mother the prak snap tik doh, 'price of the mother's milk, the nursing indemnity, with a bouquet of areca flowers; to his own parents, on the last day of the marriage, huge wax candles; besides the innumerable traditional gratuities, however humble, to be distributed on this oceasion. On the other hand, the young man who has undertaken all these expenses and has gone to 'serve' with his future parents-in-law runs the risk of being sent away in disgrace and without any compensation, as guilty of a lack of respect— a charge easily incurred if he does not manage to please them and his fiancée. He therefore tries above all to win her good-will and favour in order to escape a costly repudiation, which would, in addition, make him ridiculous in the eyes of the village. The matter is usually easy enough, the betrothed having, in the eyes of the public and even of the law, the same rights as husband and wife. The fiance who has seduced his bride can never withdraw; he who withdraws without cause is condemned to a heavy fine and the loss of his betrothal expenses. The fiancee cannot without infamy be sought by another suitor; in case of flagrant infidelity, she suffers the punishment of an adulteress. On the other hand, the children of a betrothed couple are considered legitimate. Unly the parents of the young girl are affected by such proceedings, which make it impossible for them to send away their future son-in-law if he displeases them. If they send him away without cause they themselves will be held responsible for an indemnity, and have to give back the betrothal presents.

Marriage by capture takes place in Cambodia when the parents of the young girl refuse their consent and the lovers agree. The young man is free from blame after the abduction, when he has made his apologies to his parents-in-law.

The law allows three legitimate wives, besides

The law allows three legitimate wives, besides concubines; the masses, however, through poverty, are monogamons. Only one of the wives, the propiae thom, the chief wife, enjoys authority and the prerogatives of the legitimate wife. She also is the only one who is married with a complicated ceremony. Polyandry, although very rare, is tolerated, and appears to the Cambodians old rather than seandalous.

Religious intervention is very seldom invoked at weddings in Cambodia. When it does happen to occur, which is about once in four occasions, it is confined to prayers and the sprinkling of holy water on the two young people by the bonzes. Nor does the civil law meddle with marriage. It remains a purely domestic ceremony. Marriage, we have seen, cannot take place between too near relatives. It may be celebrated at any time of the year except during the three months' retirement of

the monks.

One monks.

A special shed is built near the home of the fiancée, with a roof of foliage, and hung on the inside more or less richly with red draperies. On the morning of the marriage day the bridegroom, dressed in his best, goes in state to the house of the bride, and sits at her right hand, both on one mat. All the guests surround them, with area flowers in their bands. The bridegroom binnself, after bowing three times, offers one of the flowers to each member older than himself of the bride's family, becliming with the father and the mother. They law the flowers flowers to each member older than himself of the bride's family, beginning with the father and the mother. They lay the flowers they have received on plates in front of them, and on these the young man's parents place a sum of money varying according to the degree of the person: usually 9 danden (about 20 fr.) for the father, 7 for the mother, etc. Then the dan dai, 'binding of the hands,' takes place; the parents of the two pass a bracelet of 7 threads of untwisted cotton on the wrist of each of the pair, the relatives and friends do the same on the fingers, and at the same relatives and friends do the same on the fingers, and at the same time offer them presents, which are often very rich; jewels, clothe, animals, slaves, land. After this the parents, holding a lighted candle, walk three times round the bride and bride-groom, who, along with the old ladies, go into the house theoretically a ladies, and the server of the server the wedding breakfast to their guests. When the feast begins, the guests of ground one of the server of phsim dangek, 'ne union in the same beet, in one conjuga-house. Respected matrons arrange the inpitial sleeping-mat, and present the newly-married pair with the cakes or rice-balls, a portion of which each places in the mount of the other, to show henceforth their unity; the matrons lightly knock the heads of the husband and wife together, saying. 'Be united and happy,' nenceorth their amily; the matrons inguly anote the neans of the husband and wife together, asying; 'Be united and happy,' and leave them.' For a second or third wife, or when a man marries a whom,' the marries are common is confined to a hearty feast, Members of the royal family are married by the bakus, who sprinkle them with holy water.

(3) Divorce. - Divorce exists in Cambodia, but is seldom put into practice. It is nearly always demanded by the wife. In the case of separation by mutual consent, the wife gives up to the husband the wedding presents she received, and all that he possessed at the time of their marriage. If there are children, everything is considered common property; the husband receives two-thirds and the wife the remaining one-third. The children, if they are of tender years, are entrusted to the wife, to return in the end to the husband, or else they are divided, or, if they are grown up, are allowed to choose for themselves. If the divorce is demanded only by the wife, she is liable to pay double the amount spent by the husband on the marriage, and can claim only her dowry and one-third of all goods acquired since the marriage. But, as a rule, unions in Cambodia are lasting: the wives have a keen sense of duty, and the husbands have a great regard for their wives, and spare them too hard work-which contrasts very favourably with the loose and selfish marriages of the Annamese. Widows may marry quite honourably if they cremate their first husband properly and preserve their widowhood for three years.
(4) Birth.—The Cambodian wife, who, without

great outward authority, is well treated in her home, is accorded very particular attention during pregnancy. The confinement always takes place without the aid of a doctor, but with the intervention of expert matrons, who employ empirical maneuvres, accompanied by the recitation of mantrus and by sacrifices. The vigorous constitution of the Cambodian mother does the rest. The umbilical cord is not cut until after the issue of the placenta. The child is immediately washed and wrapped in swaddling-clothes. The mother is bathed in warm water, a warm oval stone is placed on her abdomen, and she is laid on a camp-bed, under which a fire is kept burning for the space of from 9 to 30 days. The wood with which the fire is fed differs according as the child is the first-born

or not. A cotton thread blessed by a kru or an àcar surrounds the room, to preserve it from evil spirits. The mother suckles her child until the age of three or four, not without stuffing it at the same time with rice and bananas, which is the cause of the enormous abdomen which marks all Indo-Chinese children. At six months the child receives the name of a flower, an animal, a mineral, or some other object. At the cutting of the topknot this name is exchanged for a new one. Patronymic names are unknown in Cambodia.

The birth of twins is considered unlucky, as also that of albinos, dwarfs, and deformed infants. These unfortunate children, except when the offspring of bakus, become, from their very birth, life-long slaves of the king.

Adoption takes place with extreme facility in Cambodia, and to it is joined the custom of concluding a friendship, which binds the contracting parties closely together and ends only with death. They mix a few drops of the blood of each with a little water, and divide and drink this, after prononncing the oath to be brothers for ever; such are the rites of the compact. Cf. art. BROTHERHOOD (artificial).

(5) Disposal of the dead.—Cremation is the general custom in Cambodia, but the ceremony, which among the very poor takes place immediately after death, is among the rich often deferred, for various reasons, for several months or even years. In the latter case they either bury the body and leave it to be exhumed at the desired time, or they preserve it in the honse. To preserve the body they pour a certain quantity of mercury into the mouth and place the body in a coffin of hard wood hermetically sealed, except for a small hole to which is fixed a bamboo tube which carries out of the house the gases that are formed. devout Buddhists, however, order their flesh to be cut into small pieces to feed the birds of prey. King Ang Duong ordered this to be done with his body when he died, about the end of 1859. As soon as an invalid enters on his death-agony

the bonzes are called, in order to repeat the prayers for the dying. Until the actual moment of death all present repeat in a loud voice, the patient joining in as long as he has the strength, 'Arahan! arahan!' 'the saint! the just one!' (Pāli arahan (Păli araham = 'the saint,' 'one who has attained final sanctification'). When the last breath has been drawn, the children of the dead man close his eyes and mouth, and wash the body with holy water. If, in default of direct heirs, this pious duty is performed by a slave, he is henceforth free. Then a small ingot of gold or silver is put in the dead man's month; small squares of gilded paper are applied to the orifices of his face; and he is clothed in white. His hands are joined, and in them is placed a rolled-up banana-leaf containing three betel leaves, a candle, and three sweet-smelling sticks. The body is placed in a wooden coffin, more or less costly according to the fortune of the deceased, and is kept in position by sawdust, cotton, paper, and pounded guava leaves in such a way that it cannot move. On the neck of the corpse is placed a white cotton collar, which communicates with the outside by a long cord, attached to a band of cotton, and passing between the coffin and its lid. Then the family, the servants, and slaves go into mourning -that is, they shave their heads and put on white clothes. Every day, at the usual meal-times, trays laden with food are brought near the coffin, beside which is a tray with a betel-box and a change of clothing for the deceased. The whole day a number of bonzes remain beside the coffin in prayer, with their hands on the white band which communicates with the deceased's collar.

They usually proceed with the cremation after

three days. The coffin is carried from the deathstricken house to the pyre, on a huge hearse with a fringed canopy laden with garlands of leaves and flowers. Four bouzes take their places, standing on the hearse at the four corners of the coffin, which is covered with flowers, ornamented with figures cut out of gold paper, and furnished, where the head is, with lighted candles and burning scented sticks. Just in front comes a child, the son or grandson of the deceased, carried on a palanquin, his forehead adorned with a band of plaited bamboo, to which is fastened the cotton cord from the coffin. After the burning of the body this child receives the dress of a novice from a bonze, quite near the pyre. If the deceased has no direct male descendant, a slave may fill this rôle, and receives his liberty through this fact of entering into the monastic order. This palanquin is often preceded by another covered with a yellow parasol, and bearing a bonze. In front of all goes an déar on foot, holding a white banner called 'llag of the sonl' (tôn práh tiù [Skr. lingu, 'sign']). From the laudle of this llag hangs a pot full of uncooked rice. In a wallet which he carries the àcar has put all that is required for preparing betel-quids. Behind the hearse there generally walk a small orchestra, a young girl throwing small pieces of money to the poor, hired mourners, the family, and friends. Except in the case of kings and princes, who are burned in a special construction called a mén, the dead, as a rule, are burned in a building which bears the name of phnom yon, 'mountain of deliverance.' After the thriee-repeated prandaksina round the cremation catafalque, or phnom yon, the colin is placed on it. and left there for three days. The family and friends establish themselves in the vicinity under leafy shelters. The coflin is placed open on its pyre, the face of the dead man is washed for the last time with coco-nut milk; and then the acar walks three times round the pyre, swinging a lighted torch so as to set fire to it. At the first nghted torch so as to set here to it. At the historackling of the flame the young 'conductor of the soul' is consecrated, and the music plays. When the combustion seems sufficient, the actor, his assistants, and the others present extinguish the fire by throwing jars of water on it. The rice, cooked in a pot on the funeral fire, and the betelbox are put near the ashes of the body. Out of the ashes the acar and his assistants fashion a human form, which they earefully place facing in the direction which appears most suitable. Over this figure, which is covered with white cotton cloth, the bonzes recite prayers, and all present prostrate themselves. Then each one begins to look among the ashes for the bones that remain; these bones are washed with holy water, placed in a cloth bag, or an urn of porcelain or some precious metal, and then buried in the neighbourhood of a pagoda, or piled up near a Ficus religiosa; or, in the case of rich persons, they are placed in small structures of masonry called cetřiy, built on a piece of consecrated ground. Prisoners abandoned by their family, and people who have died through violence, suicide, accident, or assassination, are buried, not burnt. The two last are not long in appearing on earth again in the form of some dreadful ghost. The body of a criminal is abandoned to birds of prey, unless the relatives buy and bury it.

(6) Mourning.—Mourning consists in shaving the head every fortnight, dressing in white, wearing no jewels or ornaments, and fasting once a week, on thinai sil (Päli sila), which is equivalent to our Sunday. Mourning is worn only for persons who are older or are in a higher position than oneself. Mandarins and functionaries wear it for the king until the cremation, which is sometimes put off for years. Children and grandchildren,

whether by birth or adoption, wear morrning for their parents and grandparents for three years; the widow wears it for her husband for the same length of time; brothers and sisters wear mourning only for their elders; nieces, nephews, and consins wear it only until the cremation. Parents, grandparents, and wilowers do not wear mourning for children, grandchildren, and wives respectively.

(7) Ghosts.—All Cambodians believe in the appearance of ghosts who issue from the decaying dead body; when there is no putrefying matter left, the apparitions cease, the human remains being changed into nocturnal birds of evil omen.

(8) Festival of the dead.—A solemn festival in honour of the dead is held in September—the pheöm, 'reunion,' 'assembly — when all souls have the right to leave their Hades and come to enjoy the offerings which the Cambodians never tall

dutifully to prepare for them.

10. Political and judicial organization. —(1) Government.—At the head of the political organization of Cambodia stands the king, absolute sovereign and by right of birth possessor of all life and lands in his kingdom. Indeed, his power is limited only by the rivalries or intrigues of his troublesome relatives; the andacity of certain great functionaries, who at one time showed a great inclination, for their own interests, to lean upon the Siamese or the Annamese; or by revolt on the part of his subjects. The king governs with the help of a council of five great mandarins, who are chosen by himself, and who have no power except what is accorded them by the good sense, favour, or laziness of the king. The order of succession to the throne of Cambodia is bally established and variable: it is in the male line, but sometimes from father to son, sometimes from brother to brother, in order of birth. Women may be and have been called to the throne. If there is no heir belonging to the royal family, the mandarins, says a very credible tradition, may call one of the bakus to the throne.

The coronation celebrations, and those at the cremation of a high personage in the royal family, are the most superb to be seen in Cambodia. Coronation celebrations are continued for eight days, the last being occupied with the actual crowning. This ceremony is purely political, not religious, except in its first part, when the chief of the bakus pours on the king's head the so-called lustral water of investiture, while the banzes pray. Then the bonzes disappear, and if the bakus remain and take a very active part in the ceremony, it is less in the rôle of unconscious representatives of the ancient Brahman religion than as trustees of the traditions of a glorious past. On the coronation day, all the functionaries, high and low, hand over their resignations to the new king, who reinstates them the next day, after they have taken the oath of tidelity. It is worthy of notice that, when the newly crowned king returns to his palace, he is accompanied by a group of female followers, one earrying his parasol, another his salae, a third his betel-box-in short, everything he needs for daily Another group follows, carrying a cat (the first living creature to be introduced into a house before it is inhabited), rice, ivory, a rhinoceros horn, a gourd, haricots, grains of sesame-all the symbols of abundance and well-being. All services within the palace are performed by women. The Khmèrs have a profound and respectful attachment. to their kings.

(2) Society. Cambodian society next to the king is no longer made up of castes but of classes, very clearly defined and often very exclusive: (a) the royal family (Prith Voissi-Skr. rainša; 'race,' 'lineage'); (b) the Prith Voi (Skr. rainša;); (c) the bakus and bonzes; (d) free men; and (c) slaves.

(a) The royal family includes relatives to the fifth degree, and persons who have gained this position by marriage with princesses nearly related to the throne. On account of polygamy, it forms a veritable population, exempt from taxes and compulsory service, and provided, according to their quality, with incomes and titles more or less considerable. Their possessors too often abuse the spirit of loyalty of the Khmers, in order to oppress them and put themselves above the law, but are, at the same time, directly and very effectively dependent on the king, their chief and absolute The importance of the princes of the master. royal family is in direct proportion to their intrigues or their popularity.

The following is the order of rank of these personages: the apprayoras (Pali upayuearaja, 'vice-heir-apparent'), king who has abdicated, preserving the right to a sux-storeyed parasol; the opparas (Pali uparaja, 'viceroy'), second king, and often heir-apparent, who must be content to be shaded with a parasol of only five storey; the prids vorracini (Pali uparaja)in, 'vicied meen') the oneen downer worther of the king, the parasol of only five storeys; the prais vorradenis (Fali wararajini, chief queen), the queen dowager, mother of the king; the ak mohesel (Fali agamahesi, 'first queen') the queen, first wife of the king and mistress of the harem, who usually owes her title unore to high birth than to favour. These positions of dignity may be vacant for want of the personages themselves dignity may be vacant for want of the personages themselves and the personages themselves are the personages the personages are the personages the personages the personages are the

(b) The Prah Von are descended from the royal family, but more distantly related. From their illustrious origin, they retain the privilege of being designated 'Prih' and of paying fewer taxes than the king's other subjects. Otherwise they live just like them.

(c) The bonzes and the bakus have already been

discussed [§ 4. i. (1) and ii, (1)].

(d) The free men (prei na) turnish the functionaries of all degrees.

(c) Slaves are divided into (a) slaves for debt, and hence redeemable; and (3) slaves who are irredeemable, comprising prisoners of war, former rebels not put to death, and unfortunate savages who have almost always been kidnapped on the frontiers. The children of irredeemable slaves are themselves slaves from their birth until the end of their lives. Slavery, although of a mild form, owing to the moderate character of the Khmèrs, has none the less been till recently the open sore of the country, and has tended to augment the general apathy and

economic mediocrity.

(3) Civil law.—In theory, individual property does not exist in Cambodia, the king being the possessor of all the territory. The legality of this theory is affirmed by certain legal provisions. Thus, in the case of large successions without direct heirs, the king inherits all or part of the goods; all land not cultivated for three years goods; all and not cultivated for energy years returns to him; when expropriating land either for the general good or for his own particular advantage, if he gives an indemnity, it is of goodadvantage, it he gives an indemnity, he is of good-will, not of necessity. But, as a matter of fact, individual property is perfectly recognized in Cambodia: any individual who, subject to certain formalities, asks the king for a piece of land from the public ground, which represents four fifths of the whole territory, obtains it without difficulty. If after three years he has brought it under cultivation, and transformed it into rice-fields or meadows, and if he continues to cultivate it, it belongs to him. He may let it, sell it, transfer it by gift, or leave it to his children, always on condition that he pays the taxes which are levied on all land in the kingdom. It cannot be taken from him except when he fails to make use of it, or when, after cultivating it, he abandons it for three years. Private property consists of the moveable and immoveable possessions which the husband and

1 The new king of Cambodia, Sisovath (Skr. Śrī Svasti), who ascended the throne in 1904, has abolished slavery, which had, indeed, heen greatly ameliorated since the arrival of the French in the country.

wife brought with them at the time of their marriage, and of which, in the event of a dissolution of the marriage, each claims his or her own, after dividing the common gains. By a very Asiatic extension of paternal rights, children are considered the property of the father, who may, if he wishes, sell them while they are minors. Except in case of extreme misery, Cambodians very seldom avail themselves of this right.

(4) Law of inheritance. This varies according as the husband has had one wife or more. In a monogamous household the surviving parent has the guardianship of the children, and the administration and the usufruct of all the property. The children inherit without distinction as to sex, but the eldest and the youngest always receive a double portion-the one because he has had to carry his brothers, the other because he has had to rejoice his parents' old age. Children by adoption enjoy the same rights as children by birth. Usually, too, children who have taken part in the cremation

of their parents reap some special benefit.

(5) Penal law.—The Khmèr penal law is extremely rigorons in theory, and boasts no fewer than some twenty ways of inflicting death, with or without ingenious tortures. In practice, the penalty of death is reserved for usurpers, rebels, those guilty of high treason, and repeatedly convicted offenders. In the first case, the condemned man's head is cut off and exposed in the middle of the market place, while the body is quartered and placed at the four cardinal points of the royal palace. In the last, the head is cut off and placed on the end of a piece of bamboo firmly fixed in the ground. The body is given back to the family if it is claimed, or is left to be buried by the police. Incorrigible elephant thieves are crushed by elephants. This terrible punishment is, of course, rarer than the offence. At one time thieves were punished by death, mutilation, slavery, or confiscation of goods; to day they are liable to a penalty varying with the offence; in cases of insolvency, this may take the form of selling the offender into slavery. The general tendency is for the judges to commute the barbarous punishments of former days into profitable fines, which are divided amougst the judges themselves, the royal treasury, and the plaintiff or prosecutor, if there is one. Any one who cannot pay the fine imposed is sold as a slave. In eases of accidental homicide there is a sort of wergeld, varying with the quality and condition of the person killed. The woman taken in adultery is marched for three consecutive days through the town, her face covered with a basket of plaited bamboo, red flowers in her ears, forming a collar, and on her head, avowing in a loud voice her fault and her repentance. This march may be exchanged for a fine levied on the personal property of the woman and her lever, part of which is handed over to the husband, unless he is proved to have been a consenting party to the infamy of his wife. The fine varies with the position of the woman in the household; the 'chief wife' is more heavily punished than the mere concubine or any other wife. The husband is entitled to kill offenders taken in flagrante delicto, but on the strict understanding that he kills them both. The punishment of rape is a fine which varies decreasingly according as the victim is a married woman, a young girl, a widow, or a slave. The seducer may be put to death by the young girl's parents, if he is caught in flagrante delicto and is acting without their implied acknowledgment; but no proceedings are taken against a seducer, failing a complaint by the victim or her parents. The penalty varies with the condition of the person seduced, and according as there has been pregnancy or not. The gravest case is pregnancy followed by death in child-bed. Abduction is

punishable by a fine in proportion to the condition of the female carried off, the distance covered, and the natural obstacles, rivers, or mountains crossed. Sexual intercourse with animals meets with ignominious punishments, such as having to feed on the grass of the fields, or to lap water from the boiling of rice. As a rule, the punishments are simply punitive and do not involve degradation: a functionary who has served a term of imprisonment for breach of trust resumes his duties freely. Legal proceedings in Cambodia are slow, involved, and expensive. Accused and accusers have the right of being represented at the tribunal by a kind of advocate called the 'shoulder of the case' (smà keděi). Liberation on finding surcties is frequently practised. A crime may be proved

either by witnesses or ordeals.

(6) Ordeals.—The principal judicial tests still in use are the following:—(a) Water; both parties dive, and the one who rises first is guilty; or they swim across the arm of a river, and the last to arrive is guilty, (b) The test of the molten tin, into which the accused must plunge a hand without being burned. (c) Burning coals, over which he must walk without hurting his feet. There are other tests quite as illusory, but much milder. Very often the judge does not hesitate to order the suspected person to be tortured, in order to obtain either his confession of a crime or the names of his accomplices. The greatest seourge of Cambodian justice is not its laws, but its judges—functionaries who are often unjust because they are ignorant and greedy. Having paid a large sum to the royal treasury before entering on office, they set about recouping themselves, at the expense of litigants, by a sail misuse of justice. There is, indeed, a law which enacts that an unjust or ignorant judge shall receive a sentence equal to double that which he has wrongly inflicted, not to mention the chastisements reserved for him in the after life. But those who ought to apply this law are only too often so deserving of the same treatment that they dare not make use of it.

ANTOINE CABATON. CAMBRIDGE PLATONISTS.—The title 'Cambridge Platonists' has come to be applied to a school of philosophical divines-members, for the most part, of two colleges, Emmanuel and Christ's—who flourished at Cambridge between the years 1633 and 1688. The names with which this article is properly concerned are those of Whicheote (1609-83), Culverwel (†1651), Smith (1618-52), Cudworth (1617-88), and More (1614-87), all resident teachers at Cambridge within the period mentioned; but, in so far as the influence of their teaching made itself felt ontside, some other names, belonging to this period and to the time after, must also be noticed-Glanvill, Norris, Cumberland, Shaftesbury, Clarke, and Berkeley, representing the religious and philosophical aspect of this influence; and Taylor, Stillingfleet, Burnet, Patrick, Rust, Tillotson, and Fowler. representing its ecclesiastical and political aspect.

The first thing which the student of a school of religious and philosophical thought must always see to is that he realizes the social environment in which the thought of the school lived and moved; study of the mere equipment of the thought apart from the use to which that equipment was put, is idle. And no student has more need of this rarcat than the student of the 'Cambridge Platonists.' They are writers—especially the three greatest of them, Smith, Cudworth, and More—whom one is peculiarly tempted to read without thinking of 'social environment,' without troubling oneself about the state of England in their time. There grows upon one, as one reads them, the sense of a cloistered piety and learning eultivated apart in some paradise—such as Henry More made for himself in his lifelony home at Christ's; and one is too apt to be impatient, as of something irrelevant, when one is asked to remember where this paradise was—that it was in the England of the Civil War, the Commonwealth, the Restoration, the Revolution, the England of Land, of the Covenant and Westminster Assembly, of the New Model, of the St. Bartholomew's Day Ejectments. But this is exactly what it is most necessary to remember. The question which a scientific study of the Cambridge Platonists must make it its chief object to answer is exactly this: how were these cloistered lives related to that troubled world without?-for it was certainly not by mere accident that these lives found their peace in that stormy time.

Burnet, who met Cudworth and More when he visited Cambridge in 1663 as a young man, and who, throughout his whole subsequent career, was in sympathy with the ecclesiastical position of the Cambridge school, describes its members generally in the following terms (Hist. of My Own Time,

Oxford, 1823, i. 323 ff.):

Oxford, 1825, L. 525 (L.);

All there, and those who were formed under them, studied to examine farther into the nature of things than had been done formerly. They declared against superstition on the one band, and enthusiasm on the other. They leved the constitution of the Church and the liturey, and could well live under them : but they did not think it unlawful to live under anothe torm. They wished that things might have been carried with more moderation. And they continued to keep a good corre-spondence with those who had differed from them in opinion, and allowed a great freedom both in philosophy and in divinity; from whence they were called men of latitude. And upon this men of narrower thoughts and fiercer tempers fastened upon them the name of Latitudinarians. They read Episcopius much. And the making out the reasons of things being a main part or their studies, their enemies called them Sociaians. They were all very zealous against popery. And so, they becoming soon very considerable, the papiets set themselves against them to decry them as atheists, deists, or at best Sociaians.

From this account, the result of contemporary observation, we gather (I) that these 'men of latitude' took up a position midway between the Puritans (the early upbringing of most of them had been Puritan) and the Prelatists of their time -that they oscupied, in respect to these extremes, what another contemporary account (S. P.'s Brief Account of the new Sect of Latitude Men: together with some Reflections on the New Philosophy, 1662) describes as 'virtuous mediocrity'; and (2) that it was deliberately on a philosophical basis that they founded the position which they took up- a position from which they advocated toleration and comprehension even where considerable differences of religious opinion and practice, not only outside, but within the Church of England, were concerned.

Turning to their writings, we find this philosophical basis of their advocacy of toleration and comprehension fully and clearly set forth in their doctrine of the place of Reason in Religion.

Truth, they tell us, is Natural and Revealed, and reason is the faculty which apprehends and judges both kinds. It is the same reason which, on the one hand, apprehends the truths of morality and of natural science, and, above all,-for 'God is most knowable of anything in the world' (Whichcote, Scleet Sermons, ed. 1698, p. 112),—the truths of Natural Religion, that God exists, and is good and wise; and, on the other hand, apprehends, in addition to the truths contained in our 'natural knowledge of God,' the truths contained in the 'revelation of His will,' which is made to us in the Scriptures. And these truths of Revealed Religion reason finds no less 'reasonable' than those of Natural Religion.

Our Reason is not confounded by our Religion, but awakened, excited, employed, directed, and improved (Whichcote, op. cit. p. 208).

The Scriptures are, indeed, we are told, exactly suited to our reason. They offer, in the plainest way, matter upon which we can employ our reason with the greatest profit to our lives, and with the surest guarantee, from that faculty itself, that we are not deceived. At the same time, by the very prominence which the Scriptures give to this matter, so suitable to reason, so capable of engaging it where its employment is most useful and least likely to lead us astray, they make it evident to us-the more evident, the more truly 'rational' our study of them is-that a minute employment of reason in religion, about things not plainly included in the matter to which prominence is given, is unprofitable, and, indeed, even irra-tional. Such a procedure brings with it no universally acceptable guarantee of its own correctness, and so divides those who fall into it from one another, one minute reasoner making this non-essential, or, it may be, extraneous, matter all-important in religion, another, that, and so on, while that which is essential, that about which all would be of one mind, if they used their reason in the way religion requires, is left out of sight.

To the two opposed parties of their day— Puritans and Prelatists—the 'men of latitude' said: 'Unite on the broad common ground of that which is essential in religion, and agree to differ about things that are non-essential. which is essential is contained in the Scriptures, and is so plain that you cannot miss it if you employ your reason in the right way, each man for himself, upon the Scriptures.' It is here that we come down to the bed-rock of the philosophical basis on which the Cambridge school founded their doctrine of toleration and comprehension: it is because God is, from the very first, its true object that man's reason marks securely, in the end, that which is essential in the revelation of God's will as contained in the Scriptures. improvement of man's reason, then, by employment in the fields of science and of moral conduct, and, above all, by employment about the truths of Natural Religion, without the light of which the principles of science and conduct cannot be seen at all, is a process by which man grows in knowledge of that which is most knowable, of God—a process by which he becomes more and more 'like unto God,' till the perfection of reason is reached in that 'Divine sagacity,' as More calls it (Pref. General to Collected Works, ed. 1662, p. ix), that 'nativity from above,' as Whichcote calls it (op. cit. p. 350), which makes a man, at last, a sure judge of what is essential in the teaching of the Scriptures.

It was a charge commonly brought against the school that they preached mere movality, and ignored the importance of 'articles' of religious belief. Their teaching on the subject of 'Divine sagacity' is their answer to this charge. The morality which they preach is 'morality' which the moral agent's sense of the real presence of God, as a vital principle central in his soul, has transformed into piety—it is the condition of one who It was a charge commonly brought against the school that

'imitates God'in 'the holy and virtuous life,' and so 'knows' Him; and, knowing Him, can interpret His revelation of Himself made in the Scriptures, and get hold there of the essential 'articles' of religion.

So much for the way, peculiar to themselves, in which the Cambridge Platonists held the doctrine that the Scriptures are to be interpreted by the reason of each man. This doctrine itself reached them by two streams of influence, each of which was, otherwise also, of great importance in deter-mining the outlook, and equipping the thought, of the school-the one having its source in Arminianism (q.v.), which had appeared in Holland towards the end of the previous century, the other proceeding from the Italian Renaissance of the century before.

In England, Arminianism found a footing towards the end of the 16th century. The distinctive tenet with which it opposed the Calvinistic doctrine of predestination had, indeed, to contend against great odds, for at this time, in England, Calvinism was widely spread among the people, and was afready entrenched in the Articles of the Church and was pread among Arminianism, what may be of the navehological for the domatic trenched in the Articles of the Church; but the temper of Arminianism, what may be called its 'Humanism,' especially as shown in the substitution of the psychological for the dogmatic way of interpreting the Scriptures, commended itself more cashed to educated minds. It Explain Iring the Church and the Ch from divines at home in a university which was otherwise letters and natural science—showing itself singularly receptive of Humanism.

The other infinence operative in forming the Cambridge view The other influence operative in forming the Cambridge view of the method of Scripture interpretation can be traced back to the 'Platonie Academy,' which flourished, during the latter half of the 15th cent., at Florence, and especially to the work, in it, of Marsillo Ficino. His Latin translations from the newly-recovered Greek, and his commentaries, gave Plato and Plotinus to Italy and then to Europe, and substituted, for the skeleton to which the Church and her schoolmen had reduced the system of Aristotle, what was everywhere welcomed as a Uring philosophy. It was a philosophy in crasnine the ioward. skeleton to which the Church and her schooline had reduced the system of Aristote, what was everywhere welcomed as a living philosophy. It was a philosophic had recorded as a living philosophy. It was a philosophic had recorded as a living philosophy. It was a philosophy and the context of new things, found a new thing which arrested their attention beyond all else, namely, a bit of vivid personal experience. It was not the soher chined and political philosophy, and the logic, of Plato that interested Freine and his Platonists very much; their chief interest was in the other—the mydical—side of Plato's teaching especially and his platonists very much; their chief interest was in the other—the mydical—side of Plato's teaching especially and the Symposium and elsewhere. Hence it was that Freine and his Platonists went eagerly on from Plato to Plotinus, in whose writings they found fuller satisfaction than in Plato's of their craving for vivid personal experience, and discovered a philosophy which offered, not so much propositions to be apprehended, as more and the platonists were applied to the platonist of the platonic Academy (set forth by Freine as a philosophy of the Platonic Academy (set forth by Freine as a philosophy in perfect concord with Christian fathly was wholly included. The Enneads of Plotinus, translated into Latin by Freine and printed at Florence in 142°, were first, printed in Greek at Basel in 1580, and were being studied at Chumbic by 1685, if not cariler.

Burnet tells us that Whielecote, who began to

Burnet tells us that Whielcote, who began to teach at Emmanuel in 1633, 'set young students much on reading the ancient philosophers, chiefly Plato, Tully, and Plotin (Hist. of My Own Time, i. 321), and Whicheote's pupil Smith, and the rest of the school, certainly show intimate knowledge of the Greek text of the Neo-Platonic philosopher, and bear ample testimony to the profound influence which he exercised upon them. It was the doctrine, or experience, of eestasy-understood by them, however, not as an occasional and temporary state of religious exaltation, but rather as habitual concentration of affection, will, and understanding upon God, 'because of His own loveliness, excellency, and beauty' (Whichcote, op. cit. p. 213) it was the Plotinian doctrine, or experience, of eestasy, thus understood, that the Cambridge Platonists put in the very centre of their Christian philosophy. It became, in their teaching, equiva-lent to 'justification by faith,' to the 'sanctification' of men's souls by means of a 'vital efflux from God upon them, making them partakers of His life and strength (Smith's Select Discourses, Worthington's ed., 1660, p. 312)—it appeared as 'nativity from above' (in Whichcote's phrase), as 'Divine sagacity' (in More's phrase), the crowning gift of God bestowed only upon those who practise the aoxyous of a holy and virtuous life, fluence of Plotinus thus modified profoundly, even transformed, in the Cambridge Platonists, the notion of Scriptural interpretation with which mere Arminianism opposed the Calvinistic and other dogmatic interpreters. The Arminian teaching carried the Cambridge Platonists only thus farthat the reason of the good man, of the man in earnest about the holy and virtuous life, is the faculty by which the Scriptures are to be interpreted, and the essentials of religious doctrine and practice distinguished broadly (as they are never distinguished by the reason of the mere theologian) from the non-essentials. But the Cambridge Platonists could not rest with this. Reason must be sublimated into 'Divine sagacity' by the real presence of God in the soul. The interpreter of inspired Scriptures must be himself inspired.

It may be asked why Christian experience alone was not accepted by them as warrant for this far-reaching conclusion-why they appealed, in support of it, also to pagan experience and philosophy. The answer is, briefly, that for them the religious faculty is reason, which, though informed by the immediate presence of God, is still man's reason. Religion is 'reasonable,' and, especially on that part of it distinguished as 'Natural Religion' (which, indeed, is the founda-tion of Revealed Religion [see Whichcote, op. cit. p. 87 f.]) much light is thrown by philosophy, by the best thoughts of the best men, of all ages and faiths, who have employed their reason about the soul, the world, and God. These divines, then, naturally mixed Religion and Philosophy. Even the mediaval Church, although holding no brief for human reason, had recognized it in Aristotle as ancillary to Catholic belief. But the Cambridge Platonists, as Christian Humanists, held a brief for reason in religion, and were very specially and strictly concerned to show that reason had not failed man, even outside the Christian dispensa-

tion, in his endeavour after religion.

How seriously they regarded the obligation upon them to bring the philosophy of the Greeks and Brinans into evidence, may be judged from the mass of classical crudition which cambers the pages of most of them—especially of Cadworth and More. It is an uncrifical, pre-flexible archition which—to describe the properties of the control of the Mosaiorigin of all that is good in Greek philosophy, especially in the teaching of the Pythagoreans and of Plato (described as Moors Aftiens)—antion which, it may be thought, stufficies the appeal, undoubtedly intended and made, to that philosophy as witnessing to the truths of Natural rather than of Revealed Religion.

But, after all, the distinction between Natural and Revealed Religion was not one to be very clearly defined by those who, on principle, mixed Religion and Philosophy, as the Cambridge Platonists did. Although there were some traths which plainly belonged to the realm of Natural Religion, there were others which belonged indeed to the realm of Revealed Religion, insanuch as without the revelation contained in the Scriptures we should not have known them at all (e,g) that the Godhead is undivided Trinity, and that we are instilled by

faith in Jesus Christ), but yet were to be detected, by those who already had them through revelation. as also obscurely appearing in the philosophical systems of men who had walked merely by the light of Nature—the 'candle of the Lord,' as Culverwel calls it. Thus we find the Cambridge school making much of the 'Trinity' of the Neo-Platonists: and we have seen that they connected the eestasy of Plotinus with that 'nativity from above' in which their Christian experience realized the meaning of the doctrine of justification by faith in Jesus Christ. In fact, when they appeal to the Platonic or Neo-Platonic philosophy, they take little account of the distinction between Natural and Revealed Religion: perhaps because Plato, as being Moses Atticus, records revealed truths; but also for the deeper reason that revealed truth, limited by them to the essentials of religion which 'Divine sagacity' marks off from non-essentials, is, after all, only natural truth raised to a bigher power, as it were-natural truth, no longer regarded from without as the object of theological science, but become the inward experience of one who has 'found religion.' The cestatic condition of union with God described by Plato and Plotinus seemed, to the religious minds of men like Smith and More, to be an experience essentially the same as that of the man 'in whom Christ liveth'—the man for whom alone 'revealed truth' has vital In ecstasy, then, the Christian Religion meaning. and the Platonic Philosophy are mingled with each other, and that so intimately that the distinction between Natural and Revealed Religion seems to vanish in the result.

While their interpretation of the Platonic philosophy is thus as psychological, and as expressive sofing is thus as psychological, and as expressive of personal experience, as their interpretation of the Scriptures, their interpretation of ancient philosophy other than Platonic, notably of the atomic philosophy of Democritus, is not psychological, but dogmatic. The Platonic philosophy they found no difficulty in interpreting in the light of their own religious experience—they felt no temptation to read the dogmas of theological science into a philosophy which tallied so well with that experience. Their interpretation, accordingly, of this philosophy is good. But ancient philosophy other than Platonic, tallying with no personal religious experience of their own, they interpreted badly, reading into it the natural science of their day. So we find them (1) comparing the atomic philosophy of Democritus closely with the mechanical philosophy of Descartes; and then, as the former is obviously 'atheistie,' while it is necessary to show that the latter, though closely resembling the former, is not 'atheistic.' (2) arguing back to a common source of both-to a theistic Mosaic atomism, which Democritus perverted into atheism, but Descartes has revived in its original purity (see Cudworth's Etern, and Immut, Morality, bk. ii. ch. 4). Similarly the revolution of the earth and the other planets round the sun-the greatest discovery of the modern mechanical philosophy—was already known to the Pythagoreans, and to Numa Pompilius, who, indeed, symbolized it by making the temple of Vesta circular with a fire in the centre; but they had derived their knowledge from the Jews, who had it by Kabbalistic tradition from Moses (see More's Append, to Defence of the Philosophick Cabbala, ch. 6, p. 126, ed. (662). Thus in Demo-critis and the Pythagoreans was found the authority of Revelation for the methods and results of modern science. There could not be a greater contrast than that between the childish exeges is of the Cambridge School, where, on the one hand, a philosophy, like that of Democritus, is concerned, which appeals, not to their personal religious experience, but to their acquaintance with modern science, and, on the other hand, their illuminating exegosis of a philosophy, like that of Plato and Plotinus, into which they read, not their modern science, but rather, as it were, themselves.

The Cartesian philosophy has been incidentally mentioned; it is now time to consider it as one of the most important factors in the environment of the Cambridge Platonists-as the body, to quote More's phrase (Preface General to Collected Works, p. xviii), of which Platonism is the soul. This philosophy, so eminently rational, doubting all that rests on any authority except that of 'clear and distinct ideas,' making its ideal the explanation of the world according to mechanical explanation of the world according to increasing principles mathematically expressible, naturally recommended itself to all those who, like the Cambridge 'men of latitude,' were contending for reason against authority. Cartesianism was, indeed, itself only a product of the Humanistic Renaissance, the air of which such men breathed everywhere, at this time. Thus we find Spinoza, who in his close association with the Remonstrants and Collegiants was in the same atmosphere, also naturally attracted by this rational philosophy of clear and distinct ideas, and writing his earlier works under its strong influence. Humanism, we must remember, not only gave new life to the study of classical literature and ancient philosophy, and was instrumental in bringing about great alterations in religious doctrine and practice, but was also the renaissance of Natural Science. Linacre, Harvey, Gilbert, Bacon, Galileo, Descartes, and many others were as truly products of Humanism as Ficino, Pico della Mirandola, Aldus, Erasmus, Colet, and Montaigne.

The mechanical philosophy of Descartes, then, was quite naturally adopted by the Cambridge School—with certain reservations, as we shall see. Smith, his friend Worthington tells us, was chiefly instrumental in introducing the study of it at Cambridge. Culverwel, More, and Cudworth made large use of it, and important letters passed between More and Descartes in 1648, which were printed in More's Collected Works (1662), and specially referred to in his Preface General to that edition. But the Cambridge Platonists, we can see, felt themselves placed in a somewhat awkward dilemma in regard to the Cartesian philosophy. They were bound, as Humanists, to adopt it, for its mechanical principles were those in the light of which the Natural Sciences were making such notable advances at this time-advances to culminate ere long in the mathematical and physical discoveries of Newton, who was already in 1665 a graduate of Cambridge, and in 1669 Professor of Mathematics, although the publication of the *Principia* was to be delayed

for many years.

The 'men of latitude,' then, were bound to accept the philosophy of Descartes, but could not conceal from themselves that it might easily be abused in the cause of 'materialism and atheism'-in fact, was being widely so abused, especially by those who had fallen under the growing influence of the writings of Hobbes. So, in order to divert the tendency of the Cartesian philosophy from materialism and atheism to the support of religion and a spiritual theory of the world, it was necessary, they felt, to insinuate into its very substance, as it were, another philosophy of an entirely different kind. This was their philosophy of the 'plastic principle, or 'soul of nature' - an immaterial principle, spiritual, but unconscious, which pervades the universe, and, like the Platonic anima mundi, or the Aristotelian φίσις, is the immediate and immanent cause of all the beautifully contrived processes and products of the organic and inorganic worlds. Descartes, indeed, posits an immaterial

spiritual substance-God-as First Mover of the world ; but leaves Him afterwards out of account : for the movements of the world, although started by Him, are explained as going on according to their own necessary mechanical laws; and it is an casy step, from this position, to dispensing with too altogether, and recognizing only those laws. So, into the Cartesian complex of mechanical laws, to be retained merely as a system of bare quantities lending themselves conveniently to exact computation, must be infused the vital quality of the plastic principle. Thus, through the lieuten-ancy of a spiritual, though unconscious, principle, God penetrates the world with His beneficent organizing activity, instead of remaining outside, a mere Force, while within, net He, but Necessity, rules. The argument for God's wisdom and goodness, 'from design in Nature,' which Cartesianism, by the prominence which it gives to mechanically be a reven destroys, is thus The argument for God's wisdom and goodnecessary laws, invalidates, or even destroys, is thus rchabilitated by the theory of a 'plastic principle.' We can now regard those laws as so many quantitative expressions of a vital quality with which God continually inspires Nature in order to the accomplishment, through her, of His ends. Teleology is grafted upon the mechanical philosophy-we can infer Divine wisdom and goodness, not merely existence and power (see Cudworth's Intell. Syst., ed. 1845, i. 274 ff.). As for the other cardinal doctrine of religion, heside that of the existence of a wise and good God—the immortality of the soul—it also rests on the theory of the 'plastic principle.' No finite soul can exist without a material vehicle, and it is the 'plastic principle' present in a soul which moulds matter—terrestrial, aërial, or ethereal—into a vehicle suitable to that soul's condition here on earth, or, after the death of this body, as a ghost in the air, or as a blessed spirit in the ether of heaven. Without the vehicle-building power of the 'plastic principle' within them, souls must perish, or, at least, pass into a state of eternal unconsciousness. Stories of ghosts appearing, and of witches transforming themselves into hares, are recorded-with especial empressement by More (in his Immortality of the Soul, and Antidote against Atheism)-as evidence of the survival of the soul after terrestrial death, and of the continuance of its whice-building plastic power, whereby it moulds an aerial body in place of the discarded terrestrial body, and—such is the force of habit—an aerial body resembling that terrestrial body, so that we can tell 'whose ghost it is' when a deceased person thus appears to us in his aërial bedy.

person thus appears to us in his activat body. The 'demonology' of the Cambridge Platonists is a topic which no estimate of their intellectual and religious position can omit to take serious account of. They shared in the popular superstitious beliefs of their time: but that is not so astonishing as the deliberation and ingenuity with which they used both Stoic physics and the current scheme of their own also their own als

There were other things in Descartes which the Cambridge Platonists did not like. His distinction between matter as 'extended substance' and spirit as 'snistance without extension' they denounced as tending to atheism—More, in the l'reface to his Divine Diologues (t688), eventually receding from the friendly position of his Letters to Descartes (1648), and charging that philosopher himself with actual atheism. Spirit, both Cudworth and More argue, has extension, for extension is not necessarily material. If spirit were without extension, God

would be nowhere, instead of being everywhere. Space is extension, but not the extension of matter; therefore, unless there is extension of Nothing, space must be the extension of Spirit. In infinite space we have the extension of infinite Spirit (see Cadworth's Intell. System, iii. 232, ed. 1845). This notion is one of the most interesting in the metaphysics of the Cambridge School, and was associated in their minds with the victory of the Copernican over the Ptolemaic system of the heavens (see More's Philosophical Poems, p. 409, ed. 1647).

Another point on which we find the Cambridge divines insisting against Descartes is that the distinction between True and False, Right and Wrong, depends, not, as he teaches, on the will of God, but on the eternal nature of things, or law of the ideal world: the distinction is 'essential,' not 'arbitrary' (see Cudworth, Intell. Syst. ii. 533). This law of the ideal world, logically prior to the will of God, as being the rule, or rather system of rules, according to which that will is always exercised, is equivalent to the τόπος νοητός of Plato, and the Divine σοφία of his later followers. Cambridge divines thus correct Cartesianism in this instance by means of the Platonic doctrine of Ideas, as they correct it elsewhere by means of the Platonic anima mundi, or 'plastic principle.' And the use which they make here of the doctrine of Ideas is as important in its bearing on their epistemology as it is on their theology, or philosophy of religion, and on their ethics. In accordance with this doctrine, knowledge is explained as man's participation in the mind of God by means of the Ideas, or eternæ rationes rerum, which are at once His thoughts, from which, by act of His will, sensible phenomena are produced, and at the same time the mental forms in us, by the activity of which we take hold of these phenomena, and organize them into a rational experience. organize them into a rational experience. Here epistemology and theology are one, as they are in the kindred philosophy of T. H. Green. This theologico-epistemological use of the doctrine of Ideas, made by the Cambridge Platonists generally, is perhaps most clearly exemplified in the writings of More's Oxford correspondent and warm admitter, John Norris of All Souls, who, adopting the language of Malebranche, speaks of knowledge as 'seeing things in God' (Reason and Religion, 1689, pp. 187-194). In ethics, the doctrine of Ideas was used by the Cambridge divines mainly against Hobbes, whose philosophy they regarded with genuine alarm. If Cartesianism is the matter out of which—with certain rejections the plastic power of Platonism, the soul of their philosophy, moulds a body for itself, Hobbism is the poison which kills philosophy body and sonl.

Against the 'materialism and atheism' Hobbes the arguments brought by the Cambridge Platonists were those which we have seen them using against Descartes, so far as that philosopher seemed to them to be dangerously defective or erroneous in his teaching about God and the soul. But their contention that the distinction between Right and Wrong is essential, not arbitrary, directed against the Cartesian conception of God. admitted - they at once saw - of extended use against Hobbes's conception of political sovereignty: and so we find them vigorously combating that conception with this same well-tried Platonic Further, since the counterpart of weapon. Hobbes's morality-making absolute 'sovereign'whether monarch or assembly-is his 'subject' wholly actuated by self-regarding motives, to meet this side, or aspect—the 'subject' side—of Hobbes's political theory, we also find them armed, and with a weapon peculiarly their own, their employment of which gives them a most important,

though imperfectly recognized, place in the history of English Moral Philosophy. It is to the psychological observation of the Cambridge Platonist that English Moral Philosophy primarily owes the conception of 'a naturally good temper,' or of 'fellow-feeling,' which Shaftesbury undoubtedly got from them, and handed on to successors who made it a cardinal point of moral theory. Shaftesbury first printed his Inquiry in 1699, and in the Preface which he wrote in 1698 to his edition of Whichcote's Sermons a passage occurs which makes it plain that it was the Cambridge Platonists who not only originated but good, once for all, definite direction—the direction which it always retained to that movement of reaction against Hobbes which may be said to constitute English Moral Philosophy as evolved throughout the 18th and the Interface of the Interface o

To Whicheote and his school-Cumberland being with them-belongs the credit of having put 'a naturally good temper,' or 'fellow-feeling,' in the position of paramount importance which it has ever since occupied in English Moral Philosophy. Hobbes, while it must be admitted that he made it quite clear that the public good is the end-here he was misunderstood by his critics-maintained that the 'sovereign' (monarch, or assembly, with carte blanche) is the only judge of the means towards this end; the Cambridge Platonists, followed by Shaftesbury and a succession of moralists down to J. S. Mill, maintained, against Hobbes, that the means to the public good are such only as the people-not the 'sovereign' wielding uncontrolled power, but the 'subjects' united by fellow-feeling when consulted from time to time, themselves determine. And this was the doctrine which Locke afterwards made popular.

There are, doubtless, important differences between the philosophy of the Cambridge Platonists and that of Looke; but, so far as political theory is concerned, the differences are quite superficial. The Cambridge Platonists are as entirely with him on the political question of the 'liberty of the subject' as they are on the religious question of teleration. Looke's friendship with Cadworth's daughter, Lady Missham, is an episode in the history of philosophy which those who look beneath the surface of those times, while they do not attach too much significance to be considered.

Their attitude to Hobbes and his influence thus exhibits the position of the Cambridge School more clearly than anything else in their philosophy. We see how firmly and consistently they hold by the maxim of Humanism-that the judgment of the well-instructed and virtuous man is to be trusted in religion, morals, and politics. In these branches they are for reason against authority, for social feeling against self-regarding motives, for religious toleration and comprehension against sectarianism of Puritan and Prelatist, for the easy liberty of the subject, under a system of fair re-presentation, against autocracy whether of monarch or of assembly-in short, they are against centralization, either in religion or in politics, whereby the judgment of the private man is suppressed in the one case, and his reasonable freedom of action in the other: that is, they are in favour of personal religion, and of individual initiative in the common work of effecting the public good. The readymade religion which the political superior supplies to his subjects in Hobbes's polity is not religion, for it is not personal; and, on the civil side, the measures taken by that superior do not really conduce to the public good, for they exclude all initiative on the part of subjects united by fellowfeeling in the task of working out a common end. It was, of course, in personal religion that the Cambridge divines were chiefly interested; and the fact that Hobbes, by divorcing reason and religion, made personal religion impossible, was, doubtless, a ground for opposing him which came home to them with peculiar intimacy. And our admiration of their courage is increased when we consider that in lighting Hobbes for rational religion against authoritative religion, for personal religion against official religion, they stood almost alone. Puritans and Prelatists alike were on the side of authoritative and official religion—the religion of Protestant Confession, or of Catholic Church. The influence of Bacon, too, as well as that of Hobbes, was against the Cambridge divines; almost everybody in England said, or implied, that reason and religion must be kept apart. Cambridge divines stood almost alone in maintaining that theology and the Christian life require the independent application of the private man's reason to the problems of religion, natural and revealed. These are problems, they maintained, which admit only of a personal solution within the Christian experience of each man.

We must now make brief mention of some con-

temporaries, not belonging strictly, or at all, to the Cambridge School, but either sharing their views independently or influenced by them.

The greatest of these is Jeremy Taylor. He

entered Cains in 1626, the year after Milton entered Christ's. He became Fellow of Caius in 1633, but in 1636 migrated to All Souls', Oxford, where he came within reach of the influence of Falkland and his Great Tew set, including Chillingworth, whose Religion of Protestants was published in 1637. This influence, tending in the same direction as that of Whicheote, who was beginning to be well known about the time Taylor left Cambridge, was, we must believe, one of the causes which produced the Liberty of Prophesying, published in 1647. At any rate, this work is a plea for reason in religion, and for toleration and comprehension (see Tulloch, op. cit. i. 384).

The next name that should be mentioned is Stillingfleet. By 1690, as Bishop of Worcester, he had hardened into orthodoxy, and was ready for his attack upon Locke; but in his earlier days his sympathy was with the Cambridge School. During all the seven years he was at St. John's, Cambridge (1648-55), Whichcote's Trinity Church Lectures were going on; and in 1659, the year before the Restoration, Stillingfleet published his *Ircnieum*, written entirely in the spirit of Whieheote's teaching, and nrging men to sink their religious differences, even to the extent of trying to find common ground on which Presbyterians and Episcopalians might be united in one Church. The Restoration, however, put an end to that idea; and Stillingleet, we must suppose, suffered disillusion. It was scarcely in the spirit of the Cambridge Platonists that he carried on his polemic with Locke.

As Taylor urged Latitudinarian views

England at the time of the Civil War, and Stillingfleet at the end of the Commonwealth, when men were prepared for the Restoration, so Burnet, standing closer to the Cambridge School than either, was one of those thielly instrumental in giving practical effect to these views in the settlement of atlairs, civil and ecclesiastical, which followed the Revolution of 1688. As we have seen. he visited Cambridge in 1663, when a young man, making there the acquaintance of Cudworth and More. The 'notions of the Latitudinarians,' then imbibed, brought Burnet into much trouble afterwards, till, at the Revolution, in 1688, he became Bishop of Salisbury, and, during his long tenure of 25 years, found it possible to give some effect to them.

Patrick, whom Burnet mentions in his Autobiography and in his History of My Own Time, was a Fellow of Queens', Cambridge, when Smith, also a Fellow of that College, died in 1632, and he preached the funeral sermon appended to Worthington's edition of Smith's Select Discourses (1660).

Patrick, as this rather florid, but evidently sincere. encomium shows, was an enthusiastic admirer of Smith; and, in his various preferments, ending with the See of Ely, must be regarded as one of those who helped to keep Latitudinarian principles before the country.

Rust, educated at St. Catherine's, became Fellow of Christ's in 1649, and was a friend of More. Soon after the Restoration, at the invita-tion of his friend Jeremy Taylor, he went to Ireland, where he was ordained, and, after many preferments, succeeded Taylor as Bishop of Dromore in 1667. Among other works he published, in 1683, A Discourse of the Use of Reason in Matters of Religion . . . against Enthusiasts and Deists.

Tillotson, who appears in Burnet's list of 'men of latitude,' was closely allied with the Cambridge School, and preached the sermon at Whichcote's funeral.

Fowler was the author of Principles and Practices of certain moderate Divines of the Church of England abusively called Latitudinarians, in a Free Discourse between two intimate Friends, published in 1670, which, together with Burnet's records and S. P.'s Brief Account, is our principal authority for the impression which the Cambridge divines made on their contemporaries. He became Bishop of Gloucester.

Turning now from public men to philosophical writers who shared independently, or were influenced by, the doctrine of the Cambridge School, we find six names standing out prominently: Glanvill, Norris, Cumberland, Shaftesbury, Samuel Clarke, and Berkeley.

Glanvill (1636-80) was of Oxford, His Vanity of Dogmatizing (1661) is a philosophical piece entirely in the spirit of the Cambridge Platonists: and his later work on witchcraft (Saddueismus triumphatus) was produced in collaboration with

Norris was also of Oxford; he entered Exeter College in 1676, and became Fellow of All Souls' in 1680. In 1683-84 he had a correspondence with More which he published in 1688, the year after More's death. His Reason and Religion was published in I689, the year he left Oxford for a country living and married. In 1701 and 1704 he published, in two parts, The Theory of the Ideal and Intelligible World. His philosophy closely resembles that of Smith and More: by grasping the Eternal Ideas man enters into the mind of God -this is Malebranche's 'seeing things in God'; and it is in 'eestasy' that a man so enters into the Divine mind. The ecstatic habit can be cultivated; and Reason and Religion, with its 'Contemplations. each followed by an 'Aspiration,' is a practical Devotional Treatise, 'written,' as its author tells us in the preface, 'for the use of the Learned Devotional Treatise, 'written,' as its author tells us in the preface, 'for the use of the Learned Devotional Treatise,' which is a content of the second properties of the s Reader, who, perhaps, needs as much to be assisted in his devotion as the more ignorant.' While Norris is thus a close follower of the Cambridge divines in philosophy, he apparently had not much sympathy with their ecclesiastical position. At any rate, in 1692 he became Rector of Bemerton near Salisbury, in Burnet's diocese-a poor man with a growing family, he complains, but with no hope of preferment from his Bishop. He was, it would seem, a strong Anglican and Tory, opposed to Nonconformists and Whigs.

Cumberland entered Magdalene College, Cam-

bridge, in 1648, and became Fellow in 1656. He was thus a contemporary, during his residence at the University, of the leading members of the Cambridge School. In 1661 he was Rector of Brampton in Northamptonshire. In 1672 he published his de Legibus Natura, and in 1691 he was made Bishop of Peterborough by William III. In the de Legibus Natura he opposes Hobbes with

CAMEL

arguments similar to those used against him by Cudworth and More; and, with Whichcote, dwells especially on good-nature, or social feeling. 'Obligation to the exercise of the moral virtues. he maintains, 'flows immediately from hence, that such actions are enjoined by the Law of Nature, which, in its ultimate form, is Benevolence to all Rationals, although he adds (what Whicheote and his school would have put otherwise): 'and the sanction of that law is briefly deduced from the consequences which attend such a Benevolence, at the appointment of the Author of Nature.' Whichcote, with the approval of Shaftesbury, insists most strongly on the natural, not arbitrary, connexion between virtue and reward, vice and punishment: we are punished for our sins, not because God so wills and appoints it, but because sin naturally produces misery. This difference between Cumberland and the Cambridge School does not, however, as it happens, amount to much; it does not affect Cumberland's attitude towards the common enemy. Hobbes, and it is to be accounted for by the difference between the juridical technique of a writer deeply influenced by Grotius, and the Platonic technique of the Cambridge School.

We have already seen how considerable Shaftesbury's debt is to Whicheote and his followers, and need only add now that Shaftesbury also owed something to Cumberland's insistence on the notion of the public good as the object of benevolence. We assist here at the birth of Utilitarianism, which, in one form or another, has ever since held

the field in England.

Samuel Clarke was an important man in his day; but his Boyle Lectures (1795-6) are wearisome reading now. He has nothing new or suggestive to say. His system is, in skeleton, that which the 'men of latitude' had brought forth in living flesh. obligation to virtue is laid upon us by our reason apprehending 'the eternal fitness of things'; but this 'eternal fitness' Newton's pupil looks at with the eye not of the Platonic mystic but of the pure mathematician.

In Berkeley's Siris (1744) the Cambridge philosophy for the last time is embedied concretely in a single work-and in a work which might almost have been written, a century earlier, by Henry More. Its immediate object is to press the claims of tar-water as a panaeea. Tar, the exudation of the pine, contains the vital virtue of the universal soul of Nature in a concentrated form. From tarwater, so informed, Berkeley 'soars very high,' on Platonic wings, up into the metaphysics of religion

and merals To sum up: the Cambridge Platonists hold their place in an 'Encyclopædia of Religion and Ethics on four main grounds: (1) They present the idea of 'personal religion' in a very impressive way, and with great sincerity. (2) They were preachers of religious toleration and comprehension, at a time when everything seemed to be against the prevalence of these ideas. (3) They gave direction to English Moral Philosophy by supplying Shaftesbury and his followers, down to the Utilitarians of 19th cent., with the notions of 'good-nature and 'fellow-feeling,' as dispositions relative to the 'public good.' (4) On the other hand, their use of the Platonic doctrine of Ideas, in theology and epistemology, presents them as contributing also to the idealistic side of English Moral Philosophy. T. H. Green's 'reproduction of the Eternal Consciousness in my consciousness' bears close comparison with the Cambridge tenet-'participation of man's mind in God's mind through apprehension of the eterna rationes rerum.' Comparison of Green with the Cambridge divines makes it clear that his philosophy is a phase of Christian Platon-

LITERATURE. - J. Tulloch, Rational Theology and Christian Philosophy in England in the Secenteenth Century, Edin. 1872, gives the fullest and most connected account of the Cambridge gives the fullest and most connected account or the "Canal Forzage Patonists" and their religious environment. The more awarder wishes to acknowledge many obligations to this standard work, as well as to the DAB. Westcott's paper on "Whicheode" in his Religious Thought or the West, London, 1821, is illuminating; and Inge in his Christian Mystician, London, 1899, deals briefly, but in a sympathetic and suggestive way, with the teaching of the School. Campagnac's Introduction to his Cambridge Pattonists (selections from Whicheode, Culverwel, and Smith, Osford, 1901) is a good piece of work, which the student will find useful. Mention may also be made of Symon Patrick, Works, including his "Autoliography," et. with Introduction, by Alex, Taylor, Oxford, 1859.

J. A. Stewaer

CAMEL .- I. In Arabia .- The camel is the animal essential to Bedawi life. On account of its meagre demands, its endurance, and its swiftness, it is the usual vehicle for long journeys across the desert. Camel-rearing is one of the most important arts with the Bedawin, and tribes vie with each other for the honour of producing the finest camels, The breed of mahris—a name now used to designate saddle-eamels-was introduced by a tribe of South Arabia, the B. Mahra. As a general rule, the male is the pack-animal  $(r\bar{\sigma}kib)$ , and the female the mount (radif).

The words used in ancient Arabia for the chief actions in the process of harnessing camels have come down to us, but they are not in entire agreement with modern terminology. The Arabic language has quite an extensive vocabulary reserved for the camel itself. Besides epithets which do duty as names of the camel, and general words like jamal (which has, through κάμηλος, spread into the languages of Europe), 'ibil, ba'ir, and naqa, Arabic has a large number of words to designate the animal according to its age and its economic rôle. The word māl appears to have meant 'camels' before acquiring the meanings of 'large cattle' and 'moveable property' (cf. Lat. pecus, pecunia). The designation, 'ship of the desert,' applied to the camel, seems strange when we think of the exclusively inland life of the Bedawin, and was apparently unknown to ancient poetry (see, however, Jacob, Altar. Beduinenleben, p. 6t f.), but it exists in modern poetical works of quite a Bedawi type, e.g. in the following lines given by Musil (Arab, Pet. iii. 253): 'What thinkest thou of this ship without mast? How it moves on! It is the female camel of the chief, which is ridden by a The explanation of the phrase gallant cavalier. seems to be as follows: the root rkb, conveying the idea of 'bestriding an animal,' gave rise to the word markar, with the sense first of 'mount' (horse or camel), then of 'ship'; and by a sort of backward play of words the idea of 'ship' has come to displace that of 'camel.' Besides, the form of the classic palanquin of the desert, the doli, has always called up to the minds of travellers the image of a barque.

In the ancient literature of Arabia, just as in practical life, the camel has a pre-eminent position, both alongside of the horse and before it. There is not a single poet of the desert but sings the praises of his camel and, by a play of imagination that is something of a shock to Western minds, compares his mistress to it, often carrying the analogy to minute details. Snouck Hurgronje (Mckka, 1888, ii. 188) recalls the cry of women lamenting a dear husband: 'O my son, my eye, my camel, interpreting it in the sense of 'O thon who wast my help in supporting life's burden.' This precious animal is what the generous host offers as a feast to a lungry traveller. The legendary host of ancient Arabia, Hatim at Ta'i, found a means of making this gift, after his death, to the Yemenite chief who fell asleep near his tomb. The camel is also the most perfect sacrifice that the Bedawi can present to his gods. But, besides offering it as a 174 CAMEL

victim, round which a small social, family, or tribal group sat at table in a ritual feast, the Bedawi also consecrated his camel as a living offering to the pre-Islāmic deities; and Nilus, writing in the 5th cent. A.D., has described a heathen Arab camel-sacrifice in considerable detail (summarized, from PG lxxi. 612 ff., in art. Arabs [ancient], vol. i. p. 665<sup>b</sup>). Owing to the prohibition contained in the Qur'ān (v. 102), traditionists have furnished valuable though contradictory details on certain pre-Islamic usages relating to the camel. The words sā'iba and wasīla meant camels which had had ten young ones and had therefore become harām, i.e. sacred. After this no one was allowed to mount them or milk them; they were tabu, under the protection of the god. Their last offspring was generally sacrificed and eaten in a solemn feast, from which women were usually excluded. The name sā'iba was also given to the camel which a man in a position of danger-e.g. in the course of an adventurous razzia-promised to consecrate to a sauctuary if his hopes of success were fulfilled. The saiba was haram for everybody except the guardians of that temple in whose sacred enclosure (himā) it passed the rest of its life. The same treatment was given to the stallion with a numerous posterity, the  $h\bar{a}m\bar{i}$ . If these sacred animals wandered from the himā, they had to be led back with due veneration. They were easily recognized by the mark (wasm) stamped on a conspicuous part of their body by means of a Similar marks distinguished the red-hot iron. victims destined for sacrifice. Although this custom had a religious significance which roused the opposition of Muhammad, the Prophet retained the practice of putting an external mark on the animals destined for the solemn sacrifice made by pilgrims at Minā on the 10th of Dhū'l-bijja. camels have a collar formed by two sandals hung on a grass rope. But the marking of flocks, and of camels in particular, was not confined to those beasts consecrated to a deity; in ceremonies beginning with a sacrifice, and with the object of protecting a flock from epidemics, and at annual gatherings, which they held at a fixed time, the Bedawin used to mark all the young beasts with a tribal and individual wasm. In this way the owner, besides performing a religious act, obtained a practical means of recovering lost or stolen animals. The marking of camels, which is attested by the carliest Arabic literature, and, in various regions, by rock-pictures, the date of which it is difficult to determine, is still a living custom; its economic importance is paramount. But the hospitable and religious sacrifice of camels is tending to disappear, the victims nowadays being less valuable animals.

It is impossible to fix with certainty the antiquity cording to arguments derived from texts, it was of the camel in the Mediterranean countries. introduced into Syro-Palestine at the time of the Judges, and into Egypt with the Assyrian conquest. Its introduction into North Africa we must, with René Basset, carry back to the time of the Arabian

conquest.

The camel plays an important rôle in Musalman history. We learn from the Qur'an (vii. 71-77, xi. 64-71) that Allah sent a prophet named Salih to the B. Thamūd to preach the worship of the true God; he consecrated a female camel to Ilim, according to the rites which have been discussed above, and threatened a terrible judgment on any one who should prevent the animal from pasturing freely on the land of Allah. The B. Thamad were obstinate in their idolatry, and, disregarding the tabu of the holy camel, they hamstrung and killed it, as a punishment for which they were destroyed by fearful storms.

The war which, according to the Arab traditions, raged for forty years between the B. Bakr and the B. Tarlih, and which is called the War of Basus, originated in the slaying of the camel Sarab and its young one by Qulaib b. Rabi', chief of the B.

Tarlib.

It is well known that the battle in which 'Ali met his chief adversaries, 'Ā'isha, Ṭalḥa, and Zubair, near Baṣra in Jumād-al-Awwal, A.H. 36 (Nov. 656 A.D.), received the name of the Battle of the Camel. In the last hours of the combat the palanquin of 'A'isha, borne on a camel specially bought for the purpose, served as the centre for the final resistance of the vanquished. The historians tell us of the groups of warriors, small tribes, or fractions of tribes, who came up in turn to snrround the 'Mother of Believers,' and in turn disappeared in the confusion of flight; sixty warriors seized the camel's bridle in their hands, and perished or lost the use of the hand. Finally, to stop a fratricidal struggle, a rally of the last defenders who were fighting under 'Ali's standards succeeded in hamstringing the camel, and so put an end to the combat. Now, all this description, down almost to its very details, is the same as that derived from modern observation of Bedawī life: when they are setting out to fight, the daughter of the chief, in bridal attire and wearing heavy jewellery, mounts the doli, and, standing upright in it, takes part in the fight. Surrounded by faithful followers, she is the rallying-point of the riders, in the successive movements of sudden charge and rapid flight that compose the whole strategy of the desert. stimulates the warriors of her tribe by her presence and her impassioned words of encouragement, and it is round her camel, fallen prostrate on its hamstrung legs, that they offer their last struggle.

2. In OT and Talmud, -The camel is mentioned with great frequency in the OT as belonging to the rich and as a beast of burden (for data see, for example, *HDB* i. 344 f. ; *EBi* i. 633-636 ; *PRE*<sup>3</sup> ix. 729-731; JE iii. 520 f.); but here it has, of course, no religious significance, although it was unclean, and might not be used for food (Ly 114, Dt 147; on various theories regarding this prohibition, cf. PRE3 xxi. 746). In later times the camel came to figure in proverbs, of which the best known are naturally the two quoted by our Lord: 'It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God' (Mt 1924 and parallel passages), and to strain at a gnat, and swallow a camel (Mt 2324).

The 'a slaud also contains several proverbe about the camel. For instance, "In Media the camel can dance on a bushel-beaket," [Feb. 455], meaning that in Media everything is possible, "as the camel, so the burden "(\$6/at 130)," "the camel asked to have horus, so his ears were cut short," (\$6/at 130), "the camel asked to have horus, so his mass bear loss of the burdens of the young server (\$6.20) (Thruss, in Joseph College).

3. Among the Iranians.-Outside Arabia, it is among the Iranians that we find the chief allusions Zarathushtra beseeches Ahura to the camel. Mazda to grant him 10 mares, a stallion, and a camel (Vasna xliv. 18); camels are classed among sacrificial animals (Vendīdād xxii. 3), and are part of the riches of Airyaman (ib. xxii. 20); while to him who has offered a perfect sacrifice the personification of Benediction (afriti) comes 'in the form of a camel of prime quality, most rutting in intense rut' (Pursišnīhā xxxii., ed. Darmesteter, Le Zend-Avesta, Paris, 1892-93, iii. 66). To the Iranians the camel was evidently the most valuable of all

The Talmud (Berakhoth 55b, Baba mezi'a 38b) has a similar roverb, except that 'elephant' is substituted for 'camel'

and the NT saying recurs in the Qur'an (vii. 38).

the larger kind of cattle, for Vendulād ix. 37 prescribes that

'a priest thou shalt purify for a pious benediction; the country a priest thou stait purity for a pious benediction; the country ford of a country thou shall purify for a male cancel of prime quality; the district-lord of a district thou shall purify for a stallior of prime quality; the wildae-lord of a village thou shalt purify for a bull of prime quality; the house-lord of a house thou shalt purify for a country to the theory of the country of the prime 
vii. 42, xiv. 11).

The camel is vividly described in Yust xiv. 11-13 as the fourth of the ten incarnations of Vereθrayna, the god of victory, but the passage has no particular religious value as regards the animal under consideration.1 It is more interesting, in this connexion, to note that, according to Strabo (p. 733), an apple or a bit of camel's meat was caten just before the consummation of marriage, doubtless with reference to the salacity of the animal, to which the Avesta repeatedly alludes. In the Avesta, ustra, 'camel,' not infrequently forms a component of proper names (Justi, Iran. Namenbuch, Marhurg, 1895, p. 515), as Frašaoštra, 'having camels that press forward'; Vohuustra, 'possessing good camels'; and—foremost of all—Zara@ustra, the great Iranian reformer bimself.2

4. In India .- Here the camel is a relatively unimportant animal, and in the earlier period ustra. the Indian counterpart of the Avesta ustru, 'camel, meant 'buffalo' (Spiegel, Arische Periode, Leipzig, 1877, pp. 49, 51). The main habitat of the camel 1877, pp. 49, 51). in India is Rajputana (Lassen, Ind. Alterthouns-kunde, Leipzig, 1858-74, i.º 349), and in northern India 'the bones of the camel are very useful for driving off insects from a sugar-cane field, and buried under the threshold keep ghosts out of the house. Pliny says that a bracelet of camel's hair keeps off fever' (PR ii. 36). The camel figures, however, to some extent in Sanskrit proverbs. Some of these represent the animal in an unfavourable light, as greedy, stupid, etc. 'A camel in a garden looks only for thorns'; 'a camel will trample down a screwpine [a bush noted for its fragrant flowers] to get at thorns'; and to touch a camel or an ass is even more polluting than to touch a dog, a cock, or a Chandala [a member of the lowest Hindu caste]; but, on the other hand, the camel receives praise for its perseverance in getting sweet fruit from unusual places (Böhtlingk, Ind. Sprücke, St. Petersburg, 1870-73, Nos. 1548, 2885, 6597, 6216). In modern India the camel is occasionally found as a dramatis persona in folktales from the north (Swynnerton, Indian Nights' Entertainment, London, 1892, 19. 15-17, 34-36, 269 f., 310 f.; Crooke and Rouse, Indking Thrush, London, 1899, pp. 33-35, 43-46).

5. In Africa and in Enrope.—The camel is not indigenous in Africa and Europe, and it plays a rôle of no religious importance. In the latter continent it has never had any real economic value, though its name in various forms (on these, see especially Schrader, Reallex, der indogram, Altertumskunde, Strassburg, 1901, pp. 404-406) is found

in every European tongue.

CAMISARDS .- Camisaids' is the name given to those Protestants of the Cevennes who for several years resisted by force of arms the attempts made by the government of Louis XIV, to convert them to Roman Catholicism. The word is doubt-less derived from camisa, a dialectic form of chemise; and its use in this connexion arises either from the practice of fighting in white shirts or blonses, or from an incident at the siege of Montauban in 1629, when such a blonse was used as a signal. The word camisade appears in early military French as the equivalent of 'nightattack.

Geographically, the name 'Cevennes' is given to the long, curving line of broken ridges extending nearly from Lyons to Narbonne, which marks the edge of the reutral table-land of France, where it breaks down castward to the basin of the Rhône. Locally, however, 'the name is limited to a tangle of schist ridges and deep-cleft raymes constituting that portion of schist ridges and deep-cieft ravines constituting that portion of the arc which is between the Coiron and the linestone plateau of Larzae' (Baring-Gould, Book of the Cerennes, 1997, p. 2). This inextricable network of mountains and deeply furrowed valleys' is drained by the rivers Alber and Lot, Ardeche and valleys' is drained by the rivers Alber and Lot, Artiche and Gardon, and represents to-day the upper parts of the Departments of the Loire, and the Lozer, the Ardsche and Gard. In the Irth cent. the population of this blesh highland district offered a studiorn resistance to the repressive measures that went before the Elict of Nantes.

The immediate cause of the troubles and the hostilities in the Cevennes was the exterminating policy of Louvois against the Protestants, which was set free from any legal transmels by the Revocation of the Edict of Nantes in 1685. That Edict, reluctantly granted by Henry IV. in favour of the Protestants who had raised him to the throne, had itself fallen far short of their claims and rights as citizens. But for many years before its revocation it had been so administered, and so disregarded, that the situation of the Protestants was already very hopeless. The condition of affairs is thus described by Jean Claude in a letter to the Marquise de Regnier (1685):

'The severities which are practised in France are of such a kind that human nature is no longer able to resist. If it were possible to foresee a termination of them, one might resolve to ace them, and death would be a motive for constancy, instead face them, and death would be a motive for constancy, instead of a temptation. But the horrors that are practised, incon-ceivable in themselves, not only have no end, but go on increasing, and are of such a kind that we are bound to fall either into despair, or into frenzy and an entire loss of reason, or into apostasy

This situation became even more acute after the Revocation. The tirst blow was the banishment of the Protestant clergy, of whom six or seven hundred quitted France. The next was the prohibition of emigration for the Protestant laity. Then followed the wholesale demolition of Protestant churches, imprisonment and torture for those who refused to conform, and the galleys for thousands of those who resisted. Louis XIV. had allowed himself to be persuaded that the Revocation would not cost a drop of blood. Before its work was done, 12,000 Protestants had been executed in Languedoc alone, and at least half a million had quitted the country, taking with them much of its best blood, its best character, and its highest industrial skill.

The administration of the Decree in Languedoc was committed to Lamoignon de Bàville, a man of untlinching severity against the Protestants, though by no means a blind admirer of the Catholic clergy. He continued to govern the province for thirty three years, at the end of which he had crushed Protestantism, but almost depopulated the country, The resistance in the Cevennes divides itself into two periods, the first from 1686 to 1698, when it was mainly passive, the second from 1700 to 1709, when it was marked by fierce outbreaks of active warfare, one of which lasted for eighteen months, The banishment of the pastors and the prohibition of public worship drove the people to private assemblies and the ministrations of lay preachers.

Among the latter, who were known as 'predicants,' François Vivens and Claude Brousson (formerly an advocate at Toulonse) were specially conspicuous. Bâville, vigorously assisted by the Duc de Noailles and the Marquis de la Trouse, turned the soldiery loose upon these assemblies, slaying and hanging the worshippers and arresting the predicants. Many of the latter were executed, burnt alive, or broken on the wheel; many more, with thousands of their followers, were shipped off to the galleys. What that meant of shame and torture may be learnt trom the narrative of Jean Bion, himself a Catholic chaplain on one of the ships. It was always open to the Protestants to escape by recanting, and large numbers gave way under the terror of persecution, but many still remained firm. Their endurance was largely fortified, and their enthusiasm inflamed, by the writings and correspondence of Pierre Jurieu, the learned antagonist of Arnauld, Bossuet, and Bayle, who, from his place of exile in Rotterdam, and chiefly by means of his 'Pastoral Letters, exercised an immense influence over the Protestant remnant in France. His prophecies of speedy deliverance, based on his interpretation of the Apocalypse, raised the hopes of the people. The prediction of Claude was verified. Many of the Protestants of Languedoc, avoiding renunciation of their faith, fell into frenzy. An infectious eestasy seized people of all ages and of both sexes. They heard supernatural voices. They spoke with tongues. Children of the tenderest years were the subjects of most extraordinary manifestations, Quite uneducated persons gave utterance, when 'seized by the Spirit,' to prophecies in the purest French. Many of these prophecies were taken down, and a long series of them, uttered by Elias Marion, is printed in A Cry from the Desert. Animated by such enthusiasm, the resistance was maintained over a period of ten years, and it was not until the capture and execution of Brousson broke the heart of the people that Baville could claim even a partial and temporary snecess.

The death of Brousson was followed by a year or two of comparative calm; but it might be thought that Baville foresaw the outbreak that was to come, seeing that he kept his troops busily employed in constructing a network of roads, practicable for eannon, throughout the whole district. The flame of enthusiasm was kindled anew by the ecstatic utterances of a travelling sempstress from Dauphiné. It spread like wildfire through the Cevennes, though Baville did his utmost to extinguish it. At last the people were goaded into open war. A chief object of their execration was the Abbé du Chayla, the arch-priest of the Cevennes, in whose prisons at Pont Montvert in the Lozère many Protestants suffered unspeakable tortures. Under the leader-ship of one Seguier, a body of the Camisards attacked his house, delivered his prisoners, and slew him (1702). Baville inflicted terrible reprisals, but the spirit of the peasants was roused to fury, and for some two years they sustained an open war with the armies of the king. Calling them-selves 'les enfants de Dien,' and their camp 'le eamp de l'Eternel,' they regarded themselves as God's instruments for the destruction of 'Babylon and Satan,' the Roman Church and priesthood. Their principal leaders were Laporte, Roland, and Cavalier—the latter but a youth of seventeen, who had been a baker's apprentice. The number of fighting men probably never exceeded four thousand; but their methods of guerrilla warfare, and their knowledge of their own rocky fastnesses, compelled Baville to collect from 40,000 to 60,000 men to hold them in check. Shocking cruelties were perpetrated on both sides. A great tract of country was devastated and almost depopulated. The issue of successive engagements varied. At length Montrevel was superseded in the command of the army by Marshal Villars, whose more diplomatic methods met with better success. He offered an amnesty, freedom of conscience, and the right to leave the country, to such as chose to accept it. These terms were accepted by Cavalier and some of his followers. He himself quitted France, and, after serving with credit in Italy and Spain, entered the British army, where he rose to the rank of Major-General, and died as Governor of Jersey (1740). Others of the Camisards, many of whom thought that Cavalier had betrayed the cause, attempted to carry on the struggle; but after the fall of Roland, the most chivalrons of their leaders, their powers of combination and resistance were broken; and, except for a fruitless rising instigated by Abraham Mazel in 1709, the Camisard movement was at an end.

For a brief time the Camisards constituted a small English sect known as French Prophets, and in their land of refuge showed forth their most unlovely and fanatical traits. They claimed to be able to prophesy and to work miracles, advocated communism of property, and asserted that the Messiah was about to establish His kingdom with terrible doom for the wicked. They gained a considerable following even among the English, but their meetings became so disorderly that legal proceedings were required to check them. Finally, in 1708, they overreached themselves by claiming that one of their number, Thomas Emes, would rise from his grave on May 25 of that year; but the resurrection did not take place, and the resultant disillusionment brought about the speedy decay of the sect.

resultant disillusionment brought about the speedy decay of the sect.

LIFEATURE—Apart from the georal histories of the Church in France, the following works may be specified out of the copions literature: (A) Professars: Benoist, Hist, de Védid & Nantes, 5 vols, belft, 1629-56, esp. the last volume, which has a useful appendix with lists of prisoners in the galleys, and a collection of the edicts against the Protestants; Jean Claude, Les Plaintes des Protestans, etc., Cologne, 1886, new ed. 1885; Cavalier, Memoirs of the War of the Cevennes, London, 1712 [to be used with caution]; A Cry from the Desert, with preface by John Lavy, London, 1707; Misson, Les Phédres seere des, 1886-89; Elias Marion, Evennetical Warnings (with verbatim report of his prophecies), London, 1707; Antoine Court, Hist. des troubles des Cevennes, Villetranche, 1760; Peyrat, Hist. des pasteurs du desert, Paris, 1865; Bonnemère, Hist. de guerre des Camisards, Paris, 1869; Paris, 1869; Blanc, De l'Impiration des Camisards, Paris, 1859; Melange de therature historique et de guerre des Camisards, Paris, 1869; Blanc, De l'Impiration des Camisards, Paris, 1869; Conpert, Hist. des épieses du desert, Paris, 1869; History de Urenton, 1701; Coquert, Hist, des épieses du desert, Paris, 1869; History de Urenton, 1701; Coquert, Hist, des épieses du desert, Paris, 1869; History de Urenton, 1701; Granten, 1701; History de Herrich, 1701-181; Louvreleuil, Fancier, 1811; Bulletin de la Société de Phistoire du Protest, Faris, 1801; History, Hist. du funatisme de notre temps, Utrecht, 1700-181; Louvreleuil, Le Fanctisme renouvelé, Auguents and the Revocation of the Edict of Nantes, 1880.—(B) Carinotic: Fléchier, Lettres choises accer relation des fanatispes, Paris, 1715; Bruerys, Hist. du funatisme de notre temps, Utrecht, 1700-181; Louvreleuil, 1701; History de Paris, 1701; History de Sevard Treatises lately published on the Studjet of the Prophets, London, 1701; Co, 1702, History de Vaurd Pugh), Copious Account of the French and English Prophets, London, 1

CAMPANOLOGY.—See Gongs and Bells.

## CAMPBELLITES.—See Disciples of Christ.

CANAANITES .- The name Cana'an first appears in the Tell el-Amarna letters under the forms Kinahni (523) and Kinahhi (233) as a designation of the lands at the eastern end of the Mediterranean, which we include to-day under the names of Syria and Palestine. In Egyptian inscriptions of the XIXth dynasty the name is inscriptions of the Alath dynasty the name is always found with the article  $p^1 \times m^2 n$  (Breasted, Ancient Records of Egypt, iii. 88, 617, iv. 219; Müller, Asien, 205 ff.), and is a general term for the Asiatic dominions of Egypt. In the 0'f it has commonly the same wide scope. What 'Canaan' means and whother the article of the control of the cont means, and whether the name of the race is derived

from the land, or that of the land from the race, are unsettled questions. In this article 'Canaanite will be used as a general designation of the pre-Israelite inhabitants of Palestine. The religion of the later Canaanites, who were contemporary with the Hebrews, will be discussed in art. PHOENICIANS.

A. SOURCES OF INFORMATION .- I. Excavations in Palestine.-Since 1890 more or less extensive exeavations have been carried on in the mounds of Palestine, and these have shed a flood of new light upon the religious beliefs and practices of the

ancient Canaanites.

In 1890 Petrie made an exploratory survey of the mound of In 1890 Petrie made an exploratory survey of the mound of Cell cl-Hesy, the Biblical Lachish (Petric, Tell cl-Hesy, 1891). Between 1891 and 1833 Bliss excavated about one quarter of this mound (Bliss, A Mound of Many Cilies, 1894). In 1808 Bliss and Macalister ran exploratory trenches into the mounds of Tell Zakariyá (Azekah'), Tell esysäñ (Gath'), Tell Judeiden, and Tell Sandahaumah (Bliss-Macalister, Ezementions in Pulesand Tell Sandahannah (Bliss-Macalester, Executations in Pules-tine, 1902). From 1902 down to the present time Macalister has been excevating in a very thorough fashion the great mound state of the property of the property of the property of Sidelights From the Mound of Georg, 1907. In 1902-3 Sellin excavated Tell Ta'annek, the Biblical Taanach (Sellin, Tell To'annek, 1909), and in 1903-5 Schumacher executated Tell ch'utesellim, the Biblical Megiddo (Schumacher, Tell el-Mutesellim, 1908).

All these mounds contain remains dating from the earliest period of l'alestinian history, show that a homogeneous civilization prevailed in the land prior to the Hebrew conquest, and they give a fairly complete idea of the religion of the

aborigines.

Mention should also be made of the Tell el-Amarna tablets, a collection of nearly 300 letters sent by petty kings of Canaan to the Pharaohs Amenophis III. and Amenophis IV. (r. 1400 B.C.), which were discovered in 1887 at Tell el-Amarna in Egypt. These were written in Canaan, and therefore properly come under the head of Palestinian archaeology. One letter of this series was found at Lachish, and four letters of the same period have been discovered by Sellin at Taanach. All are rich in allusions to religious beliefs and rites, and contain a large number of theophorous names of persons and places (see Winckler, KIB v. [1896]; Knudtzon, BASS iv. [1899] pp. 101–154; Vorderasiat, Bibliothek, ii. [1907 (l.]).

2. Babylonian inscriptions. The evidence is now abundant that the Amorites entered Babylonia at the same time as they entered Palestine, and that the founding of the so-called First Dynasty of Babylon was a result of their invasion (Meyer, Gesch.<sup>2</sup> i. 2, pp. 465, 544 ff.). In contract-tablets of this period an immense number of proper names of a Canaanitish-Hebrew type make their appearance; and, as these are nearly all theophorous, they throw much light upon the religious conceptions of the Amorites (see Ranke, Early Bab. Personal Names of the Hammurahi Dynasty, 1905). Besides this, the Babylonian inscriptions of about 2000 B.C. contain a number of direct statements in regard to the religion of Amarra, or the 'Westland, which stood at that time under Babylonian rule.

3. Egyptian inscriptions .- From the earliest days the Egyptians interfered in the politics of Canaan, and in their records names of Canaanite canaan, and in their recovers names of Canaanne gods occur, either independently or compounded with the names of places or persons. Canaanite colonies also settled in Egypt, and introduced their gods into that land. When the Egyptians became a conquering power under the XVIIIth and X1Xth dynasties, they had no war-gods of their own, and consequently they extensively adopted the deities of their warlike Semitic neighbours. During the New Empire, Semitic fashions and Semitic religion made great progress in Egypt. and hosts of Canaanites were settled in that country either as slaves or as officials. The result is that the Egyptian records, particularly of the New Empire, contain many references to the

religion of Canaan (see Müller, up. cit. 309 318).
4. The Old Testament.—The OT contains numerous statements, mostly in the form of prohibitions, concerning the religion of the race which Israel dispossessed. It also discloses survivals of Canaanitish ideas. The Hebrews did not exterminate their predecessors, but mingled with them, and adopted their civilization. The language which we call Hebrew is the language of the glosses to the Tell el-Amarna letters, and Is 19<sup>18</sup> calls it 'the language of Canaan.' It differs little from the dialect spoken by the Phonicians. The placenames of the Israelites were nearly all derived from the earlier inhabitants, and many of them are found in the Egyptian inscriptions and in the Tell el-Amarna letters. So far as they contain the names of gods, they may be used unbesitatingly for the history of the pre-Israelitish period. The OT also informs us that Israel served the b ālim, and worshipped in their high places; accordingly, it is probable that most of the sanctuaries of later times were survivals of ancient Canaanite holy places. It is certain also that the sacred traditions of these shrines were learned by Israel from the Canaanites, and were gradually transformed to accord with the genius of the religion of Jahweh. The Book of Genesis contains many evidences of a fusing of two strands of tradition, a Hebrew and a Canaanite, corresponding to the fusing of the two races; and, so far as the Canaanite elements can be disentangled, they are useful for reconstructing the religion of Israel's predecessors (see Paton, 'The Oral Sources of the Patriarchal Narratives,' AJTh, 1904, p. 658). Many rites of Mariatives, 1911, 1994, p. 6381. Many files of the religion of Israel, particularly those connected with the planting of grain, the reaping of crops, and the celebration of harvest festivals, must have been derived from the earlier inhabitants of the

land.
5. The Phœnician religion.—The Phœnicians were the lineal descendants of the Canaanites; hence it is natural to look among them for survivals of primitive Canaanite religion, and to interpret obscure phenomena of earlier times by the

later Phoenician religion.

From these various sources we must now seek to re-construct the religion of the ancient Canaanites. B. THE PRE-SEMITIC ABORIGINES, -The earliest archeological remains in Palestine belong to the Paleolithic age. These have been found in small numbers, and have never been adequately described. From them it is impossible to draw any conclusions in regard to the race or the religion of the people who produced them. Neolithic remains are more numerous, and furnish a better basis for historical conclusions. The excavations that for the last seven years have been earried on by the Palestine Exploration Fund at Gezer have disclosed in the lowest level of the mound a series of caves in the soft limestone rock that were once occupied by Neolithic men. As the marks on the walls show, these caves were excavated with tools of bone, stone, or wood; and in them only bone and dressed-stone implements have been found. They must belong to a period from 3500 to 3000 B.C., because they are three feet below the level in which searabs of the XIIth Egyptian dynasty first appear (PEF8t, 1902, p. 347; 1903, p. 12; 1903, pp. 317-321; 1905, p. 309 f.; 1907, p. 186; 1908, pp. 213-217). Similar caves were found by Sellin under the mound of Tasuach, although in this case they contained no remains. Other caves in all parts of Palestine doubtless date from the same early age, but no thorough investigation of them has thus far been made,

This race was in the habit of burning its dead; and for this purpose fitted up one of its caves at

VOL. III.-12

Gezer as a crematory, cutting a chimney up through the solid rock, in order to secure a good draught (PEFSt, 1902, p. 347 fl.). The floor of this cave was covered to a depth of a foot with the ashes of human bodies. In this stratum a sufficient number of fragments of bones were found to permit a re-construction of the ethnological type. None of the individuals exceeded 5 ft. 7 in, in height, and most were under 5 ft. 4 in. From the shape of the skull and from other indications it may safely be inferred that these people did not belong to the Semitic race (see the report of Macalister, PEFSI, 1902, p. 353 ff.). The same conclusion may be drawn from the fact that they burned their dead, since cremation was not a Semitic custom. From the circumstance that they deposited food and drink with their dead, it may be inferred that they believed in some sort of immortality, and that they

practised ancestor-worship.

Around the entrance to this cave, and in the iloors, sides, and entrances of other caves, an immense number of so-called 'cup-marks' are found. These are melon-shaped depressions formed by rotating a hard stone upon the soft surface of the They vary from the size of a thimble to that of a barrel, and are often arranged in complicated patterns (*PEFSt*, 1902, p. 361; 1903, pp. 124, 316 ff.; 1904, pp. 35, 112, 197; 1905, p. 310; 1908, p. 213). It is clear that most of them cannot have served any utilitarian purpose, particularly when placed on vertical surfaces; and the fact that they are constantly associated with menhirs, dolmens, cromlechs, and altars seems to indicate that they have a religious significance (see Spoer, ZATW, 1908, p. 271 ff.). Herodotus (ii. 106) states that he saw in Syria pillars on which γιναικός αίδοῖα were cut. These correspond to the menhirs, found in all parts of Palestine, and evidently intended to represent phalli on which cup-marks are engraved. They show, apparently, that the enp-marks were symbols of a female deity worshipped by these aborigines, and that they were intended to represent either the inverted breast, or, as Herodotus says, the γιναικὸς αίδοῖα. These symbols were multiplied for magical purposes around dwelling-places. just as crosses are multiplied on Christian buildings. From them we may perhaps infer that the chief divinity of the pre-Semitic Canaanites was a mother-goldess, and that they were still organized on the matriarchal tribal basis. From the fact that nearly equal numbers of male and female hones were found in the crematory, it may be concluded that polyandry was not practised.

It was natural that a people dwelling in caves

should think of their deity as also inhabiting one. Traces of such a sanctuary seem to be found at Gezer. In the central valley, which lies between the two summits of the mound, a rock-surface about 90 ft. square has been unearthed, which is about 30 to square mas see a marks, varying in size from for inches to 6 ft in diameter. Two of these, a few inches to 6 ft. in diameter. measuring 3 ft. in diameter, are surrounded with small standing stones set on end and cemented together with clay. Another, 2 ft. 3 in. in diameter, has cut from its bottom a passage, too narrow to admit a full-grown man, which leads to a cave beneath the rock-surface. In this cave a large number of pig-bones were found, which suggests that the rock-surface above was a place of sacrifice, and that the blood and portions of the victims were poured down through the passage into the adutum below. The same cave is provided with a concealed entrance, which may have served some priestly purpose; and two other caves, with cup-marks in their floors, in the immediate vicinity evidently form part of the same complex (PEFSt, 1903, pp. 317-321; 1904, pp. 111-113). Similar rock-cut high places with caverns beneath them, dating apparently from the carliest period, have been discovered at Taanach (Sellin, op. cit. 34) and at Megiddo (Schumacher, op. cit. 156). All three sanctuaries bear a close resemblance to the Qubbet es-Sahra in the Haram at Jerusalem, with its rock-surface and underground passages. Cup-mark areas with small circles of standing stones have also been found at Tell Judeideh and at Tell es-Sâli (Bliss-Macalister, op. cit. 194 ff.;

Vincent, Canaan, p. 92 ll.).

The only other evidences of the religion of the Neolithic aborigines are annulets found in their caves. A few phallic emblems have been discovered, but these are not so common as in the later Semitic levels (PEFSt, 1902, p. 342; 1903, p. 22; 1904, p. 112). Along with them, in larger numbers, are found small stone rings (PEFSt, 1903, p. 23; 1904, p. 113; 1904, p. 120). These cannot be spindle-whorls, as was at first conjectured, since undoubted spindle-whorls are found along with them. It seems more likely that they are feminine symbols (analogous to the cup-marks) that were worn on the person as amulets (cf. the objects depicted by Schumacher, op. cit. 52). In the ashes of the crematory at Gezer a rude terracotta figure of a man's head was found (PEFSt, 1902, p. 358; 1904, p. 19). There is nothing to indicate that this was an idol. This race apparently stood upon a lower religious level than that of image-worship.

C. The Semitic Canaanites. — From the Egyptian records it is clear that, at least as early as 2500 B.C., Palestine was occupied by a Semitic race which exterminated the earlier inhabitants (Meyer, op. cit. i. 2, p. 389). From contemporary Bab. records it appears that this race was called Amurru, the Amorites of the OT (Meyer, ib.

465).
I. THE PANTHEON.—(a) General names for the gods,-Can, religion bore a close resemblance to the religion of the pre-Muhammadan Arabs and of the Semites in general (see Arabs, Semites). It was a complex system of polydæmonism and polytheism, in which everything that could do something, or was believed to be able to do something, was deified. Personal names of the gods were commonly avoided, and they were called by titles that expressed their power or authority.

1. El.—The most general designation of a divinity was cl (lleb. 58, 'god'), which probably means 'power' (from the root 58, 'be strong'). It is frequent in Amorite names of the 1st dynasty of Babylon (Ranke, op. cit. 99 ff.). In Palestine it occurs as early as 1500 B.C. in the list of cities conquered by Thutmose III.

conquered by I muthose III.

The place-names compounded with el are Y(a) '-g(e)-b-'a-ra'

= Jacob-el (Thutmose, No. 102; MFG, 1907, p. 27; Egyptian
makes no distinction between 1 and 7; Y(a)-kha-p-(e)-ra,
perhaps = Joseph-el, or Jesheh-el, in any case a compound with
c/(Thutmose, No. 78; MFG, 1907, p. 29; Mas-kha-'(e)-ra =
Mishal in Asher, probably also a wrongly vocalized el-compound
(Thutmose, No. 39; MFG, 1907, p. 16); Har-'(e)-ra = Har-el,
'mount of a god' (Thutmose, No. 81; MFG, 1907, p. 24).

In the Amarna letters of occurs from (Probable 1907) (1907), P. 39; Midka-ila
(163, 26). − He-milke (179, 36); Yabin-ila (218); Shabi-ila
(163, 26).

(126, 26).

From the time of the XXth dynasty we meet Raui-'(e)ra, From the time of the XXth dynasty we meet Kam: (9)ra, possibly = Levicel (Müller, Egppl. Researches, p. 49); (E)-ry-m = El-ram, an inspector under Ramses III. (Breasted, Records, v. 21); Rh-ny-ry-r Eschur-el, the chief of police under Ramses IX. (Breasted, iv. 253); Rh-ny-ny-Eschur-el, the wife of Seti 1, Ph-dyr-Bed-el, the king of the Canaanite city of Dor in the time of Ramses XII. (Breasted, iv. 278); Wi-ri-k-ty-ri-el Erket-el, a rich shipowner of Sidon in the time of Ramses XII.; Nh-k-m-rue-Makam-el, a Syrian prince of the same period (Breasted iv. 270). (Breasted, iv. 279).

(Breasted, iv. 279). All the place-names compounded with el in the OT are probably survivals of Camanite nomenclature. These are El-ide (Nu 281-87, 1s 148, 169, Jer 4834); El-koh (Nah II); El-telad (Jos 15<sup>20</sup> 194); El-telad (Jos 19<sup>20</sup> 197); El-telad (Jos 16<sup>20</sup>); Al-telad (Jos 16<sup>20</sup>); Joseph (Joseph (Joseph Joseph Joseph Joseph Joseph Joseph (Joseph Joseph Joseph Joseph Joseph Joseph Joseph (Joseph Joseph 
(los 1528, 2 K 147); Jirpe-el (los 1827); Mightal-el (los 1927);  $Ae^+el$  (los 1927); Penu-el (Gn 3234 etc.); Kabge-el (los 1521, 2 8 2329, 1 Ch 1122).

In none of these cases was cl understood as 'God' in a monotheistic sense, or even in monarchieal sense; nor was it the name of an individual deity, as it became later among the Hebrews. It was generic, and denoted the particular divinity who dwelt in a place, or whose activity was recognized in the name of a person. Any one of the innumerable gods or demons might be called by this title.

2. Ba'al .- When an el, or 'power,' was regarded as the 'proprietor' of a city or sanctuary, he was known as Ba'al. Here also no one god was meant, but every superhuman being, from the lowest sort of local damon to the highest Nature-god or tribal god, might become a ha'al by establishing a relation with a particular holy place (see BAAL). En'alnames are common in the Amorite period in Babylonia, e.g. in the Obelisk of Manishtusu (Hoschander, Z.1, 1907, pp. 285-297; Ranke, p. 72). Through Semitic settlers and captives, and through borrowing of Asiatic cults, many of the be alim of Canaan became naturalized in Egypt during the period of the XVIIIth and XIXth dynasties, being identified either with Set or with Montu. The name ba'al is regularly used with the article in Egyptian, as in Can.-Heb., which shows that it is in no sense a proper name, but only an appellative (see Be proper haine, but only an appearance (see Breasted, iii. 46, 140, 147, 154, 200, 271, iv. 25, 27, 36, 42, 44, 48, 57, 61, 63, 140). From these passages it appears that the Canaanitish b\*ālim were regarded by the Egyptians as primarily gods of storm and of war.

Of storm and of war.

A Ba'datt Zaphon, the feminine counterpart of the Biblical
Ba'dat Zaphon, appears at Memphis in the time of Ramses it.

(BAM, it. 2899). The daybook of a frontier official in the time
of Memphals records Ba'data-remep and Shem-ba'dat as names
of Memphals records Ba'data-remep and Shem-ba'dat as names
butter in the time of Hamses it. Book direased, it. (Ba'da'). A

(Breasted, iv. 219). The king of Gelal in the time of Hamses
att. was Zakar-ba'da' (Breasted, iv. 279). Muller adds the
names of Ba'dar-am and Sauf-ba'da' (Asien, 329). Ba'da'-ram
appears as a proper name in one of the letters discovered at
Taanach (Selhin, op. cit. 113). (For additional evidence of the
use of the name ba'd in ancient Canana, see Baxb, it. 399-b).

When the deities were viewed in relation to their worshippers, they were called by various names of kinship and authority, like human heads of families and rulers. Such names are 'amm or dâd, 'father nucle'; ab, 'father'; ab, 'brother'; mokek, 'king' am, 'judge.' In none of these cases is the title to be understood as the name of an individual god. Any clo roke all night become a 'father' or 'uncle' or 'king' by being worshipped by a particular group of people; consequently all these epithets are just as indefinite as are cl and ba' al.

3. Amm.—One of the oldest of these titles is comm.

3. Amm.—One of the oldest of these titles is comm. 'father-uncle,' which dates from a polyandrons stage of social organization, when the child did not know its father, but only a group of husbands of the mother, any one of whom might be either father or uncle. Under such circumstances the chief divinity of the tribe could not be known as 'father,' but only as 'omm, or 'father-uncle' (see 'AMM).

 belong to the earliest period of the Semitic Languages. These are  $Jokde\cdot lam$  (Jos 15%),  $Jokme\cdot lam$  (1 K 44%),  $Jokn\cdot lam$  (Jos 1222 etc.),  $Jocke\cdot lam$  (1 Ch 244),  $[Am\cdot lad$  (Jos 1959).

4. Dâd.—Similar in meaning to amm is dâd (Heb. 12), 'paternal uncle' (primarily 'beloved'), to centrs in West Semite personal names as early as the Obelisk of Manishtusu, e.g. Bit-dada (C. xi. 4; cf. C. xvii. 1), Budo-waqor (Can. Texts, ii. 3-43, 4). It appears perhaps in the name of the Egyptian commissioner Dudo in the Amarra letters (Nos. 44, 45, 52). The name of the city, Ash-dod, nay also be compounded with this divinity (cf. Ash-dot). Dâd lingers in Heb. names of persons, eg. El-dad (Nu 112), Eli-dad (Mu 312), Ibad-jahu (2 Ch. 2025), Bil-dad (Job 20 etc.), and the name is applied to Jahweh in Is 5', perhaps also in Am 82, according to the text of the LXX.

5. Abn.—When fraternal polyandry gave place to polygany and children knew their fathers, then the chief god of the clan was known as abn, 'father.' This stage of social development had already been reached by the Amorites. Proper names compounded with abn are common in tablets dating from the period of the Amorite 1st dynasty of Babylon. Two of the kings of this dynasty are Abi-csha'a and Sumu-abi. Other names of this period are Abi-rann (= Abram), Abi-arah, Abi-ila, etc. (see Ranke, 58). In the famous freese on the tomb of Khummhotep of the time of Seostris II. (c. 1900 B.C.), one of the Asiatics there represented bears the name '(Albs.ha'(a) ic. Abi-sha'n or Abi-sha. In the patriarchal tradition of Gn 29² the king of Gerar bears the name Abi-melek, and in Gn 14² the king of Admah is Shim-ab. In the Tell cl-Amama letters (149-156) we find Abi-milki, king of Tyre.

6. Ahu.—Another frequent title of deities in ancient Canaan was ahu, 'brother,' 'kinsman.' Amorite names of this type appear in Babylonia as early as the Obelisk of Manishtusn (Scheil, Textes thun.stm.), e.g., Ahu.tahu (A. xv. 14), Ahu.issny (C. xvii. 3), Ahu.patau (D. xi. 12), Ahu.shuinu (B. i. 7; C. v. 3); Ali-ahu (A. x. 25) (see Hoschander, ZA, 1907, pp. 260-265). In documents of the Hammurabi period we meet a large number of names of this formation (see Ranke, 62 ff.).

7. Melek.—Melek, 'king,' is not a Bab. title of divinities. Nevertheless, forms compounded with malk occur in the Obelisk of Manishtuss (Scheil, op. cit. 41 ft.), doubtless as names of Amorite settlers in Babylonia. In tun. Texts, xii. 34, Malik appears in a list of foreign gods. In the Amarna letters there are several compounds with melek, e.g. Alimitki, king of Tyre (nos. 149-146); 'Abdi-milki (77, 37; 252); Ri-milki (102, 36; 151, 45), or Milki (163, 27, etc.); Milk-urn (61, 53; 69, 85; 55, 43). The place-names 'Emeg-hum-melek (Gn 14<sup>17</sup>, 2 S 18<sup>18</sup>), which has probably come down from Canaanite times, and Yad-hum-melek in the list of Sheshonk (Breasted, iv. 351), may contain this title of deity. See, Intrher, Ammontres.

8. Adon, 'master,' which is so frequent as a designation of deities in the OT and in Phrenician inscriptions and proper names (see Lidzbarski, Nordsen, Epig, 1521; K.173–398, n. 2), appears in the Amarna letters in Adama, the name of the king of 'Arqa (79, rev. 2; 119, 10).

9. Dan, 'judge,' is a common Semitic epithet of

9. Dan, 'judge,' is a common Semitic epithet of gods. In Assyrian it is a title of Shamash, the sam-god, and is found in the names of the king Alshur-dan and the general Degen-Ashur. In the Amaria letters it appears in Addu-dan (163, 32) and Alda-dayor (239-240). It survives in the Heb, place-names Dan (6n, 144 etc.) and Maharch-dan (163, 38), and probably in the tribal name Dan, which bears the same relation to the personal names Daniel and Abidon as the clan-name Ram hears to Jehorata and Abirana, or as Jacob and

Joseph bear to the place-names Jacob-cl and Joseph-cl in the list of Thutmose III.

10. Kôsh, 'lord,' is found in the place-names Ka-su-na (List of Thutmose III., No. 37; JUFG, 1907, p. 16) =  $Kish \delta n$  (1g 47 etc.) and  $El\cdot j \phi sh$  (Nah P). This title survives in Heb. in the personal name  $K \phi sh\cdot Yahu$  (1 Ch 15<sup>17</sup>) and  $Bar\cdot j \phi sh$ (Ezr 2<sup>53</sup>, Neh 7<sup>55</sup>), also in the Edomite royal names Kaush malak (KIB ii. 21) and Kaush-gabri (KIB ii. 239). In later times Kosh became the standing

11. 239). In facer times Acos became inc scanning title of the national god of the Edomites.

11. Addar, 'noble,' as a title of deities, may perhaps be inferred from the Pal. place-names Addar (Jos 15<sup>5</sup>)= Hazar-addar (Nu 34), and Adoraim (2 Ch 11<sup>9</sup>), both of which are mentioned in the 13th of Shedneth (Paradal in 26, 26, 279). in the list of Sheshonk I. (Breasted, iv. 350, 353), and 'Ataroth-addar (Jos 16° 1813). Cf. the names compounded with adar in Bab. (ZA, 1907, p. 256).

12. Shem.—A curious anticipation of the late

Jewish use of shem, 'name,' as a substitute for Jahweh is found already among the Amorites in the use of *shumu*, or *shem*, as a title of divinities. This is seen as early as the Obelisk of Manishtusu (B. i. 7; C. v. 3) in the personal name Ahu-shumu, 'name is a brother' (ZA, 1907, p. 264). It appears in the names of two of the kings of the 1st dynasty of Babylon, Sumu-ahi and Sumu-lâ-ilu, and also in such names as Sumu-ramu, Sumu-atar, etc. (see Ranke, 151). In the Amarna letters we mest Shumu-Adda, i.e. Shem-Hadad, prince of Sham-huna (no. 220), Shum-Adda (11, 13; 221); cf. the

fleb. name Shemu-cl, Samuel.

13. 'Elyon, 'high,' is preserved in Gn 1418st as the title of the god of the Canaanite priest-king Melchizedek. According to Phile Byblius (ap. Euseb. Pracp. Evang. i. 36), this name was in use among the Phenicians. It also survived among the Hebrews as a title of Jahweh.

(b) Nature-gods .- Having now enumerated the general titles of divinity, we preced to investigate the individual deities of the Canaanites. Here, as among all the other Semites, the powers of Nature

held a conspicuous place.

1. Shemesh, or Shamash, 'the sun.'-Shamash is mentioned along with Belit and the other gods as one of the chief divinities of Gebal in the Amarna letter, Winckler, No. 87, 65. In No. 156, 6 he is coupled with Adad, the storm-god. In other passages he is spoken of as the source of human life and joy (144, 11; 149, 52; 150, 21). Several place-names compounded with Shemesh in the OT bear witness to the ancient prevalence of his worship; e.g. Beth-Shemesh, 'hônse of the sun,' in Judah (Jos 15<sup>10</sup> etc.)='Ir-Shemesh, 'eity of the sun' (Jos 19<sup>11</sup>); also in Naphtali (Jos 19<sup>18</sup>), and in Issachar (Jos 19<sup>12</sup>); 'En-Shemesh, 'spring of the sun' (Jos 15<sup>7</sup> 18<sup>17</sup>). Synonymons with Shemesh is Heres, which is found in Har-Heres, 'mount of the sun,' a city of the Amorites (Jg 1<sup>28</sup>), and Timmath-Heres, 'territory of the sun' (Jg 2<sup>28</sup>). It so happens that none of these names occurs in the Evyntian records or in the Amana letters, but worship; e.g. Beth-Shemesh, 'house of the sun,' in Egyptian records or in the Amarna letters, but there is no reason to doubt that they belong to the Canaanite period.

2. Yārēah, 'the moon,' is not mentioned as an object of worship in the pre-Israelitish period; the names Sin and Sin-ai seem, however, to attest the antiquity of the moon-cult under its Bab. form. The native Can. Heb. name is found, apparently, in Verehô, Jeriche (se Jerome, OS, 78. 6; the older comm.; Siegfried-Stade, Heb. Worterb.; Sayce, Early History, p. 250). Lebānāh, 'the white,' one of the names of the moon, seems to be found in the place-names Libnah and Lebonah; and Hadashah, 'the new moon,' in the town of that name (Jos t527). Bit-arha (Kundtzon, Amarna, 83, 29) seems to be the same as Beth-yerah, 'house of the new moon.' The worship of the moon prevailed among the

Hebrews down to a late date (Dt 419 173, 2 K 235, Jer 82, Job 3126), and was universal in other branches of the Semitic race; it cannot, therefore, have been lacking among the Canaanites. Star-worship also was probably not absent, although no traces of it have survived, unless it be in the place-name Kesil, 'the constellation Orien' (Jos 1530). The name Beer-sheba, 'well of the Seven,' may also be connected with the cult of the Pleiades.

3. Zaphon, 'the north,' or Ba'al Zaphon, 'owner of the north,' appears in the place-name Zapuna (Amarna 174. 16) and Zaphon in Gad (Jos 13", Jg 121). It occurs also in the feminine form Ba'alat Zaphon as a deity worshipped at Memphis (Sallier Papyrus, 4, 1 rev.) (see BAAL, ii. 288<sup>b</sup>).

4. Addn, Adad, or Hadad, was the storm-god of Canaan. Ad-da-ad appears written phonetically in the list of gods, K. 2100 (see Bezold, PSBA xi. p. 174 ff.), with the added remark that this name is used especially in Amurru (the Amerite land).. This god entered Babylonia at an early date with the Amerite settlers, and there became synonymous with Ramman, 'the thunder' (Zimmern, KAT' 442 ff.; Jastrow, Rel. Bab. i. [1905] 146 ff.). In the time of the Amorite 1st dynasty he occupied a eenspicuous position. In the conclusion of the Code of Hammurabi, where the king pronounces curses upon those who shall abrogate his laws (xliii. 64), he says:

"May Adad, the lord of abundance, the ruler of beaven and earth, my helper, deprive him of the rain from heaven and the water-floods from the springs! May be bring his land to destruc-tion through want and hunger! May be break loose turiously over his city and turn his land into a heap left by a whirtwind!" In Amarna 149, 13f, he is described as the god 'who utters his voice in heaven, so that the whole

Who utters his voice in leaven, so that the whole land trembles at his voice' (cf. 150, 7).

His name occurs more frequently than any other as an element in personal names in the Amarna letters, e.g. A-ad-du (Winckler, 125, 17), Ad-da-ya (163, 37, etc.), I apti-Ha-da (217a, 6, ct., 444), Alib.-Ad-di (53, 1), also written helegraphically Rib-13l (63, 2), Shaun-ad-da (11, 18)=
names such as Amtr-IM, Ad-di M, Natur-IM, Vapa-IM, Var-path-IM, IM-dayan, Mut-IM, and IM-mathri is to be read Addu or Ba (di Robottul (see BaA), ii. 2909). In any case it is certain or Ba'al is doubtful (see BAAL, ii. 290b). In any case it is certain that Addu had become the chief ba'al of Canaan, and that the trace rather had become the enter of at of Canasan, and that the Egyptians thought mostly of him when they spoke of the be'all (see above, C. I. (a) z). In the OT the name survives in the personal name Hadad (6n 3638, 1 K 1114) and in the place-name Hadad-rimmon (Zec 1211).

In early Bab, inscriptions this god frequently bears the ideographic title MAR-TU, which, according to an Assyr. interlinear version (Reisner, Hymn. p. 139, lines 143, 145), is to be read Amurru, 'the Amorite'—a name given with reference to his foreign origin. He bears also the title KUR-GAL, 'great mountain,' and is ealled 'lord of the mountain,' which seems to indicate that he had become the ba'ul of Lebanon, the region in which his worshippers dwelt (Jensen, ZA xi. 303 f.). Aramaic endorsements on Bab. documents of the Persian period, both MAR-TU and KUR-GAL are rendered by אור, i.e. Amurru (Clay, Bab. Exp. Univ. Penn. x. 7, xiv. viii, also Studies in memory of W. R. Harper, i. 301, 304, 311, and Amurru, the Home of the Northern Semites, 1909). On Bab. seal-cylinders he is represented holding a boomerang (the thunderbolt) in his right hand, and a spear (the lightning) in his left hand, oceasionally as standing on a stag or a wild goat. These attributes identify him with the storm-god (see E. Meyer, Sumerier u. Semiten = ABAW, 1906); the goddess Ashera is regarded as his consort (Reisner, 139) as well as the consort of Ramman=Addn (Sayce, ZA vi. 161). There is no reason, accordingly, to doubt that Amurru is merely a title of Adda (see

Zimmern, KAT 443, 447; Meyer, Gesch. 466 ff.).

5. Resheph, 'the lightning,' is hardly more than a variant of Addu. Under this name the god was early adopted from the Canaanites by the Egyptians. A text of Ramses III. reads: The officers

are mighty like Resheph. . . His name is a flame, the terror of him is in the countries' (Breasted, iv. 22). A city in Egypt bore the name of 'House of Resheph' (TSBA iii. 421). On the Egyptian monuments he is represented with Semitic features, armed with shield, club, and spear, wearing a tall conical cap, around which is a fillet bearing a gazelle's head. The type does not differ much from the representations of Amurru-Hadad (see the figures in Müller, Asien, p. 311; Equpt. Researches, p. 33; Spiegelberg, OLZ, 1908, col. 529). Resheph continued to be worshipped by the Phomicians down to the latest times (see Hidzbarski, Handbuch, 154, s.r., also Ephemeris, i. 150 f.; Baethgen, Beitrage, 50 ff.). He survives also in the place-name Rushpuna (Rost, Tighat-Pileser III., Annals, 126; Smaller Inscriptions, i. 5, iii. 1). A Phœnician seal of the 14th or 15th cent. (Ménant, Glypt. 204 f.) depicts him in a manner similar to the Egyptian representations. In the OT resheph is the lightning-stroke of Jakweh, with which He inflicts pestilence and death (Dt 32<sup>24</sup>, Ps 78<sup>38</sup>). Synonymous with Resheph was Barak, 'lightning,' which appears in the place-name Bene-Berak (Jos 1945), and the personal name Barak (Jg 46 etc.). Closely connected is Reseph, 'thunderwhich occurs in the Phoenician compound name המקוחת (Cook, p. 361), and in the name of Sanl's concubine Rispath (28 37).

6. Sharabu and Birdu, 'heat' and 'cold,' appear

in Bab. lists of gods as the Amorite names for corresponding Bab. divinities (Zimmern, KAT'

415).

7. Selem, 'darkness,' is a well-known deity in Arabia and in Babylonia. He appears in the Amarna letters in the place-name Burnesilim (Winckler, 71, 64, 67), and in the OT in the mountain Salmon (Jg 948) and the town Salmonah (Nu 3341).

8. Uru, 'light,' seems to be found in Uru-salim, Jerusalem, in the Amarna letters; also in Milk-uru (Winckler, 61, 53, 69, 85, 52, 43), with which should be compared Urn-milki, king of Gobal in the Annals of Sennacherib, ii. 50. Personal names compounded with Ur or  $\theta r$  are common in later Heb. and Phosnician. According to Clay, Uru is used as a

synonym of Amurra in Bab. texts.

9. Sheel, 'the under world,' seems to have been 9. Sheot, the angle word, seems to have been personified as a deity by the ancient Semiles, to judge from the proper names Methu-shael, Misheel, Shorit (Saul). Hence the place-name in the list of Thutmose III., No. 110, Bu-th-shari-ya, which can hardly be regarded as a Babylonianizing writing of Beth-el with inserted sha, may be Beth-She al (see Miller, M'G, 1907, p. 29); and Gibenth-She'ad (see Miller, M'G, 1907, p. 29); and Gibenth-She'ad (1 8 11 4 15 3, 1 8 10 29), which in 1 8 10 3, apparently, is called 'the hill of God,' may have derived its name from the god of the under world rather than from the historic king of Israel (II. P. Smith, Harper Memorial, i. 61).

ro. Dagon appears in Babylonia as early as 2150 B.C. in the names of the kings of the dynasty of Isin-Idin-Dagan and his son Ishme-Dagan,-also in the name of one of the early patesis of Assyria, Ishme-Dagan. This deity is not Old Babylonian, but was first brought in by the Amorite invaders. A Canaanite in the Amarna letters (Winckler, Nos. 215, 216) bears the name Dagan-takala. town Beth Dagon appears in a list of Ramses III., itself copied from an earlier original (Müller, Egypt. Research, p. 49). It is the same as *Beth-Dagon* in Judah of Jos 15<sup>41</sup>. There was another *Beth-Dagon* in Asher (Jos 19<sup>27</sup>). The oldest and most probable etymology of this name is that of Philo Byblins. who connects it with dagan, 'corn'; Dagan was thus a sort of Semitic Ceres.

11. Worship of animals.—The early Canaanites, like most primitive races, worshipped animals,

partly on account of their superior strength and cunning, partly because of their utility, and partly because of their adoption as totems of clans. In later days these animals were subordinated to the great gods as attributes or symbols. Clay images of cows and bullocks, and human figures with the heads of these animals, have been found in large numbers in all the mounds of Palestine (see Macalister, PEFSt, 1903, p. 41; 1904, p. 331; 1907, p. 245; Sellin, Tell Ta'annek, p. 107). The worship of Jahweh under the form of a bullock, and the use of the title אביר, 'bullock,' as a name of Jahweh by the later Hebrews, are doubtless survivals of this cult. Images of horses are also found in the mounds (*PEFSt*, 1903, p. 41), and the place-name *Hazar-susah*, 'court of the mare' (Jos 19<sup>5</sup>), also suggests this cult. Sacred horses at Jerusalem are mentioned as late as the time of Manasseh (2 K 2311), and the Phonician name coordy, 'servant of the horses, occurs (CIS i. 1, p. 95). Bronze figures of serpents, and serpent-heads as anniets, have been found both at Gezer and at Taanach (PEFSt, 1903, pp. 42, 222, 1906, p. 119; Sellin, op. cit. 112). The goddess 'Ashtart is often represented holding serpents in her hands. One of the towns of the Calebites in later Judea bore the name 'Ir-nahash, serpent-town,' and the cult of a bronze serpent in Jernsalem lasted down to the time of Hezekiah ocussuem assed own to the time of Hezekiah (2 K 18). Figures of fishes are found at Gezer in different levels (PEFst. 1992, p. 342; 1963, p. 39). The Heb, place-names Bethear, house of the hard's 'Bethelough,' house of the land's 'Bethelough,' house of the holm's 'Bethelough,' house of the holm's 'Bethelough,' house of the holm's 'Bethelough,' house of the printipe Cananite and so animals at these places. Other animal place-names that may have religious meaning are Ajjadon, 'Stag-town' (dg. 28–129), mentioned also in the Amarra letters (Winckler, 173, 20, 186, 57); Humdah, 'Brand' (Jos 163); Hagar-shad,' court of the fox 'Gos 152 1997; Tehran, 'Lands (1834); Latish, 'Bon (Gos 33); 'Bellon, 'call' (Jos 1529); also 'Bethelough's 'Bethel (2 K 184). Figures of fishes are found at Gezer in

12. Other Nature-deities. - Besides the gods just enumerated, there was an immense number of nameless numina that presided over all sorts of physical objects, and were known as their b'ālim

(see BAAL, vol. ii. p. 291).
(c) Ancestor- and hero-warship. -- The Semitic Canaanites believed in the continued existence of the dead, and practised sacrificial rites in their honour. At Gezer the Amorites used as burialplaces the caves that had previously been occupied as dwellings by their non-Semitic predecessors. Around the walls of these caves, in small stone enclosures, the nobility were buried. The common people were piled one upon another in the middle With the dead were placed food and of the caves. drink, clothing, ornaments, weapons, seals, scarabs, amulets, and small figures of domestic animals, all of which were designed to supply the needs of the soul in its journey to the other world. In the earlier period the dead were usually deposited in the contracted position of an unborn child, possibly to express the thought that death is birth into another life. Flat benches and altar-like structures in the burial-places suggest the performance of sacrificial rites, and this theory is confirmed by the presence of bones of animals and of infants in connexion with adult burials. Cup-marks found in the eaves also attest the existence of religious practices (see PEFSt, 1902, p. 351 ff.; 1903, pp. 14 ff., 23, 396, 323; 1904, pp. 1194f., 324; 1905, pp. 32, 79, 307; 1907, p. 191; 1908, pp. 187, 203). Similar remains have been found by Sellin at Taanach and by Schumacher at Megiddo.

by Schullacher at Megdddo.

Certain place-name in Palestine also suggest the cult of the dead, e.g. Obboth, 'ghosts' (Nu 21ht. 3352a); 'Emeq-rephaim, 'valley of the shades' (Go 18' etc.). The graves of the patriarchs, which were reverenced by the Hebrews in later times, were probably survivals of ancient Canannitish sanctuaries, e.g., the grave of Abraham and Sarah at Hebron (Gn 230° 25°), of Accob at Abel-mizraim (Gn 50°), of Joseph at Sherber (Gn 28°), of Jacob at Abel-mizraim (Gn 50°), of Joseph at Sherber (Gn 28°), and the common factor of the c names, accordingly, point to a cult of real or assumed ancestors at their supposed places of burial (see von Gall, Attisr. Kultat their supposed places of birnal (see you Gall, Altisr, Kult-stitten, pp. 65, 129). A number of these names occur already in the Egyptian inscriptions, and all of them probably go back to Canaanite times. Fer other forms of ancestor-worship among the Hebrews that may be derived from the Canaanites, and that at least help to interpret the facts just adduced, see ANCESTOR-WORSHIM (Hebrew), vol. i. p. 444.

(d) Departmental deities.—Besides Nature-gods and deified ancestors, the Canaanites had numerous divinities who presided over various aspects of human life or over abstract qualities. Conspicuous

among these were

I. 'Ashtart, the 'Ashtoreth of the OT and the Astarte of the Greeks. The etymology of her name is obscure, but her function is clear. She was the goddess of sexual love and of reproduction (for the archaeological and literary evidence of the early existence of her cult in Canaan see 'ASHTART, One of her epithets was Kadesh (cf. kedesha, temple harlot'), and under this name she is often mentioned in Egyptian texts (Müller, Asicn, 315; Egypt. Res. 32). In monuments of the XIXth Egypt. Res. 32). In monuments of the XIXth dynasty she is depicted in un-Egyptian fashion facing straight forward, standing on a lion, naked, or clothed in a skin-tight garment, holding in one hand a lotus-blossom and in the other a serpent, to typify both the charm and the peril of her cult. Usually she is grouped in a triad with Resheph and the ithyphallic Min. Similarly in a Bab. text (Reisner, *Hymn*. p. 139, lines 143, 145) she appears as the consort of Amurrn-Hadad-Resheph. In all the mounds of Palestine large numbers of terracotta Ashtart plaques, six or seven inches in length, have been discovered, and also moulds in which these were manufactured. They are limited to the later period, when the land was under Egyptian rule (PEFSt, 1904, p. 118; Sellin, Tell Ta'annek, p. 106). The commonest type of Ashtart figures bears a close resemblance to the Egyptian representations described above (see the drawings in Bliss-Macalister, pl. lxvi. 10-16, lxviii. 1, 2; Clermont-Ganneau, Arch. Res. ii. 242; Vincent, Canaan, 161 ff.). A second type, which is most frequent at Taanach (Sellin, 106), depicts her with a tall striated head-dress, necklace, anklets, and girdle, with her hands held to her breasts. suggests rather Bab. influence. A third type has horns like the Egyptian Hathor (PEFSt, 1903, p. 225). A fourth type has a bird-like beak and huge earrings (Sellin, fig. 113). Here perhaps Cypriote influence is to be detected. Still a fifth type recently discovered at Gezer (PEFSt, 1909, p. 15) represents the goddess with a veil, like the statue discovered by Oppenheim at Tell Halaf (Das atte Orient, x. 1). This seems to reveal Hittite influence. In Taanach, Sellin found 19 'Ashtarts, but not a single Ba'al. The same proportion holds true of the other mounds, and shows that 'Ashtart must have occupied an altogether unique position in the esteem of the ancient Canaanites.

2. 'Anath.-The etymology and meaning of her name are obscure (perhaps from my in a transitive sense, 'afflict,' 'conquer'). That she has anything to do with the Bab, goddess Antum, the consort of Anu, is extremely doubtful: (1) because the reading Antum is uncertain; (2) because this goddess

plays an unimportant part in early Bab. religion; and (3) because in Canaan this name has the initial and any which is not tound in party and was widely worshipped in the Semitic world, and there is no reason to doubt that she consistive Semitic divinity. The place-name Anati in the Amarna letters (Winckler, 125. 43) probably contains her name. Beth-Anath in Naphtali is mentioned in the list of Thutmose III. (No. 111), also in a list of Seti I. (Müller, 195; cf. Jos 19<sup>38</sup>, Jg 1<sup>33</sup>), and there was another Beth-Anath in Judah (Jos 1559). 'Anathoth, near Jerusalem. was also named after her (Jer 1), and the father of Shamgar, judge of Israel, was called 'Anath, according to Jg331 (? cf. 56). Her cult had penetrated to Egypt as early as the reign of Thutmose III. (Müller, Asien, p. 313). A team of horses belonging to Seti I. bore the name 'Anath is satisfied' (Breasted, Anc. Rec. iii. 43). One of the dogs of Ramses II. was called 'Anath is protection' Ranses II. was caused Anath is protection (Breasted, iii. 201). In one of his inscriptions Ramses III. says: 'Anath and Ashtart are his shield' (Breasted, iv. 62). On the Egyptian monuments Anath is represented in profile, holding a shield and spear in her right hand, and a club in her left hand. By the Egyptians she was evidently regarded as a war-goddess. Her name occurs down to late times in Phænician inscriptions

(See Baethgen, Beitr, p. 52).

3. Edom, 'maker,' whose worship is attested by the names 'Obed-Edom (2 S 610) and ערואום (CIS i. 367), appears in the place-name Sha-ma-sha '(E)-tiu-ma = Shamash-Edom, in the list of Thutmose III. (No. 51; Müller, MVG, 1907, p. 18); also, perhaps in Udumu (Amarna, Winckler, No. 237), Adam (Jos 316), and Admah (Gn 1019 142. 8, Dt 2923 Hos 11°). In an Egyp, magical text we meet 'Resheph and his wife Edom' (Müller, p. 315), which shows that Edom was also construed as

feminine.

4. Aven, 'strength,' is perhaps present as the name of a deity in Beth-Aven, 'house of strength' (cf. Beth-el, Beth-Shemesh; Jos 7<sup>2</sup> 18<sup>12</sup>, 1 S 13<sup>5</sup> (23). In Hos 4<sup>15</sup> 10<sup>8</sup> it appears as a sanctuary.
Bezek, 'scattering' (?), seems to be a Divine

name in the place-name *Qir-Bezek* in a list of Ramses III. (Müller, *Eg. Res.* p. 49), and in the

name of the Canantic king, Adoni-Bezek, 'my lord is Bezek' (Jg 1<sup>5-7</sup>).

6. Gad, 'fortune,' is a well-known Semitic deity (see Arabs, vol. i. p. 662; Baal, vol. ii. p. His cult survives in the place-name Migdal-Gad (Jos 1587), and also probably in the tribal

name Gad.

7. Gil, 'joy,' must be a god in the woman's name Abi-Gil, which cannot be translated 'father of joy,' but must be translated 'joy is a father.' The place-name Gilo(n) (Jos 15<sup>23</sup>, 2 S 15<sup>12</sup>) may also be named after him.

8. Hiba (etymology unknown) appears as a god in the name of the king of Jerusalem in the Amarna letters, 'Abd-Hiba, 'servant of Hiba.'

9. Chemosh (etymology unknown) appears perhaps in the place - name Michmush, 'place of

Chemosh.

Chemosh.

70. Muth, 'death,' was a deity among the Phomicians (Enseb. Pracp. Econg. i. 38), and appears also in the Heb. personal name Ahi-moth, 'death is a brother' (I Ch 629). It may be found in the place-name 'Az-maweth (Far 224, or Beth-'az-maweth, Nch 728), 'death is strong': perhaps also in Jar-muth, a Canaanitish city (Jos 10<sup>3</sup> etc.), and Jeri-moth (1 Ch 7<sup>7</sup> etc.). This seems more likely than that we have here the Egyptian deity Muth. None of the other Egyptian deities obtained such a foothold in Canaan that towns were named after them, and it is not probable that this happened to this relatively obscure goddess.

11. 'Azar, 'help,' appears as a god in such proper names as Abi-Azor, 'Azar is a father,' Eli-Azor, or 'Azari-el, 'Azar is god.' Hence the name of the famous mosseba Elo n'ezor, which was probably a survival from Canaanitish days, should apparently

be translated 'stone of Ezer.

12. 'Eŝan, 'maker' (cf. 'Edom'), was worshipped by the Phenicians, according to Philo Byb. (Euseb. Prace, Evana, i. 35), who calls him Usous. He seems to have been regarded as a rough huntsman, Esau of Hebrew tradition. It is probable like that he was known to the early Canaanites, although his name does not occur in any of our sources. His feminine counterpart A.S. ti = neg seems to be found in Egypt (Muller, 316). The picture of her on a rock in the desert near Redesich (Lepsius, Denkmaler, 138) represents her as a wild huntress on horseback, brandishing a shield and spear. In a votive inscription of the XVIIIth dynasty, according to Ebers, 'A-si-ti of the sand is

dynasty, accounting to rates, Assert of the said is named along with Kadesh.

13. Palet, 'deliverance,' appears as the name of a god in the place-name Beth-Palet (Jos 15<sup>27</sup>). Neh 1126), as well as in several Heb, personal

14. Sid, 'hunter,' or 'fisher,' perhaps identical with Agreus, 'the hunter,' or his brother Halieus, 'the fisher,' in Philo, ii. 9, appears as a god in such Phomician personal names as 'Abd-Sid, Yuton-Sud, Han-Sid, and in the compound Divine names Sid-Melgart and Sid-Tanit. The antiquity of his cult is proved by the name of the city Sid-on (Meyer,

18 proved by the name of the try yarma (steper, Gesch, 2) i. 1, p. 392).
15. Sedeq, 'righteousness,' is a god in the personal name Brn-Sedeq (Winckler, Amarna Let. 125, 37), also in Adoni-Sedeq (Adonizedek), the Canaanite king of Jerusalem (Jos 10<sup>1,3</sup>). He surrections of the second s vives in the Phon, personal names Sedeq-Rimmon

and Sedeg-melek.

and searcy-meech.
16. Shalem, 'peace,' is well attested as a Phenician deity (Sidon, 4; CIG 4449; CIS 15; see Lidzbarski, s.r.; Winckler, KAIT 224). Ite appears also frequently in Heb. proper names. such as Abi-Shutom, Shutmi-cl, etc. His worship in ancient Canaan seems to be established by the name of the city Jeru-salem (in the Amarna letters Uru-salim), which may mean either 'city of Shalem,' or 'Uru is Shalem,' and also by the sanctuary Jahweh-Shalom (Jg 6<sup>23</sup>). In the Amorite period in Babylonia he appears as Shulmana, whose name was used frequently in compounding the names of later Assyrian kings, e.g. Shalman-ezer.

17. Jahweh.-Whether Jahweh was known to Amorites in Canaan and in Babylonia is a

hotly-debated question,

The facts are these: In Neo-Babylonian documents from The facts are these: In Neo-Rabytonian documents from Nippur, Jewish names occur in which an initial Jubb is represented by Jabb, e.g. Jahn-natunu=Jeho-nathan (Clay, Eusimess Documents of the Marushk Sons, p. 19). In the same documents final Jahn or Jah is represented by Jama=Juwa, ness Documents of the Muroshi Sons, p. 19. In the same documents final John or Jah is represented by Jamas Jouca, e.g. Abi-jourst—Mi-jah, Abi-jourst—Mi-jah. The long list of ames of this sort given by Clay (Lindt on the Old Techturent, p. 244) leaves no doubt of the identity of Jana with Heb. Jah. In Assyrian, mittal Jebo is represented by Jan, e.g. Jana-bu-zi the end of names John or Jah is also represented in Assyrian the Heavish, Narad-bi-jourst—Nech-biah, Az-ri-jout-or Azariah. Now, in documents of the 1st dipast of Baly lon, where Amortic names are so common, we find Jana-bu-jout-life (tran. Texts, iv. 25), which, after the analogy of the Assyrian Assyrian, Jana-bu-jout-life (tran. Texts, iv. 25), which, after the analogy of the Assyrian through the Jana-bu-jout-life (tran. Texts, iv. 25), which after the analogy of the Assyrian through the Jana-bu-jout-life, Jana-Ju-jout-life, Jana-Ju-jo Ja-um-ilu, as Delitzsch, Sayce, Hommel, and Winckler think, is

Januarita, as Delitzsch, Sayce, Hommel, and Winckler think, is more doubtful; still it is not impossible.

Coming now to Cansan, is one of the tablets of the Amarna period this overed at Tannach the name. Abijanai or Abijanai carried the course (Schin, Title Informack, p. 115). It books as though we occur (Schin, Title Informack, p. 115). It books as though we beginning with Jah occur in the Amarna letters, and may possibly be Jahweh-compounds. Furthermore, in place-manus of Cansan in the early Egyptan inscriptors Jah occurs at the end of words in the same manner as in later Heb. formations, in the list of Thutnose in, (No. 97) the name Bett-jad occurs, which can be read only Beth-Jah (d. Bithiah, 1 Ch 4\*). This is precisely the same sort of formation that is found in the list of Shishak', Handraid (No. 55), Shanaay-d (No. 115), Bedy and the same stating in Jade (Maller, Lieber, p. 162, 312, 4145, 1997, p. 20). Jastrow (JHL, 1894, pp. 191-222) tries to explain Jah in these forms, and in Heb. names, not as the Divine name Jahweb, but as only an emphatic afformative. Delitzed (Paradice, Bedt) and all Jahu increases edifficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets that Jah and Jahu increases are difficult in view of the facets and Jah and Jahu increases are difficult in view o from Jahuch. Both of these theories are difficult in view of the facts that Jah and Jahu intrehange at the ends of names, and that formations ending with Jah increase in Heb. history in the that formations ending with Jah increase in 16th, instory in the same proportion as formations be ginning with  $JJ\phi$  (Gray,  $H\phi$ ). Prop.~Names,~p.~162).~ In Gn 22-14 Mori-jah is explained as though it were a Jahwebt-compound. This shows at least the feeling of the ancient Hebrews that Jah at the end of names was Jahweb. Muller and Sellin singgest that names of this sort was Jahweh. Muller and Sellin singest that names of this sort may be due to early settling of Hebrews in Canan; but the tradition that Israel first came to know Jahweh through Moses is well attested by the facts that no names compounded with Jahweh are found in pational tradition before the time of Moses, and that names of this sort are exceedingly rare before the time

On the whole, the evidence seems favourable to the idea that Jahweh was known to the Amorites in Canaan and in Babylonia as early as 2000 B.C. If this be so, it is easy to see why he was worshipped by the Kenites, from whom the know-ledge of him passed to Israel (see, further, art. JAHWEH).

(e) Bab, gods in Canaan,—It is now known from the Bab, inscriptions that between 3000 and 1700 B.C. Palestine stood almost constantly under Bab. influence. The depth of the impression that Bab. civilization left at this time is shown by the fact that in 1400 B.C., after Canaan had been 200 years under Egyptian rule, its people still used Babylonian for correspondence with the Pharaoh and with one another. The mounds also contain abundant evidence of the influence of Bab, art (see Paton, Early Hist, of Syria and Palestine, p. 49 ff.). It is not surprising, therefore, that Bab, religion exerted a profound impression upon ancient Canaan, and that many of the gods of Babylonia were adopted in that land.

I. Sin.-The cult of the moon-god under his Bab, name Sin is proved by the names Sin-ai and the Desert of Sin, perhaps also by zano, the name of the Canaanite king of Admah (Gn 142; ef. Jensen.

ZA vii. 177). On the cult of the moon in the desert see von Gall, Altisr. Kultstatten, p. 2. 2. Ramman-Rimmon was the Bab. equivalent of the Amerite Adad (the root ramann, 'roar, 'thunder,' occurs only in Bab.), but he was introduced into Canaan as a separate deity. Giti-Rimuni occurs in the Amarna letters (Winckler, 164. 45) = Gath-Rimmon (Jos 1945 21246, 1 Ch 654 (69)). 104. 45): Cattle-teamon (508 19 2): A C16 0 c., We find also Kimmon-percy (Nn 3319), the chiff of Rimmon (Jg 205-9 212), the spring of Rimmon (Jos 1522 19); Rimmon in Zebulun (Jos 1913, I Ch 662-97), and Hudad-Rimmon (Zee 129), which is specially interesting because of its identification of Adad with Ramman.

3. Nin-ib. - The god whose name is written ideographically NIN-IB has lately been shown to be represented in Aram, translations by אניבה (Clay, Bah, Exp. Univ. Penn, x, 8 f.; JAOS xxviii, 135 ff.; Studies in Memory of W. R. Horper, i. 287 ff.). This, he thinks, should be read En-mashti=En-This, he times, should be real the meant.—Bit murit, the Sumer, equivalent of Bel-anuru, 'lord of the Amorite.' In this case NIN-IB would be a god of the West who had migrated to Babylonia; but the equivalence with En-marti

is very doubtful, and the name seems to be too old in Babylonia to have come in with the Amorites (see Jastrow, Rel. der Bub, u. Ass. i. 57). More plansible is the pronunciation Ennanumeshti, 'bord of the creatures' (Hrozný, RN, 1908, p. 339 II.), in which case this is a genuine old Bab, divinity. He appears in the Amarna letters in the placename Bit.NIN-IB, near Gebal (Winckler, 55, 31), and near Jerusalem (183, 15), also in the personal name' Abd.NIN-IB (53, 39), in all of which cases it is possible that he is merely the Bab, equivalent of some native Can, deity.

4. Anu, the Bab. sky-god, is perhaps found in Anaharath (Jos 19<sup>19</sup>), which appears already in the list of Thutmose III. (No. 52) as ('E)-nu-h(e)-r-tu;

also in Ben-Ana (Amarna, 125, 35).

5. Lahmu, the god of fertility, is perhaps found in Beth-lehem (so Fomkins, Sayce). Beth-lehem (so Fomkins, Sayce). Beth-lehem (thouse of fertility, which is found as an explanatory gloss in Mic 5' (LXX), seems to confirm this view. That Bethlehem was the seat of a regular cult is evident from 1 S 20<sup>94, 29</sup>, where David is said to have gone to Bethlehem to perform the annual sacrifices of his clan.

6. Nabu, Nebo, the patron god of Borsippa, the scribe of the gods, appears in the town Nebo in Moab (Nu 32<sup>2-38</sup>), also Nebo in Judah (Ezr 2<sup>2</sup> 10<sup>4</sup>, Neb 7<sup>30</sup>), and Mount Nebo in Moab (Nu 33<sup>4</sup>7, Dt

3249 341).

7. Nergal, the war-god, is found on a seal-cylinder of Cananitish workmanship, discovered in the Amarna level at Taanach, which bears the inscription, 'Atanahili, son of Ilabsi, servant of Nergal.' In this case the possibility must be reckoned with that Nergal is the Bab. equivalent of a native deity, but in any case it gives an interesting evidence of the syncretism that was going on in Canaan during this period (Sellin, Tell Ta'annek, pp. 27, 105). Nergal is also mentioned in the letter of the king of Alashia (Cyprus) (Winckler, 25, 13, 37). A tablet containing the myth of Nergal and Eresh-kigal was found among the tablets at Tell el-Amarna.

8. Sheba'.—In the Bab, pantheon there is a deity Sibitti, 'the Seven,' who is identified with the Pleiades. 'The Seven,' are also a group of evil demons that are often mentioned in incantations (Zimmern, KaT' 413, 459). The worship of Sheba', seven,' in Palestine is shown by the woman's name Bath-Sheba', daughter of Sheba', and by several other OT personal names. The place-name Bc'er-Sheba' is most naturally ex-

plained with reference to this cult.

Seals representing various Bab, divinities have been found in the Amorite levels at Gezer, and one tablet commonly called the 'Zodiacal tablet,' found in debris contemporary with the Amarna letters, bears the emblems of a large number of the Bab, gods (PEF8t, 1907, pp. 245, 263; 1908, pp. 26 fl., 78, 186, 298, 245). In the light of this evidence we may safely infer that the Amorites were familiar with the Bab, religion, and that many Bab, gods won an established place in their pantheon. Many of the Bab, elements in the later Heb, religion were probably learned by the Hebrews from the Canaantes.

(f) Egyptian divinities in Canuan.—During the Neolithic period there is no evidence of Egyptian intervention in Palestine, but in the carliest Sentitic period such intervention began. King Sparm of

period such intervention began. King Snofru of the IVth dynasty (c. 2900 B.C.) brought cedarwood from Lebanon (Breasted, Anc. Rec. i. 66). Under Pepi I. of the VIth dynasty, Palestine was invaded by an Egyptian army under the leadership of Una (Breasted, op. cit. i. 142 f.). The excavations at Gezer show that Egyptian influence was strong there at least as early as 2500 B.C., and this influence continued throughout the entire

history of this city (PEFSt, 1903, p. 309). Scarabs of every dynasty from the VIth onward have been found in the various levels, and are an important aid in determining the chronology of the mound. A funerary statue, bearing an Egyp. inscription of the VIth dynasty, has also been found at Gezer (PEFSt, 1903, pp. 36, 125). From the period of the XIIth dynasty a burial-cave has been discovered, containing a number of interments that are thoroughly Egyptian, with the exception of embalming (PEFSt, 1905, p. 316; 1906, p. 122). A stele and a statuette of the XIIth dynasty have also been unearthed (PEFSt, 1904, p. 121; 1906, p. 122). The traces of early Egyptian influence in Taanach and Megiddo are less numerous; still they are not wanting. The seal-cylinder of the Hamnurabi period, discovered by Sellin at Taanach, bears also Egyptian emblems—an interesting evidence of the meeting in Palestine of the two great civilizations of antiquity. Under dynasties XVIII.-XIX, (1600-1200 B.C.) Canaan was almost continuously under Egyptian rule, and its civilization received a strong Egyptian impress. A large Egyp, hieroglyph of the X1Xth dynasty indicates the existence of an Egyp. temple or palace at Gezer (*PEFSt*, 1908, p. 200). At Tell esh-Shihab, near Damascus, there is a votive stele of Seti I. (*PEFSt*, 1904, p. 78). At Sa'adiyeh, east of the Sea of Galilee, is a monument of Ramses II. (*ZDPI* xiv. p. 142), and at the mouth of the Nahr el-Kelb, near Beirnt, are inscriptions of several Egyp. kings. In view of these facts, it is not surprising that Egyp. religion found considerable acceptance in ancient Canaan.

I. Hathor, the Egyptian goddess of love, was early identified with 'Ashtart, as is shown by the artistic representations of this goddess. She has frequently the horns and other attributes of Hathor (see above, p. 182). The Ba'alat of Gebal was represented in precisely the same manner as Hathor, with the solar disk between two horns (Meyer, Gesch.<sup>2</sup> ii. 1, p. 394), and in Egypt she was known as the Hathor of Gebal (Miller, Asien,

p. 314)

Z. Bes, the ugly dwarf-god, was more popular in Canaan than any other Egyptian deity. Numerous images of him are found in the mounds at all levels (PEFS), 1993, p. 122; 1904, p. 288; Sellin, Tell Ta'annek, p. 105.

3. Other Egyptian figures, supposed to represent Ptah, Osiris, Sebek, etc., have been found in single specimens (*PEFSt*, 1903, pp. 48, 122; Sellin,

Tell Ta'annek, p. 107).

 Scarabs were used as anulets in Canaan as in Egypt, and were buried with the dead. They have been found in large numbers (*PEFSt*, 1902, p. 365; 1903, pp. 21, 380; 1904, pp. 20, 224; 1904, pp. 186, 188; 1907, p. 266; Sellin, *Tell Tu' annek*,

p. 111).

5. Amon-Re, the patron of Thebes, and the chief god of the empire so long as Thebes was the capital, received much compulsory service in Canaan during the period of the Egyptian supremacy. After his victorious campaigns, Thutmose III. gave three cities in Northern Syria to Amon (Breasted, Anc. Rec. ii. 223). In the Amaarna letters (Kundtzon, 59, 9) the people of Tunip say: 'The gods and the (wooden) mutashshu maprillum of the king of Egypt dwell in Tunip.' Rib-Addi of Gebal invokes Amon as 'the god of the king' (Winckler, 54, 4). In another letter he comples him with the Ba'alat of Gebal (Winckler, 67, 5). Amon also occurs in one of the tablets from Taanach (Sellin, Tell Ta'annek, p. 119). In other cases Amon was identified with the mative sun-god Shamash. Thus Rib-Addi combines Shamash with the Ba'alat of Gebal in the same manner in which he combines Amon (Winckler,

87. 624f.). Similarly, when Abimilki of Tyre calls the Pharaob Shanash, he is thinking of Amon (Winckler, 150, 6 ft.). One Canaunite hears a name compounded with Amon, namely, Amerihathi (Winckler, 134). Ramses III, records the building of a temple in Zahi, in Syria, where there was a great statue of this god, to which the people of Syria brought their presents (Breasted, Anc. Rec. iv. 123). It was also customary for the Pharaoh to send an image of Amon to one of his friends in Canaan upon whom he wished to confer honour. Thus, in the reign of Ramses XII. (c. 1100 B.C.), Hrihor, the high priest of Amon at Thebes, sent a certain Wenamon to carry an image called 'Amon of the Way' to Gelal, and to bring back thence cedar-wood (Breasted, Anc. Rec. iv. 278 ff.), Incidentally it is mentioned that the forefathers of the king of Gebal had spent their days sacrilicing to Amon (p. 283). This king of Gebal had a butler called Pen-Amon (p. 284). The cult of Amon never took a strong hold upon the affection of the Canaanites, for he was identified in their minds with the exactions of the Egyptian government. So soon as Egyptian anthority was relaxed, his worship died out, and it has left no traces in any of the place-names of the land. The report of Wenamon shows clearly how Amon had lost prestige in Canaan by the time of the XXth dynasty.

6. The cult of the Pharaoh,-In Egypt the Pharaoh was worshipped as an incarnation of Amon-Re, and in the palmy days of Egyptian rule this dogma was enforced in Canaan. The image of the king was set up in certain cities alongside of that of Amon, and on stated occasions the Syrian princes were required to pay homage to it (Winekler, 51, 9f.). The worship of the king seems to have consisted chiefly in the burning of incense; hence, when a beleaguered town wished to surrender, it signified this by holding up a lighted censer on its battlements (Müller, Asien, p. 305). One of these censers found at Megildo is depicted in the frontispiece of Schumacher's Tell el-Mutesellim. The writers of the Tell el-Amarna letters address the king as 'my lord, lord of the lands, my father, my sun, the sun of heaven, the sun of the lands, my god, the breath of my life. Occasionally they append 'son of Shamash' as a translation of the Egyp, title 'son of Re,' with the absurd result that the Pharaoh is entitled both 'sun' and 'son of the sun.'
These were conventional formulas that the Canaanites did not take at all seriously, and the moment that Egyptian rule was relaxed the worship of the Pharaoh ceased along with that of his father Amon-Re.

11. The Sanctuaries of Canaan,-(a) Holy rities.—A large number of places in Canaan show by the meanings of their names that they were set apart as sanctuaries

Thus, in the annals of Thutmose III., we meet Kadesh, 'the Thus, in the annals of Thutmose in, we meet Kadesh, 'the sanctuary (No. 1) Amarna Kidshi, 'Hoadh, 'asylimi' (No. 3)—Amarna Hats'; Tibbath, 'ascribee' (No. 6) = Tubihi (Amarna 127); 'Nor-p'a, 'healing-place' (No. 29), et. Jage-et (Jo. 187); Akshaph, 'sorcery' (No. 19); Hekstayim, 'two temples' (No. 19), In the Amarna letters we meet in Northern Syria Ribarba, 'house of the new moon' (Kmultzon, 83, 29); Ribarba, 'house of the new moon' (Kmultzon, 83, 29); Ribarba, 'louise of the turtle-dove' () (Winckler, 82, 12); Rus-Solom, 'time well of Selem' (Nimekker, 13, 14), 'Live-Solom, 'time well of Selem' (Nimekker, 14, 16, 16); 'Adama, Solom (from the god Sela); in Chinckler, 'I. 13, 19); Riba-VIN-Ha (Winckler, 183, 18); Lev-solom, 'Mockler, Stadem'; in Palestone cast of the Jordan, Ashtarti (Winckler, 112, 10, 277, 24). Many place-mames in Israel show by their meaning, or In-

Many place-names in Israel show by their meaning, or la Many place-names in Israel show by their meaning or by something connected with them, that they are survivals of ancient Can, sanctuaries. Such are Ecc-Shelm, 'the well of the Seven', Hebom, 'alliance'; Carach, 'garlen,' in Judah, where a feast occurred (1 8 225 5) and where there was a standing-stone (1 8 152 5). Echt-Aunth, 'house of 'Anath' (Joe 198 cic.); Kirjathi-je'arin, or Evial Judah (Joe 152), where the ark was long deposited (1 8 62, 2 8 67); 'Ea-sheunsh, 'spring of the sun' (Joe 157 187); Mindal-Gad, 'tower of

the god of fortune' (Jos 15-2); Reth Lehem, 'house of Lahmu'; Reth Bugon, 'house of Dagon' (Jos 15-3); Judnov-d. 'a god hull-d', apparedly the mine of a didicid ance stor (dos 15-3); Judnov-d. 'a god hull-d', apparedly to mine of a didicid ance stor (dos 15-3); State (S. 15-3); End knacht, 'valley of the sacred tree' (1.8 17-1); Streed, 'a god sows, apparently a didicid ancestor (Jos 15-9); Kebo, named atter the 18th, god Nabu (Ezr 22-10-4); Tenathah, 'city of the sacred tree' (1.8 17-1); Tenathah, 'city of the sacred tree' (1.8 18-1); Kebod, 'tithe height,' where sacrifice occurred (1.8 19-1); Houston, 'the height,' where sacrifice occurred (1.8 19-1); Houston, 'the height,' where sacrifice occurred (1.8 19-1); Houston, 'the height,' where there was a temple and a priesthood of Jahweh (1.8 29-3); Houthoft, 'the 'handsh', where here was a temple and a priesthood of Jahweh (1.8 29-1); Houthoft of the sacred tree was a temple of the sour of the god 'Timothe', 'peckner of the sam' (2.8); Houthoft, 'the Cak of the diviner' (3.1 18-2); Hill), 'house of the god 'Timothe', 'peckner of the sam' (2.9); Houthoft (3.8 19-3); 'house of the god 'Timothe', 'peckner of the sam' (2.9); 'Janthah, 'the cak of the diviner' (3.1 19-2); 'Hill), and hydron (4.9); Firsthood, where there was a how, there there was a holy tree, 'the cak of the diviner' (3.1 19-2); 'Hill), and hydron', the charmon', 'here dhe rewas a how, the gaze of the here 'Malon (3.2 19-3); 'Juputan, 'Stag (town, 'where there was a proper of the here 'Malon (3.2 19-3); 'Juputan, 'Stag (town, 'where there was a great of the here hand of the place'); 'Juputan, ' Hispath, 'the watch-tower,' connected with the legends of acob and Laban (Gn 31), and a place of assembly for Israel Jacob and Latan (cm. 31), and a place of assembly for Israel (Ag 119), Michatanin, where the angels of God appeared to the Israel and Ambatanin, where the angels of God appeared to hearting, where Jacob was burjed (Gn. 30<sup>6,11</sup>); "Israel and Mesha carried awas "the altar of its beloved," i.e., its god (Mesha Lawe, line 20); Botal Pene (Nu 22<sup>6,5</sup> etc.); Neba, named after the Eab, 201 Nabu (Nu 23<sup>6,5</sup> etc.); Erth. Botal Near (Israel 10<sup>6,6</sup>). The Computation of the after the Fah, 20d Nabu (Nu 32° etc.); Eth. Eical. 3n. on Josa 1397); Ethough-borth, Inital Balews of the Ball (Nu 2224, Jun 1397); Ethough-borth, Inital State (Nu 224, Jun 1408); Henry Harris, Alley (Nu 224, Jun 1408); Henry Harris, Inital acadas, Where bruch was soluted to Modelle rites (Nu 224, Hos 199). In all these cases it is prodable that we are dealing with ancient (Can Sanctuaries that were appropriated more or less completely by the Israelites to the service of Inhereda

(b) Sacred natural objects.—The sanctity of the places that have just been mentioned was due in most cases to the presence in them of some aweinspiring natural object in which the deity was believed to manifest his presence. Such were sorius trees, mountains, and caves. All of these holy objects that we meet in the OT were doubtless an inheritance from the Canaanites (see BAAL, vol. ii. pp. 285-288, where full lists are given). The sanctuary at Sinai seems to have been a cave (Ex 33°2, 1 K 19°); so also at Hebron (Gn 23°). In Gezer a cave was reverenced by the primitive Neolithic inhabitants, and retained its sanctity as part of the high place down through Semitic times (PEFSt, 1903, p. 24).

(c) High places,—In connexion with such holy objects, sacred enclosures, known as bāmoth, 'high were established. In the earliest times these were open to the sky, being merely fenced off from the adjacent territory by walls or lines of stones. The high place at Tell es Sáfi was rectangular in form. At the two ends there were small chambers, and on one side was the entrance (Bliss-Macalister, Excavations, fig. 9). Most of the sanctuaries of Canaan were of this simple type, and remained so throughout the entire Israelitish neriod. No certain traces of covered temples have been discovered in the excavations; nevertheless, it is certain that such temples existed in the larger cities. We have noticed already the one that Ramses 411, built for Amon Re in Zahi, and in the letter of Rib-Addi of Gehal (Winckler, 71, 59) we read: 'Let not the king, my lord, neglect the city, for there is much silver and gold in it; great will be the spoil in its temple (bit-ilouishi) it it is captured,' The mention of 'gods,' i.c. images, that have been carried off from other places also suggests that there must have been houses in which these images were kept. A small terra-cotta model from Gezer represents a deily seated within a covered edifice (PEFSt, 1908, p. 22). The OT aludes frequently to the high places of the Camanites, mostly in commands to destroy them. The equipment of the

high places consisted of-

1. Masseboth, or standing-stones .- In all Semitic lands the most primitive and the most persistent symbols of the deity were the masseboth, or standing-stones (see MASSEBA). Tall, slender stones were phallic emblems and represented male divinities, while small conical stones depicted the female breast and represented female divinities (see Ashtart, 4; Spoer, ZATW, p. 286). The OT frequently refers to these as used by the Canaanites, and commands that they shall be destroyed lest they seduce the Israelites to worship strange gods (Ex 23°4 341°, Lv 26¹, Dt 7⁵ 12°). These prohibitions date from a late period. In early times Israel appropriated the masseboth of its predecessors, and dedicated them to the service of Jahweh. A large number of these sacred stones are mentioned in the earlier writings of the OT (see BAAL, vol. ii. p. 287). They were probably inherited from the earlier inhabitants of the land. In the list of Thutmose III. (No. 11) we meet Kirjath-nesib, 'town of the standing-stone' (Müller, OLZ ii. 138). The excavations have revealed such pillars in the high places of all the cities. At Tell es-San there were three standing-stones within the sacred enclosure (Bliss-Macalister, fig. 9). At Gezer there was an alignment of eight huge stones. The second stone in the line from N. to S. is much smaller than the rest, and has been worn smooth by rubbing, kissing, or sacrificing upon it. It was evidently the most sacred object in the temenos, and the conjecture is reasonable that it was the symbol of the mother-goddess Ashtart, whose plaques are found in such large numbers in all levels of the mound. She was the analogue of the ancient Semitic matriarch. Consequently the seven tall stones in the line must quency the seven tail stones in the line must represent male divinities who were regarded as the polyandrons consorts of 'Ashtart (see PEFSt, 1903, p. 25 ff., 287; 1904, pp. 118, 196; Macalister, Bible Side-Lights, p. 57 [a photograph of the stones is given on p. 51]). The enormous number of phallic emblens found in the strata covering of phantic embeds and in the control of the high place prove that it was devoted to the cult of the reproductive forces of Nature (PEFSt, 1993, p. 36). Two pillars surrounded with cup-marks were found by Sellin in the high place at Taanach (Tell Ta'annek, p. 104). Pillars with cup-marks upon them were discovered by Schumacher at Megiddo (Tell el-Mutesellim, pp. 105 ff., 125 ff., 163 ff.). These pillars, unlike those at Gezer, are artificially hewn, and hence should perhaps be classified as hammānim rather than massēboth (see BAAL, vol. ii. p. 287).

2. Asherim.—The āshērim, or sacred posts, were indispensable accessories of Canaanite high places (see art. Poles). The Hebrews adopted these from the Canaanites along with the maṣṣēbāh, and they were used in the cult of Jahweh down to the Deuteronomic reformation. After that time an effort was made to destroy them (Ex 34/3) 10. 75 12<sup>3</sup>). At an early date 'Ashtart was confused with her symbol, so that Ashera was used as a proper name. She appears in Bubylonia, in connexion with the Amorite migration, in tablets of the Hammurabi dynasty. In one inscription set up in honour of Hammurabi by a certain Ibla Ashratum, she appears as 'Ashratum, bride of the king of heaven, mistress of hxury and splendour, dwelling in the mountain, the merciful one who

reverently supplicates her husband' (Hommel, Au/s. u. Abk. p. 211 ff.). In a seal published by Sayce (ZA vi. 161) she is coupled with Ramman in the same manner as 'Ashtart is coupled elsewhere; and in a hynn she is associated with Amurru, the equivalent of Ramman (Reisner, Hyone, p. 189). In Babylonia, Ashera is regarded as a goddess of the desert, or of the west-land (Zimmern,  $KAT^3$  432). Abd. Ashirta, 'servant of Ashera,' is mentioned in the Amarna letters more frequently than any other person. In one letter (Winckler, 40. 3) he calls himself 'Abd. Ash. ta-[ar]-ti, i.e. 'servant of 'Ashtart,' which shows the equivalence of the two names. In one of the tablets from Taanach (Sellin, p. 113) we read: 'If the finger of the goddess Ashirat shall indicate, let one observe and obey.' The asherim, being made of wood, have not survived in any of the mounds of Palestine.

3. Altars.—In the most ancient high places there were probably no altars. The massion served both as idol and as altar. Subsequently a separate stone or a mound of earth was set apart for purposes of sacrifice. In the high place of Gezer no altar was found, but a hollowed block of stone standing near one of the pillars may have been used to receive blood or offerings (PEFSt, 1903, p. 31). At Taanach, in the lowest Semitic level, Sellin found a rock-hewn altar with exp-marks and a drain for carrying off the blood (Sellin, pp. 34, 103). A similar rock-altar was found by Schumacher at Megiddo (Tell el-Mutesellim, p. 155 ff.). In both of these cases remains of sacrifices and religious emblems found on the spot leave no doubt as to the Cananaites are mentioned repeatedly in the OT (Ex 342, Dt 72 102, Jg 22), and it is probable that the famous altars which the Israelites traced back to patriarchal times were derived from their predecessors (Gn 127-134-13-222 262-333-33545).

4. Images. - Images were not a part of the equipment of most of the high places, for in early times the massēbā served both as idol and as altar. The OT mentions maşşēbôth, ḥammānîm, āshērîm, and altars, as found in the Canaanite high places, but rarely images (Jo 625, 2 Ch 143-6 344-9). Neverbut rarely images (Jg 6<sup>25</sup>, 2 Ch 14<sup>3-6</sup> 34<sup>4-9</sup>). theless, idols were in use in the larger cities. In an Amarna letter (Winckler, 105. 27) Rib-Addi of Gebal writes to the Pharaoh: 'If no troops are at hand, then send ships that may fetch us alive to my lord along with the gods. Here evidently images are meant. In another letter (Winckler, 138 rev. 18 ff.) Akizzi of Qatna writes: 'O lord, thy fathers made Shamash, the god of my father, and put their name upon him. But now the king of the Hittites has carried off Shamash, the god of my father. Let the king know, accordingly, how it stands with the god; and if Shamash, the god of my father, is to return to me, then let the heart of my lord care for him and give gold for Shamash, the god of my father, as thy fathers have done, and let my lord put his name upon Shamash along with the former one. This shows that in this period, as in later times, idols were taken prisoners of war, and that conquerors were in the habit of carving their names upon them (cf. KIB i. 26 f.; ii, 62 f., 130 f.).

Images such as might have been used for public worship have not been found in any of the mounds of Palestine. The 'Ashtart plaques, which have been excavated in such numbers, were apparently not meant for worship, but for presentation as gifts to the goddess, like the votive figures that have been discovered at the 'Argive Herneum, Delos, and other ancient Greek sunctuaries. The fact that they are always broken shows that, when they had accumulated in too great quantities, they

were destroyed by the priests in order to prevent their being used again. Apart from these, and the little figures of deities imported from Egypt, representations of gods in human form are rare in Canaan. It is uncertain whether the few statuettes that have been found are really idols (PEFSt. 1907, p. 246; 1908, p. 23; Schumacher, Tell el-Mutesellim, p. 51; Vincent, Canaan, ch. iii.). Evidently fetish-stones continued to be the chief symbols of the great gods down to late times. Figures of animal gods are more common (see

above, p. 181).

H. RELIGIOUS RITES OF THE CANAANITES.—
I. Animal-sacrifice.—Mussychith and altars imply
the existence of sucritice. We must suppose that the zebah, or sacrificial meal, as it was practised among the Arabs, Hebrews, and other Semites, existed also in Canaan. Animals that were regarded as proper for food were brought to the sacred stone or altar and were slain upon it, and the blood was poured out at the base of the stone. Parts of the animal were then given to the god by throwing them into a pit, or by burning; and other parts were eaten by the worshippers in a meal of communion. The report of Wenamon speaks of a daily sacrifice offered in the fortress of Zakar-ba'al, king of Gebal (Breasted, Anc. Rec. iv. 280 f.). Direct evidences of animal-sacrifices are not frequent in the mounds, since the eating of the animals resulted in the scattering of their skeletons. Nevertheless, accumulations of bones in the strata near all the high places make it evident that among the Canaanites, as among the early Hebrews, every slaughter was at the same time a sacrifice (cf. *PEFNt*, 1902, p. 32).

2. Infant-sacrifice. — Traces of infant-sacrifice

are much more clear. In the Canaanite levels of all the mounds, jars containing the bones of newborn infants have been found in large numbers, buried beneath the floors of the high places, under the corners and thresholds of houses, and in other the corners and thresholds of houses, and in their places where sacrifice would naturally occur (Petrie, Tell cl-Hesy, p. 32; PEFSt, 1902, pp. 303, 352; 1963, pp. 32 ff., 121; 1904, p. 119; 1906, pp. 634, 117 f., 159; Scllin, p. 35; Schumacher, p. 18). With these infants were deposited small jars containing food and drink. In some instances the taning 1000 and drink. In some instance or bones showed signs of burning, but usually this was not the case. The jars were often filled with fine sea-sand. It is evident that first-born infants were sacrificed in honour of the mother-goddess, the giver of children. Such rites were common among all the Semites (see Ammonities, vol. i. p. 391); it is not surprising, therefore, to find them

among the Amorites.

3. Sacrifice of adults was not so common as sacrifice of children; still it was occasionally practised. In several cases the upper halves of bodies have been found in tombs, while the lower halves are missing. The analogy of rites in other parts of the world leads to the conjecture that these are cases of sacrifice (*PEFSt*, 1903, pp. 17 ff., 51; 1908, p. 186). The skull of a man was found in the high place at Gezer (*PEFSt*, 1903, p. 225; 1904, p. 118). In a bank of hard earth near the high place a number of human bones were found (PEFSt, 1903, p. 317). The head of a girl was also found near the standing-stones (PEFSt, 1907, p. 268). Foundation-sacrifices of adults, buried p. 208). Foundation-sacrinees of adults, buried under the corners of buildings, are frequent in all the mounds (*PEFSt*, 1903, p. 221; 1904, p. 391; 1905, p. 198; 1908, p. 186; *MNDPV*, 1905. p. 10).

4. Lamp and bowl deposits. - In the period contemporaneous with Egyptian rule in Canaan, deposits of lamps placed between two bowls begin to occur under the corners or thresholds of houses. in positions where formerly sacrificed infants were

buried. It is clear that these are intended as substitutes for child sacrifice. The lamp, the symbol of life, takes the place of the life of the child. In a few cases both the sign and the thing signified are deposited together. Lamp and bowl deposits become increasingly frequent in the upper Canaanite and Israelite levels, and jar burials decrease in the same ratio, until about the time of the Exile, jar-burials cease altogether and only lamp and bowl deposits remain (PEFSt, 1903, pp. 10 f., 228, 299, 306 ff.).

5. Incense.-It is known from the Egyptian inscriptions that incense was offered to the Pharaoh (Müller, Asien, p. 305), and there is no doubt that it was also presented to the gods. In the annals of Thutmose III. it is often mentioned as part of the tribute from Canaan (see Breasted, Anc. Rec., Index, s, e, 'Incense'). The town *Lebourh*, 'frank-incense' (Jg 21<sup>19</sup>), is mentioned already in the list of Thutmose III. (No. 10). Incense-burners have been found in the mounds (Schumacher, Tell el-

Mutesellim, frontispiece).

6. Libations must also have been offered, but it is difficult to tell which of the vessels found in the mounds were used for this purpose. A sherd of the Israelite period from Luchish (Bliss, p. 192) bears apparently the inscription 70%, 'for making

libation.

7. Music.—A large rattle was found in the temple enclosure at Gezer (PEF8t, 1903, p. 46). Similar ones have been discovered at Lachish (Bliss, pp. 117, 120), and at Taanach (Sellin, p. 19). It is conjectured that they were used in the cult. like the sistra of the Egyptians, to mark time in the chanting of hymns. Musical instruments were part of the spoil carried away from Canaan by the Egyptians; and two Egyptian instruments, the ken'noru, or 'lyre,' and the nataki, or 'castanet, have Semitic names, and were probably derived from Canaan. The presence of musical instruments implies the existence of song, and song implies a development of poetry. If there was secular song, there was doubtless also song in the service of the gods, as in Egypt and Babylonia. Such poetic effusions addressed to the Pharaoh as we meet in the letters of Yabitiri, governor of Joppa (Winckler, No. 214), or of Abimilki, king of Tyre (Winckler, 149), would scarcely have been possible, if the scribe had not been familiar with hymns to the gods. The long influence of Bab. civilization in Canaan also makes it probable that the psalm-type of composition had already found its way into that land.

8. Amulets, designed to protect the wearer against evil influences, were worn by the Canaanites in all periods. The most common type was the so-called 'Horns-eyes,' derived from Egypt, and intended to protect the wearer against the evil eye (PEFSt, 1903, p. 213; Breasted, Ancient Records, Index, s.v. Eye annulets'). For other types of amulets see Vincent, Canaan, p. 176 f.,

and artt. Charms and Amulets.

9. Divination .- In one of the cunciform letters from Taanach we read; 'If the finger of the goldess Ashirat shall indicate, let one observe and obey' (Sellin, p. 113). This shows that soothsaying was practised at sanctuaries, as in later Israel. The existence of oracles is further established by the names of many Canaanitish holy places: e.g. Akshaph, 'divination' (Jos 111 etc.); En-mishpat, 'the spring of decision,' at Kadesh, the sanctinary'; the trebuilt of moreh, the oracle (Gn 12<sup>th</sup>, 13<sup>th</sup>); the trebuilt of moreh, the oracle (Gn 12<sup>th</sup>, 13<sup>th</sup>); the terebuilt of melonenim, the diviners' (dg 2<sup>th</sup>); Gebe ath ham-moreh, thill of the oracle (Jg 7).

10. Priests.- Sanctuaries and oracles imply the existence of priests who guarded the shrines and cultivated the means of divination, like the old 188 CANDLE

Arab kahanat and the old Heb, kôhănîm. In a letter of Rib-Addi of Gebal to the Pharaoh (Knudtzon, 83, 52), mention is made of a certain Ummahnu, whose husband is Ishkuru, handmaid of the Ba'alat.' Evidently she was a priestess of the great goddess of Gebal. Akizzi of Qatna complains of the Hittites that they have burned the city and carried away its gods and its mu-ti people. From the connexion mu-ti can hardly mean any-

thing else than 'priests.'

11. Prophets.—The report of Wenamon (c. 1100) B.C.) relates of the king of Gebal: 'Now while he sacrificed to his gods, the god seized one of the noble youths, making him frenzied, so that he said, Bring the god hither! Bring the messenger of Amon! . . Now, while the frenzied youth continued in frenzy during the night, I found a ship bound for Egypt' (Breasted, Anc. Rec. iv. 280). This shows that the ecstatic prophets of Ba'al and Ashera that we meet in later Heb. history were no new thing among the Canaanites (1 K  $18^{19}$ ).

Of other Canaanite religious institutions we have no direct evidence, and can only draw inferences from the analogy of the Hebrews and of other Semitic peoples. In all probability the ritual of the Canaanites did not differ greatly from that of

the Canamites did not differ greatly from that of Israel in the pre-prophetic period.

CANDLE.—The root of this word appears in the Lat. candere, 'to shine'; the term itself is directly derived from candela, an old word in Latin speech, having apparently the same meaning. It came in with Christianity, and has held a prominent place in our literature ever since, owing doubtless to the use of candles in religious and superstitions customs, and the figurative and symbolical associations of thought connected with this use. The importance of the term in English speech is well shown in Murray's OED. Here we shall confine attention to religious and ecclesiastical

The use of artificial lights in religious ceremonies and observances is not by any means confined to the Christian Church; it has been characteristic of religious customs far into anti-quity, and is not to be explained by considerations of utility alone. It springs from a sense of the

symbolism inherent in Nature and in the powers and energies of the visible world. The human mind has a deep presentiment of a world behind and above the senses, and naturally sees in the more striking phenomena of the world the images and symbols of things unseen. Light is the most ethereal of all material things, fulfilling as it does so many beneficent functions in the world, and has long been consecrated in the sphere of religion as a symbol of Deity, of Godlike qualities and powers, of truth, purity, holiness, of that which enlightens and purifies the soul. In the Biblical sphere light in its highest sense is given to man in Revelation and in the institutions of religion, in which the ideas of the former are embodied. Of this, the golden eandlestick in the tabernacle and the temple was a symbol, since it suggests generally the light which shone upon the world through law and prophecy, and in the ordinances of religion. Similarly, Christ calls Himself the 'light of the world,' and He charges His people to be like the candle which gives light 'unto all that are in the house (Mt 515). See small type below.

With the rise of gospel light upon the world, the types and symbols of the former dispensation were no longer required; and the NT nowhere enjoins the use of symbols even for its central and essential conceptions. The Church itself is the 'light of the world' (Mt 514), and her light should be such as to render material symbols of it needless and superfluous. Yet it is likely enough that the need which has created Christian art would soon come to be felt, whenever men realized the essential beauty of the Christian conceptions, and the idea of the Church as the light of the world would be the first to call for symbolic and

artistic expression.

artistic expression. It may be noted by the way that the word 'candle' has all but disappeared from the English Bible. The RV of 1888 has allowed it only in two places (der 25% Qeph 12 (text, but marg. 'lamps')). Why it should remain in these two solitary instances is quite a puzzle to the reader, since mêr, the common Heb. term for 'lamp,' stands in the text, and is so rendered in all other passages. It seems pretty certain that mêr must mean not 'candle,' but 'lamp,' since the tamps of the golden candle-stick were fed with sacred oil. It seems probable also that Advove in the NT means 'lamp.'

Lamps (ke/yoo, lucechna') were early in use among the Greeks and Romans, as also among more Eastern peoples, though earlier instruments of

Eastern peoples, though earlier instruments of light (tapers, torches, candles) of various materials and make may have continued among the poor. Numerous specimens of lamps have been preserved, some highly ornamental. In more primitive times, lights were readily obtained from splinters of pine or other resinous wood. These and other combustible substances, steeped in oil or tallow and fastened together with bark, could be used as torches. We read also of torch-cases of metal or clay, which, filled with suitable materials, could produce a bright and steady flame. None of these proved so convenient for ready and general use as the primitive candle, which consisted of a wick of oakum or of the dried pith of reeds or rushes, steeped in wax or tallow. Besides its greater convenience, it could be subjected to artistic treatment in the moulding to adapt it for seenic effect; in consequence of which, doubtless, its supremacy as a religious symbol was finally established.

We may take it as established beyond dispute that there was no ceremonial use of candles or lamps in Christian worship or in churches for the first three centuries. Up to that time the spiritual simplicity of worship as well as the strong antagonism to heathen customs which characterized the early days still continued, and found expression in occasional protests against the corrupting effect of

heathen customs.

Tertullian (A.D. 200) inveighs in various places against the burning of lamps and the hanging of wreaths in porches in honour of the gods. Lactantius (A.D. 300), in exposing the folly

of heathen worship, exclaims; 'They kindle lights to Him as though He were in darkness.' 'If they would contemplate that heavenly light which we call the sun, they would at once perceive how God has no need of their candles.' It shal man therefore to be thought in his senses who presents the light of canalles and torches to Hun who is the author and giver of light. But their gods, because they are of the carth, are in need of light that they may not be in darkness; and their worshippers, because they have no taske for my thing leavenly, are recalled to the earth even by the religious rates to which they are devoted. For on the earth there is need of light, because its system is tark. Therefore they do not attribute to the needs of system is dark. Therefore they do not attribute to the gods a heavenly perception, but rather a human one' (Div. Instit. bk. vi. ch. 2).

Such protests, however, soon proved unavailing against the full tide of heathen custom which now began to enter the Church. With the conversion of Constantine and the Imperial recognition of Christianity, the new religion found ready nominal acceptance; but many of the old customs continued under new names and different sanctions. We hear first of the ceremonial use of lights at festivals in the dedication of churches and at the tombs of

the martyrs.

the martyrs, Paulinus of Nola (a.p. 407) thus describes the feast of St. Felix, to whom his church was dedicated: 'Lights are hurned, odorous with waxed papyri. They shine by night and day, night is radiant with the hrightness of the day, and the day, itself bright in heavenly beauty, shines yet more with the hight of countless lamps.' Jerone fully acknowledges the prevalence of the custom, which he excuses on the ground of the knorance and simplicity of laymen or superstitions women, though evidently he sympathizes with it. He states that throughout the East 'candles are lit at the reading of the Gospel in full sunshine, not on account of the darkness, but as a token of joy' (Ep, ad)Ripar,).

From the 4th cent, onwards and down through the Middle Ages, the custom is not only fully established, but is held in the greatest honour. Candles are burnt everywhere in the worship and on all high occasions, in festal services and processions, at baptisms, marriages, and funerals. stand on the altar, they are placed in front of images and shrines, they are offered as votive offerings to God and to the saints, with prayer for recovery from sickness or for other benefits. There is hardly any service or ceremony by night or day which can be observed without them.

Some contend that the rapid spread of the custom is explained Some contend that the rapid spread of the custom is explained by supposing that it was samply the continuance of an earlier product when the supposition of the supposition of the product design to the supposition of the su

drift towards externalism and superstition-all these combined offer sufficient explanation.

In relating the origin of the festival of Candlemas (q, v, t), originally a commemoration of our Lord's meeting with Simeon and Anna in the temple (Lk  $2^{\sigma, \infty}$ ), but afterwards celebrated in the West at the Feast of the Purification (Conditoria), an old writer (Jacob de Voragine, collector of the Golden Legend) affirms that this festival succeeded to and continued an earlier custom. 'Since it is difficult,' says he, 'to relinguish custom, the Christians converted to the faith from among the nations found it difficult to abandon this heathen practice, and so Pope Sergius changed it into something better, that the Christians, in honour of the blessed mother of the Lord, might on this day (Feb. 2) enlighten the whole world with lighted candles and wax tapers which had been blessed' (PRE3, art. 'Lichtmesse'). This was pre-eminently the Feast of Candles, in which candles were solemnly blessed and distributed among the people, who marched with them afterwards in procession through the city. The Christian reference of the ceremony was to the words of Simcon; 'a Light to lighten the Gentiles.' The higher reference of the custom is seen in the prayer offered in the consecration of the candles: Lord Jesus Christ, Son of the living God, Thou true light which lightens every man who cometh into the world, we pray Thee to bless

these candles, that, wherever they are lighted, our hearts, enlightened by the invisible fire and purity of the Holy Ghost, may be freed from all blindness of sin and vice, and that after the dark and dangerous pilgrimage of earth we may enter into everlasting light.' Candles so blessed were thought to be a sure protection from many superstitious fears, a shield from thunder and lightning, blighting of the fields, diseases of cattle and other evils.

especially the wiles of the devil.

It should be freely admitted that the higher reference of the enston and the Christian symbolism embodied in it were generally kept in view, and occasionally explained and enforced by the clergy. It was enjoined that the candles should treegy. It was enjoying that the characteristics shall be of wax alone, and not of tallow or other substances. 'The fragrant wax, the labour of the bee which dies when its work is accomplished, has mystic significance. It is drawn from the best juices of plants, and has the highest natural worth as a material for offerings.' The symbolism also might vary with the oceasion. The baptism candle denoted the splendour of good works which open the door to the heavenly wedding-feast; the bride's candle, purity and sincerity of heart; the grave candle, the everlasting light of heaven which the dead enjoy; the Easter candle, the light of the world which breaks the power of death; the burning lights on the altar denote the Church, the light of the world  $(PRE^3, loc, vit.)$ .

Yet it is patent to all that the custom has been the source of wide-spread and debasing superstition. This is strikingly seen both within the ranks of the clergy, where the observances were subject to prescribed rules, and among the people at large, where, as among the Russian peasantry at the present day, a consecrated candle is a charm for every evil they can think of. The minute prescriptions to regulate their use on ordinary and high occasions were calculated to induce false and superstitious conceptions among an ignorant or poorly educated clergy, and many old popular delusions which originated in these customs are hardly yet extinct.

At the Reformation the use of candles was abolished in all the Reformed Churches. They are still to be seen on the altar in Lutheran Churches. where they are retained as a symbol; also in many

Anglican Churches

CANDLEMAS .- 1. Name .- 'Candlemas' is the old English name for the Festival of the Blessed Virgin Mary on Feb. 2, which is called in the English Prayer Book 'The Presentation of Christ in the Temple, commonly called The Purification

of Saint Mary the Virgin.

of Saint Mary the Virgin.

There is early witness to its use—in the Anglo-Sayon Chronicle under the year 104; King Swegen ended his days 'to Cambelamoson in' Aoms Februare'; In a metrical hondy of 1225; 'The first man es Candelamoso, The tother Maryes clearsing esse, The threaf Cristes metring escale! (Mott. Hom., 153); in Arnolds, Chrom., under date 1221; 'Candylmas day next after, the kymer and the sayd black of Inraeyan have they from many the control of the Candelamos night) had been time out of minde celebrated at Court with somewhat more than ordinary

if you please call it Candlemas night) had been time out of minde celebrated at Court with somewhat more than ordinary solemnity (Murray, OED, s.r., Candlemas). The name is not peculiar to England. In France, it was formedly called 'la Candellere'; to-day it is 'la Chandeleur.' In tally it is called 'Candellere'; to-day it is 'la Chandeleur.' In tally it is called 'Candellere'; to-day it is 'la Chandeleur.' In Chronicle of Florence (t. 33), under date 1248, re-ords life ex-pulsion of the finels by Frederic it. 'Ha note di Santa Maria Candelain.' The Banes used the term 'Brendelmess' (Olaus Wormins in Posts' Domicking').

et Inf. Lat., s.r. 'Candelaria').

The name is derived from the custom of carrying caudles, torches, and tapers in the solemn pro-cessions on this day- a custom which is attested by Bede in the early part of the 8th century :

Sed hanc lustrandi consuctudinem bene mutavit Christiana

religio, cum in mense codem (ic» Februario), dlo 8. Mariae plebs universa cum Sucerdottibus ao Ministris, hymnis modulatae vocis per Eerlesias, perque congrua urbis loca procedit, datosque a Pontifice cuneti cerces in manibus gestata arientes" (Bed. de Ratimer Penp. c. 10, ap. du Cange, bo. c. ct.).

This description of the Candlemas procession and the reference to the Festival of the *Ipapunti* Domini—the Greek title of the Festival—in the Martyrologium of Bede are the earliest witnesses to Candlemas in this country (DACL ii. 619).

to Candlemas in this country (DACL ii, 640). Baronius in his Martyrologium Romonum says that in the ndest eodices the Festival has a variety of names: 'Festiam Simeonis et Annae,' Presentatio, 'Occursus,' Purificatio,' and, among the Greeks, 'Hypapante' or 'Hypante. This last title was also used in the West, and is equivalent to the word 'Occursus,' It also witnesses to what was perhaps the original thought of the Festival, the coming of Christ to the Temple, which is the note struck in the Invitatorium in the Roman Ferviary: 'Evce venit ad templum sanctum suum Dominator Dominus: Gaude et lacture Sion, occurrens Deo tuo.'

2. Origin.—This has been until lately the subject of considerable difference of opinion. Baronius refers to the statement in the *Historia Miscella*, which here rests on the authority of Paulus

Diaconus (ob. 799):

'Anno decimoquinto Imperii Justiniani (541), mense Octobre, facta est mortalitas Byzantii. Et eodem anno Hypapante Domini sumpsit initium, ut celebraretur apud Byzantium, secunda die Februarii mensis' (Muratori, Rerum Ital. Script. 1. i. 108).

He also refers to the statement of Georgins Cedrenus, a later authority, whose Compondium goes down to the reign of Michael vi. Stratioticus (1057). Cedrenus records the institution of the Festival nuder the reign of Justin (Hist. Compend. in Hist. Byzant., tom. vii., Ven. 1729), and the combined witness of the Historia Miscella and of Cedrenus is sufficient authority for recognizing the institution of the Festival at Constantinople on Feb. 2, either under Justin or under his successor Justinian—in either case probably through the influence of the latter.

But the discovery of the Peregrinatio Silviae by Gamurrini in a MS at Arezzo (Gamurrini, S. Silviae Aquit. Peregrinatio ad loca sancta, Rome, 1887), now known to be the Peregrinatio Egeriae (Dom Férotin, Paris, 1903), has thrown new light on the early recognition of the Festival. The pilgrimage took place c. 385. The Festival of the Presentation was celebrated in the Church of the Anastasis at Jerusalem with great pomp. It was called the Quadrogesimae de Epiphania. There is the procession such as is described by Bede three centuries later. Priests and bishops preach on the Presentation, and the dominant note is that of the 'Hypapante,' the 'Occursus,' the 'Festim Simeonis et Annae' of Baronius (cf. Duchesne, Origines', p. 499).

The transference of the Festival from 14th to 2nd Feb. was due to the institution of the Festival of Christmas  $(q, v_*)$  on Dec. 25. This was unknown at Jerusalem in 385. Chrysostom refers to the Festival of Christmas in 386, as having been introduced into Antioch about 375. It is a Festival of the Latin Church (Duchesne, p. 258). And the forty days of the Purification according to the Law would lead to the institution of the Festival of the Presentation on Feb. 2. It was perhaps under the influence of the traditions of the Latin Church of the Danube Provinces that Justinian, whose home was in Dardania, between Old Servia and Macedonia, introduced the Festival into Constantinople. Evans has pointed out 'the loyal adherence to Western orthodoxy and the See of Rome' which was shown by the Dardanian bishops (Antiquarian Researches in Illyricum, pts. iii.-iv. p. 133, Westminster, The inference is that the Festival was kept in Illyricum and in the Church of the Danube at

the close of the 5th century.
There is no evidence to show at what date the
Festival was first held at Rome. Baronius states
that it was instituted by Pope Gelsaius (492–496)
as a check to the heathen Festival of the Lupercalia

(Mart. Rom. p. 87), but the statement rests on no evidence (see DCA ii. 1141). Batiliol (Hist. du Brêv., rom. 134) says that the only Festival observed in early days in honour of the Blessed Virgin at Rome was the Octave of Christmas, Jan. 1. The four Festivals of the Nativity (Sept. 8), the Aummeiation (March 25), the Falling Asleep or Assumption (Aug. 15), and the Purification (Feb. 2), are not attested earlier than the time of Pope Sergius (687-701). The statement of the Liber Pontificalis, as Baronius points out, does not necessarily go beyond the order of the Litany or Procession from S. Adriano to S. Maria Maggiore (Anast. Bibl. lxxxv.; Murat. Rev. Ral. Script. III. i. 150).

There is an earlier witness in Gaul, in a sermon of Eligius of Noyon (ob. 665), in which mention is made of the candles ('de ee mysterio cercorum' [Baronius, Mart. Rom.]). Whatever may be inferred from these scant references, there is witness for the observance of the Festival in Jerusalem in 385, in the Dambe Province c. 500, in Constantinople in 542, in Gaul c. 650, and in Rome c. 700. It is in keeping with the traditions of Rome that it should be the last to witness to a Festival which had apparently already been established in the more Celtic provinces beyond the Alps.

3. Threefold character.—The Calendars and Service Books of the Church throw light on the threefold character of the Festival—as a Feast of our Lord, a Feast of the Blessed Virgin Mary, and

a Feast of Lights.

The earliest liturgical reference is in the Gelasian Sucramentury, the earliest MS of which dates from the end of the 7th century. The Vatican MS has the title 'in Purificatione Sanctae Mariae,' the Rheiman MS 'Saneti Simeonis,' and the edition of Gerbert, perhaps from the lost Zürich MS, 'Yppapanti' (Wilson, Gel. Sacr., p. 166). This is evidence that the name of the Festival was not as yet fixed, and that beyond the Alps the prominent thought was the Feast of the Presentation. The titles 'S. Simeonis' and 'Yppapanti' agree with the notice in the Liber Pontificalls.

The Gregorian Sacramentary represents the use at Rome at the close of the Sth century. The first part of it (Murat., cols. 1-138) is the Sacramentary sent by Hadrian to Charles the Great, between 784 and 791 (Duchesne, p. 120; Wilson, Missal of Robert of Junièges, p. xli). The Festival is entitled Yppapanti ad S. Mariam. The first Collect is 'Oratio ad Collectam ad S. Adrianum.' Then, as a title to the Collect for the day, is the note 'Missa ad Sanctam Mariam Majorem.' The Collect is that of the English Prayer Book and the Roman Missal, a Collect of the Presentation. The 'Collecta ad S. Adrianum,' with its prayer 'Erudi, quaesumus, Domine, plebem tuam,' is the prayer for the Litania at S. Adriano instituted by Pope Sergius (Murat. Sucr. Greg. p. 22). It is to be noted that the Preface for use in Purificatione Sanctae Mariae' from the Vatican Codex and the Codex Othobonianus (ib. 273,297) is the Preface 'V.D. . . . Deus quia per incarnati,' the Preface for Christmas Day. This is still the rule in the Roman Missal, and it is the link which joins Candle mas to Christmas.

The Saint-Amand MS of the Roman ordines is an important witness to the Candlemas Procession at Rome. It is a MS of the 8th cent., and is therefore of the same age as the Gregorian Sacramentary. At early dawn there was a gathering, or collecta, at the church of S. Adriano in the Forum. All the diaconal regions and all the titular parishes were represented, and with lighted candles awaited the Pope at the church. It was a meeting of the 'plebs,' on the very site of the Conitium, in

the Caria, where in bygone years the Comitia tributa had assembled. The choice of S. Adriano for this collecta is therefore not without importance in the history of the Festival at Rome, and the oratio ad Collectum must certainly be read in connexion with the traditions which probably still hung round this old meeting-place: 'Erndi, quaesumus, Domine, plebem tham (Murat. Savr. Greg. p. 22). The Pope and the deacons vested themselves in black (restimentis nigris). The Procession was then formed. Seven crosses were borne, probably at the head of the seven 'diaconiae'; then came the priests and subdeacons; last of all, the Pope with the deacons. Two lighted candles were carried before him.

Thus the Procession left the Forum for the church of S. Maria Maggiore. On nearing the atrium the Pope bade the choir sing the Litany again three times. 'Et ipsa die non psallitur Gloria in excelsis Dea.' The black vestments and the lushing of the Gloria lent a special note of solemnity to this service. It gives grounds for thinking that there is something in the suggestion of Baronius that the Festival was introduced into Rome to counteract the Festival of the Lupercalia

(Duchesne, App. p. 479).

The earlier Service Books of the Middle Ages still give emphasis to the idea of the Presentation of Christ. It is in the later Service Books that the Purification of the Blessed Virgin Mary takes a more prominent place. In the Metrical Martyrology of Oengus the Culdee (c. 800), it is noted as The reception of Mary's Son in the Temple, sure, inestimable (Whitley Stokes, Mart. of Congus, Henry Bradshaw Society, vol. xxix., 1880, p. 58).

The Leafric Missal represents the use of the anglish Church before the Conquest. The earliest English Church before the Conquest. part of the Missal (Leofric A), c. 900-950, reproduces the order of the Gregorian Sacramentary, with, however, the Epiphany Preface instead of the l'reface: 'Deus...quia per incarnati.' The Festival has the title 'Purificatio Sanctae Mariae (Warren, Leafric Missal, 1883, p. 70). The second part (Leofric B) is a calendar of the date 975-1000. The 'Purificatio Sanctae Mariae' is distinguished by F as one of the Greater Festivals (ib. p. 24). The Third Part (Leofric C) is of the date of Leofric. Bishop of Exeter (1059-1072). There are several prayers which belong to the Candlemas Procession. and enter into the later Service Books.

These prayers and antiphons illustrate the three aspects of Candlemas. It is a Feast of Lights, in which there is a Blessing of Fire and a Blessing of Light, in honour of Him who is the Light of the World, a Light to lighten the Gentiles. It is a Feast of the Presentation, or Festival of Simcon, who is mentioned in more than one of the prayers. It is a Feast of the Blessed Virgin: 'genetricis thae, cujus hodiae festa percolimus' (Leafric

Missal, pp. 203, 204).

The Missal of Robert of Junivers, Bp. of London (1044-1059) and Archibishop of Canterbury (1051-1052), is evidence of English use in the early years of the 11th century. The date of the MS is of the 11th century. The date of the MS is 1008-1025, or perhaps 1013 1017 (H. A. Wilson, Missal of Rabert of Juniveyes, H.B.S. vol. xi, p. xxiv). The title in the Calendar is 'Purificarlo Sanctae Mariae (th. p. 10). The prayers for the Blessing of the Fire and Candles and the prayers for the Mass are both in the Sanctorale. The Blessings come immediately after the Collect catio Sanctae Mariae (ib. p. 10). for the Festival of St. Bridget on Feb. 1, and as there is a leaf wanting in the MS before the ml Missam of the Parification, Wilson thinks it possible that the candles were blessed on St. Bridget's Day, 'Leofr, A has no mass for S. Brigid's Day (ib. p. lviii)—a fact which is important in its bearing on the customs of Candlemas Eve.

The antiphon is much fuller than in Leotric C. and has reference to Holy Simeon as well as the Blessed Virgin. It is a witness to the older name of the Festival. The prayers ad Mission are those of the Gregorian Sacramentary and the Leofric Missel, substituting a Special Preface instead of the old Christmas Preface. The Preface 'V.D.... Dens. In exultatione' has not been traced. Two passages give its character:

Dives in suo, pauper in nostro. Par turturum vel duos pullos columbarum vix sufficit sacrificio caeli terreque possessor. Gran-devi Symeonis invalidis gestatur in manibus a quo mundi rector

et dominus predicatur. . , , salvator.

It is probably of Galliean origin (ib. p. 160). The character of the antiphons and the Preface suggest that the European or Gallican type, as distinct from the Roman type, gave emphasis to the idea of the Presentation and the Meeting with Simeon and 'The Purification' was the title derived Anna. from Rome.

The Benedictional of Archbishop Robert, a MS written at Winchester towards the end of the 10th cent., has the rubric 'Oratio ad candelas benedicendas in Purificatione Sanctae Mariae' (Wilson, Benedictional of Archb. Robert, H.B.S. vol. xxiv. p. 35). This is the only form given, and it is followed by the Episcopal Benedictions in the Mass.

The later Candlemas rites are to be studied in the Westminster Missal, a MS of the date 1362-1386 (Wickham Legg, H.B.S. vols. i., v., xii.). The Mass is on p. 760. The whole of the Service except the Sequence emphasizes the Presentation. Sequence is in honour of the Blessed Virgin,

The blessing of the candles is on p. 619, and is ordered after Terce. The candles, together with the special candela rotunda, are placed in readiness before Teree, in front of the high altar. The abbot enters, and the choir sing the responsory, 'Gaude Maria virgo cunctas hereses sola interemisti,' with the verse 'Gabrielem archangelum,' which is said to have been composed by a blind cantor, and sung first at the Pantheon (Batiffol, Hist. du Brer. rom. i. 134). Its reference to 'hereses' and to the judeus infelix qui dicit christum ex Joseph semine esse natum' is archaic. The Collect Deus qui salutis is the old Gregorian Collect for Jan. 1—the ancient Roman Festival of the Blessed Virgin.

The candela rotunda, which is to be specially consecrated, is then lighted, the cantor beginning the antiphon 'Venit lumen tuum,' which is an Epiphany antiphon at Lauds in the Sarum Breviary. Then follows the Blessing of the Light, after which the candles are sprinkled with holy water and censed, the cantor beginning the antiphon 'Hodic beata virgo Maria puerum Iesum praesentavit. The candles are next distributed, and they, to gether with all the lights of the church, are to be lighted de lumine benedicto-the large candela rotunda which has been specially blessed with the old form of the Benedictio ignis,

The Candlemas Procession at Westminster Abbey in the 14th cent. emphasized the Blessing of the Light, the Presentation of Christ, and, in

the ancient responsory, the Virgin Birth.

The Candlemas Procession in the Monastery at Evesham in the 13th cent. differed from the West-minster use (Wilson, The Evesham Book, H.B.S. vol. vi. p. 57). A procession was formed usque in vol. M. p. ori. A procession was remark as procession was remark as a series of the Fire and of the Candles took place, perhaps at the altar of St. Mary 'in cryptis.' This is a relic of the older Benedictine use, which ordered that the blessing should take place 'extra propriam ecclesiam. should take place 'extra propulm eccresiam, When they reach the crypt, the abbot precedes and stands near the candles while the antiphon 'Gabrielem' is sung. The abbot them blesses the fire in the thurible, after which the candles and tapers are blessed. The abbot next sprinkles the candles with holy water and censes them, and then says 'Dominus vobiscum' and the Collect 'Erndi, quaesumus, Domine, plebem,' the oratio ad Collection S. Adviani of the Gregorian Sucramentary. The abbot then goes to his place, whereupon the precentor receives the candle prepared for the abbot, and lights it from the fire in the thurible. The versus ormatus, probably the magnus versus gui dictium mariate in the Westminster MS Benedictional at Oxford, is borne before the abbot, and the procession is re-formed and passes through the cloisters to the church. The vercus ornatus is then placed 'super candelabrum juxta altare.' The candles have to be carried during the Mass.

In the Salisbury Processional of 1445 (Chr. Wordsworth, Salisbury Ceremonies and Processions, p. 100), the large candle which was borne before the bishop weighed six pounds. The Lincoln candle

weighed a stone.

There is an important comparative table of the Blessing of the Candles in Legg's edition of the Westminster Missal (pt. iii. pp. 1431–1432), which presents many of the chief differences as well as

the points of agreement.

The later rives at the Procession, the Mass, and the Hours may be found in the Roman and Sarum Missals, and the Roman and Sarum Breviaries. In the Roman rite, where the priest is vested in a violet cope, there is no Blessing of the Fire, but the candles after being blessed are distributed, and the Xume Dimittis is sung with the artiphon 'Lumen' after every verse. The Sarum Missal (ed. Dickinson, p. 696) also omits the Blessing of the Fire.

The Breviary Service of the Roman rite reflects the old character of the Festival. The antiphons at Vespers are those appointed for the Greuncision, the ancient Roman Festival of the Blessed Virgin, and at Matins the Invitatory is 'Ecce venit ad templum.' It is to be noted that the Te Deum's sung to-day where Gloria in Excelsis was omitted in the 8th cent. ordo of Saint-Amand. At second Vespers the antiphon to Magnifical is 'Hodie beata virgo Maria puerum lesum praesentavit.' The

Lections all refer to the Presentation.

The Surum Breviary (ed. Wordsworth, p. 131) has some variations. The Ninth Response, not displaced by the Te Deum, is the ancient 'Gande Maria, . . . Gabrielem,' and at second Vespers the responsory is 'Gande, gaude, gaude, Maria.' It is noted that according to the Sarum Use the Festival

cannot be transferred.

The Festival is observed with characteristic variations in the Ambrosian and Mozarable rites. In the 11th cent. Sacramentary of Bergamo of the Ambrosian rite, it appears in the Calendar as the Purification (D24CL i. 1399). In the Breviary the Resp. in choro at the First Vespers is 'Suscipiens feaum in ulnis,' with the verse Nune Dimittles; the Psallenda is 'Senex pnerum portabat'; the third Collect is 'Erudi'; and the Antiphona and Cruccan is that of the Circumcision, 'Venite et videte in Bethlehem Regen'—another link which joins Candlemas to Christmas. This antiphon is repeated only five times, whereas at the Feast of the Circumcision (Jan. 1) it is repeated seven times.

The Mozarabie rite has preserved the Blessing of the Fire. The ordo ad benedicendum randelus is in the Mozarabic Missal (ed. Lesley, Rome, 1754, p. 300). The fire is struck from flint: 'Et sembatur novus ignis cum seilice et ex lavone? 'The Benedictio ignis is that of Leofric C, while the Preface is that of the Sarum Missal, with some very slight differences, its presence in the Mozarabic and Sarum Missals showing the community of rite in the West in the earlier ages of the Church.

The antiphon 'Lumen' is sung after each verse of the Nanc Dimittis. Then follows the Blessing

of the Light after the sprinkling of the candles. The Collect differs from the Roman, referring to Simeon and the 'Lumen ad revelationem gentium.' The 'oratio ad pacem' has a reference to purification: 'Domine less Christe ... in te impleta omnia ostendisti: dum in te vero Deo et homine: purification secundum legem exprimitur: ... Adesto plebi the ad te ex purificatione venienti, et presta incrementum muneris,' Is this a link with the Roman purifications of the month of February? The Inlatio is of special interest, since it is identical with the Inlatio of the Circuncision, and yet has an allusion to Simeon and Anna and the Presentation in the Temple. Is it to be inferred that in earlier days the Presentation was observed at the octave of Christmas but was transferred to Candlemas to meet the needs of the Church to check the February traditions of heathendom—the sacred fire in the West, the lustrations in Rome?

4. Relation of the Feast of Candlemas to the

4. Relation of the Feast of Candremas to the early heather festivals.—The following points stand out prominently in the liturgical evidence: the Blessing of the New Fire's emphasized in the Evesham use and the Mozarabic rite; the carrying of the candles is associated with the 'Lumen ad revelationem gentium'; and the idea of purification is preserved not only in the title of the Festival, but in the oratio and pacem of the Mozarabic rite. This liturgical evidence is supported by the evidence

of folk-lore.

The Blessing of the New Fire, which, according to the Mozarabic rite, must be newly struck out of the flint, may perhaps link the Festival of Candlemas with the rites of Celtic heathendom. The Celtic year began on Nov. 1, which the Church consecrated to All Saints. The 1st of May marked the beginning of summer, and the Beltane hires of May 1 compare with the Sauhain fires of Nov. 1 (Rhŷs, Celtic Heathendom, p. 518). The Church consecrated May 1 to the Apostles. The 1st of August is the great feast of the sun-god, the Lughnasadh Fair or Lammas Day, which the Church took over in honour of St. Peter. The day was also marked in old time by its hires.

The 1st of Feb. was the fourth great Festival of the Celtic year (Chambers, Book of Days, Aug. 1; for further details, cf. Festivals (Celtic)). Vallancey in a quotation from Cormac's Glossory

savs

'In his time [i.e. the 10th cent.] four great fires were lighted up on the four great festivals of the Druids; viz. in February, May, August, and November' (Brand, Popular Antiquities, ed.

Bohn, 1848, vol. i. p. 349).

It is not difficult to connect the Blessing of the Fire with the ancient fires of Feb. 1; and the Scotch custom of the Candlemas Bleeze or Blaze (Book of Days, Feb. 2) was probably derived from the sacred fires lighted on Feb. 1, which is still dedicated to St. Bridget or St. Bride. Her sacred fire was still gnarded at Kildare in the time of Giraldus Cambrensis (Wood-Martin, Elder Faiths of Ircland, 1902, vol. i, p. 279). St. Bride has entered into the heritage of the Goidelic Brigit, a Minerva who presided over the three chief crafts of Erinn (Ithys, Cell. Heathendon, p. 75). Candlemas is connected with St. Bride by two traditions of Scotch custom. One of these is described by M. Martin in his 'Description of the Western Islands of Scotland,' 1716 (Pinkerton's Voyages, iii, 613):

'The mistress and servants of each family take a sheaf of cots and dress it up in women's apparel, put it in a large basket, and lay a wooden elib by it, and this they call Brild's Bed; and then the mistress and servants ery three times, "Brild is come, Brild is welcome." This they do just before going to bed'

(Brand, op. cit. i. 50).

There is another version from the M88 of John Ramsay of Ochtertyre (Scotland and Scotsman in 18th Cent., ed. A. Allardyce, Edin. 1888, vol. ii. p. 447). The custom, according to Ramsay, was associated with the night before Candlemas, thus linking the Candlemas Festival with the older Festival of Feb. 1. A bed was made of corn and hay near the door. When it was ready, some one went out, and called three times: 'Bridget, Bridget, come in; thy hed is ready.' One or more candles were left burning near it all the night. Frazer  $(GB^2$  i. 223) speaks of this as a representation of the revival of vegetation in spring, and it is this which links the folk-lore of St. Bridget with the myth of Persephone (Seyflert, Dict. of Class. Antt.,

tr. Nettleship and Sandys, 1906, s. r. (Persephone').
There is another early instance of the association of St. Bridget with Candlemas in Maxwell's

Bygone Scotland (p. 153):

30th Jan. 1510. It is ordanit that on Candlemas Day, as is '30th Jan. 1510. It is ordanit that on Candlemas Day, as is the yerlie ryt and custom of the burgh, in the hour of God and the Blissit Virgin Mary, there shall be the processions of cratismen, twa and twa togdr, socialie, als honourabily as they can. And in the offering of the Play, the cratismen sal furnyss the Pagcante; ... wobstaris and walearis, Symeon, goldsmiths, the three Kingis of Culliane; the litetaris, the Emperor; ... the tailyours, our Lady Sante Brid and Sante Effect.

'Our Lady Sanct Brid' here takes an important place in the Candlemas pageant, and it therefore seems reasonable to associate the Blessing of the Fire on Candlemas Day with the ancient Fire of

St. Bridget.

The Carrying of the Candles has also its early associations, which were taken up by the Church in honour of Him who came to be the Light of the World, 'Lumen ad revelationem gentium.' myth of the rape of Persephone has reference to the changes of the seasons. 'In spring, when the seeds sprout up from the ground, she rises to her mother [Demeter]' (Seyflert, op. cit. p. 472). Both she and her mother Demeter are represented with a lighted torch (ib. 473, 178). The Eleusinian Mysteries were celebrated in honour of Demeter and Persephone, and the return of Persephone to the light was celebrated at the Lesser Mysteries, which were held in the month Anthesterion, which corresponds roughly with February. In these Mysteries the carrying of torches was a marked feature in the rite. The Scotch custom of calling for Bridget on Candlemas Eve, and the solemn carrying of candles at Candlemas, are only different methods of giving expression in folkcustom and religion to the ancient myth of the spring return of Per-ephone. Baronius accepts the principle of consecrating pagan mysteries to the glory of Christ :

'Patanus usum illum superstitionis Gentilium sacris ritibus expiatum, ac sacrosanctum redditum, in Dei Ecclesiam esse laudabiliter introductum' (Mart. Rom. p. 88).

The idea of purification is emphasized in the oratio ad pacem of the Mozarabie rite. Baronins regarded this as being the immediate cause of the introduction of the Festival into Rome. He refers to the treatise of Gelasius against the Senator Andromachus on the abuses of the Lupercalia. which was held at Rome on Feb. 15th (ib. 87), and he gives the letter in full in his Annals (sub ann. 496). It was a festival favoured by the women of Rome, who looked for virtue from the thongs cut from the skins of the goats sacrificed to Juno Februalis. The whole purpose of the Festival was purification (Varro, vi. 3, 55). February thus became the month of purification, and the Festival itself was a redletter day for the women of Rome. It is certainly not an accident that Candlemas Day was called in the North of England 'the Wives' Feast Day,' and it was an inspiration of the Church to consecrate the February Festival to the honour of the Blessed Virgin Mother of our Lord: 'Gaude, gaude, gaude, Maria.' Nor was it an accident that the Candlemas Procession at Rome was representative of the whole city, and gathered at the church of S. Adriano, the ancient Curia on the Forum of Rome, the meeting-place of the 'plebs.' It is this to which allusion is made in the Collect 'Erudi, quaesumus, Domine, plebem tuam . . . gratiae tuae lumen concede.

5. The Candlemas customs did not altogether die ont in England with the Reformation. Peter Smart, a Prebendary of Durham, in 1628 alludes to

Smarty a Frenchary of Darman, in 10.55 annates to the practice of Cosin, Bp. of Durham:

On Candlenass Day hast past, Mr. Cozens, in renuing that Popish ceremonic of burning Candles to the honour of our Ladje, busied himself from two of the clocke in the aftermone. till foure, in climbing long ladders to stick up wax candles in the said Cathedral Church (Brand, op. cit. i. 47).

George Herbert in his Country Purson (1675)

speaks of an 'old custom of saying, when light is brought in, "God send us the light of Heaven and the parson likes this very well.' In a note to the Gentleman's Magazine of 1790, a gentleman visiting Harrogate said that at Ripon, a few years before, 'on the Sunday before Candlemas, the collegiate church, a line ancient building, was one continued blaze of light all the afternoon from an immense number of candles' (Hone, Every-Day Book, ed. 1830, vol. i. p. 205).

Herrick in his Hesperides alindes to the customs of Candlemas, which was still the end of the Forty

Days of Christmas:

Chilstings:

'Down with the Rosemary, and so
Down with the Eales and Misletoe:
Down with the Holly, Ivic, all
Wherewith ye drest the Christmas Hall:
That so the superstitious find No one least branch there left behind: For look how many leaves there be Neglected there (Maids, trust to me), So many Goblins you shall see

(Brand, op. cit. i. 49).

Sir Thomas Browne sums no Candlemas weather in the proverb,
Si Sol splendescat Maria purificante,

Major crit glacies post festum quam fuit ante' (ib. 50).

This proverb is best Englished in the Scotch lines:

'If Candlemass Day he dry and fair, The half o' winter's to come and mair ; The half o' winter's to come and man; If Candlemass Day he wet and foul,
The half o' winter's gane at Yule'
(Chambers, Buok of Days, i. 214).

(Chambers, Book of Days, 1, 244).

Box might take the place of holly at Candlemas:
bown with the Bosemary and Bayes,
bown with the Misleto;
Instead of Holly, now upersise
The greener Box (for show):
(Herrick, in Brand, p. 49).

And the old idea of the continuity of the Sacred Fire and Light is shown in the burning of the Christmas Brand and its preservation till the coming Christmas:

'Kindle the Christmas brand, and then Till sunne-set let it burne; Which quencht, then lay it up agen,

Til Christmas next returne Part must be kent wherewith to teend

The Christmas Log next yeare; And where 'tis safely kept, the Fiend Can do no mischiefe (there)

(ib. p. 50).

The 'teending,' or lighting, of the Christmas Log with the Christmas Brand laid up from Candlemas, is an echo of the sanctity of the Sacred Fire. enstoms and rites show the continuity in folk-lore and religion of the earliest religious ideas. To quote George Herbert, 'Light is a great blessing, and as great as food, for which we give thanks; and those that think this superstitions neither know superstition nor themselves.

know superstition nor themselves?

## CANNIBALISM.

i. Origin of cannibalism. - 1. Cannibalism, anthropophagy, or man-eating, is a custom which at once inspires horror in the civilized mind. But, though the present range of the practice is somewhat restricted, it was much wider within even recent times, and there is every probability that all races have, at one period or another, passed through a cannibalistic stage, which survived occasionally in ritual or in folk-enstom, or was remembered in legend or folk-tale. Even now extreme hunger will drive members of the most civilized races, as well as those peoples who live always on the borders of starvation, to the practice, however much they may instinctively abhor it. But there is every reason to believe that such abhorrence was not originally instinctive, but arose through a variety of causes, so that, in the beginning, maneating may have been as natural to primitive men as is the eating of animal-flesh to ourselves. The word 'cannibal' is derived from Carib. When Columbus visited Cuba he heard of the 'Canibales (Caribs) as man-eaters. At Hayti they were called 'Caribes' - the difference being caused by the interchange of l, n, and r in American languages. The name of this particular man-eating people was then extended as a popular term for all maneaters, or for any bloodthirsty race, the Spaniards erroneously connecting it with Sp. can, and Lat. canis, 'a dog.' By the end of the 16th cent. the word was in common use as a generic term; c.q. Bonner is called a cannibal by Foxe (Acts and Mon. iii. 739), and Shakespeare makes Queen Margaret call her son's murderers 'bloody cannibals' (3 Hen. VI. Act v. Sc. 5, line 61). 'Anthropophagy' is directly derived from ανθρωποφάγος, while 'man-eater' was already in use as a Teutonic feminine appellation (mannætta) for both male and female sercerers (Grimm, Teut. Myth. 1081).

2. Cannibalism among animals. — Among the lower animals eating of their own kind occurs as an habitual or occasional practice with most of the carnivores, feline and canine, and with some rodents, the young or weak falling victims to the rapacity of the others. This has been noted mainly in the case of captive animals, but in some cases also among animals in their wild state. With very few exceptions, e.g. the horse, animals seem to show no shrinking from the dead of their own When, however, we come to the higher apes, no evidence of their eating their own kind is yet forthcoming, and some have inferred from this that man's immediate precursor as well as primitive man himself was not a cannibal. Some, indeed, have gone so far as to deny that the higher apes and even primitive men were carnivores. It is quite certain, however, that most, if not all, of the higher apes in a wild state eat small and possibly large mammals, while in captivity they show no distaste for flesh food. Though mainly frugivores, they are by no means exclusively so, and all of them seem to be omnivorous in their tastes and habits. As to primitive man, the argument appears to be based mainly on the form of his teeth, which indeed differ but slightly from those of modern men who are omnivorous. He could quite well have eaten flesh food as we do, without possessing the teeth of a carnivore, which tears its food with its teeth in order to consume it. The

analogy of the lower savages, who are by no means exclusively vegetarians, and many of whom devour flesh greedily, tends to show that primitive man, like the men of the Quaternary period (the refuse of whose food shows strong flesh-eating propensities), was not a plant- or fruit-eater exclusively. (On the cannibalism of beasts see Brehm, Thierleben2, 1878.)

3. Primitive cannibalism .- Primitive man and even man's immediate precursor were already far in advance of the higher apes. One line of advance is to be seen in their growing ability to supply their rapidly extending needs, and there can be little doubt that they desired and obtained a more varied and a more regular food supply. If, as is certain, the higher apes were already omnivorous the increasing development of primitive man would make him more so, through his increasing adaptation to a more varied diet. At the same time, increasing skill as a hunter of his prey, increasing wariness, and the use of stone or endgel as weapons would cause him to master even large mammals, whose flesh would be used as food. There would be a growing taste for flesh food, and there seems no reason to suppose that any discrimination as to the kind of flesh eaten was exercised. buman flesh need not have seemed to primitive man or to his immediate precursor any more disgusting than to eat any other kind of flesh. When other flesh was wanting, the sight of a dead human being would but excite the flesh-hunger. In this connexion Steinmetz has shown (1) that the fear of the dead body could have been no hindrance to the eating of it, since even now, where ghosts are feared, savages show little fear of the corpse, handling it indifferently, remaining with it, subjecting it to various indignities (from our point of view), and also eating it; (2) that the natural disgust which civilized man has at cannibalism does not exist among cannibalistic savages, while many low races, even without the pressure of hunger, eat the most revolting things; (3) that the æsthetic refinement of civilized man is hardly discoverable in the savage. A fortiori, then, man, when just emerging from the bestial stage, must have

been as the savage (Endokannibalismus, ch. 20).

To this it may be added that the satisfaction felt after a meal of flesh of whatever kind, as well as the pressing claims of hunger, were little calculated to make primitive man discriminate as to what he ate. The dead body of friend or foe was but an addition to the primitive larder, and would be readily eaten, when other flesh food was wanting, by one who was at all costs bent on satisfying his hunger. Since cannibalism, which seems to have once existed universally, must have originated at some time, there seems no good reason for crediting primitive man with greater refinement of feeling than his successors who do practise it, or for denying that it originated with him. The earliest men of whose habits we have any actual knowledge, viz. the men of Palæolithic times, were cannibalistic, and we can hardly suppose that the practice began with them. Better that it should have begun at a time when there existed no ethical or asthetic reason to hinder it, and that, with increasing civilization, men should have begun to give it up, than that we should seek its origin in a later age, when its commencement would involve the shifting of already formed higher feelings. There was a time when cannibalism was natural to man, as there was a time when other things, shocking to our moral sense, e.g. incest, were natural to him. It was man's privilege, in becoming more couscious of his manhood, to shake them off and to rise in doing so to a higher ethical plane. Thus Schurtz's dictum that cannibalism is a sickness of childhood, which often overcomes the strongest peoples, is scarcely relevant as regards primitive

man. It assumes that cannibalism, in its origin, was pathological, whereas it seems, under the circumstances, perfectly natural. Only when the feelings which now make it abhorrent to us are overcome through madness or gluttony, can it be called pathological, and these are happily the least wide-spread causes of cannibalism. Few maniaes, indeed, whatever other perversions they exhibit, are known to become cannibalistic.

The question of pre-historic cannibalism-Paleolithic and Neolithic-has been much discussed. The arguments for Palæo Neothine—has been much discussed. The arguments for Paleco lithic times are mainly these—the presence of human bones, charred, broken, and calcined, mixed with animal bones, as-her, and charcoal, in Quaternary deposits; some of these are split as if to obtain marrow, as in later savage cannibalism; others show traces of scraping with fifth intartunents as it to acrape off show the core accounts with an instruments as it to scrape on show cutting marks, and in one instrument the metric remaining broken with a stone hammer, as if to extract the brains. As no other bones were found, Piette supposes a tribe of head-numers to have inhabited this cave, who need a similar method to that of the head-hunters of Luzou (Ess. 34, L. 1878, p. 497). In late Paiwolthic interments, e.g. those of Baousses-Rousses at Mentone, the custom of removing flesh from the bones before interment—a common savage custom—had been followed, and may indicate cannibalism. Quaternary man also made necklaces of human teeth, as many camibalistic savages now do. It has been thought too, that, as the fiels of the larger manumals may not always have been available through the poverty of Paleso lithic man's weapons, he may frequently have been reduced to hunger, and may thus have been driven to anthropophagy. Against all this it has been contended that the charring may have hunger, and may thus have been driven to anthropophagy, Against all this it has been contended that the charring may have been accidental; that fractures on human bones bear no resemblance to those on animal hones, and may have here caused through the weight of the supernoundent layers; and that there was abundance of flesh food available. There is, however, no a priori reason why Palsolithic man should not have been an excasional though not an haitmal counibal; and if cannibalism recessional though not an haitmal counibal; and if cannibalism rests on similar evidence, as well as the presence of human bones in refuse heaps or kitchen middlens. The Palsolithic evidence rests uninly on caves in Belguun and France; the Neolithic, on deposits in Egypt (where Petric and Transce; the Neolithic, on deposits in Egypt (where Petric and Transce; the Neolithic, on deposits in Egypt (where Petric and Transce), the Neolithic laked-wellers in Switzerland used the skulls of enemies as drinking-cups (Gross, Les Frodokelètea, 1883, p. 197). See reports of discussions at Inter. Problems of the Sealer, 1884, p. 1981, and following years. In Mission, 1884, p. 1884, and following year

nunger, of the civilized man's natural disguist at eating human flesh, rather than actual mathies, gave rise to it. Some cases of tall authenticity (1 crth. der Antheopophagie, p. 2). Steinmete, (ep. cit. do. 23) could discover no instances of it, and the works of modern alienists do not refer to it. Plutarch cites a confused story of the daughters of Minyas, who went mad with desire for human flesh and slew one of their children (Quest. Gr. 28).

4. The most satisfactory hypothesis of the primitive social group is that which makes it analogous to the family groups of the higher apes, viz. the sire, a number of females, and their younger progeny. From this group, ex hapothesi, the sons, as they grow up, are driven off by the sire through the influence of sexual jealousy. They are thus forced to seek mates by capture from some other group (Lang and Atkinson, Social Origins: Primal Law, 1903). Assuming, then, as we have reason for doing, that the members of such a group had omnivorous tastes, and through hunger ate their fellows as well as the other mammals, whom would they eat—members of the group, or outsiders (fees), or both? Such love as may have existed between the sire and his mates or progeny was little likely to hinder him from eating them when dead, especially as no other reason kept him from it, and the practice was as yet natural. To the sons who had been driven out he was hostile; if he killed them while attempting to interfere with his wives, again nothing hindered their being eaten. Finally, the members of all other groups. being hostile, would, when killed, afford a food supply. Thus relatives and enemies alike would

be eaten. Hence it is impossible to assume, as some writers (e.g. Steinmetz) do, the priority of endo-cannibalism (viz. the eating of relatives) over exo cannibalism (the eating of non-relatives) Cannibalism existed without these distinctions first of all, and the desire for food made no distinction between relative and enemy. Or the distinction may have been thus far suggested, that, while an enemy might be killed in order to be eaten, a relative would be eaten only when dead. The sons, though relatives, were strictly in the position of enemies. The distinction between friend and foe. so far as forming a possible food supply was concerned, would, of course, exist, whatever was the form of the earliest human or semi-human social group.

Bordier (BSAP, 3me sér., xi. 67) used the words exo-anthropophagy' and 'endo-anthropophagy': Steinmetz (Endokannibalismus, p. 1) prefers the forms 'exo-cannibalism' and 'endo-cannibalism' to these and to the usual English forms 'exophagy' and 'endoplagy,' which are also used for the ordinary food restrictions of totemistic peoples.

5. Totemism and cannibalism.—The earliest

cannibals were thus unconsciously both endo- and exo-cannibals. The distinction between cating a relative and eating an enemy, with the consequent tabu against eating a kinsman, could have arisen only with the growing sense of kinship. Man soon discovered that there were certain persons whom he must not marry, viz. those of kin to him-not, however, in our sense of the word. Whether an exogamous tendency existed before totemism is uncertain; if it did, totemism made it absolute. Was there also a growing dislike of endo-cannibalism which totemism also made absolute? One result of totemism was certainly to make tabu the eating of the animal or plant which was the totem of the group of kinsmen, because, in effect, it was a kinsman. This tabu, aided by the increased sense of kinship and the customary laws which it involved, as well as by the growing dislike of endo-cannibalism (if such existed), may quite conceivably have made tabu the eating of a human kinsman. Frazer has pointed out that 'the further we go back we should find how much the less the clansman distinguishes between conduct towards his totem and towards his fellow-clansmen' (Totemism, p. 3). If it is wrong to kill and eat one's totem-animal because it is of kin to one, it is equally wrong to eat a kinsman. And in actual practice we find that among totemistic peoples it is generally considered wrong to kill a kinsman. In Mangaia, to kill a fellow-clansman was regarded as falling on the god (totem) himself, the literal sense of ta atua (to kill a member of the same totem-clan) being 'god-killing' (Gill, Myths and Songs, 1876, p. 38). The animal kinsman being tabu, not to be killed or eaten, the human kinsman must have been so too. Conceivably, then, a man might eat his wife (just as he could eat freely of her totem-animal), since she was bound to be of a different totem kin and class from himself, and yet would be breaking no law forbidding endo-cannibalism. But he could not eat his sister, or brother, or mother, since these were within the list forbidden degrees and of the same totem kin. The tabu against eating relatives may possibly be seen in the savage custom of not cating in a house where a dead man is lying, lest his ghost should by accident be eaten. Why then are relatives sometimes eaten among present or earlier totemistic peoples? Totemism is now generally a declining institution, and its sanctions are frequently not observed. Hunger might impel to the eating of a dead kinsman, as it does sometimes, even in Australia, to the eating of a totem animal. So affection or some powerful animistic or semi-religious motive

might here and there overcome the totem cannibal

Strictly speaking, the words 'exo-cannibalism' and 'endo-cannibalism' should be used only where totem clans practise cannibalism, since a man may eat another who, from our point of view, is a relative, and yet from the totem point of view is not a kinsman (not of the same totem). But in actual use this is overlooked, and the eating of relatives, or even more loosely of tribesmen, is spoken of as endo-cannibalism, and that of any others as exocannibalism; whereas endo-cannibalism should be confined to the cating of toten kinsmen where it occurs. This (which resembles the loose use of the word 'exogamy') is partly due to the fact that observers of cannibalism seldom state what relatives are eaten or by whom. This is important, since, even where totemism as an institution has passed away, its restrictions frequently remain (see below). But, using the terms in their wider sense, we find, from a survey of information given by travellers and missionaries, that many peoples who eat enemies also eat, on certain occasions, fellow-tribesmen or 'relations.' A closer investigation might have shown that the latter were often not kinsmen in the totemistic sense. As far as most cannibal areas are concerned, since so many peoples have abandoned the practice, the time for this has gone by. A closer serntiny of existing caunibal tribes may bring fresh information to light.

Among actual totem peoples some data exist to show the trath of our contention. From the Australians we have a few recorded facts by observers who have connected totemism and recorded facts by observers who have connected totemism and cannibalism. Some tribes eat only enemies, e.g., the Kurnai and Maneroo (Fison and Howitt, Kamilaroi and Kurnai, 1850, pp. 214, 218, 223). Spencer and Gillen report of North Central Australia that Ghanji cat enemies and probably their own dead; with the Binbinga tribe, men of a different class from the dead man eat him; in one case cited from the Anula tribe, the woman was eaten by four men, two of them her own 'tribal fathers,' and of the same class as she, and two of a different class, but all of a different totem from the woman (Spencer-Gillen, pp. 545, 545). Other tribes eat only relatives; but we seldom hear what the relationship is, save among the Dieri with whom 'the father does not eat the child or the child the father, but mother eats child and child eats mother, while brothers in law and sisters in law eat each other '(Curr, Aust. Racc, 18-7, ü. 63). The Dieri do not count descent through the mother, however, and eat their own totems. In other cases in Australia the restriction as to eating the totem is sometimes decrease, especially through bunger, as mong tribes and the same was the same and the same was the same was seen as well as well as the same was the of their totem so that men of other kins may eat it (Howitt p. 145; Spencer-Gillenb, pp. 167, 321). Among some Central Anstralian tribes the totem is eaten ceremonially. It is thus evident that there is a tendency to break down the earlier evinent that there is a behavior to break down the earner restriction on eating the totem animal, and the same teadency may explain the eating of kinsnen. Hunger and the strong influence of other motives would certainly tend in this direction (ii. § 12). With the American Indians, also totemists, extreme hunger alone drives isolated tribes to ear telatives; elsewherhunger alone drives isolated tribes to eat relatives; elsewher-only cenemies are eaten, and for maggiar reasons (i,  $\beta$ :  $\gamma$ ). Of the Carlis and other tribes in Thurn says: 'tribal feeling is always very strong among Indians, so that they cannot be suspected of feeding on individuals of their own tribe' (Inl., of Gattana, p, 418). In New Caledonia, Fiji, and the New Hebrides, where a past totemism has left a legacy of food restrictions, the eating of relatives is certainly occasional; which in the New Hebrides and Duke of York Island the bodies are sold or exchanged (Powell, Fanderings, 1888, p, 93; Nadsilla, BSAP, 1888, p. 34).
In Fiji, where an earlier totemism had given rise to the idea

In Fiji, where an earlier totemism had given rise to the idea of the gods being incarnate in certain animals which must never be eaten by the worshippers, we find that some weather from eating human flesh, because the shrine of their god is a man' (Williams, Fiji, ASSA, 1220). Here, probably, an earlier totem restriction on the eating of kinsmen has become, with the curious local development of the institution, a tabu against eating any human flesh where the clan god and not bis shrine. Another suggestive case is found among the Mazor formerly totemists, according to Macleman. When some of the tormery totemists, according to accuentath. When some of the matives fought with the English against their fellows, after the fight some of the young men proposed to eat the fallen of the other side. But others forbade this, because the fallen and the victors were all "Negaphil' together (i.e. of the same chan), and to eat a relative was a deadly sin (Od New Zedatad, 1833, p. 229). So in a Maori myth, when Maui's grandmother was on

the point of devonring him, she suddenly discovered him to be a relative, and her desire ceased; while one family who devonred their near relatives became cowards as a consequence

(Grey, Polyn. Myth., 1855, pp. 34, 131).
In Airica no eating of relatives occurs in the south (Bechu-In Arrica no eating of relatives occurs in the south (Bechi-anas, etc.), where there are totem-animal restrictions; while most remarkable of all is the reductance of the worst cannibals in the world—those of Central Africa—to eat relatives, whose bodies are invariably sold or exchanged. Here, too, the preence of an earlier totemism has been found (Macleman, Studies

in Anc. Hist.2, 1886, chs. xxii.-xxv.).
In support of the theory that totemism tabued the eating of In support of the theory that totemism tabucd the eating of kinsmen is the parallel (noted by W. R. Smith, Kinship, 1885, p. 307) drawn by certain peoples between cannibalism and the eating of tabucd animals. Forphyry says the Egyptians and Phoemicians would rather have eaten buman flesh than that of the cow (de Abst. ii.11). Generally, even by cannibals, there is a distinction drawn between eating of enemies and eating of reladistinction drawn between eating of enemies and eating of reinves—the former ont of revenge, etc., the latter generally for ceremonial purposes. Livingstone reports that the people of the Zambesi were shocked at the idea of enting a donkey (presimably a totem-animal): "it would be like eating man himselt' (Zambesi, 1835, p. 335). The Solomon Islanders, who have exogamous claus, never eat the body of a member of the same tribe (UAnthrop. x. 492).

6. Taking the word 'endo-cannibalism' in the wider sense of eating members of the tribal group, we may make certain deductions from the data. (1) Endo- and exo-cannibalism frequently coexist, especially where some motive other than hunger underlies man-eating, e.g. the desire to assimilate the virtues, soul, or strength of the deceased. In these cases we may assume that the totemistic restriction has been overridden by some stronger (2) Exo-cannibalism frequently exists alone, even among very low races. This may result (a) from totemistic traditions; (b) where enemies are eaten to show contempt for them or out of sheer rage-motives which obviously could not underlie the eating of relatives or fellowtribesmen, and which would inevitably bring that to an end where it still existed. The only exception to this latter case is where the criminal, i.e. a member of the tribal group, is eaten as an expression of legal punishment. (c) Exo-cannibalism occasionally exists alone, with sheer gluttony as the motive; the bodies of relatives, as has been seen, are exchanged or sold — a proof that the strong desire for human flesh may be overruled in the case of relatives by some powerful law, even though it be only a survival. This law we hold to be totemistic. (d) Where cannibalism is dying out, it continues to exist mainly in an attenuated form as exo-cannibalism, as among some American Indian tribes. (3) Endo-cannibalism seldom exists alone, and this suggests the inference that at first no distinction was made between eating friend and cating foe. It was only later that the distinction arose. This is also suggested by the fact that, among races who have abandoned cannibalism and who do not possess totemism as a flourishing institution, the bodies of dead relatives are eaten under the pressure of famine, as among the Eskimos, and wherever cannibalism has occurred among civilized peoples.

ii. Varieties of cannibalism. - I. Cannibalism from hunger,-Where cannibalism now occurs out of hunger, a distinction must be noted between eating the dead and killing the living in order to eat them. In the latter case, sometimes it is the sick and old who are killed, but usually these are put to death for another motive, as will be seen. Dead bodies are eaten among the Eskimos (though some deny this), a few isolated American Indian tribes, some S. American tribes, the Tongans, and the Basutos. Cannibal murder is found among the Australians, New Caledonians, islanders of Nuka Hiva, Marquesans, Samoans, Ainus, Sakhalin is-landers, Ostiaks, Samoyeds, Tiering Dayaks, in further India, among some American Indian tribes, and among the Fuegians. With all these peoples, except the Tongans, New Caledonians, and Marquesans, cannibalism is occasional and through stress of

famine, while it is mainly relatives or members of the same tribe who are eaten. In a few case, c.g. American Indians and Basutos, we find canniball-in through famine causing a taste for human liesh, and resulting in man-eating through gluttony.

The cambaism of the Eskimos has been denied, as by Egede (Bruchstacke cines Tagebuches, p. 107), who says that in famine they kill their dogs as we would do horses, dogs not being usually eaten by them. Its earlier evistence, however, is sugartitle and the state of 
Certain Australian tribes, on the Watchandi of W. Australia, Certain Australian tribes, on the Watchandi of W. Australia, Edited Brain the for need—the mother getting the head, the half the mother of the control of t

In another and modern times, civilized societies and individuals, through sess of famine as in siege or shipwreck, have excessionally an experience of the session of the conception of the session of the control of the session of the session of the session of the control of the session of the session of the session of the mediawal times after great searcity in the 7th and 11th cent of at the siege of Paris in 150; among the Saxons at the cent of the Thirty Years' War; during famine in Algiers in 1868; and during the siege of Messian (Letourneau, Erol. of Morally, 1886, p. 215; Bergemann, op. cit. p. 11.).

2. Other motives.—It has now to be shown how other motives than the primitive one of hunger influenced the practice of cannibalism, and occasionally were strong enough to override the totenistic restriction regarding the eating of kinsmen, or, assuming that they existed before the rise of totenism, prevented the application of the food restriction so far as it concerned human kinsmen.

That this is not contrary to fact is proved by the actual eating of kinsmen among some totem peoples. The permission to cal

human kinsmen plus the restriction on cating animal kinsmen may seem a contradiction, but savage law, however stirct, is frequently accommodating, and we have an analogous contradiction in this, that, while human kinsmen were alsointley forbidden to marry, the animal kinsmen must have been known to baid among themselves. Eagle man might not marry Eagle woman, but the actual Eagle had an Eagle mate. Various totember people sales kill or eat their totum animal on certain being peoples also kill or eat their totum animal on certain as a sacred, and do not ordinarily kill or eat their with an animal relations festival (Todas, Central African tithes) or at an animal relations festival (Todas, Central African tithes) or at the samalar relations festival (Todas, Central African tithes), heathen Arabs, See Marshall, Phrenologist animal Todas, 1873, p. 129; Frazer, Totenman, 1905, Golden Bomp?; W. R. Smith, Rel. of Smites, p. 278; Kwelle, Rel. of Mexico and Pern, 1884, p. 236; Herodous, it 77; Bancroft, Nather Races, 1875, iii, 310.

Men are eaten with the purpose of acquiring their qualities, their strength, or their soul; for magical or medical purposes; ont of affection; out of hatred; through gluttony; for religious or ritual, political, and social reasons. In some cases more than one of these notives exist together. Generally speaking, they have arisen later than the eating of luman flesh through hunger; in many instances they have arisen directly out of it, but we must not overlook the possibility of any of them having arisen separately and apart from a taste for this food acquired in time of starvation. Each of these motives will be discussed separately, and its range and extent set forth. It should be observed that, when enunibalism has become an established custom, it exists usually quite independently of the presence or absence of plenty of other kinds of food.

3. Cannibalism to obtain strength, etc. - First may be noted the common savage belief that by eating a human being or an animal one acquires the qualities and virtues of such a person or animal. The strength of the lion, the ferocity of the tiger, the courage of the warrior, will be communicated to the eater of the flesh of lion, tiger, or warrior. In it-elf the belief is primarily a development of what must already have been patent to primitive man, viz. the strengthening power of tood. Hence it was easy to believe that the qualities of a beast or man-strength, swiftness, cunning, valour, etc.—would also be acquired by eating. This sucremental transfusion of qualities and energies must have originated in early times, while it is found universally among all peoples of a low range of culture. It was also aided by the growing magical theory of things, and especially by that branch of it by which it was held that the part was equal to the whole, or could convey the qualities of the whole, since the nature of anything adheres to its parts even when they are separated from it. Hence, to eat even a small piece or the flesh of beast or man would result in the assimilation of his qualities by the eater. Even totemism itself may have assisted this belief in the assimilation of qualities, if totemistic peoples held that the life circulating in the group of kinsmen was a fixed quantity, any part of which it was dangerous to lose. Hence, it a kinsman dies, his share of the life must be received by his fellow-kinsmen to prevent its passing out of the kin. Therefore they may smear themselves with his blood or fat, or even cat a part of him (Frazer, Totemism, p. 80). In the same way wearing a bone or tooth of a dead man is sometimes held to convey to the wearer his properties. Thus, while totemism generally forbade the cating of relatives, it may here and there have suggested it. In the same way, when totemism was weakened, the sacred totem animal became a sacred magical animal with healing qualities when caten (S. Reinach, L'Anthrop. xiv. 355; W. R. Smith, Kinship in Arabia, 2 p. 231). This motive has led to the enting of relatives, but especially to the eating of enemies, in order to acquire their qualities.

4. The growth of Animism, with its belief in an indwelling spirit in all things, helped this theory of transmission of qualities, and introduced some of the strongest reasons for the continuance of cannibalism. While a man's strength or bravery may not have been conceived of as a separate entity, but simply as wrapped up in the man himself, Animism, with its belief in a shadowy replica of man-his soul or spirit-gave these things a new psychic significance. Hence in actual cannibalism we find that many tribes eat a man to be possessed of his soul, which in turn makes them presessors of all the qualities of the man. His life and all its manifestations - strength, wit, courage - are conceived of as being in the soul which lurks in his tlesh; and, as in the earlier theory, by eating a man one obtained his strength, so now by eating him one obtains his soul. In many cases, where the heart or liver or marrow is said to be caten, or the blood drunk for the sake of obtaining its owner's strength, it is probable that the assimilation of the owner's soul or life is intended, since it is so commonly believed that the life or soul is in one of

these parts. It might be thought that Animism, with its 5. It might be thought that Animosa, which when belief in soul, or spirit, or ghost, which, when freed from the body, was held to have many additional powers or, at least, greater freedom in using them, would have caused a fear of the dead and a natural shrinking from eating the body of an enemy, whereby his soul would be introduced into the eater, and thus work him harm. In effect, Animism did give rise to the fear of the dead and of ghosts, and in many cases it was held that the soul of a man, living or dead, could work considerable harm to the body or soul of another. But as, in spite of this, the bodies of the dead and of those most likely to harm the eater, viz. enemies, continued to be eaten, it is obvious that some counter theories were strong enough, in most cases, to aid men in overcoming their fears. These were (1) that by eating a man one overcame his ghost or soul, which was thenceforth harmless, and subservient to the will of the eater, or was even destroyed. We shall find this as a working belief among Australians, Maoris, Eskimos, and in Central Africa, while it also supplies one strong motive for head-hunting, frequently associated with cannibalism (§ 14). (2) Again, the enrious ideas regarding eating, viz. that it established a bond of nnion between persons eating together (hence to eat the food of the spirit world, later of fairy-land, or of the gods, bound one to the company of ghosts or gods), may also have assisted to overcome the fear of the dead by a kind of inversion. If persons eating together became of one kin, so also might the eater with the thing or person eaten. Thus the eater of friend or foe, as it were, became inoculated with him, and so rendered him harmless. the case of relatives this eating may easily have come to be regarded as part of the funeral cere-monies, to neglect which would ensure the ghost's vengeance, but to fulfil which cansed his continued friendship. Thus cannibalism does not seem to have been much hindered, as far as fear was concerned, by the prevailing animistic beliefs, though these may have occasionally caused it to cease in another direction (see below, iii.). Frequently the bodies of relatives are eaten in order that their souls may strengthen the eaters, or pass over into them, pos-sibly with the notion of their being re-incarnate in the bodies of the next children born into the family. Or again, the old and sick are killed and eaten to prevent the soul becoming weak with the body. Some analogy to this negative influence of Animism is found where cannibalism, involving the handling of a dead body, prevails among peoples, e.g. the

Maoris, to whom such handling caused uncleanness.

And parallels to the idea of the ghost strengthening or helping the eater of the body are found, e.g., in the Melanesian belief that arrows tipped with human bone are deadly, because the ghost to whom the piece of bone belonged will work upon the wounded person (JAI xix. 215), or in the Andaman custom of wearing necklaces of human bones in the belief that the disembodied spirit will shield the wearer against evil spirits, through gratifude for the respect thus paid to his memory (ib, xii. 85).

6. Where cannibalism occurs for the purpose of obtaining the strength or other qualities of the person eaten, it is most frequently only a part of the body which is used; hence there is seldom a cannibalistic meal. This motive underlies cannibalism in parts of Anstralia, in the Sandwich Islands, Torres Straits and Nagir Islands, Timor-Lant, Celebes, and New Zealand, in some parts of Asia, among some African tribes, with the majority of American Indian tribes, occasionally in S. America, and even now and then in civilized lands.

America, and even now and then in civilized Rands. Some tribes in North Australia cat the cheeks and eves of enemies to make them brave (MacGillivray, Voyage of Rattle-stake, 1852, i. 162); in Queensland enemies do not appear to be eaten, but members of the tribe are, for various reasons, including the obtaining of their qualities; e.g. a mother will eat her child to get back the strength which she has given it; relatives are also eaten, as well as members of the tribe who fall in hattle, and honoured headmen (Palmer, JAI xiii. 283; Howitt, Native Tribes, p. 763; Finch-Hatton, Advence Australial, 1885, p. 143); in N.S. Wales the fat of the fallen, to which great strength is attributed, is exten, while at burila a piece of the fissh is divided among the relatives, out of which they suck strength or throw it into the river to nourish the fish (Waitz, Anthrop, Vi. 748; JAI xiii. 183); in S. Australia, hesides other motives, the acquiring of strength appears among the Kurnai, Theddora, vi. 748; JAI xiii. 139); in S. Australia, hesides other motives, the acquiring of strength appears among the Kurnai, Theddora, and Ngarigo, who eat the hands and feet of enemies (Howitt, op. cit. p. 729); the Dieri of Central Australia eat a man and drink his blood; the Loritcha frequently kill a strong child and feed a weak one on its flesh, while most of the tribesmen, before starting on an expedition, draw blood from one or more of their members, and drink it to make them lithe and active (JAI xxiv. 172; Spencer-Gillens, pp. 461, 475). Bonwick says of the Tasmanians that a man's blood was sometimes administered as Tasmanians that a mark blood was sometimes administered as 1570, p. 89). In the Sandwich Islands the eating of an enemy's eye by the king at his coronation to get his strength was the reduced form of an earlier, wider cambidalism (see § 38). In the Torres Straits Islands the tongue of a slain enemy was eaten as a charm for bravery; the sweat of warriors was drunk for the same reason; the eyes and cheeks of a shipwrecked party in 1834 a charm for bravery; the sweat of warriors was drank for the same reason; the eyes and cheeks of a shipwrecked party in 1834 were said to have heen eaten to 'increase their desire after the blood of white men. Beyond this cannibalism did not exist. (Iladdon, JAI xix, 312). On Nagir Island boys were made to eat the eyes and tongue of an enemy that their hearts might know no fear (Petermann's Mittellungen, vi. 90). In Timor-Lault the fiels of a dead enemy was set un to cure impotence; in Celebes the blood of an enemy was carried to core imporence; in Celebes the blood of an enemy was drunk to acquire courage (Riedel, Selebes, 1886, p. 279). Savage tribes in N.E. Burnia preserve blood of enemies in bamboo canes till dry, and then eat it in a feast to obtain courage (Lumboltz, Among Cannibals, 1889, p. 274). The Dayak head hunters would eat a piece of the cheek-skin as a charm to make them fearless (Ling Roth, J.A.I xxii. 59). Eating the eye and sucking the blood to get strength xxii. 59. Eating the eye and sucking the blood to get strength appear with the notive of revenge among the Maonis (Taylor, N.Z. ch. xxi.). Among the Yakuts and Kamtchatkans, and in Liu-kiu, a mother would eat the placenta in order to bear quickly again (Inter. Arch. für Eth. iii. 71), while in Muzaffar. quickly again (Inter. Arch. Jur Eth. iii. 71), while in Muzaffar-magar a barren woman is recorded as killing a child to drink its blood (PK ii. 172). The lamas in Tibet are said to have a craving for lumnan blood in order to obtain vigour and genius (Landor, In the Forbidden Land, 1898, ii. 68). Drinking an enun's blood is reported of the people of Dardistan (Leitner, Tour in D. i. 9); the brains and lungs of an eneny are catand his blood is drunk in Luzon (Featherman, Rores of Manand his blood is drunk in Luzon (Featherman, Rores of Manand his Stode is drun and his blood is drunk in Luzon (Featherman, Račes of Man-kind, 1888, ii. 501). In Africa the practice as an isolated custom is found mainly in the south. The Basutos, in Moshesh's time, at their Boer enemies to get their courage; warriors were also painted with a mixture into which pieces of human flesh (enemy's) entered, for the same reason; some of it was occasionally drunk; the hearts of conspicuous warriors are exten by most of the tribes (JAI xix, 2844, xx, 137). The Kährs will eat a human heart to obtain strength; a similar notion doubtless underlat the custom among the Ama-pondo Kährs drunk of the custom and the control of the chief bathed in his blood and drank from his skull. The Bechuanas thuche disliking the practice, also eat an enemy's Chief bathed in his blood and drank from his skull. The Bechuanas, though disliking the practice, also eat an enemy's flesh for superstitious reasons (Crawley, Mystic Rose, 1992, 192). Tribes in East Central Africa cut out an enemy's heart and liver and eat them on the spot, while parts of the flesh are reduced to ashes and made into a broth, which is swallowed to give courage, perseverance, and wisdom (Macdonald, JAI xkii, 111; Buchanan, Shrie Highlands, 1885, p. 138). Among the

Negro tribes, who are cannibal mainly out of revence or gluttony, this motive is occasionally found, either along with these or by itself: the Jaggas (Angola) are men because it gave them courage, according to a 17th eent, traveller, and among the Bassongi of the hassai men after circumcision and unfruitful domen eat men's flesh to recuperate their powers; at Great Bassam (Vory Coast) the heart and liver of a sacrificial victim, sain at the founding of a new town, are caten by all present so that they may not die within the year; in Dahomey an enemy's blad they may not die within the year; in Dahomey an enemy's Plagge, 1829, p. 129; Istated, Volkerkende, 1888, i 03:6-04). In S. Africa, where cannibalism has been practically uprooted by Muhammadanism, it is believed, e.g., among the Nubians, that every bullet they fire will kill a man if they consume the liver of an enemy (Taker, Ismallia, 1874, it. 351). Among the American Indians, with the exception of the outlying fribe, who are the manufactured of the control of the outlying fribe, who are then another than the corrace a death only, though occasionally through revenge. Chippewa women fed their children with the blood and pieces of flesh of Eaglish prisoners to make warriers of them. The heart was eaten by such tribes as the Crees and Blackfeet; Jakotas and Sloux are known to have cut up a prisoner into small pieces, which were distributed to all the warriors, who ate them to get his bravery. There seems that Crees and Blackfeet; Jakotas and Sloux are known to have cut up a prisoner into small pieces, which were distributed to all the warriors, who ate them to get his bravery. There seems valled in earlier times (Long, Fougges, 1791, p. 116; Faraud, op. cit, p. 35; Keating, Exped. to 8. Peter's Riber, 1825, 1412). Occasionally Indians have been known to eat part of a slain emmy out of havado (ERBU, p. 272). Among S. American tribes where mainly giuttony or more purely animistic motives prevail, there is sometimes a practice of rubbing children's along them of

flesh, etc., of the dead has medical virtues. What strengthened the body would also cure its ills; hence primitive and even later pharmacopoias occasionally prescribe some part of the dead body as a medicine. The most remarkable examples of this practice occur in China. Among the poor it is not uncommon for a member of the family to cut a piece of flesh from arm or leg, which is cooked and then given to a sick relative. Parts of the bodies of criminals are eaten as medicine; their blood is drunk as a cure for consumption. In some cases murder is committed so that the diseased, e.g. lepers, may drink the blood of the victim. A popular work on materia medica gives many such cannibal remedies; in general, each part of the body has some particular curative virtue. The whole superstition in China is certainly connected with the idea that the eating of the human body strengthens the eater, for this is wide-spread, and at times it is difficult to say which purpose is intended. Thus Wells Williams writes: 'It is not uncommon for him [the executioner] to cut out the gall-bladder of notorious robbers, and sell it, to be eaten as a specific for courage' (Middle Kingdom, 1848, i. 415; Dennys, Folk-lore of China, 1876, p. 69; Bergemann, p. 21). Among savages the praetice is found of giving a sick man some blood to drink drawn from the veins of a relative (Australia, JAI xiii. 132; American Indians, Petitot, Trad. Ind., 1886, p. 269). Pliny cites a number of remedies concocted from portions of human bodies and used by the sick (UN xxviii, 1f.). The medical properties of human tlesh were believed in throughout medieval Europe and even in much later times. Even in the 17th cent. the Hon. Robert Boyle speaks of the curative properties of the thigh-bone of a criminal. Popular superstition still makes occasional use of such remedies in Germany, but generally the flesh is used magically, though in some cases it is eaten. Drinking out of the skull of a dead criminal or suicide has always been a favourite remedy, and is

still made use of in out-of-the-way corners—cases have been reported from the Scottish Highlands within the last few years. The custom of the sick drinking water in which the relics of a saint had been washed, or from his skull, or of a stream diverted so that it might flow under the altar of a church over the bones of a saint, was a favourite practice in mediaval times, as it still is in Roman Catholic lands and in, r.g., the Cyclades (Bent, The Cyclades, 1885, p. 122). Louville (Memoirs, 1818, Cyclades, 1885, p. 122). ii. 107) cites the case of the duchess of Alva in the 17th cent., who, alarmed for the health of her son, obtained a finger of St. Isidore from the monks of Madrid, pounded it up, and made him drink part of it in a potion. Probably the idea of the value of the flesh of a criminal for medical purposes was a relie from the time when criminals or prisoners or slaves were used as human sacrificial victims, sometimes representing the divinity, and either eaten in a cannibal feast, or their flesh or blood used for healing purposes. Since eriminals had frequently been chosen as sacrificial victims, it was argued that there must be some virtue in a eriminal's body. Thus when human sacrifices eeased, the executed criminal was still held to possess special virtues (see an article by M. Peacock, 'Executed Criminals and Folk-Medicine,' in FL vii. [1896] 268, for other instances).

8. Magical cannibalism. - In some cases the flesh of the dead is eaten for magical purposes; here also the underlying idea is that of acquiring the powers of the deceased. In the Torres Straits Islands, where only the tongue of dead enemies is eaten in ordinary circumstances, youths at initiation into the eraft of soreery are required to eat part of a putrid human corpse; this is also done by sorcerers before practising their art. In both cases it causes frenzy, and the eater is not held accountable for his actions, even for murder (Haddon, JAI xix. 316, 398). In various parts of Australia this eating of the dead forms part of the making of medicine-men, but with many of the tribes initiation is held to be the work of spirits; hence, possibly, eating the dead ensures the help of the ghost. Among the Wiimbaio of S. Australia the candidates must chew the bones of a dead man, dug up for this purpose, and, as in the previous case, they then become frenzied and act as maniacs (Howitt, op. cit. p. 404). The same practice occurs in Africa, as among the Bantu negroes generally, who think that the person desirous of becoming a sorcerer (as well as the sorcerer himself) is a corpse-eater, either from morbid tastes, or more probably with the idea that the dead body will invest him with magical powers. In E. Central Africa it is believed that witches and wizards feed on corpses in midnight orgies, and that any one eating such food is thereby converted into a wizard (Johnston, Uganda Protectorate, 1902, ii. 578; J. Macdonald, JAI xxii, 107). In W. Africa witches are held to feed upon living human victims by sending their 'power' into the body; but this power is dangerous to its owner, as it may feed himself if not regularly fed otherwise. Similarly, witches can extract the life-soul—a less material duplicate of the victim—and feast on it in a magic orgy; its owner then sickens and dies (M. II. Kingsley, W. Af. Studies, 1899, p. 209; Nassan, Ertichism in W. Africa, 1904, p. 55). Horace refers to witch practices in his day, and describes love-philtres in which dried human marrow and liver were ingredients (Odes, v. v.); while Petronius and Plantus also speak of witches devouring the nerves and intestines of their victims; the former mentions images of straw substituted by them for kidnapped children (Pet. cap. 63, 134; Plant. Pseud. iii. 2. 31), Similar crimes were laid at the door of witches in Christian times, and the belief still survives in Slavonic lands, where many tales are told of how the lags take out their victims' heart while they sleep and devour it, substituting some straw or a hare's heart, and thus changing their nature (see iv. § 4 for other instances). This branch of cannibalism is closely hound up with a whole group of practices in which part of a dead body is used for magical purposes, on account of its virtues, or because the soul of the dead man will act through the part which is made use of. These are found universally among savages, and with sorcerers and witches in more civilized lands, while they have given rise to a vast series of folk superstitions (see RELICS).

9. Animistic cannibalism. - The belief that by eating the dead one acquires their strength is scarcely to be distinguished from the purely animistic motive-to obtain their soul, or otherwise to influence it-and it is possible that in some of the cases already cited 'strength' is equivalent to 'soul. Where relatives are eaten, the passing over of the soul to the eater for the benefit of the latter is mainly aimed at; but in the case of an enemy the destruction or hurt of his soul is also intended, though instances with the intention of obtaining his services and goodwill are known. This is suggested in the curious 'ritual' performed by a murderer in ancient Greece, viz. to lick up the blood and then spit if forth. This was said to be done by way of ridding himself of the pollution of murder; in reality it 'took away the force of the dead, which was still further effected by the lopping off of his limbs (Apoll. Rhod. iv. 470 i.). The former practice is found in Australia and Tibet, in N. and S. America occasionally, and in Africa; the latter is clearly found among the Maoris, the Eskimos, the Tupis of S. America, the Ashantis, and in New Cale-The idea of destroying the soul through donia. eating the body is illustrated by the Ainu belief that until the body is decomposed the ghost remains active, and the Indian idea that a maneating tiger obtains possession of the souls of his victims; hence he walks with bent head weighed down by their souls (Crooke, ii. 211); while, generally, the belief that by obtaining or acting upon a part of any one's body-hair-cuttings, nail-parings, bones, etc .- control over his spirit for its hurt is possible, is also suggestive in this connexion.

possible, is also suggestive in this connexion.

(1) Eating of relatives.—The Australian instances show how easily 'strength' and 'soul' are confounded. In most cases the obtaining of strength is desired (\$60, but the passing over the obtaining of strength is desired (\$60, but the passing over the obtaining of strength is mainly equivalent to 'soul' is seen in eaten. That 'strength 'is mainly equivalent to 'soul' is seen in W. Australian caumbalism, where the old are eaten for food, because, being old, they have no longer a soul which might cause the eater disconfort; i.e. weakness and want of soul are identical (oldfield, Trans. Eth. Soc. N.S. iii. 243). In Tibet, the lamas first and then the relatives of the dead man eat his fiesh with the idea that the spirit whose fiesh has been swallowed will always remain friendly to the eater Canador, nearly aimed at; but sometimes, as with the Shooknoes, the eater of an enemy became animated with his spirit (Featherman, op. cit. iii. 200. In S. America the Chavantis eat dead children that their souls may pass over to the parents, while the Yamas, now extinct, broke the bones of their dead to suck out the marrow, believing that the soul resided in it and would pass over to them (Andree, p. 89; Marcov), in Tout de Monde, xv. 139). In Uganda it was held that the liver, as the sent of the soul, would, when eaten, henceft the eater (TRSE) and the soul, of convince The Marris, whose camuliables extended to the soul, would, when eaten, henceft the eater (TRSE) and the soul resided in the soul, would, when eaten, henceft the eater (TRSE).

xiii. 218).

(2) Eating of enemies.—The Maoris, whose campibalism existed mainly out of revenge, believed that in eating the enemy they destroyed his spirit, thus avoiding his posthomous venge-ance, since the spirits of the slain wander about seeking to revenge themselves (L'Authropotopie, vi. 449). With the Eskimos a curious helief prevails. After killing a men, they must earl of his liver, as fink says, to prevent his ghost rushing infinity and the control of the state of the single properties of the state of the state of the single properties. The heart of a dead wirch is also caten by all the community to prevent her ghost haunting or trightening the fiving (Rink, op. cit. p. 45; Egele, op. cit. p. 132; Cranz. Hist., of Greenland, 1820, gives a curious reason for eating the heart of a murderer, viz. to cause his relatives to lose their courage; Bergemann, p. 20,

says the Chukchis eat the heart of a dead enemy to make his relatives sick). The East Prussians at a piece of numbered victims so as never to remember their evil deed again, i.e. probably to prevent the appearance of the ghost (Strate, Blutabley Dearth and the property of the sayer, after eating him, occurred with the Tupis of S. America, who are cannibals out of revenge and the Tupis of S. America, who are cannibals out of revenge and the Tupis of S. America, who are cannibals out of revenge and the Tupis of S. America, who are cannibals out of revenge and the Tupis of S. America, who are cannibals out of revenge and the Tupis of S. America, who are cannibals out of revenge and the Tupis of S. America, but he has heart to sold of "print," it is to obvious that the slaver thus acquired his victim's soul (Aodree, p. 87; Chamisso, Bemerkungen, p. 136). With the Ashantis the fetish-priest prepares the heart of an enemy with scarcel herbs, and gives it to all who have not yet killed an enemy, that the ghost, which has its scat in the heart, may not take away their courage (Bowdich, Ashantee, 181), p. 402.). If heart with goal's fiesh, to prevent revenge on the part of her ghost (Livingstone, Last Journals, 1874, it. 58). In Melanesia, p. 414. x. 289; or a man will eat part of a corpse to obtain communion with the ghost, which will then assist him against living enemies (Codrington, Melanesian, 1891, p. 222).

10. Cannibalism and blood-covenant. - In some of the cases cited, and perhaps running more or less through all animistic or strength-acquiring eating of enemies, appears the idea that eaters and eaten are now one; hence the revenge of the ghost is forestalled; hence, too, the relatives of the victim cannot harm the murderer. This seems to underlie the Chukchi, Eskimo, and E. Prussian cases; it reappears among the Hurons, who drank the blood of an enemy to become invulnerable against the attacks of other enemies (presumably his relatives); among the Botocudos, who ate an enemy to be protected from his revenge and to be invulnerable against the arrows of the hostile tribe; in New Britain; and in modern Italy, where a murderer believes he will not escape unless he taste his victim's blood (Featherman, Aonco-Mar. p. 60, Chiapo Mar. p. 355; Powell, Wanderings, p. 92; Rivista, i. 640). In all these cases there is a dim recognition of kinship acquired with the victim and his relatives, which has doubtless been suggested by the rite of blood - brotherhood, by which, when two persons, not otherwise related, have tasted each other's blood, they are henceforth one (see Brotherhood [artificial])

11. Honorific cannibalism. - Other motives besides the above must be noted, especially in con nexion with the eating of relatives. It is possible that an animistic reason may underlie these. certain cases the sick or old are killed in order that their souls may not be weakened with the body; thus the soul is set free in comparative strength From one point of view to animate the eater. this is to honour the dead, and honour may well be the motive even where it is not expressly stated. We may therefore join all cases where this animistic intention is found with those in which honour to the dead is the prevailing idea, and those in which the eating by relatives ensures proper burial, or the prevention of corruption or of worms doing harm to the body or soul. Among those practising cannibalism for this reason are several peoples mentioned by classical writers, some Australian tribes, various Asiatic peoples, and S. American tribes. Thus it hardly occurs in and S. American tribes. those regions where cannibalism existed out of revenge or gluttony, save in a few notable instances.

Herodotus (i. 216) describes the canubalism of the Massageta, a Seythian people living to the N.E. of the Caspian. When a man had attained a great age, his kinsmen 'sacrificed' him with cattle, boiled the flesh, and at eit, accounting this a happy death. This account is confirmed by Strabo (xi. 513). Their neighbours, the Issedones, had a similar practice when the father died, his flesh with that of cattle being cut up and eaten at a hanquet by the relatives, who then cleansed the head, gilded the skull, and afterwards honoured it with sacrifices (Herodi, v. 26). Strabo also says that the berbikes, a people of North Iran, killed and ate all old uen over 70; all others (in the Caucasus as cating the flesh of relatives. Indians called Padiaio are mentioned by Herodotus (iii. 99) as camnibals: a sick man was killed and eaten by male relatives. Indians called Padiaio are leatives. Any who attained old age were also

killed and caten. Other Indian peoples, e.g. the Kallatiai, ate their dead parents (iii. 38). These were doubtless aboriginal and not Hindu tribes. Farther west, the inhabitants of Ireland (Fepra) are said by Strabo to deem it. Henourable to eat the bodies of the contract of the contract of the contract of their commissalism, but hendrons only the eating of dead enemies (i. 16). There seems no reason for throwing doubt on these assertions, especially as they are paralleled by recent or existing customs not only in Asia but deswhere. The Welctahi or Wilze, a Slavonic people, are said by Notker to have eaten their old parents (Grum, Fett. Myth. iii. 1981); and the same is related of the Wents in ancient chronicles (Steinmetz, p. 29). In Anot did, homour to deal relatives auditive among tribes on the Mary River (Queensland) and in Western Wietoria. In the latter case only those dying not by liness are eaten; and brothers and sisters do not eat each other (A.41 ii. 179; Dawson, Int. Abor., 1881, p. 67). In the Tarthal tribe, when a man is killed at the ceremonial initiation fights, his tribesance at him 'because they knew him and were load of him, and they now knew where he was, and his flesh would not stink (Howit, Q. Col. p. 750). In Raff of Strates were recovered and continued and the provides a strategy of the results of Strates and the second of the continued and the provides of the continued of the continued and the provides of the continued o. cit. p. 753). In Asia, the classic example of cannibalism found among the Battas of Sumatra, who practise legal canniis found among the Battas of Sumaira, who practise legal cambairs not enemies and criminals, but also eat the sick and old out of respect—an unusual combination of contradictory motives. It is probable that they are the people mentioned by Marco Polo and others as dwelling in the kingdom of Dagroian. Marco Polo and others as dwelling in the kingdom of Dagroian. Marco Polo and onthe statement of the statement of a tree, round which the others assemble singing a funeral dirge a tree, round which the others assemble singing a funeral dirge—"The season is come, the fruit is ripe, and it must discernd. He then descends, and is put to death and eaten in a solenn hanquet. The custome existed speradically among the wider tribes of Eastern Asia within recent times. The wild people of Arakan eat the old (Yule, op. Cf. 1, 281), some of the tonds of Arakan eat the Old (Yule, op. Cf. 1, 281), some of the tonds of the aged, 'thinking this an act of kindness and acceptable to the goddess Kali'; so also did the Birbor and the Godds in Oudh (Yule, ii, 281, Sartori, 'Die Sitte der Alten- und Krankentotting)' (debus, 1825, p. 126). The Kweichans were said by the Chinese to cat old relatives, as also did the people of Leil'ow with old men; women were evenight. The same was asserted of reported as the motive (Yule, i. 292); while the Samoyeas and Ostikas ate them with shamanic ceremonies, so that their and Ostiaks ate them with shamanic ceremonies, so that their condition after death might be improved (Inter. Arch. für Eth. condition after death might be improved (Inter, Arch., Iir Bth.
iii. 71). For some of the S. American tribes, with when this
motive appears, the evidence is conflicting, as they are also
accessed of esting enemies out of revenge or gluttony. This is
true of the bottometer, with whom the outlet has as a claim
out of tenderness (Preuss, Begundarster, as and child
out of tenderness (Preuss, Begundarster, der Amerikaner,
p. 219; Waitz, iii. 440); of the Miranhas, said to cat the sick and
old (Marcoy, in Tour du Monde, vs. 139); and of the Rashibos,
said to cat their elders from religious motives (Anthrop. Rer.
i. 38). Surer ground is reached with the Sundruens, who kill
and eat the sick and old out of kindness; the Capanalmus and
the three to be unside a friend than to be sendlowed up to the coldbetter to be unside a friend than to be sendlowed up to the coldthe Cocomas, who eat the dead out of honour, because it is 'better to he inside a friend than to be swallowed up by the cold earth'; the Nayornuas and the tribes on the Orinoco, with whom the reason is that it is better to be eaten by a friend than by worms; and the Acumas on the Maranon, who ate dead relatives (Markham, AAI xxiv. '84, etc.'; Spencer, Prin. of Ethics, 1893, i. 339; Steinnetz, p. 184). Tapuya mothers eat their dead infants as well as the placenta (Nieuhof, Gedenk, Brasil. Zec. on Lantreize, Amsterdam, 1682, p. 216).

12. Closely akin to the above motive is that of morbid affection, eating the dead out of sheer love, which is found with many Australian tribes. The idea is clearly that of obtaining communion with the dead, which is also effected in Australia, Timor-Laut, New Britain, etc., by smearing the body with the decomposed matter of the corpse; or, in Australia and the Andaman Islands, by a near relative carrying about the skull or bones. It is expressed in two different ways by the Australian tribes. (1) Among the coast tribes of north central Australia, the flesh of the dead is eaten as part of the burial rites, apparently out of affection, and always by certain definitely arranged persons (Spencer-Gillen<sup>b</sup>, p. 547 ff.). Other writers refer to the so-called 'love-feasts' of east central tribes, in which, when a young woman dies, her male relatives and men with whom she has had sexual relations eat parts of her body (Steinmetz, p. 11). With these tribes, the bones are the object of the utmost care and the most minute

ceremonial. (2) A curious motive is that of the relatives eating the dead in order that they may no longer be sad. This occurs among tribes on the Peak Flood river (along with other motives). They cat dead children, else they will for ever mourn them; the mother gets the head, while the other children are given part in order to strengthen them (Andree, p. 45). With the Dieri, the fat adhering to the face, thighs, arms, and stomach is eaten according to strict rules of relationship, and in order that the relatives may not be sad or weep: this is also the case with other tribes of S. Australia—the Yaurorka, Yantruwunta, Marula, and Tangara. The latter eat the flesh also, carrying the remains about and eating a piece whenever their grief overcomes them (Howitt, op. cit. pp. The custom is not unknown even 449, 751). among Christianized American Indians in British Columbia, instances being known of some of the blood or juices of the corpse being rubbed on the body or swallowed in a frenzy of grief to obtain union with the beloved dead (Allison, JAI xxi. Precisely the same idea of morbid affection is found in the story of Artemisia, who drank the ashes of Mausolus out of love for him (Aul. Gell. x. 18). Civilized Greek and savage Australian were at one. It was possibly also a custom among the ancient Celts, since in the heroic cycles we lead how Emer, the wife of Cuchulainn, after her husband's head had been cut off, washed it, pressed it to her bosom, and sucked in the blood (Hyde, Lit. Hist, of Ireland, 1899, p. 352). Deirdre also lapped the blood of her husband when he was slain (16. p. 315). The custom is also referred to in much later Gaelie poetry, while Spenser saw a woman drink the blood of her foster-son at Limerick (Carmichael, Carmina Gadelica, 1900, ii. 282).

13. Cannibalism through revenge.—Probably at a later stage an entirely new motive arose with respect to the eating of enemies, though it may always have been more or less latent in this practice, and, where it prevailed, it put a stop to the eating of relatives (where that existed) or fellowtribesmen, except for one particular reason. is probably a late motive, since it seems mainly to affect savages at a higher stage of civilization, while it also prevails with those who are most cruel. Here enemies are eaten out of rage, and in order to glut revenge and cause their lasting \* contumely. The dead enemy was treated with the utmost contempt, and finally eaten with every mark of degradation. It is obvious that, where the eating of relatives out of honour still continued, the rise of this motive must have soon put an end to it. For eating the dead could not signify in the one case contempt and in the other honour. And, in fact, where enemies are eaten for this precise reason, the eating of fellow-tribes men does not exist except where gluttony, as in certain Polynesian cases, causes all loss of dis-tinction between friend and foe, or in cases of extreme hunger (Marquesas Islands) when an enemy is not available. The motive of revenge, however, gave an impetus to the eating of fellow-tribesmen in a new direction, viz. as a punishment, and produced legal cannibalism. The criminal was caten, as elsewhere he is executed. In certain cases the motive of sheer gluttony coexists with this motive of contempt, and here also mainly among higher savages. Raids are made on surrounding tribes, and cannibalism causes a regular trade in bodies, which are bought and sold in the market as meat is in a butcher's shop.

14. The eating of enemies out of rage or contempt, with its correlate, legal cannibalism—the eating of criminal members of the community—has a comparatively wide range, and mainly among higher savages and barbaric races. In some cases it is connected with the idea of obtaining the enemies' strength, while it cannot always be dissociated from the motive of gluttony. In many cases, however, the eating is reduced to a minimum, and becomes a mere formal act of revenge. Its connexion with actual head-hunting—a practice which extends eastwards from India, through Malaysia, to Melanesia, and which is mainly coneerned with showing contempt for enemies-as well as with the cutting off and preservation of the head or skull or sealp, after the cannibal meal, as a trophy, should be noted; while we must distinguish between this latter custom and the preservation of a relative's head out of honour or for the purpose of a definite cult. The cutting off and preservation of the head as a trophy must have originated early, as in Neolithie graves headless bodies are frequently found (JAI v. 146). While rage and contempt are clearly indicated in the custom, actual head-hunters now believe that the ghost of the slain will become the victor's slave in the next world, or will become his guardian and benefactor-an animistic motive which doubtand benefactor—an animistic motive which doubt-less underlies the practice wherever found, while it recalls the already noted instances of subduing the ghost through eating (Dayaks [Ling Roth, Nat. of Sorawak, 1896, ii. 140; L'Anthrop. xiv. 96]; Lushais [Woodthorpe, Lushai Expedition, 1873, p. 136]). Cannibalism out of contempt, whether associated or not with head-hunting, occurred among the ancient Celts and Scythians. It is found among a few Anstralian tribes; in E. Asia; in Melanesia. Polynesia, and Micronesia; it is common in Africa

and also in S. America.

Of the Irish Cetts, Diedours Siculus (vi. 12) says that they ate their enemies; while it is certain that the heads of enemies were cut off, and carried at the girdle, or otherwise preserved. In some cases the victor tore the features with his teeth, as did the Prince of Leinster in Fitzstephen's time (Girald, Caubr. Cont., of Irel. bk. i. cap. 4; cf. also Hyde, op. cit. p. 295, feature of the Prince of Leinster in Fitzstephen's time (Girald, Caubr. Cont., of Irel. bk. i. cap. 4; cf. also Hyde, op. cit. p. 295, feature property (Solves, V. 277). The heads of slain warriors were dedicated and the leidout of slain enemies, stripped off the scalp and hung it on the bridle-rein, and made a drinking-cup of the upper part of the skull. This was also done to relatives with whom they were at enmity (Herod, iv. 64f.). Strabo speaks of the Karmanians, a people west of the Indus, among whom none may marry till he cuts off an enemy's head and brings it to the king, in whose dwelling it is lung up; the tengue is niked with the control of the co

kicked along the ground and afterwards hung up near the camp (MacGillivray, Voyage of Rattlesnake, ii. 4-7). In the Solomon Islands both revenge and gluttony lead to the eating of war-prisoners, who are cooked in a pit with hot stones, and eaten with frantic joy. The scalp and hair are put on a coco-nut and hung in the common hall; canoe-houses are also adorned with enemies' skulls (Verguet, RE iv. 214; Woodford, Nat. among Head-Hunters, 1890, pp. 92, 152; Guppy, Sol. Is., 1887, p. 16). The same mixed motives are found in the New Hebrides; some The same mixed motives are found in the New Hebrides; some refer it to an unnatural taste after revenge; others, to fultrony, as plenty of food exists in the islands. In some cases the crimes of an enemy are alleged by the natives as their reason for eating him; in other cases the bodies are supplied by the chief to the villages as a feast. The practice now exists only in the interior, and members of another tribe are asked to cut up the body (Turner, Ninteen Years in Polynseia, 1841, p. 83; ½ Andurop, x. 300; šteel, New Heb, 1850, p. 25). In New Caledonia the receiving the natives is well known, one group attacking the control of the native size well known, one group attacking a second of the control of the native size of the lack of animal food but reverge also enters into it to a large extent. food, but revenge also enters into it to a large extent of animal food, but revenge also enters into it to a large extent. The smallest pretext is used for fighting, and revenge is not complete until the slain have been devoured. It appears to be mainly the privilege of the chiefs, who even eat their own tribesmen, causing a tunnult to be raised and eating the offenders as a punishment, and firsting guests, we share the consideration of the constant proverb. Chiefs sent bodies of the victims of war to each other, or kept a register of the numbers they had eaten—in one case this reached 872. The skulls were sometimes used as drinking vessels. Ovens and pots in which the dead were cooked, and vessers. Veens and poor in which the dead were cooked, and the dishes from which they were eaten, were tabu (Williams, Fiji, 1885, passin; Miss Gordon-Cumming, At Home in Fiji, 1881, p. 134; Erskin, Western Pacific, 1885). In the Marquesa's Islands, as in New Zealand, cannibalism in great part showed contempt for the slain enemy, and this was further marked by the semifor the slam thenly, and this was influent distract by the semi-alministic motive already mentioned—the satisfaction at destroy-ing the enemy's soul. The religious aspect of cannibalism in these countries will be referred to later. In the former, cannibalism was latterly restricted to chiefs (descendants of the goods) are priests—the leart and eyes being eaten and the blood drunk. priests—the heart and eyes being eaten and the blood drunk. In the latter, gluttony was also a notive, and the circumstances of the feast were most gruesome. The head was placed on a pole and the oven was date (LAnthrov, v., 443), Miss Clarke, Maori Tales and Lepands, 1896, p. 1261; Andree, p. 68; Bergemann, p. 36, in Tonga the liver of a slain enemy was eaten through hate (Mariner, Tonga Islands, 1817, i. 291); in Samoa the motives were also hatred and revenge, "I will roast thee' being the greatest insult which could be offered to a Samoan, while, the greatest insult which could be offered to a Samoan, while, even after the practice was given up, captives, in token of submission, would offer burning wood, and say, 'Kill and cook us when it seems good to thee '(Turner, Polynesia, p. 194); in Micronesia, cannibalism was reduced to eating part of a great warrior out of hate, the eaterstaking his name (Andree, p. 71). Instances from Africa are usually connected with gluttony; in Manjuma, as also among some tribes of the Niger edital, enemies Manjurma, as also among some tribes of the Niger delta, enemies are eaten mainly out of revenge; skulls of enemies decorate the houses and villages. Robertson Smith has shown that cannibalism existed among the early Arubs to the extent of eating the liver or drinking the blood of an enemy; drinking elter the control of warrare between neighbouring trines was requent, chartoy, in Tour du Monde, xv. 135). Blood revenge was attributed as the motive of Miranha cannibalism (Martius, Beitr. zur Eth. Amer. 1867, p. 539; also among the Columbian Indians; the Botocudo, (head stuck on a pole and used as a mark for arrows); probably the Coroatos (enemy's arms eaten during a dance of warriors); and the Araucanians (head chief and other chiefs suck warriors); and the Araucanians (head chief and other chiefs suck blood of hearis) (Andree, p. 821.; Neuwied, Rieis anda, Brasil. ii. 49; Smith, The Araucanians, p. 274). With the Tupis, dead cennies were caten, while their children were brought home and cared for till the age of 14, when they were slain and eather This was also done to young women; while to male prisoners were given wives. They were then kept till a festival was arranged, which was carried through according to strict cerearranged, which was carried infough according to strice effection monial. The prisoner had to hight the first at which he was to be reasted; he was slain with a special club, round which women had sung and danced all night. All took part in the eating. The motive was revenge, the prisoner being told that he was thus treated because he had killed and eaten his captors' friends. If a child had been born to the prisoner, it was also eaten, and was held to be of the same flesh and blood as their enemies (Hans Staden, cited in Andree, p. 85.f.; Southey, *Hist*, of *Brazil*, 1819, p. 299). With civilized peoples eating part of an obnoxious enemy or ruler has occasionally occurred on the part of rough soldiers or the mob. Christian soldiers are said to

have roasted and eaten Turkish prisoners at the siege of Antioch (Bergemann, p. 18); at Florence, in the 14th cent, citizens stee the flesh of their rulers (Machiavelli, ii. 6, 8); and in the French Revolution eating the heart of victims of mob violence was not unknown (for the Scots instance of Lord Soulis see Scott, Mustriely, 1839, p. 462, and cases cited there). It is obvious from many of these cases that head-hunting was, in its origin, chevely connected with canonbalism, while it forms

It is obvious from many of these cases that head-hunting was, in its origin, chevely connected with canobilasim, while it forms one of a series of practices in which the remains of dead enemies are treated with contumely or regarded as trophies, or worn to increase the weavers strength. For Celtic and Scandinavian instances of making trophies of heads, see Elton, Origins of Eng. Hist., 1882, p. 112. For American Iodian scalping, see Elton, Origins on Eng. Hist., 1882, p. 112. For American Iodian scalping, see Form and Analysis of the Company of the Compan

15. Legal cannibalism is found among the Battas, who treat their evil-doers and criminals precisely as they do enemies (vide supra, p. 200a, § 9(2)), eating them as an ignominious punishment (see Geog. Jour., June 1898). Marco Polo describes the cat-Jour., June 1898). ing of dead malefactors among the Tatars of Xandu, and the people of Fo-kien and Kiang-si (Ynle, p. 207). Thieves and assassins were eaten in Bow Island as well as enemies, and in Francis Island thieves were consumed (Letournean, op. cit. p. 212; Turner, Samoa, 1884, p. 300). Among the Maoris, adulteresses and murderers were eaten and their bones made into utensils; the eyes were swallowed raw by the Ariki (Shortland, N.Z., 1851, p. 230). Wrong-doers were not eaten by their own tribesmen in Duke of York Island, but killed and sold to another tribe (Powell, Wanderings, p. 93); murderers or particularly detested enemies are eaten in Lepers' Island in anger and to show ill-treatment (Codrington, Melanesians, p. 344); evildoers are killed and eaten by order of the chiefs in New Caledonia (Andree, p. 58, citing Garnier); witches were sold for food as a punishment in New Georgia (Woodford, Head-hunters, p. 150); while in Fiji a whole tribe would be condemned to be eaten for offending the paramount chief (Keane,

Man Past and Present, p. 137).

Among the African Negroes the practice is common, sorcerers being generally killed and eaten by all the tribes (E Anth. xiv. 91). The Mambanga eat murderers or those asserted to be so by an oracle (Andree, p. 39); the Ba-Ngala occasionally eat debtors (Coquilhat, Sur le Haut-Congo, 1888, p. 337); the Tupende and Tukette are said to eat malefactors (Wissmann, Im Innern-Afrikas, p. 98). Among the Kissama a debtor or criminal is eaten as a punishment (Hamilton, JAI i. 187); dead rebels are eaten in Concobella, and murderers are killed, torn to pieces, and eaten in Bonny; while among the Agni of the Ivory Coast those condemned to death as criminals were eaten (Steinmetz, pp. 21-22; L'Anthrop. iv. 424). In E. Africa an offender is sometimes made to eat one of his own members cut off for the purpose (JAI xxii. 110). The Eskimo custom of eating a witch's heart (already noted) may be regarded also as a legal punishment. Two N. Australian tribes, the Mukjarawaint and the Jupagalk, kill men marrying within the forbidden degrees, and part of the body is eaten by members of the same totem-clan (Howitt, op. rit. p. 247).

16. Cannibulism through sheer gluttony—the

16. Cainibalism through sheer gluttony—the worst form of all—is found mainly in Africa, along the Guinea Coast, southwards into Congo-land, and eastwards to about 30° E. longitude. Captain

Hindes, at the meeting of the British Association in, 1895, said, 'The Negro takes human flesh a food purely and simply, and not from any religious or superstitions reasons.' To this, however, there are some exceptions. It also occurs among the Negroes of Hayti, apart from their religious camibalism. It is found among a few N. American and several S. American tribes in a particularly odious form, in New Guinea sporadically, and in Melanesia.

Melancsia.

In the Guinea coast region and the Niger delta, cannibalism through gluttony appears to be dying out, and only a few tribes here and threat the necent years are accused of it—the pears of the control of t earnibalism is in Central Africa, especially in the regions uncuched by Muhammadan influence. The tribes in and around the Congo Free State—Niam-Niams, Monbuttus, Mam-banga, Manjuena, Bongos, Balubo, Bassanje, and others—are mentioned by Stanley (In Darket Africa, 1800), Schweinturth, and other explorers, as invelerate caminals. Among all these quictonous expact of some of them eating their own dead, but this is probably a mistake. Modern authorities lay particular emphasion the fact that relatives are not eaten, through an existing horror at eating the flesh of blood relators, but their bodies are frequently sold or exchanged to neighbouring villages or tribes. With many of the tribes, raids are regularly undertake to obtain prisoners, who are them sold, living or dead, in the market-place as butcher mean, walted down or dried; but the Manjuena are most disgusting and deprawed, soaking the body in water till putrid, and eating it raw. The Yokomas, Bongons, and others also eat putrid human flesh (L'Luthkop, vi. 119, Mi. 75). Among the Niam-Niams the children born to slave women are killed and eaten. In all cases human flesh is regarded and treated exactly as the flesh of animals would be descuber. The skalls of victums ornament the villages; their covariant of the control of the covariant of th Manjuema, Bongos, Baluto, Bassauje, and others—are mentioned by Stanley (In Darkest Africa, 1800), Schweinfurth, and other

The doors of chicks were here decorated with men's skulls (Cleza de Leon, in Hakliyt Soc. p. 101). The cating of the offspring of a captive to whom one of their own women had been given among the Tupls has already been noted. In parts of New Guinea, e.g., in the south-cast, luman victims were and are caten as 'the best possible nourishment'; some of the tribes were constantly at war for the sake of a feast off the prisoners taken (Chalmers and Gill), New Guinea, 185, pp. 41, 185, etc.). Elsewhere the practice is abhorred, or exists only for other reasons (see above). In New Ireland the people glory in ready for eating (Rop. Geos. Soc. Report, 1887; Bergemann, p. 31). For the New Hebridss and Solomon Islands see above; the gluttonous motive of the former is confirmed by Steel (New Heb., 1880), p. 25), who says appetite sometimes leads them to capture victims; while Woodford (Nat. among Head-hunters, 1890, p. 167) speaks of cambibalism as a daily practice in the Solomon Islands. In some parts of New Freland a tribe will hire itself out for fighting, the only ayment required being the holies of out for fighting, the only ayment required being the holies of normal fight of the state of the screen administration of Justice, has occasional easts in which (as in the African and American Indian societies) human flesh is the principal dish (Deniker, Races of Man, 1900, p. 264; Powell, Wanderings, 1883, p. 63).

17. Religious cannibalism.—Religion as a motive for cannibalism exists more or less wherever the animistic motive or the desire of honouring the dead is found. There is here, however, a blending of magic and religion, since, though honour to the ghost of the dead may suggest the practice, there is also the intention of assimilating the qualities or the soul of the deceased. It is mainly where enemies are eaten that cannibalism as a strictly religious rite exists, and usually in connexion with the sacrifice of the victim to the gods. This suggests that the religious aspect of cannibalism is a late one, more especially as in such comparatively civilized countries as Mexico and Nicaragua canni-balism was entirely ritual and religions. The eating of prisoners would naturally be only occasional; hence it would become a festival with a religious aspect. The question of the relation of human sacrifice to cannibalism requires consideration. Did human sacrifice arise through an earlier cannibalism, viz. on the principle that, as men ate human flesh and liked it, therefore they could offer nothing better to the gods-sacrifice being primarily a feeding of ghosts or gods? Or did human sacrifice have a separate origin to which divine cannibalistic ideas were transferred by human cannibals? The former is much more likely, as the gods are universally believed in early times to eat the sacrifice. We may also note instances of human sacrifices to animal divinities who actually eat the victims. could only then have been at a later time that the worshipper shared in the human victim with the gods or ghosts at a sacrificial feast. We cannot therefore seek the origin of cannibalism in such a feast. It presupposes cannibalism; instances of it are rare, and are found only among higher savages; while cannibalism is not always associated with human sacrifice, and sometimes exists, as with the Australians, where sacrifice of any kind is un-known. The human victim may sometimes have been eaten as in a common meal in which gods and men shared, or, to judge by several actual instances, as himself representing the divinity of whose life men partook by eating the human repre-But such a view certainly does not sentative. belong to the earliest stages of religious thought. Religious cannibalism is found to have existed among the Maoris and Melanesians; possibly among the Dayaks; in Central Africa and sporadically in other parts of the continent; in Ilayti; among the higher races of N. America; occasionally in S. America; in India; among the Greeks and other ancient peoples.

and other ancient peoples. Maori cannibalism has already been described; the first enemy slain was offered as a propitiatory sacrifice to the Atua; the hair was offered to the war-god. The ear of this victim was eaten by the female Ariki or priestess; the heart by the male Ariki (soutenies by the priestess); the second enemy slain was reserved for the priest; all other bodies fell to the warriors (Shortland, op. eit, p, 247, JAI xiv, 105). In Thhit the eye of sacrificial victims was given to the king as 'the eye of the

people. In later times he did not eat it, but offered it to the gods. Much the same procedure as in N. Zealand was followed in Fiji, one of the prisoners being offered to the war-god by the priest before the least began (Williams, Fiji, 1.147). Garnier says that in New Caledonia old people were killed by their own desire, offered to the gods, and eaten (Tour du Monde, xvi. 11). In the Marquessa Islands cannibalism had a strong religious aspect. The victious were called 'food of the gods', and the cinets, being descendants of gods and therefore divine, had a first right to a part of the feast. When the victius were enemies they were tortured by the priests, who received the heads; and the whole feast was accompanied by religious chants. Human sacrifices, however, were offered also without a cannibalistic least (L'Authrap. vi. 443, 449). The use of sacred people.' In later times be did not eat it, but offered it to the cannibalistic feast (L'Anthrop. vi. 443, 449). The use of sacred hymns at cannibalistic war-feasts in the Solomon Islands is also suggestive of a ritual and religious aspect (Bergemann, p. 32). West Central Africa.—Among tribes on the Guinea coast, as at Great Bassam, at the founding of a new town a coast, as at Great Bassam, at the founding of a new town a victim was offered in sacrifice. The priests gave auguries from the entrails, after which the heart, liver, and other parts were cooked with fowls, a goat, and fish; all present partook of the feast, lest they should die within the year (Hecquard, Reise, p. 49). There is some slight evidence that in Dadomey the frequent human sacrifices were accompanied in earlier times by a camillad feast. Norris asserts this in 1772, and some proof of it exists in the custom of the king's dipping his finger in the blood and licking it. Probably this is a survival of an earlier had been cut out by the priest had also a ritual significance (see above); it was caten with sacred herbs. In Bonny, where enemies were eaten out of revenge, they were first offered to the Ju-ju; it another case which was observed, first offered to the Ju-ju; in another case which was observed, the entrails were given to the ignama, the guardian animal-god (Andree, p. 26, citing Bp. Crowther; Hutchinson, Ten Years' Wanderings, p. 66). The Kinbunda of Portuguese West Africa Wanderings, p. 66). The Kinhmade of Portuguese West Africa eat the flesh of seemies to acquire bravery, but the diviner first cuts up the body, tears out the entrails, and divines with them (Magyar, Kichen in Suid-Africa, 1859), 1769. Among the Kas-sanje, the human victim of the Sambamento feast was received with the same bonour as a chief. The headman then stabled him, with the same nonour as a chief. The headman then stained him, tore out his heart and ate a piece, while his attendants allowed the blood to stream over his body. The flesh was then eaten by all in due order along with that of animals (Valdez, Siz Fears in W. Africa, 1861, b. 189). In Haylt these African practices are still continued by the cannibalistic Vandoux sects among the Negroes. St. John, eiting trustworthy witnesses and the evidence produced at marder trials, shows that at the obscene orginatio produced at murder trials, shows that at the obseene organic meetings connected with the worship of a serpent, a sacrifice of a child or adult, 'the goat without horns' frequently takes place to propitate this serpent-divinity, either for particular purposes or at stated festivals. The papaloi, or priest, having sain and offered the rictin, the skin and entrails are buried, and the flesh is eaten cooked or raw, smid singing of sacred chants and dancing. The rictins are usually children who have been kidnapped, but sonetimes women are drugged and, after having been buried, are exhumed and sacrificed (St. John, Hayti, ch. 5). The typical example of religious cannibalism is found among the ancient Maxicans, who, is spite of their Hayti, ch. 5). The typical example of religious cannibalism is found among the ancient Mexicans, who, in spite of their civilization, had a taste for human flesh little different from the gluttonous Negro, although it had the sanction of religion. The victims were invariably enemies or slaves, and were offered The victims were invariably coemies or slaves, and were offered before the images of the gods. The priest cut open the breast with an obsidiant knife, tore out the heart, and offered it to the gods; then he sprinkled his assistants and the offeres with the blood. After this a cannibalistic feast on the body took place, priest and offerers partaking. Dressing in the skin of the victim was usually a part of the ceremony. On particular cocasions the victim had been kept for a year beforehand and treated as a prince, and there is reason to believe that he they represented the divinity, so that the worshippers, in cating his represented the divinity, so that the worsimplers, in Catting his flesh, sacramentally partook of their god through his represen-tative. In other cases paste images of the god Huitzilopochtli were mixed with human blood and eaten sacramentally. Early writers estimate these cannibalistic sacrifices by thousands were mixed with human blood and eaten sacramentally. Early writers estimate these canmibalistic sacrifices by thousands yearly, and there seems little reason to suppose much exaggration in their accounts (Bernal Diaz and Sahagun give the best accounts; cf. Jourdant's Etude sur les sucrifices humans at Endhersophagic chec les Alciques, in his delition of the former human term of the less than the less than the less than the less than the same stilled, and their hearts blood was mixed with the sap of a tree, herbs, and dough. The mixture, called toyoldigaltaqual, was caten every six months by women over sixteen and men over twenty-five (Mexico, bk. ii. cap. 16, 19). Caonibalistic sacrifices were common among the Central American tribes, e.g. in Nicaragua. To obtain rain from Quiateot, the raingod, children and adults were sacrificed to him and his images were sprinkled with their blood. Caciques and versus the grant of the same strength of th p. 137 f.), thus showing themselves in a more amiable light than the Mexicans. The custom was to offer the heart and blood of a captive to the animal-gods, while the worshippers feasted on the flesh of the sacrifice (de la Vega, ii. 344).

As in nearly all these cannibalistic sacrifices the victims were enemies, it is far from unlikely that, in many cases where the eating of enemies for various motives—to obtain strength, out of revenge or gluttony-is reported, without any mention of a religious rite, this also existed, so that cannibalism with a

religious rite, this also existed, so that cannibalism with a ritual aspect would have a wder range (cf. the case of the Philippine islanders, § 14). The cannibalism of the Lighteri, a sect of Siva, which continued in India until lately, appears to have been partially religious in India until lately, appears to have been partially religious stangentered or had died in autural heath woose who had been stangentered or had died; a natural heath woose who had been quently stolen for that purpose (Baifour, Cygl. of Ind.<sup>3</sup>, 1885, 142); Tod. Rajusthan, 1822). The sect, which flourished in mediaval times, was accustomed to luy human flesh in the open market as late as the 17th cent.; but the eating of the dead has now practically disappeared, and the sect is much reduced (see Autons).

Arabs, and the eating of a sacrificial animal which represented Arabs, and the eating of a sacrificial animal which represented the god was common. These may be extensions of totenism; but possibly, as in the Cretan rite, behind them may lie the eating of a human victim. We may compare with the Cretan rite that of the Khonds, where a girl representing the goddess Tari was servineed and torn limb from himb by the worshippers, eager to obtain a piece of the defined victim (Reclus, Prim. Polk, 1891, p. 304), or that of the Narinova, a S. African people, who strewed the blood and ashes of brains and skull of a human sacrifice on the field to make it fruitful, and consumed the remainder (Schmeker, Ret. at aprils, Naturoscher, 1861, 1, 176), blood in ritual corenous by the Ostilat, and the control of 
blood in ritual ceremonies by the Ostiaks, and the use of a child's blood in the Sacrament among the Christian sectaries of

Great Russia (L'Anthrop. v. 508).

18. Political and social cannibalism .- Cannibalism has also political and social aspects, though both, probably, are connected with religion. The former is most marked in certain African coronation rites, as at Darfur, where, even after the introduction of Islam, two boys were sacrificed and their flesh eaten by the Sultan and his nobles. He who did not cat was regarded as a traitor (Munzinger, Ostafrik, Stud.<sup>2</sup>, 1883, p. 558). Another instance is that of the Ama-pondo Kāfirs, with whom the new chief bathed in the blood of a relative and drank out of his skull (Bergemann, p. 39). In the Cameroon district a new chief must kill one or more men and divide the flesh among his relatives and the other chiefs (Ratzel, Volkerkunde, 1885-88, i. 613). Compare the survival at the coronation of a king in the Sandwich Islands. The left eye of a human victim was given him to swallow, so that an accession of strength might be his (Turnbull, Travels, 1840, p. 210). The social aspect of cannibalism appears in the rites of blood-brotherhood (see Ввотневноор [artif.]), where the covenanting parties mingle their blood and drink it, and in those of initiation (q.v.), where the candidate tastes or drinks the blood of the older men of the clan, or is smeared with it. Both these customs are very marked with most Australian tribes: 'The drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby bound together in friendship, and obliged to assist one another' (Spencer-Gillen', p. 598; cf. Howitt, up. cit. pp. 658, 668, 670; Prazer, Totemism, p. 45). They are thus analogous to the drinking of a friend's blood in sickness (see above, § 7), or as a

mark of affection, as among the Celts (§ 12). Eating of the flesh of a fallen enemy by both contending parties after a fight, as a token of entering on a covenant of peace, is akin to the blood-brotherhood rites, and is found among the Liu-kiu islanders and the Garo hill-tribes (Steinmetz, p. 3, and see § 10). the daro intr-troos (stemmetz, p. 3, and see § 10). In Timor-Laut, bonds are scaled by both parties eating a slave (Bergemann, p. 22). Both Sallust and Tertullian mention the drinking of human blood to strengthen a bond between contracting parties among the Romans (Cutil. xxii.; ade, Gnost. scorp. vii.).

19. Lowest peoples and cannibalism .- Evidence thus goes to show that the worst forms of cannibalism do not occur among the lowest savages, but among barbaric races (Battas, Negroes, Maoris, S. Americans) with a certain amount of culture. Among other races of that grade or next above it (American Indians, S. African races, some Polynesians) it tends to disappear, or occurs through other motives than gluttony, and often in a reduced form. Among the lowest savages the worst forms are never found, and it is doubtful whether eannibalism now exists among some of them. Australians are cannibals from a variety of motives, never through gluttony; the cannibalism of the Tasmanians and Andamanese, asserted by early travellers, is denied by later authorities, though the North and Little Andaman Islanders are accused of it by their fellows (Ling Roth, Abor. of Tasmania, p. 97; E. H. Man, JAI xii. 117ff.); the Bushmen and Hottentots do not seem to be cannibals, though one tribe (considered by some to be an earlier people than the Bushmen) have cannibalistic traits, eating the placenta atter birth (Stow, Ruces of S. Africa, 1905, pp. 20, 51, 336), while the Dwarfs of Central Africa 'repudiate the while the Dwaits of Central Africa reputate the idea with horror, though they eat animal flesh freely (Sir H. Johnston, Uganda Protectorate, it, 540); the Negritoes of the Malay Archipelago (Actas and Sakkas) are doubtful (see Fose, Malay Anthrop., 1903, i. 20; Semang interment shows no evidence of the head being eaten, as has been said to be done, and the authors failed to obtain evidence of eannibalism among the Semangs, though the true Semangs are said by the Hami to eat men).

Ainus, Eskimos, and Fuegians all seem to have been occasionally cannibals. We can hardly, however, argue that the non-cannibal peoples referred to were not formerly cannibals. Their present reduced numbers, the pressure of more cultured tribes upon them, and the presence in some cases of a higher civilization, may have altered earlier customs, and have made the slaying and eating of enemies difficult, and in any case a matter of secrecy. It is possible also that fear of the dead. which exists strongly among some of these peoples, which exists strongly among some or those proposets, g. Tasmanians and Sakkas (the former 'never name the dead' [Roth, Abor. of Tass. p. 97]), may bave hindered cannibalism. Their case cannot, therefore, be alleged in proof of cannibalism's being non-existent in primitive times when man was on their own or a still lower level. Palacolithic man was already higher in culture than they. All that can be said is that cannibalism is an occasional custom rather than a fixed habit among the lowest

The weakening of cannibal customs is seen in cases where the people but rarely take part, and the act is restricted, in a more or less formal manner, to the chief, king, or priest, as among the Araneanians, in Ashanti, Dahomey, and Cameroon, in the Philippines, Marquesas Islands, New Caledonia, and Sandwich and Society Islands, and in the N. American cannibal societies (see above). It is obvious that, where certain selected portions of the flesh have been the special privilege of chief or priest as a result of their natural pre-

eminence, when the custom was dying out among the people it would still be kept up by those privileged persons out of pride or as an honorific act. Thus the eye as the seat of the soul was eaten by the chief in New Zealand, the Society and Sandwich Islands, and in the Maronesas group. where, even after their conversion to Christianity, the priests kept the name of aimata, 'eye-eater' (Letourneau, op. cit. p. 208; Taylor, N.Z., 1885, ch. xxi.; L'Anthrop. vi. 443; cf. § 17). In New xxi.; L'Anthrop. vi. 443; cf. § 17). In New Zealand the priest ate the heart, and the warriors ate selected portions; the heart and cutrails fell to the priests and his assistants in Kimbanda; to the chief in Kassanje; to the bravest in the W. India Islands; in Tangale (Guinea) the Sultan received the breast; in Monbuttu (C. Africa) children captured in war were reserved for kings; among the Shekiam people of Senegal the fetish-priest received the liver as a tit-bit (§ 17; du Tertre, Hist. gén. des Antilles, 1671, ii. 401; Andrec, p. 27; Schweinfurth, op. cit. ii. 98; Bergemann, p. 47). These selected portions would certainly continue to be caten by the persons privileged to do so after the general custom had ceased. The same idea of privilege is seen where priest or chief eats first, and not till he has done so may the others take part in the feast.

20. Women and cannibalism .- Women sometimes occupied a curious position in cannibalistic customs. While the head was occasionally regarded as a special portion, in some places, as in Tangale, it was considered the worst part, and was given to women to consume. This part was also given to women among the Wakhandi of W. Australia, and among the Peak River tribes of S. Australia. With several peoples women were not allowed to take yee find this tabu existing among the Maoris (with certain exceptions) and Tonga islanders, in Fiji, and the Marquesas Islands; among the Manjuemas, Fans, Ba'ngalu, and Bassanje in Africa; and in Nicaragua. Children were forbidden to take part among the Bassanje and Fans, and in the Marquesas Islands; men not tatued could not take part in the last-mentioned place. The prohibition against women's eating human flesh is doubtless nothing but an instance of that universal sexual tabu in connexion with eating which forbids men and women to cat together or to eat the same kind of food (see Crawley, Mystic Rose, p. 167 f.), and which is known to exist in most of the districts referred to. In the Solomon Islands women and children must not be present when the body is cut up, but a portion is sent to them (L'Anthrop, x, 492).

A similar extension of the sexual tabu, which regards woman as potentially or actually dangerous to man, will also explain the fact that, while the flesh of men is freely eaten, that of women was abhorred or regarded as poisonous in New Zealand, with the Manjuemas, the Kashibos, in Nicaragua, and probably in other places where the custom has not been referred to by observers. It may also explain why women were not eaten by their relatives while men were, among the Derbikes, as reported by Strabo (see § 11). Elsewhere the tabu does not exist, and certain parts of female flesh, breasts, hips, etc., were regarded as tit-bits.

21. Some cannibals, while eating freely of their own kind, or of black people, abhor the flesh of white men. The Tongans thought it a wicked and dangerous practice, some Tongans having died after it; in the New Hebrides and New Caledonia it was thought too salt; among the Fans it is thought to be poisonous, and other Negro cannibals dislike it; the Botocudos mutilated but did not eat the bodies of white men; certain Australian tribes also thought it salt, while it produced nausea (Mariner, Tonga Is., 1817, i. 321; Turner, Polynesia,

p. 83; De Rochas, Bull. soc. d'Anthr. 1860, p. 414; Andree, pp. 30, 88; Lumholtz, Among Cannibals, p. 273).

iii. Present range of cannibalism. - At the present time, cannibalism as a regular custom exists only among isolated S. American tribes, in West, Equatorial, and Central Africa, in Malaysia, some of the South Sea Islands (mainly in Melanesia), and in Australia. Excluding Australia, it is thus confined to a belt of laud extending to little more than 10° N. and S. of the Equator. Beyond these regions, of which the worst is Central Africa, it occurs only through hunger, or in an attenuated form for magical or medical purposes. What have been the causes of this gradual weakening of a once extensive and probably world-wide custom? Increasing civilization has everywhere played its part, and this appears in the mythology of various peoples. Orpheus was held to have weaned the Greeks, Osiris the Egyptians—cannibals in Neolithic times (see i. § 3)-and the divine Aioina the Ainus, from their earlier cannibalism (Hor., Ars poet. 391; Diod. Sic. i. 14; Batchelor, Ainu and their Folk-lore, 1901, p. 2). Even among savage peoples may be noted an out-growing of or disgust at the custom, or an attempt to put it down on the part of chiefs or priests, often quite apart from In several of the Pacific Islands outside influences. (Hawaii, Tahiti) it was dying out at the time of their discovery, and shame at the practice was arising; in the Fiji Islands several pagan chiefs arising; in the Fiji Islands several pagan chiefs tried to stop it but unsuccessfully, while Marquesan priests protested against it in the name of the gods; among the American Indians the custom seems to have become much diminished through a gradual dislike of it; in Africa among the southern tribes there was a general disgust at those who had relapsed into man-eating, and Moshesh tried to extirpate it; the Riamba cult, with its practice of hemp-smoking, has uprooted it among some Central African tribes, e.g. the Tuschilange (Andree, pp. 61, 63; Turnbull, Travels, p. 204; Wake, Evol. of Moral., 1878, i. 427; Wissmann, Imparen Afrikas, p. 152). We must also note the part which totemism has played in forbidding the eating of near relatives (see i. § 5). Animism, too, by furthering the idea of the dignity of the soul, suggested also the idea of the dignity of the body which contained it, and thus may have had a certain influence in forbidding the eating of relatives where no stronger religious motive impelled to it. This is suggested by the fact that enemies are frequently eaten out of contempt, and where this happens relatives are seldom eaten (see ii. § 13). The presence of a higher civilization, and especially of a higher religion, and the spread of commercial relations among lower races, have usually a beneficial effect in putting an end to anthropophagy. Even in the worst man-eating districts the feasts are frequently held in secret. The case of the Inca rule in Peru has already been considered (ii. § 17). The higher ancient religions doubtless had similar effects among the wild tribes of Asia. Muhammadanism has extirpated or reduced the once universal cannibalism of the Negro tribes of North and East Africa, in Sumatra, and other parts of the Malay Archipelago, not only among those professing it, but among other tribes bordering upon them. Christianity, together with other European civilizing influences, has also put an end to it in many parts of S. America, in New Zealand, and many islands of the South Seas, once hotbeds of cannibalism, as well as in large tracts of the African continent. With the further spread of civilization and religion over the cannibalistic zone, there is little reason to doubt that the custom will soon become little more than a memory.

iv. Folk-lore survivals. - The former univer-

sality of cannibalism is suggested by the existence of occasional ritual practices, as well as of myths and Marchen among peoples who are scarcely if ever cannibals, and also among higher races who have long since abandoned cannibalism. Such things have descended from a time when they did practise it, or were borrowed by them from cannibalistic peoples at a time when they themselves

were not far removed from the custom.

I. Folk-custom. - Hartland has suggested by comparison of a large range of customs at funeral feasts, that such feasts may have replaced an earlier honorific eating of dead relatives. Especial links of connexion are eating the food across the corpse (England), on the table where the dead has lain (Abruzzi), or at the grave (ancient Greeks and Romans, Albania); the use of special food, e.g.corpse-cakes (Bavaria), or some form of pulse which is often identified in folk-belief with human flesh (France, Italy; ef. Pliny, xviii. 30); the impression of a human form on the cakes (Albania; cf. sweetmeats stamped with images of skulls, etc., eaten in Italy on All Souls' Day; the custom is called 'eating the dead'); the use of pious exclamations while eating, or of conversation about the virtues of the deceased; the idea that the corpsecake actually contains the virtues and strength of the deceased through the dough having been laid on his body (Bavaria); the custom of the 'sin-eater'
—some person eating food which had been placed in contact with the dead, thus becoming responsible for his sins (Wales; cf. similar practices in India). Although in some cases these feasts are also survivals of earlier feasts in which part of the food was laid out for the dead, the idea of communion with the dead runs through all of them, and the various points noted are certainly suggestive of an earlier eating of the dead (Hartland, Legend of Perseus, 1895, ii. 287f.; Gomme, Ethnol. in Folklore, 1892, p. 116 ff.).

2. Myths. — Even a cultured people like the Greeks had myths which prove that in some far district the deir account of the control of

distant time their ancestors had been cannibals. It has already been seen that orginstic cannibalism and ritual survival existed even down to late times. The saga of Tantalus and his descendants is a curious instance of persistent cannibalism. He, wishing to test the knowledge of the gods, set before them his son Pelops whom he had slain, but all of them as we Demeter refused the ghastly meal. Later, Pelops' son, Thyestes, having debauched his brother's wife, had two children by her; these his brother killed, and served up to him. A like punishment befell Tereus, who unwittingly ate his son Itys. Athenœus preserves a story of the glutton Cambleta, king of the Lydians, who cut his wife to pieces and ate her, while in the Odysscy the Polyphemus saga of man-eating giants dwelling in caves is itself suggestive of the quaternary cave-dwelling cannibals. Here, too, the cannibalism of gods and semi-divine beings was told of in Pindar (Ol. Odes, i.) refuses to tell the tale of the cannibalism of the blessed gods, but others were less discreet. The myth of Cronus swallowing his children was well known, and has been compared with similar 'swallow' myths from all parts of the world which attribute a like action to divinities, human beings, and sometimes animals. Though some of these may be Nature-myths -the heavenly bodies appearing to swallow their children, the stars—they were obviously suggested in a cannibalistic age. The eating of children was also attributed to Lamia, the prototype of the Lamie of ancient and modern Greece, also can nibals. The human sacrifices to Zeus Lycreus on Mt. Lycæum (Paus, viii, 38, 6) had given rise to a cannibalistic myth. That the sacrifice had arisen at a time when the god was supposed to eat the victim is clear from the myth of Lycaon's setting human food before Zeus, while the belief that those who tasted part of the sacrifice were changed to wolves implies a former cannibalistic banquet. Such local titles of Zeus as Laphystius (according to Snidas, 'the glutton'), or of Dionysus as 'the raw-cater,' are doubtless explainable through raw-cater, are doubtless explanable through human sacrifices which the gods were supposed to devour, just as, among the Polynesians, the god Tane was called 'the man-cater,' and his teeth were stained with the blood of his victims (Gill, pp. 30, 263). Finally, the myth of Dionysus, slain and eaten by the Titans, though it may be actiological, explaining the origin of the Dionysiae rites, none the less reflects actual cannibalism among those who invented it. That this is true of all these myths is found by comparing them with precisely similar myths existing among actual cannibals. In Polynesia, where human sacrifices were common, the gods were believed to eat the victims, if not actually, at least in essence, and the title 'man-eater' is applied to some of the gods (as in Greece) in several of the islands. The gods were held to eat and digest the spirits of the dead, people of higher rank being eaten by the higher gods, and common people by a deity in the shape of a bird, in which form also the gods ate the human sacrificial victims (Ellis, Pol. Res., 1830, i. 396 f.). The mythology is full of these accounts, and in one myth we hear of the escape of the hero Ngaru from the oven of the hag Miru, queen of Hades, who cooked and ate her victims precisely in the manner of the cannibal ogres of Enropean Marchen (Gill, Myths and Songs of the Pacific, p. 229). In the Marquesas Islands the chiefs, as descendants of gods, had a right to select portions of the human victims—the 'food of the gods' (L'Anthrep, vi. 443). Such divine eating of human victims is also shown wherever at a cannibal feast, as in Fiji, part of the slain is first offered to the gods. Among the ancient Celts the Morrigu, or goddess of war, and her attendants were believed to feast on the slain; while the Greeks held that a demon in Hades called Eurynomos gnawed the flesh of the dead (Paus. x. 28. 4). Similar myths also linger on among low races who have more or less abandoned cannibalism, as well as among some who still practise it. The Mintira of the Malay peninsula and the Hos of N.E. India have myths in which the sun and moon are conceived of as human, and as devouring their children the stars (Tylor, Prim. Cult, i. 356; for other instances, see Lang, Myth, Ritual, and Religion<sup>2</sup>, 1899, i. 130, and Castom and Myth<sup>2</sup>, 1893, p. 53 i.). The Malays think that the badi of a dead man feeds on the soul (or liver) of the living, while certain sea-spirits feed entirely on dead men (Fasc. Malay. Anthrop. i. 81, 101). A mythical being among the Eskimos is called Erdlavcersissok, 'the entrall-seizer.' She resideon the way to the moon, and takes out the entrailof all whom she can make laugh; while akin to the myth of the Polynesian gods is that of a god who devours the bowels of the ghosts (link, Tales and Traditions of the Eskimo, p. 48). The Haidas think that the god of the clouds seeks human victims on days when the clouds are low; any one caught out on such a day dies in six months to furnish a meal for this god. He draws out the man's spirit, and then sends it to fetch his body to be eaten. If the spirit refuses, it is eaten, and, in consequence, is annihilated (Harrison, JAI xxi, 16, 18).

3. Folk-tore.—In the various horrible mancating ogres of races who have abandoned cannibalism we may see memories of earlier cannibalistic practices. They represent the man-eating gods of earlier paganism, now appearing as demons, or they reflect later opinion of man-eating ancestors, or they may have been suggested by hostile races

who devoured their prisoners and made war on non-cannibalistic peoples. The Rakshasas and Rakshasis or Yaks of the East, the Cyclops, Drakos, and ogres of European Märchen, the Greek Lamise, and the Russian Baba-Yaga are typical forms. They are the dark shadows of actual cannibals of an earlier time, and are paralleled by more nearly human forms in the folk-tales of lower races who are themselves, or who live among, cannibals. Other dark figures of folk-lore have also been, in part at least, suggested by earlier cannibalism. Vampires, dead people come to life again who suck the blood of the living, are mainly believed in by the Slavs, Celts, and Scandinavians; but a similar being occurs in Negro Vaudoux belief, the offspring, probably, of the West African Uvengwa, a self-resurrected human being, thirsting for human blood; and among the Melanesians who believe in the Talamanr, the soul of a living person which goes out to eat the dead—a reversal of the usual Vampire belief. The Ghouls of Arab belief have a certain resemblance to Vampires; they are demons who take various forms and eat the dead, or are simply cannibals. The Werwolf, also, a human being, witch or wizard, or their victim, who takes the form of a wolf or some other animal and eats human beings, is frequently connected with the Vampire in folk-belief, and its existence as a superstition is also largely due to cannibalism. The belief is an early one, and was known in classical times; it is found in all Enropean countries, as well as in India, China, Malaysia, Africa, and N. and S. America. See the articles VAMPIRE, LYCANTHROPY, and cf. the Australian belief that sorcerers (boyl-yas) can invisibly enter their victims and consume their flesh (Grey, Journals, 1841, ii. 339).

4. Mürchen which contain a cannibalistic episode may be divided into definite classes-(1) Those in which a man-eating ogre, demon, or witch is outwitted in various ways by the hero he intends to witted in various ways by the nervo he internal to cat (Odysseus and the Cyclops, Hansel and Grethel, and Mally Whuppie types). There are countless European variants of this tale, as well as Lapp, Kirghiz, Indian, Persian, Karen, Ainu, Eskimo, Malagasy, E. African, American Indian, and Melanesian variants.—(2) Those in which a person, who is married to a cannibalistic husband or wife of another tribe, or who has fallen into the clutches of such a tribe more or less human, escapes. This version is found among the Kāfirs, Eskimos, Chinese, Japanese, American Indians, and Malagasy, as well as in civilized European and Asiatic lands. Both classes are evidently the reflexion of an actual state of things, viz. of the horror with which a race which had given up can-nibalism would look upon others still cannibals with whom they were in actual contact or had been so traditionally. Where such tales occur among the lower races the cannibals have human traits, but, advancing higher, we find them becoming less and less human, till finally the ogre proper is arrived at. Actual instances of such feelings of fear and horror at neighbouring cannibal races causing them to be regarded with various repulsive traits are found, e.g., among the Eskimos with respect to the American Indians, whom they call Irtkily, cannibals with dogs' heads; among African tribes with respect to their mancating neighbours; among the Savage Islanders with respect to the Tongans. The same order of facts underlies the charges brought, e.g., by Greeks against most barbarians; by Hindus against the 'goat-nosed' Turanians; by pagans against Jews and primitive Christians; in mediaval times against Templars and Jews, in modern times against gipsies and (in Russia) the Jews.—(3) In another class of Marchen, as well as in actual folk-belief, witches

figure as cannibals, stealing newborn babes or enticing away older children to eat them either privately or at the Sabbat. In Tentonic lands this clicf seems to have been especially strong; the tolk-tales are full of descriptions of cannibalistic witches (cf. Grimm, Teut. Myth. 1081, 1625); and at witch-trials the charge of cannibalism was com-monly made. The Russian Baba-Yaga is also a cannibalistic witch, who steals, cooks, and eats her victims, and has her house ornamented with skull and bones—a frequent practice among savage cannibals; and the same is true of the Greek strige, mysterious women who swoop down as birds on their sleeping victims and suck their blood or devour them. It is possible that the mediæval witch may have succeeded to the inheritance of earlier pagan priestesses who presided over the orginatic rites of a goddess of fertility to whom children were sacrificed and afterwards eaten. great mortality among children in the Middle Ages, and the fact that midwives were frequently accused of witchcraft and held responsible for causing the death of children for sinister ends, would all serve to strengthen the traditional stories of witchcannibalism. Reference has already been made to cases of actual anthropophagy in mediaval times, but it is probable that the tradition of earlier cannibalism, quite as much as these, caused the general belief and led to the condemnation in the Salic Law of witches who eat men for magical purposes. Pieces of a corpse were, however, actually used in witch-magic, as among the Australians and others. -(4) A frequent incident in Märchen is that of the child being sent out by the parent to be killed, while the assassin is ordered to bring back the victim's heart, liver, etc. Out of pity he slays some animal instead, and the parent is frequently represented as eating it under the impression that it is the child's. Grimm's story of Snow-White is a typical instance. Here we may see a reminiscence of the practice of eating heart, liver, etc., in order to acquire the strength or soul of their owner.—(5) In some Cinderella tales the mother of the heroine is changed to a beast by the second wife, slain, and eaten; the daughter refuses to eat, knowing that it is her mother. But in Greek and Dalmatian variants the jealous elder daughters kill and eat their mother, the youngest again refusing. Is there here some confused memory of actual parent-eating as well as of an early rule forbidding the eating of one's own kin? (The stories will be found in Miss Cox, Cinderella, 1893.)— (6) Two other well-defined groups of tales exhibit cannibalism as a perverted taste. The first of these is the story of the mother who kills her child and sends it cooked to the father (Grimm's story of the Juniper-Tree, common in Europe, and with a Malagasy variant); in the second the interest circles round a person—frequently a woman—who suddenly becomes a cannibal, and will thenceforth be contented with nothing but human flesh. Of this story there are versions from all parts of the world. Both groups reflect what has been frequently seen in actual practice—the lapse into the customs of the savage past through desire or during famine.—(7) Lastly, fairies were sometimes believed to eat children whom they stole or inveigled from their parents, e.g. in Welsh folk-lore. Rhŷs (Celtic Folklore, 1901, ii. 694) is inclined to equate these with the man-eating Atecotti; and, so far as fairies reflect an early race, this may be correct. 5. Myths of the origin of cannibalism .- In a few

5. Myths of the origin of communication.—In a rew cases such myths are found among actual cannibalistic peoples. The Mesayas say that in early times a band of their hungry ancestors found a Umana asleep, and killed and ate him. A bird told this to the Umanas. Hence arose endless

fends in which all prisoners were slain and eaten (Marcoy, in *Tour du Monde*, xv. 135). The Tupis ascribe the origin of cannibalism to the murder of a youth, whose mother rushed upon one of the murderers, bit a piece out of his shoulder, and ate it. He showed the wound to his people, who forthwith began to eat the flesh of enemies (Andree, p. 84, citing Pigafetta). The Fijians say that the coming of eannibalism took place through their ancestors eating, instead of burying, king Tue Dreketi, lest he should rise again. Hence arose the eating of enemies in battle, a story which suggests the animistic motive of destroying the soul (Bergemann, p. 34). In New Zealand, as with the Tupis, the origin is ascribed to the first murder. Hauriki killed Hotua, and Hotua's friends killed Hauriki and his friends. They presented Hauriki's heart to the high priest, who are it, after which all feasted on the body. The blood of his friends was offered to the gods, while the bodies were cooked and eaten (White, Anv. Hist. of the Maori, 1887-89, i. 43). It is remarkable how the consciousness of cannibalism as a violent act runs through these tales, only one of which speaks of hunger as the motive,

A curious myth, perhaps hinting at early Iranian cannibalism, occurs in the Persian Bundahis (West's Pah. Texts, pt. i., SBE vol. v.), regarding the first human pair, Mashya and Mashyôi, to whom two children were born, and who 'out of tenderness for offspring' devoured them. This 'tenderness' was then taken from them by Aûharmazd. This eating of their children is evi-

dently regarded as part of their 'fall.

dently regarded as part of their '1411.'

CANON (Buddhist) .- See LITERATURE (Buddhist).

CANON (Christian). - See BIBLE.

CANONIZATION .- The earlier part of this subject is dealt with in the article BEATIFICATION. The cult of martyrs and of persons eminent for their virtues goes back to very early times, and began in popular reverence, which came to be authorized by bishops or by local councils. But the history of the process of veneration took a different course in East and West. It will be necessary, therefore, to treat separately of the Western and Eastern Churches.

I. The West .- Canonization, while it was not distinguished from beatification, remained for a long time in the power of the local episcopate. It is asserted as at least probable, by Ferraris (Prompte Bibliothera, Rome, 1766, t. vii.), that Leo III. in 804 began the rule of requiring the submission of a name to the lope: but the letter he refers to is probably not authentic. (The matter is further discussed in Benedict XIV., de Servorum Dei beatificatione, etc., Rome, 1787, t. i. lib. i, cap. 7.) It is also stated that the rule was begun by John XV. in the case of St. Udalric, in 993 (MGH iv. 377-428). There is no doubt that at the beginning of the 12th cent. Urban II., Calixtus II., and Engenius III. claimed that the power could not be exercised by bishops, but that cases, if not decided by the Popes themselves, should be submitted to councils, and, if possible, general councils. Engenius III. himself canonized the Emperor Henry II., and Alexander III. canon-

VOL. 111.-1.1

ized Edward the Confessor, St. Thomas of Canterbury, St. Bernard of Clairvaux, and others (see Benedict XIV., op. cit. lib. i. cap. viii. and cap. x.). A decree of Alexander III. in 1170 (see art. BEATI-FICATION) reserves the right to the Roman Sec. Some maintain that this is a new departure; others see in it merely a formal declaration of ancient custom and right. But Benedict XIV, shows strong reason to believe (as is indeed natural) that the local episcopate could never cause veneration throughout the Catholic Church (op. cit. lib. i. cap. x.). exercise of the power locally by bishops remained, however, untouched till at least that date (cf. AS, Julii, i. 587; Junii, vii. 556). The decree of Alexander III, was renewed by Innocent III, in 1210 (Decretal, lib. iii, tit. xlv. cap. ii.); but it was some time before it became fully effective, local veneration and popular 'eanonization' continuing in some parts of Europe till a much later date (instances are the case of Simon de Montfort, for whom an office was written, and whose venera-tion, though condemned by the Popes, was long unsuppressed [cf. 'Dictum de Kenilworth,' ch. 8, in Stubbs, Select Charters, 1895, Carmen de bello Lewensi, ed. Kingsford, 1890, and Halliwell, Miracula Simonis, 1840]; and of Thomas of Lancaster [cf. Ancedota ex-codicibus hagiographicis J. Girlemans, 1895, pp. 80-100]). Indeed, it was not until the decree of Urban VIII., July 5, 1634, that the whole process was finally and authoritatively declared to belong to the Roman pontiff, to the exclusion of every other person or power whatever. From this date we find canonization to be recognized as a formal act of the Pope, giving a definitive sentence by which the name of a person who had been beatified is placed in the ranks of the saints, as already having entered into the bliss of heaven, and his memory is to be celebrated on a given day throughout the whole Church. Churches and altars may be erected freely in his name (Benedict XIV., op. cit. lib. i. eap. xxxix. 10). As in the case of Beatification  $(q, v_*)$ , there is a

distinction between formal and equivalent or equipollent canonization. Urban VIII. declared that the formal process should not prejudice the case of those who were already the objects of a general cult arising from general consent, immemorial custom, the testimony of the fathers, or the tacit consent of the Holy See. Such cases were from time to time legalized without the long formal process (Benedict xiv., op. cit. lib. i. cap. xli. 4). Prominent cases are those of St. Wenceslas of Bohemia (ob. 929), whose equipollent canonization dates from 1729; St. Romwald (ob. 1027, can. 1595); St. Stephen of Hungary (ob. 1038, can. 1686); Gregory VII. (ob. 1085, can. 1728); St. Margaret of Scotland (ob. 1093, can. 1691); and there are many others. Under the class of equipollent canonizations come also all those of infants (among them a number of those, such as St. Simon of Trent, St. Ilugh of Lincoln, and St. William of Norwich, who were supposed to have been murdered by Jews), because they are not martyrs in will (Benediet xiv., op. cit. lib. iii. cap. xvi. n. 6). A remarkable case is that of Charles the Great, canonized by the anti-Pope Pascal HL, but accepted by the Holy See (cf. art. BEATIFICATION and AS, Jan.,

iii. 490, 503).

In formal canonizations it is claimed that the Pope is infallible (the matter is discussed at length in Vacant and Mangenot, Dictionnaire de théologie catholique, fasc. xv., Paris, 1905, col. 1640-1642), but that it is 'not of divine faith but of ecclesiastical faith' that the person canonized is already in heaven (Salmanticensis Cursus theolog., t. xvii., 'de Fide theologia,' Paris, 1870-81, xi. 275).

The actual process of canonization in the Roman Church may now be briefly sketched. The growth of the present system is traced in Benedict XIV. (op. cit. lib. i. cap. xx. xxiii.; lib. ii. cap. xxxv.). The first step is a public statement by the ordinary of a particular place of the public regard for the person in question. This is followed by a prohibition of public veneration. The bishop then considers, with evidence of repute and of miracles, the claim for public veneration, and if satisfied transmits it to Rome. If the sentence of the ordinary is approved by the Sacred Congregation of Rites, the writings of the person are submitted to a rigorous examination with a view to discovering if there is any taint, however small, of heresy or unsound teaching. This is the work of several theologians, working separately, and a report is submitted to the cardinal whom the Pope has charged with the preliminary investigations. This report is submitted to the Sacred Congregation. advocate of the cause, if the decision is favourable, then sends a formal petition, through the Sacred Congregation, to the Pope. If the Pope agrees to the continuance of the process, he writes placet on the petition, the person whose case is submitted receives the title of 'venerable,' as one whose public fame is saintly, and the formal introduction of the cause takes place. The commission visits the scenes of the life and miracles, and collects and tests evidence, which is again examined by the Sacred Congregation. Evidence need not be oral or documentary: for example, at the beatification of the 'English Martyrs' by Leo XIII., Dec. 29, 1886, the evidence of a book of engravings, showing that in some frescoes, long destroyed, in the Church of the English College at Rome, they were placed among canonized saints, was regarded as justifying equipollent beatification (Dom Bede Camm, Lives of the English Martyrs, London, 1904, i. xvi ff.). Three sessions are necessary for the discussion of the virtue and miracles of the person, the third of which takes place in the Vatican, under the presidency of the Pope. The case is argued by the postulator and the promoter of the faith, and if the decision is favourable the Pope issues a decree of beatification.

Before the process of canonization is opened, it is necessary to submit evidence of miracles since beatification was accepted by the Congregation of Rites. The Pope again issues a commission, and there is a local examination as before, followed by a triple session of the Sacred Congregation; and afterwards in three consistories, separated by some lapse of time, but not interrupted by a vacancy of the Papal See. The question is then submitted to the whole college of cardinals, to patriarchs, archbishops, and bishops at Rome, and to bishops of the neighbourhood. A private meeting of the Sacred College is next consulted, and its assent is followed by a solemn and public consistory, in which the claim is pleaded by a consistorial advocate. A third consistory then takes place, at which all prelates present in Rome appear and give their advice to the Pope, the bishops thus preserving their ancient rights (Benedict XIV., op. cit. lib. i. cap. xxxiv. n. 9). The Pope now names the day for the formal canonization, which since the end of the Great Schism has always taken place in Rome. As a rule, several saints are canonized on the same day, and in the basilica of the Vatican. The Pope himself completes the process of canonization by declaring that the persons are saints, and that he inscribes their names on the roll of saints, and requires the Universal Church (Benedict xiv., op. cit. lib. i. cap. xxxvi.). A formal act is registered, the Te Deum is sung, and the Pope recites the names of the new saints in prayer. The canonization is now complete.

A few words may be added on the rutionale of canonization. It is a recognition of the solidarity of the Church based on the doctrine of the Communion of Saints. Originating in the fundamental human admiration for heroic virtue, it was adapted and developed by the Church, under continual popular pressure, till it became first a theological and then an ecclesiastical system. In its man principles it is rooted deep in universal feeling and supported by continuous tradition in the Church. This applies to the 'unchanging East' as well as to the West, and we may now trace the Eastern history of the subject.

2. The East.—Down to the 11th cent. the

history of canonization follows on the same lines in the East as in the West. Local saints were elevated in popular reverence, were accepted by bishops and councils, and were locally venerated; but geographical barriers prevented much inter-change of this sentiment between East and West (see, however, the case of St. Maria Antiqua, Proc. of the Brit. School at Rome, vol. i., No. 1, London, 1902; and the history of the veneration of St. Anne, whose cult probably reached the West from the East through the Crusades, is of considerable interest). In the greater part of the East the custom remained unaltered. The episcopate retained the authority to place the saint on the diptychs, and to sanction the creation and veneration of images (icons). In the separated Churches (Armenian, Syrian, etc.) the same custom was observed, with some local differences. In Russia, owing to the special history of that Church, more significant differences occurred. At the present time three distinct groups are recognized among those whose cult is permitted: (1) those venerated, by order of the supreme ecclesiastical anthority, throughout the whole Russian Church; (2) those whose cult is approved for a particular part of the Church, a district, a monastery, or a church; and (3) those who are venerated by popular feeling, with tacit sanction of ecclesiastical anthority, although not yet canonized. These classes to some extent correspond to those whom the Roman Church styles 'canonized,' 'beatified,' and 'venerable.' The earliest Russian saints, Boris and Glyeb, were inscribed in the calendar within a short time of their martyrdom (or political murder), and the Chronicle of Nestor (ed. Leger, Paris, 1884) shows that miracles were attributed to them, while the chronicler Jacob, in describing the institution of their festival, states that its formal institution, which was equivalent to canonization, was preceded by a period of popular veneration and pilgrimage to the tomb to which their bodies had been translated (Golubinski, *Hist. of Canonization of Saints*<sup>2</sup>, p. 45 f.). In 1108, Theodosius Pecherski was admitted by all the bishops, it would seem (there was certainly a petition to that effect, through Svjatopolk, the ruler of the Russians), to commemoration in the Synodik throughout Russia (ib. p. 51); i.e. his name was inserted in the list of saints commemorated in the festal litia, sung at the end of vespers. There are other, but not numerous, instances which point to a general cult, before the Councils of 1547 and 1549 under the patriarch Macarius. At those councils the list of saints universally venerated received large additions, and additions were made also to those whose local veneration was permitted. These canonisations en masse' have been attributed to the new position of dignity which was assumed by the Russian Church when the Mother Church fell under the domination of the Turks (Diet. de théol. eath., fasc. xv., Paris, 1905, col. 1660); but the date hardly supports this view, and the step was more likely due to the growing political strength of the monarchy and the sense of unity which it

diffused, and to the efforts for reform which culminated in the 'Council of a hundred chapters' at Moscow in 1551. From 1547 to 1721, when the new constitution of Peter the Great, the Most Holy Synod, took its beginning, there were only fifteen saints canonized for universal veneration; and since then there have been but six. It should be added that, during the period of the separation of the church of Kiev from that of Moscow (1458-1685), 141 new saints were introduced into the calendar of the former. The number of saints universally venerated (i.e., in a strict Western sense, canonized), therefore, remains small; but saints who are locally venerated have their own offices, festivals, veneration of relies, and icons. The third class of persons venerated consists of those on the anniversary of whose death special services are said in which their intercession is invoked. It is from this commemoration, it would appear, that in almost every case the higher steps in veneration have arisen (cf. the case of the veneration of the martyrs John, Stephen, and Peter, killed by pagan Tatars, begun by Hermogenes of Kasan in 1592 [Golubinski, op, cit, p.

For canonization, the attribution of miracle to the person venerated, as well as peculiar sanctity of life, or martyrdom, is practically essential. The incorruption of the body, on special inquiry, was also an important point in the evidence submitted. This applies to the cases mentioned above, SS. Boris and Glyeb and Theodosius Pecherski; but St. Vladimir, the typical Slavonie hero and saint (972-1054), who was 'canonized' by the creation of his festival in 1240, was not declared to have wrought miracles. It appears that the new saints of 1547-49 were all designated as 'thaumaturges,' and that miracles wrought by their intercession were regarded as the evidence of their sanctity. In 1690, when application was made for the canonization of Germanus, one of the founders of the monastery of Solovetz, it was answered that, besides the consent of the Czar and the Patriarch, a severe inquiry establishing the holiness and miracles of the person was necessary (ib. p. 428 f.). A further class of hiero-martyrs is, however, known; and for admission to this miracles would not seem to be necessary. The incorruptibility of the body, again, is not regarded as essential to canonization, as has been formally declared on the canonization of St. Seraphim of Sarov in 1903, by the Metropolitan Antonius of St. Petersburg (Tserkovnyja Vjedomosti [official journal of the Synod], St. Petersburg, June 28, 1903). This is contrary to the view taken by Nectarius, Patriarch of Jerusalem in 1682 (cf. Golubinski, op. cit. p. 406 f.).

The right of canonization exercised by local bishops was generally, if not always, subject to the sanction of the Metropolitan (ib. p. 295). The Metropolitans also acted independently or with the support of a synod, and up to 1547 these commanded universal veneration on their own authority. The intervention, or sanction, of the Sovereign was, however, frequent if not essential (see the case of Svjatopolk in regard to St. Theodosins Pecherski, in Nestor's Chronicle, ed. Leger, p. 223). The canonization of 1547-49 was the work of the Metropolitan and the conneil of bishops. After that the Metropolitan is again found acting independently, as well as with the counsel of his synod, though the consent of the Patriarch and the Czar seems to have been regarded as essential (cf. case of Germanus of Solovetz above). At least from 1667, when a council insisted on an examination of the cause by the assembled bishops, the final decision was in the hands of the Patriarch, with the concurrence of his synod and of the Czar.

A typical case is the canonization of St. Ame of Kashin (ob. 1368), which was completed in 1650 (Golubinski, op. cit. p. 167 f.). The case is a very curious one in many respects, as the canonization was quashed by the Patriarch Joachim in 1678. From the time of Peter the Great, canonizations are issued formally by the Holy Synod, local veneration (or beatification) being without any formal proclamation, though approved by the Synod. The process of canonization begins with the submission of the cause by a bishop, with testimony as to miraeles, to the Holy Synod : but there are exceptions where the petition has been began by civil authority. The Holy Synod then appoints a commission of investigation, which considers, inter alia, the state of the body and the evidence for miracles. The inquiry as to the life of the person is embodied in a document issued after the canonization by the Holy Synod, with a view to its public use in commemorations. At the conclusion of the inquiry the Holy Synod may decide to continue the process immediately, or, as is more generally done, to defer it for about two years, and then to seek further evidence. A further commission then reports to the Holy Synod, which issues a statement, submitted to the Imperial authority for sanction, which places the person in the list of saints, and orders an exposition of his relies, the composition of an office, the creation of a festival, and the publication of this decree for the instruction of the faithful. is followed, if possible, by a translation and veneration of the relies, with special solemnity, under the authority of the Holy Synod and in the presence of some of the highest prelates. It includes the linal recitation of special prayers for the repose of the soul of the saint, and for all those who have taken part in the ceremony. At the time of the translation a special office in honour of the saint is recited and the relics are exposed. From that moment prayers are no longer said for the soul; his intercession is invoked instead. The festival is prolonged, with special masses and sermons, for several days: that of St. Seraphim of Sarov lasted from July 16 to July 21, 1903.

The points in which Russian canonizations differ from those of the rest of the Eastern Church are those involved in the position assumed by the Christian Sovereign and by the Holy Synod; throughout the rest of the East, where these special features do not exist, the ancient custom, which leaves the whole process in the hands of the bishops, still obtains. In the Roman Church the system is more complex and exact, and depends on the Papal authority. In the Anglican Church, though churches have been dedicated in the nan es of modern persons of holy life, nothing approaching to a custom of canonization exists. The nearest approach to it is the insertion of the name of Charles I., 'King and Martyr,' in the calendar of the English Church by the authority of the Crown, the Convocations, and Parliament, and the compilation of a special office, for use on Jan. 30, which was removed from the Prayer Book (by royal authority only) in 1859. Protestant Churches have no parallel custom. It may be a lifed that, while canonizations tend to increase in the Church of Rome, in the Eastern Church generally the cases of additions to the list of saints in modern times are rare. Though the Russian Church is perhaps becoming more generous in this regard, the Orthodox Church as a whole, and especially in Constantinople, is very chary of adding to the roll of those whom she formally declares to have attained to the highest bliss.

LITERATURE.—Benedict XIV., de Servorum Dei beatificatione et beatorum canonizatione, 1st ed., 4 vols., Bologna, 1731-25,

completed in his Opera Omnia, Venice, 1767 (the ed. used for the purpose of this art, is that in 15 volumes, Rome, 1787-92); Ferraris, Prompta bibliotheca canonica, Paris, 1884 (another ed. is Rome, 1766); Gardellini, Decreta authentica sacrorum ed. is Rome, 1700). Gardellini, Decreta authentica sucroum ritum, Rome, 1898–1901; Vacant and Mangenot, Dictionnative de theologic eathelique, tase, xv., Paris, 1905. There is a large number of earlier autherities, but practically all that they say will be found summarized in the books named above. On Eastern canonization, see Golubinski, Istoria Kanonizatis varight: we reasonize the same of the Russian Church '9. Moscow, 1903, which has a full bibliography (pp. 3–10). Martinov, Annus ecclesiasticus greeo-staticus, Brussels, 1803. On the rationate of canonization and some theological doctrines involved, reference may be made to W. H. Hutton, The Influence of Christianity upon National Character, etc. (IR.), 1983, and A. N. G. achience schere given. The writer's grateful thanks are due to Mr. W. J. Birkbeck for most valuable help in regard to Russia. beck for most valuable help in regard to Russia.

CAPITAL PUNISHMENT. - See CRIMES AND PUNISHMENTS.

CAPPADOCIAN THEOLOGY.—i. GENERAL CHARACTERISTICS .- It is only in a limited sense that we can speak of a 'Cappadocian Theology. The term does not denote a formal system of doctrine, but represents in a more general way occurine, our represents in a more general way the contributions to theology of three Christian Fathers who were united by a common con-nexion with the Church in Cappadocia, and who brought to the defence of the Christian faith the inspiration of the same religious ideals and the same intellectual interests. The literary activity of the three Cappadocians—Basil of Cæsarea, his friend Gregory of Nazianzus, and his brother Gregory of Nyssa-covers the period 362-394. It thus coincides with a momentous period in the history of the Church. As champions of the Nicene cause in the closing years of the struggle with Arianism, the Cappadocians were the successors of Athanasius, and compileted the victory over Arianism in the East. Under their guidance the fresh questions which were coming to the front in their time-the Divinity of the Holy Spirit and the formulation of the doctrine of the Trinity—received a solution. Again, they were called upon to deal with the Christological controversy in its earlier stage, as represented by the teaching of Apollinaris; and here too they rendered services which prepared the way for later theologians. But their place in the history of thought is due also to another cause. They were devoted students of Origen, and, like Origen, they sought to enlist in the service of Christian theology the best philosophical thought of their time, in order to present the Christian faith to the culture of their age in the form of a scientific theology. This dream of 'a league between Faith and Science' (Harnack) is shown in their presentation of the doctrine of the Trinity by the help of conceptions derived from the thought of Plato and Aristotle. But it appears in other directions as well, in the publication by Basil and Gregory of Nazianzus of the Philocalia (a selection of extracts from the writings of Origen), in the Hexagemeron of Basil, above all in the three treatises of Gregory of Nyssa, On the Soul and the Resurrection, On the Making of Man, and the Catechetical Oration.

The last-named Father was a more thoroughgoing student of Origen than either of the other two. He traverses almost the whole field of problems which had been dealt with by the whole neld of problems which had been dealt with by Origen, and seeks to present the Christian religion in relation to the plan of the Universe and human history. The questions of which he treats include the providence of God, the creation of matter, the origin of the soul and its relations to the body, the source and nature of evil, the resurrection of the body, and the eschatological problem. In this way he was the successor of Origen, and the first Father after him who attempted to create a system of thought based upon Christianity. In his speculative idealism he goes beyond Origen in explaining away matter. On the other hand, he does more justice than Origen to the sensions side of things in his assertion of the interdependence of spirit and matter in the constitution of man. And yet again there is a strain of mysticism in his thought, which gives him a place in the line of mystics between the Alexandrians and pseudo-Dionysins the Arcopagite (on Gregory's mysticism see Dickamp, Die Gottesther d. hl. Grap. x Myss. p. 90 ff.; Holl, Amphilochius con Honium, p. 205 ff.). This breadth of interest shows how many and various were the elements which he had incorporated from the thought of his time.

Another feature of the Cappadocians is the spirituality of their religious conceptions. again shows the influence of Origen, and marks a point of contact with the best non-Christian thought of the time, which had been profoundly influenced by Neo-Platonism. The Kingdom of Heaven, says Basil (Ep. 8), is 'the contemplation of realities.' 'This the Divine Scriptures call blessedness. For "the Kingdom of Heaven is within you." 'Likeness to God' is the goal set before man (Basil, de Spir. Sanct. i. 2, cf. ix. 23). The image of God is shown to us in Christ by the Holy Spirit, and thus through the Spirit and the Son man ascends to the Father (ib. xviii. 47). Thus their defence of the Divine unity is inspired

by a religious interest. Side by side with this spirituality of conception there appears since by side with times spiritually of conceptual times about the season in Gregory of Nyssa a tendency to realism, which is exhibited especially in his exposition of the redemption through Christicse below) and in his language on the Sacraments. In this respect he shows the influence of Methodius. See the present writer's edition of the Catechetical Oration, Camb. Partistic

Texts, p. xxv ff.

The interest of the Cappadocians in furthering the cause of spiritual religion attracted them to the ascetic movement in the Church, represented by monasticism, in which the age sought to ex-press its ideal of practical piety. Basil's interest in monasticism, of which he was the chief promoter and organizer in the East, communicated itself to the two Gregorys, and the writings of all three are affected by the ascetic ideal, which finds its apologist in Gregory of Nyssa. In his early work On Virginity, asceticism is expounded as a philosophy of life, and interpreted as the detachment of heart which enables a man to enjoy the vision

of the uncreated Beauty.

The connexico of Amphilochias, Bp. of Iconium, with the Cappadecians has been treated by K. Holl (Amphilochias v. Ikonium). While maintaining their Trinitarian and Christological doctrines, Amphilochias does not share their interest in Origen's philosophy or their speculative bent. But as a popular teacher he belped to give currency to the doctrinal formulas which took shape among the Cappadecians.

ii. Sources of Doctrine.-I. Authority of Scripture. - The supremacy of Holy Scripture was fully recognized by the Cappadocians (see esp. Basil, de Fide 1, Hom. adv. Calumn. SS. Trin. 4). In their exegesis they were influenced by Origen, though Basil was fully conscious of the dangers of Origen's allegorieal method (*Hex.* ix. 1), and often prefers a strictly literal interpretation. In this respect he has points of contact with the school of Antioch. Gregory of Nazianzus makes a moderate use of the allegorical method, which is defended at length by Gregory of Nyssa (in Cant. [PG xliv. 756]), and more freely employed by him than by either of the other two. In this way he explained the early chapters of Genesis (Or. Cat. v., viii,), while he deals (de Comm. Not. [PG xlv. 181]) with the συγκατάβασω ('accommodation') of the language of Scripture after the manner of Origen.

Origen. At the time when the Cappadocians wrote, the allegorical method was beginning to fall under suspicion; and the contest with the Arians, who had been trained in the literal methods of the school of Antioch, showed the need of a more scientific treatment of Scripture. Even Gregory of Nysas expresses his desire to adhere, wherever possible, to the literal sense (Hexamenor [PG xiiv, 68]; ct, Ca Caut. [PG xiiv, 769]. In dealing with the typology of the 0.61 Testament, fasal approximates to the later teaching of the school of Antioch, and exhibits and the conscientions desire to bring out the full grammatical sense of Scripture. They appeal occasionally to the Hebrew, and they

quote from other versions than the LXX. See, further, Weiss, Die grossen Kuppadocier . . . als Exegeten (1872).

2. Tradition.-Next to Scripture, the Cappadocians recognize the importance of tradition. They start from the Church tradition of their time (see Greg. Naz. Or. xxxiii. 15; Greg. Nyss. Ep. iii, ad Eustath, ct Ambros. [PG xlvi, 1024]), and exhibit especially the influence of the Creed of their local saint, Gregory Thaumaturgus (see below). In a passage of the de Spir. Sanct. (xxvii. 66) Basil makes a distinction between written and unwritten tradition, and claims for the latter an Apostolic origin. In one passage (Or. xxxi, 25 ff.) Gregory of Nazianzus assumes a gradual development in revelation, in order to explain the reticence of Scripture on the subject of the Holy Spirit. In another passage he propounds the idea of a 'disciplina areani' (Or, xl. 45).

iii. The Knowledge of God. - The Cappadocians are unanimous in asserting the mystery of the Divine Being. 'We know that He exists, but of His essence (ovolas) we cannot deny that we are ignorant (Greg. Nyss. contra Eunomium [PG xlv. 933]; ef. Basil, Ep. 234). The writers of Scripture 'lead men, as by the hand, to the understanding of the Divine nature (φύσεως), making known to them the bare grandeur of the thought of God; while the question of His essence (ovoias), as one which it is impossible to grasp . . . . . . . . . . . . dismiss' (ib. p. 945; cf. Greg. Naz. Or. xxviii. 5, as one which it is impossible to grasp . . . they 7, 17). But, though the 'being' or 'essence God is unknowable, God may be known mediately by H is energies and operations (Basil,  $E\rho$ , 234, 1), and in Creation those energies are translated into a language that we can understand (Basil, adv. Eunom. ii. 32). Basil escapes the dilemma propounded by Eunomius, that either man can know the essence of God or he cannot know God at all, by maintaining that the incompleteness of our knowledge does not deprive it of truth (Ep, 233, 2). The Universe exists to manifest the Creator, and from the exhibition of beauty and wisdom which it presents the mind is led to grasp by analogy the Divine Wisdom and the uncreated Beauty (Greg. Nyss. de Infantibus qui pvam. [PG xlvi, 181]). This habit of seeing affinities and analogies between the visible and invisible worlds shows the influence of Origen and Plato. It led the Cappadocians to that profound delight in natural scenery which is characteristic of their writings (see esp. Basil, Hex. 10, vi. 1; Greg. Naz. Or. xxviii.; Greg. Nyss. de Infantibus, Ep. 20 [PG xlvi. 181, 1079]. The same feature appears in Plotinus). But it is especially in the human soul that we may find analogies to the Creator, for the soul is a mirror, which reflects the traits of its Divine archetype (Basil, Her. ix. 6; Greg. Nyss. de An. et Res. [PG xlvi. 41], de Mortuis [ib. p. 509]). Hence both Gregorys employ the psychology of human nature to illustrate the doctrine of the Trinity (see below). The more complete knowledge of God, however, is unattainable without the light of faith, and in the Old Testament this faith was still incomplete. The Law and the Prophets were like the 'window and the 'lattice' (Ca 2°), which admitted only a ray of truth, whereas in the Incarnation the true light itself is revealed (Greg. Nyss. in Cant. hom,

iv. THE INCARNATION. - None of the Cappadocians sets forth the purposes of the Incarnation so fully or so adequately as Athanasius had done in his treatise On the Incarnation. In Basil the predominant thought is the revelation to man of the image of God in Christ and the restoration of the Divine image in man (Epp. 236. 3, 38. 8, de Spir. Sanct. ix. 23). In Gregory of Nazianzus the same conceptions appear, but the characteristic idea is the 'deilication' (θέωσις, θεούν, θεόν γενέσθαι) of

v. [PG xliv. 865]).

man in Christ (see esp. Orr. i. 5, xxxix, 17, xl. 45, The same idea appears in Basil and Gregory of Nyssa, and may be traced to the influence of earlier writers, e.g. Origen and Athanasius. See Harnack, Hist. of Dogwo, Eng. tr. iii, 164 n. 2). Gregory of Nyssa, while giving a place to both these conceptions, develops the redemptive aspect of the Incarnation in a manner which recalls the earlier treatment of Ireneus, although in its actual form it finds its closest parallel in the teaching of Methodius (see above). The purpose of the Incarnation was to arrest the process of dissolution in man's nature, which was a result of sin. Death had been ordained after the Fall (the 'coats of skin' in Genesis represent this state of mortality, Or. Cat. viii.) as a merciful provision for removing the evil which had been mingled with man's physical nature. Christ assumed humanity as a whole (similarly Methodius), in order to knit together in an inseparable union the elements of human nature (i.e. body and soul) which had been severed by death. His redemptive work accordingly was only completed by His resurrection, through which He becomes a new principle of life to all mankind (Or, Cat. xvi., xxxv.). This exposition exhibits the realism which has been noticed above as a characteristic of some parts of Gregory's teaching.

parts of Gregory 8 teaching.
Gregory of Nyssa is the only one of the Cappadocians who
attempted a formal treatment of the fracturation, which occupies the larger part of his apologetic work, the Catchedical
Oration. His object in that treatse is to show the reasonableness of a helie in the Christian religion. He adopts many of
the arguments of Allamasius, and appeals to the Gospel Instory. the arguments of Affanasaus, and appears to the cooper instory and the rise of the Church as exhibiting the Drvine power of Christianty. He justifies the idea of the Incarnation by an appeal to the immanence of God in creation, and by showing that the plan of redemption was consistent with the attributes of God, displaying at once His power, righteousness, wisdom and goodness. No external remedy would have suffeed, for of God, displaying at once 11st power, inguivenees, wissoon, and goodnees. No external remedy would have similared, for man needed to be touched in order to be cured (AAM). The dual to Christ, was necessary in order that Ills as-unquition of humanity much be complete. For his fuller treatment of the death of Christ, see below. In the latter part of the treatise he shows the relation of the Sacraments to the In-

THE DOCTRING OF THE TRINITY. - Among the local influences which helped to shape the theology of the Cappadocians must be reckoned the teaching to which currency had been given by the labours of Gregory Thanmaturgus. The Creed of Gregory (see Hahn, Bibliothek der Symbole<sup>3</sup>, 1897, p. 253), which contains a clear assertion of the unity and eternity of the Three Persons of the Trinity, and closely associates the Holy Spirit with the Son, appears to have formed the starting-point of the Cappadocian theologians, and even to have moulded their language to some extent (see Holl, Amphilochius von Ikanium, p. 117 ff.; and cf. Basil, Ep. 204, de Spir. Sanct, xxix, 74; Greg. Nyss, Vita Greg. Thanimat, (PG xlvi, 912). In the Creed of Nicea they recognized a natural development of such teaching and the starting-point for the still further developments which were forced upon them by their opposition to the advanced Arian teaching of Eunomius and by the controversy on the Holy Spirit. The complete vindication of the Deity of the Son and of the Holy Spirit was one part of the task which lay before them. The other was the settlement of the terminology in which these results were to be expressed, the treatment of the immanent relations of the three 'Persons,' and the manner of their co-existence in the one Divine Being. This latter task, to which they were led by the need of giving scientific precision to the results attained through the controversics of their time, constitutes their chief importance in the history of Christian theology. (At the same time it marks an epoch in the history of thought as a serious attempt to grapple with the conception of personality.) The distinction between the terms οὐσία and ὑπόστο σιε marks the starting-point of this later development. Currency

was now given, largely through the influence of the Cappadocians, to the formula μία οὐσία, τρεῖς ὑποστάσεις, to denote the coexistence in the one Divine Being of three subsistences or spheres of conscious

being ('Persons' in later terminology).
In this task of formulating the doctrine of the
Trinity, Basil was the pioneer. The two Gregorys depend upon him, though they advance beyond him and complete his work. To Basil is due, on the one hand, the definition of the terms ovola and υπόστασις, and, on the other hand, the beginnings of the attempt to discover the characteristies (γνωρίσματα, ίδιώματα, ίδιότητες) of each of the ὑποστάσεις, and their relations to one another in the Godhead. In the former task the other two Cappadocians advance little beyond Basil. In the latter they develop and complete his work, especially in regard to the doctrine of the Holy Spirit. At the same time they were more alive than Basil appears to have been to the dangers of tritheism, and they exhibit a stronger interest in defending the Unity of the Deity and in refuting the charge of Tritheism. Both of them insist that the unity of the three Persons is no mere abstraction or generic unity. That which constitutes it, the Godhead, is identical in all three Persons. There is one Godhead in three subsistences or Persons. This unity was further secured by a discussion of the 'modes of heing (τρόποι ἐπάρξεωs) of the Son and of the Holy Spirit. The Father is the source of Deity, while the Son has a derived Godhead (γεννητός, μονογενής  $\theta \epsilon \delta z$ ). The Holy Spirit 'proceeds' (έκπορεύεται) from the Father through the Son (διά τοῦ νίοῦ). Finally, the idea of a περιχώρησις ('co-inherence') of the three Persons was put forward to express their inseparable will and activity. These results were commended to the thought of the time by an attempt to show that the Christian doctrine of the Trinity was the mean between Judaism on the one hand and Hellenism on the other (Basil and Gregory of Nyssa), and an attempt was made to illustrate the immanent relations of the three Persons and their unity in the Godhead from the analogy of human nature (Greg. Naz., Greg. Nyss.).

The following points deserve attention, as illustrating the particular contributions to the doctrine of the Trinity made by

The following points deserve attention, as illustrating the particular contributions to the doctrine of the Trinity made by each of the titree Fathers.

Also prepared the chains in the contribution is a second of the titree fathers.

Also prepared the chains (Holl), of the terms solved and violarized. The term obtain (Holl), the terms solved and violarized. The term obtain 'Holl), the terms now as the animon has to the particular. It is common, like goodness or Godbard, or any similar attribute; while vivorages is contemplate in the special property of Fatherhood, Sonship, or the power to sanctify (Ep. 214). Easil also contributed to the contemplate in relations of Father, Son, and Holy spirit. He cases the craim relations of Father, Son, and Holy spirit. He of the expression and its use by Basil and Greg. Nyss. see Holl, Amphilochius, p. 210 ft), to denote the manner of derivation of the Son and Holy spirit from the Father. The relations of the Father and the Son are expressed by the terms rappears and using (less commonly agiveness and yourges). But he could not suffer that the son that is not the mote of being of the Holy spirit strom God. He is also called the Spirit of Christ, is attached to Christ and 'intimately associated' with Him (the Spirit, Sanet, sviii, 46; contra Sod, et Ar. [PG STANE]. Though Easil is not so concerned as the two Gregory to defend the Unity, he is not wanted in clear statement of the contract of the process of the following of the Father and the Son (Ep. 8), as the state of the contract of the father state of the son of the father and the Son (Ep. 8). terms "like" and "unlike as applied to the con, and maintains the identity of nature (rantorpra rig downed) and one-ness of being ( $\delta$ -nodorned) of the Father and the Son ( $\mathcal{E}_{\mathcal{P}}$ , S.) and in another passage ( $\mathcal{E}_{\mathcal{P}}$ , S.) he relates the idea that obvia denotes a substance anterior to corrudelying both. The Father than the substance anterior to corrudelying both. The Father than the substance anterior to corrudelying both. The Father creating through the Son and perfecting through the Spirit de Spir. Sanct. xvi. 38), although in the experience of hie we ascend from the Holy Spirit, through the Son, to the Father (ib.

vviii. 47). Group of Nationaus, starting from Basil's teaching, completed his definitions by giving currency to the term emogeness to denote the 'procession' of the Holy Sprint. His ruling conception of the ideorypes, or 'characteristics', of the three Persons is that the Father is unbegotten, the Son begotten, while the Holy of the Computer of defined. Gregory has a clear statement of the Divine unity, which

is characterized by 'equality of nature, unanimity of Judgment, identity of action, and concurrence of the other two Persons with the One from whom they are derived; so that, though there is a numerical difference, there is no division or separation one thing that can be called Godhead.' The Persons derived from the One source are referred back to the One, though we believe them to be three (Or, xxxi. 14). At the same time be safeguards the unity from being regarded as a mere abstraction or generic unity. Peter, Paul, and John are not Japoulovo ('of one substance or being') in the same sense as the Persons of the cannet for persons of the contraction of the Son and one substance or being ) in the same sense as the rersons of the Trinity (Or. xxxi. 19). Elsewhere he uses almost Sabellian language to express the closeness of the relations of the Son and Spirit to the Father (Or. xxix. 2).

Spirit to the Father (Or. XXIV. 2).

Gregory of Nassa starts, like Gregory of Nazianzus, from the standpoint of Basil; and develops in an independent manner his own thought upon the subject. Like Gregory of Nazianzus, he has a strong interest in maintaining the unity of the Godhead. In own thought upon the subject. Like Gregory of Azzanzus, he has a strong interest in maintaining the unity of the Gothead. In place of the terms yearpies and chroperris to denote the anotes properly of the control of (This conception of the unity of human nature exhibits the realism of Gregory). Again, he urges, individual men are distinguished sharply by the varying relations of time and place and circumstance, whereas the Persons of the Godhead exhibit a constant causal relation.

There are 1. τὸ ἀτονη, the cause=the Father,

11. τὸ ἀιτασόν, the cause=the Father,

(a) immediately (τὸ προσενιών ἐκ τοῦ πρώτου), i.e. (This conception of the unity of human nature exhibits the

the Son, (b) mediately (τὸ διὰ τοῦ προσεχῶς ἐκ τοῦ πρώτου), i.e. the Holy Spirit, (Cf. also de Spir, Sanet, [PG xlv. 1304], ἐκ τοῦ θεοῦ ἐστί, και τοῦ Χριστοῦ ἐστί.)

Thus Gregory of Nyssa advances beyond the other Cappadocians in his clearer definition of the procession of the Spirit through the Son, and in this respect he represents the final stage of development attained in the Eastern Church. Another contribution made by him in the Quad non sint tree Di is the clear statement of the mepaysipmys ('co-imberence,' 'interpentation') of the three Persons. The operations of the Godhead are conducted by all Three, acting together without mark of medion of, and disposition of, the goodwill which is communicated from the Father through the Son to the Spirit.' Lastry, we may notice (see Holl, op. cit, p. 220) that Gregory's insistence on the unity of the Godhead is bound up with his speculative interest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and his Origenium, which led him to seek a single Frinterest and him to seek a sing interest and his Origenism, which led him to seek a single Principle as the source of the evolution of the world and human

Some distinguished German theologians (Harnack, Zahn, Loofs) have in recent times attempted a fresh reading of the work of the Cappadocians in relation to the doctrine of the Trinity. According to this view, the Cappadocians modified the sense of the outpoor and seenred adherence to their new interpretation, by which it came to denote likeness (or equality) of substance rather than unity of substance. In this new development the Cappadocians are supposed to have been influenced by the theology of Basil of Ancyra. According to their reading of ὁμοούσιον, the terms οὐσία ('being') and φύσις ('nature') became nearly equivalent, and it was permissible to believe in three hypostases of like nature which together form the Godhead, instead of one Godhead existing in three distinct spheres of conscious being. By this view the Church became committed to an interpretation which is really tritheistic. But this theory appears to have gained ground from the weight of the authorities by which it is supported rather than from its intrinsic merits. It introduces confusion into the careful language of Gregory of Nazianzus and Gregory of Nyssa, and on its presuppositions the argument of the latter in his Quod non sint tres Dii becomes unintelligible. Nor does the theory receive any adequate support from the less complete treatment of Basil. A careful study of the theological stand-

point of all the Cappadocians (especially the two Gregorys) shows how vital to their whole view of religion was the belief in the unity of the Godhead. For the theory itself, see Zahn, Marcellus v. Aneya, 1867; Harnack, Ristory of Donma, Eng. tr. (1894-89); Loofs, Leifuden, zum Stud. der Dommenschicht (1893); Loofs, Leifuden, zum Stud. der Dommenschicht (1893), and art. 'Gregor, v. Naz.' in PRES, vol. vii. (1890). For a careful criticism of the theory, see Bethune-Baker, Perts and Studies, viii. (1901).

n. 1; and for a general treatment of the Cappadocian theology, see Holl, Amphilochius v. Romium (1904). Ct. also Ullmann, Greg. v. Naz.<sup>2</sup> (1897), p. 311 ff.; Dorner, Doctr. of Person of Christ, Eng. tr. (1891-63), iii. 506ff.

vi. CHRISTOLOGY, — The Christological problem was discussed by the Campadocian; in conversion with religion was the belief in the unity of the Godhead.

was discussed by the Cappadocians in connexion with the teaching of Apollinaris. Beyond a few passing notices, Basil does not deal with the theories of Apollinaris, which are, however, treated of at length by Gregory of Nazianzus in his two Epistles tenger by Gregory of Adamilias in his two Epistes to Cledonius and in his Epistle to Nectarius, and by Gregory of Nyssa in his Interrheticus adv. Apoll. and his Epistle to Theophilus. Their influence on Their influence on later speculation is seen in the following directions:

(1) Gregory of Nazianzus employed, and gave eurrency to, the expression 'two natures' (600 eurrency to, the expression two natures (δου φύσειs, used earlier by Origen), while emphasizing clearly a principle of unity in Christ. (2) Both Fathers prepared the way for future

disensions by emphasizing the reality and com-pleteness of the human nature assumed by Christ. Especially valuable is the appeal of Gregory of Nyssa to the portrait of Christ in the Gospels and its exhibition of a human will, human ignorance, growth in knowledge, submission to temptation. sorrow, and dereliction (see esp. Antirrh. 11, 14, 24, 32). In this respect he has affinities with the Antiochene theologians. The vindication of the existence of a rational soul in Christ (against Apollinaris) was further prompted by the interest of both Fathers in the doctrine of redemption. If or oom rathers in the doctrine of redemption. If Christ had no luman soul, the soul of man was not redeemed (Greg. Naz. Ep. i. ad Cled. 7, Ep. ii. 4; Greg. Nyss. Antirch. 11, 17, Ep. ad. Theophil.). (3) In dealing with the central problem raised by Apollinaris, 'llow is the existence in Christ

of two complete natures compatible with the unity of His Person? both Gregorys tended towards the idea of a transmutation of the human nature into the Divine. They employ, as earlier writers had done, the terms 'mixture,' 'blending' (μξες, κρᾶσες, σύγκρασες, ἀνάκρασες), to denote the union of the two natures. But, further, they speak of the human nature as 'deified,' and 'transmuted' into the Divine. Gregory of Nyssa appears to regard the unity of the human nature with the Divine in Christ as a progressive unity, which was fully accomplished only at the Ascension, when the humanity ceased to retain its own characteristics, and was blended with the Deity 'like a drop of vinegar with the ocean' (Antirrh. 42, Ep. ad Theophil.). In this way he was able to meet the objection of Apollinaris that, if Christ's humanity was complete, 'the triad (or Trinity) was expanded into a tetrad'; but his language exhibits a tendency which is periously near to that which afterwards produced Monophysitism.

(4) Neither of the two Gregorys fully reached the

solution of later theology, which maintained the impersonal character of the humanity of Christ. In a few passages Gregory of Nyssa appears to allow a relative independence to the humanity, and we nemploy the term 'person' (nphamby), and even employs the term 'person' (nphamby) in connexion with it as well as with the Divine nature (c. Euron. ii. [FG xlv. 504]; Antirch. 2, 27). Similarly, both Fathers occasionally use language which has a Nestorian ring (see Masson, Five Orawhich has a Nestolina ring (see Micson, 1995 order tions of Greg. Naz., 1899, Introd. p. xvi ff.; and cf. Greg. Nyss. Or. Cal. xvi., xxvii., xxxii.). On the other hand, Gregory of Nazianzus clearly anticipates the later language of Cyril of Alexandria, when he speaks of the union of the two natures as

an 'essential' union (συνάπτεσθαι κατ' οὐσίαν, Ερ. 101, where κατ' οὐσίαν is opposed to κατά χάρυ). Similarly his interest in the redemptive work of Christ led him to attribute to the Divine Person the human acts and sufferings. Thus he freely uses the terms  $\theta \epsilon \sigma r \delta \kappa \sigma_0$ ,  $\theta \epsilon \delta s \pi \sigma \theta \eta \tau \delta s$ , and similar expressions (see Holl, op. cit. pp. 179, 190 ff.). Lastly, both Gregorys expound the idea of a communicatio idiomotum (see Greg. Naz. Or. xxx. 8; Greg. Nyss. Ep. ad. Theophil.). In this way they make approaches towards the later Alexandrian theology.

The question raised by Apollinaris, 'How could Christ have assumed human nature in its completeness and yet be without sin?' is only indirectly treated of by freegory of Nysse. He affirms (1) the reality and completeness of our Lord's human nature; (2) the completeness of the union between the Divine and nature; (2) the completeness of the union between the invite and human matures in Christ. Scripture affirms that Christ became sin for us, 'that is, that He united to Himself the sinful soul of man' (Antirch. 23). 'He endared not to repel from communion sin tor us, 'that is, that He united to Himself the simil soul or man '(Lubrich, 23). 'He endured not to repel from communion with Himself our nature, failen though it was as the result of the summary of the communion with Himself our nature, failen though it was as the result of the inect industrial the summary of the pollution, but in His own self He partiles the filth' (bb. 26). This purification was effected at the very moment of the conception of the Virgin. The Divine nature was present in both the body and the soul of Christ from the very first, and rendered each of them sinkes (Lubrich, 4a). Christ shared our human feelings and weaknesses, but did not share our tendency to sin or disease of will c. Eurono, bis, vi. [First, 721]; Ep. ad Eustablaian [First, 182], 182]. 'Immediately the tendency of the low of the Hole Chort, and the overshadowing power in its own nature was 'Ep. ad Eustablaian [First, Tergory approaches the later treatment of Cyril of Alexandria, Thomb God cannot suffer, the was in Him who suffered, and made this suffering His own. See Antirrh, 43, 5a, and cf. Cyrils 2nd Epitals to Netherios.

vil. The Creation of Mark And THE FALL.

vii. The Creation of Man and the Fall.-(1) Though the Cappadocians rejected definitely Origen's theory of the pre-existence of souls, their doctrine of human nature exhibits, especially in the two Gregorys, lingering traces of Origen's influence. All alike represent the primal condition of man as almost angelic in character (see tion of man as almost angene in character (see Basil, *Hex.* viii. 2, ix. 2; Greg. Naz. in *Ps. czriii*. v. 2; Greg. Nyss. de *Hom. Op.* 16, 17). Both Gregorys allegorize the coats of skin in Genesis, and see in them the type of the sensuous life and the subjection to mortality, which were results of the Fall (Greg. Naz. Or. xxxviii, 12; Greg. Xyss. Or. Cat. viii., de Virg. 12, de An. et Res. [PG xlvi, 148]). Gregory of Nyssa even regards human generation as a consequence of the Fall (de Vivy. 12; cf. de Hom. Op. 16, 17), though in his later work, the Oratio Catechetica (c. xxviii.), he gives

up this view.

(2) As to the origin of the soul, while Gregory of Naziauzus shows himself a Creationist (Or. xxxviii. 11), Gregory of Nyssa uses language which implies a Traducianist conception (de Hom. Op. 28, 29, de An. et Res. [PG xlvi, 125 ff.]). The soul is not created before the body, nor the body before the soul. There is one beginning for soul and body alike, and the powers of the former unfold gradually with the body's growth. Just as a seed contains in germ all future developments, so does the principle of life in man (de Hom. Op. 29). The closeness of the intercommunion between soul and body is a characteristic feature of the teaching of Gregory of Nyssa. In other respects Gregory of Nyssa advanced interesting speculations on human nature. He has a realistic conception of the unity of the race (see above, §§ iv., v.), maintaining that the whole of humanity was created ideally beforehand by God (de Hom. Op. 16, 17). This conception, by which Adam represents the whole of mankind, presents points of contact with Philo on the one hand and Methodius on the other. Again, he dwells upon the idea that man is a microcosm, the meeting-point of the two worlds of matter and spirit (Or. Cat. v.; cf. Greg. Naz. Or. axxviii, ti). Hence he employs the terminology 'intelligible and sensible, or invisible and visible to denote the constituents of human nature, in preference to Origen's trichotomy—body, soul, and

spirit.

(3) All the Cappadocians emphasize man's possession of free-will. This again marks a point of contact with Origen, and was further developed in face of the fatalism of Greek thought and through the opposition to Manichaeism. The possession of free-will was a consequence of man's creation in the image of God. Sin was the result of the misuse of man's free-will in departing from what is good. The Fall only weakened, it did not destroy, man's freedom (see, e.g., Basil, de Spir. Sanct. ix. 23, Ep. 233; Greg. Naz. Or. ii. 17, vi. 15, xxxvii. 13; Greg. Nyss. Or. Cat. xxx., xxxi., Antierh. 29). In this respect the Cappadocians represent the general attitude of Greek thought as contrasted with the later teaching of Angustine.

(4) In their conception of the negative character of evil the Cappadocians exhibit the influence of Plato and Origen (so also Athanasius). Evil has no substantive existence. It springs from within and is 'a disposition in the soul opposed to virtue.' It arises through man's free-will, when the soul departs from good. See Basil, Hez. ii. 4; Greg.

Nyss. Or. Cat. v.

(5) In their treatment of the effects of the Fall, the Cappadocians mark an advance beyond the position of Athanasius. The idea of a transmission of sin and death appears in Basil (Hom. in famem et sice. 7, Sermo de renunt. sweuli, 7). Gregory of Nazianzus speaks of Adam as having involved all men in condemnation through his sin (Or. xxxviii. 4, xxxix. 13. 16). He also speaks of the delilement attaching to human nature, and regards the Virgin-birth as delivering man from 'the fetters of his birth' (Or. xxxviii. 17). Gregory of Nyssa goes further, and appears to teach the idea of an inherited moral taint. He speaks of man's nature as 'sinful' (de Vita Moysis [PG xliv. 336]), and as having 'fallen into sin', (ib. p. 337). 'He who partakes of Adam's nature, partakes also of his fall' (de Oratione Dom. Or. v. [ib. p. 1184]). Sin is born in our nature (in Psalmos [ib. p. 609]). The adversary of man 'through his p. 609]). The adversary of man 'through his deception mingled evil with man's will and suceeeded in extinguishing and obscuring in a way the Divine blessing (Or. Cat. viii.). By baptism man is released from his connexion with evil (Or. Cat. xxxv.). For further refl. see Tennant, The Fall and Original Sin, 1903, pp. 316-323. In these respects Gregory of Nyssa develops the later (as opposed to the earlier) teaching of Origen, and approximates towards the teaching of Augustine on Original Sin.

viii. The Atonement,—Theological reflexion on the death of Christ and its relation to the work of man's redemption in the period preceding the Cappadocians had emphasized two ideas. (1) Christ's death was a sacrifice to God. This idea had reached its fullest expression in Athanasius. (2) Christ's death was a ransom paid to Satan. The chief representative of this thought was Origen. The former idea was not systematically developed by the Cappadocians, who appear to have been influenced but little by the teaching of

Athanasius on the subject.

Basil searcely deals with the question, which had not been made a subject of controversy (see, however, on the sacrilice to God, Hom. in Ps. \( x^i \nable iii.\); and on the deception and defeat of Satan, Hom. \( xx. \) & Homilitate, 2; see, further, Ep. 261).

Gregory of Nazianzus exhibits a more profoundly religious interest in the question than either Basic or Gregory of Nyssa, and approaches more nearly than they to Athanasius in the spirit of his teaching. Christ's death delivered us from the curse of sin. The Atonement was the work of God (hence

the phrases θεδε παθητός, θεδε παθών), and yet the sacrifice could only be made by One who was a member of the human race. Hence he insists on the representative and vicarious character of Christ's sulferings in a way which anticipates St. Bernard's teaching on the sulfering of the Head for the members (see esp. Or. xxx. 5). He criticizes existing theories (Or. xlv. 22), and indignantly repudiates the idea of a ransom to Satan. But he will not commit himself to say in what sense the sacrifice was offered to God, beyond suggesting that, though the Father had not asked for it or required it, it was perhaps due to the 'economy' of God. The necessity of the sacrifice is not, in fact, made absolute by him. Man's deliverance from Satan and man's sanctification required it, and, further, it was offered in honour of the Father (ib.).

Gregory of Nyssa does not dwell upon the thought of a propitiation at all. But he develope in a crude and repulsive manner Origen's idea of a ransom paid to Satan, and of an act of deception practised upon the latter. Man had freely sold himself to Satan, and, in delivering man, God could proceed only by methods of strict justice, i.e. by a bargain such as would be acceptable to the adversary. Christ was the ransom price. But the veil of the humanity hid from Satan the Godhead of Christ, and thus, by an act of strict retribution, the deceiver was in turn deceived (Or. Cat. xxiii.). The idea of a deception practised on Satan appears also in Gregory of Nazianzus (Or. xxxix. 13, while the whole conception of Gregory of Nyssa is found in his contemporary Amphilochius of Leonium (see Holl, op. cit. p. 98 ft.). The theory thus developed by Gregory of Nyssa became widely current in both East and West, and proved a fatal legacy to the Church.

ix. The Sacraments.—The only important developments in the doctrine of the Sacraments to be found in the teaching of the Cappadocians are contained in the Catechetical Oration of Gregory of Nyssa (chs. xxxiii.—xxxvii.), where he treats of Baptism and the Eucharist. The main points in

his teaching are as follows :-

(1) Gregory appeals to the immanence of God in support of the principle of a Divine operation through sacramental channels, while he arges that the assurance of God's presence and operation rests upon His promise to be present in this way

when invoked (chs. xxxiv., xxxvi.).

(2) Gregory clearly states the idea that the Sacraments are an 'extension' of the Incarnation in that the process of 'delification' effected once for all in the humanity of Christ, through its union with the Personal Word, is progressively effected in humanity as a whole by participation in Christ through the Sacraments (xxxv., xxxvii.).

(3) Gregory distinguishes between the effects of Baptism and the Eucharist by saying that in Baptism the soul is united to the Saviour through faith, while in the Eucharist the body is brought to the same union, though here again only through the faith of him who partakes of the

Sacrament (xxxvii.).

(4) Gregory teaches an objective change of the elements (effected through the prayer of consecration) into the Body and Blood of Christ, and he represents the manner of the change in a striking and original way. Anticipating the later problem of the 'ubiquity' of the Lord's Body, he sets himself to solve the question how the one Body can be given whole to thousands of believers. He employs the Aristotelian distinction of 'form' and 'matter,' and draws a parallel between the change of food and drink into the human body through digestion, and the change of bread and wine into the Body and Blood of Christ. The 'constituent elements' (στοχία) of bread and wine in each case are re-

arranged under a new 'form,' although in the one case it is through the process of digestion, in the other immediately 'by the power of the Word' (xxxvii.). This statement of Gregory is the first attempt to propound a theory of the conversion of the elements. Gregory gave a direction to Eucharistic doctrine, which eventually led in the West to the theory of a transformation of substance in the elements. But Gregory himself is far removed from such a theory. His language is of the nature of an illustration, and even while applying his analogy from physiology to the Eucharist he shows signs of hesitation. (See Batiffol, Etudes d'histoire et de théologie positive, 2 ième série [1905], p. 260 î., and the present writer's ed. of the Ovatio Catechetica in Cambridge Patristic Texts, p. xxxviii fl. and notes on ch. xxxvii. There is an interesting later parallel to Gregory's theory in Descartes' letters to Mesland on the Eucharist.) Gregory's teaching exercised considerable influence on John of Damascus, and through him on the later Eastern Church.

As a contrast to the treatment of the Eucharist exhibited in trails contrast Green volume is plat quoted. Basil's language in Ep. 8.4 deserves attention. In accordance with his spiritualizing tendency (see above, § 1.), he says (commenting on Jacob): We cat His flesh, and drink His blood, heng made through His Incarnation and His visible life partakers of His Weston. For all His mystic soporm among through his linearization and his visible life partakers of this Word and of his Wisdom. For all his mystic sojourn among us He called flesh and blood, and set forth the teaching consist-ing of practical science, of physics, and of theology, whereby our soul is nourished, and is meanwhile trained for the contem-

plation of actual realities.

X. ESCHATOLOGY.-Gregory of Nyssa is the only one of the Cappadocian Fathers who exhibits any considerable interest in eschatological problems, and it is here that he shows himself a most thoroughgoing disciple of Origen. His chief contributions are: (1) his treatment of the resurrection of the body; (2) his theory of the purification of souls by fire after the Resurrection; and (3) his idea of the restoration of all spirits, Satan included, to final blessedness

(1) The first of these is discussed in his treatise On the Soul and the Resurrection (cf. also de Hom. Op. 27). The theory which he propounds is a modified form of the spiritualistic view of Origen. As in his discussion on the Eucharist, he employs the Aristotelian terms 'form' (είδος) and 'clements' (στοιχεία). The 'constituent elements' (στοιχεία) of the body, having once received the impress of the soul, are recognized by it at the time of the Resurrection, and are received back again from the common source. By death, however, the body is purged of its sensuous character, and in the Resurrection is of a more subtle and ethereal character.

(2) The idea of a purifying fire, derived from Origen, and found also in a passage of Gregory of Nazianzus (Or. xxxix. 19), has its source in Plato. According to Gregory, the soul stained by sin finds its remedy in the practice of virtue in this life and in the sifting judgment and refining fire of the after-life (Or. Cat. viii.). Elsewhere he says that for those who have not received the grace of baptism there waits a purification by fire hereafter of Gregory's Origenistic speculations, was quietly dropped by the Eastern Church, has little resemblance to the later Western doctrine of Purgatory, inasmuch as it applies to a different time (after, and not before, the Resurrection), and is intended to benefit not the good but the evil.

(3) The doctrine of an ἀποκατάστασις, or universal restoration of all souls, is another indication of the influence of Origon upon Gregory of Nyssa. In both writers this belief is bound up with their theodicy, which was based on the thought that the world-process must result in God becoming 'all in all' (1 Co 1528; cf. Greg. Naz. Or. xxx. 6); while evil, having no subsistence of its own, cannot be eternal. Satan himself will be purged, and from all Creation there will arise a choras of thanksgiving (Or. Cat. xxvi. : dc An. et Res. [PG xlvi. 72]). In later times, after the condemnation of Origen's works of Gregory of Nyssa by the Origenisk was employed to get rid of this idea from the writings of one who was a canonized doctor of the Church. But there is no justification for such a suspicion.

General Summary.—The one permanent service rendered to Christian thought by the Cappadocian Fathers was their formulation of the doctrine of the Trinity. In this respect their theology remained the standard of faith for the Eastern Church, which refused to accept from the West in later times the filiogue clause. But their influence in this respect was not limited to the East. Through Ambrose, who was a diligent student of Basil's writings, the theology of the Cappadocians was imported into the West, and influenced the later developments of Trinitarian doctrine found in Augustine. In other respects their work was of a tentative or preparatory character. helped to shape some of the terminology of the later Christological definitions, and they prepared the way for a careful statement of the reality of the two natures in Christ. Their attempt to re-introduce into the Church a modified form of Origen's theology met with only slight success, while the more pronounced Origenistic speculations of Gregory of Nyssa were entirely dropped. The Origenists of the lifth and sixth centuries appealed to their authority, while the mystical and pantheistic tendencies of Gregory of Nyssa received fresh developments in the teaching of the later Monophysites and of pseudo-Dionysius the Arcopagite. Their attempt to create a scientific theology was not altogether without results. For a few generations they succeeded in enlisting the best culture of the time in the cause of Christianity. while by the spirituality of their religious conceptions and their devotion to the practical ideals of monastic picty they arrested for a time the inroads of the cruder and more materialistic forms of popular religion which were already invading the Eastern Church.

213 CAPRICE

CAPRICE.—Lexicographers are in general agreement that the word 'caprice' is derived, through Ital. capriccio, from the stem of Lat. caper, 'goat.' In the literal sense, 'eaprice' is, therefore, an unexpected movement, seemingly without motive or purpose, like the frisky antics of a goat. In the metaphorical sense, 'caprice' is nsed of mental movement, and means 'a sudden change or turn of the mind without apparent or adequate motive' (OED). True to the fundamental idea is the use of capriccio as a musical term signifying a species of free composition, not subject to rule as to form or figure. As applied to human action, the word 'caprice' connotes conduct which appears purposeless, if not motiveless—either inconsistent with, or indicating fickleness of, character. The solution of the ethical problem involved must be sought by studying psychologically the relation of will to desire. As applied to Divine action, the word 'eaprice' implies an imputation of arbitrary procedure to God; as when, for example, capriciousness is ascribed to the Heavenly Father who has promised to hear and answer His children's prayers. The solution of the religious problem involved must be sought by reverent study of the relation of the Divine will to the Divine

I. Caprice in human action.-When human actions are said to be due to mere caprice, nothing more may be intended than a reflexion upon a general fieldeness of character. Emotional natures are often 'unstable as water.' As the pregnant phrase expresses it, they 'cannot be depended upon. It is, however, only lack of knowledge that compels observers to explain such conduct as caprice. Even to intimate friends a capricious person's actions may be quite unaccountable as well as altogether surprising, but deeper insight would reveal the fact that they are only 'seemingly without motive or purpose.' All that can be said with certainty of the man who is double-minded, and therefore is unstable in all his ways (Ja 18), is that, because he has no fixity of purpose, no unity of aim, it is uncertain how he will act on any given occasion. The true psychological estimate of all such characters is given by McCosh:

'People of whom this chameleon liability to change of affection Propie of Woon this chamereon monity to conage or sauccious is characteristic . . . appear very inconsistent, and so they are, and they do not gain our permanent confidence. But they are, and they do not gain our permanent confidence. But they are, after all, acting consistently with their obsarcter, which goes by impulses and glerks, and not by steady principle' (Psychology: The Mottee Powers, 1887, p. 1887,).

Determinists, who contend that human actions are always and necessarily decided by the strongest motive, have, in the course of the free-will controversy, charged indeterminists with asserting that it is possible for men to act from mere caprice, or, in other words, to make 'an unmotived choice between motives.' T. H. Green, in his profound analysis of human personality, has shown that, when 'motive' is accurately defined and distinguished from 'desire,' there is no such thing as unmotived choice. But he insists that it is the 'Self' that decides which desire shall prevail and become the motive to action. The will is free, because it is determined by motive, and is not swayed hither and thither by chance desires (Proleg. to Ethics<sup>3</sup>, 1890, bk. ii. ch. 1). It follows that the explanation of what is usually called caprice will be found in the weakening of the will. Psychological analysis may rule out caprice as insufficient to account for human action, but the activity of the Self may be reduced to a minimum, so that there may be little or no interval between the uprising of the desire and its acceptance as a motive by the will. In such a case the resultant action may not improperly be described as capricious. But after the cousciousness of an impulse to act, the mind has the power to pause and to consider the consequences

likely to follow from yielding to the impulse. It is on the cultivation of that power-which enables the mind to attend to other considerations and to reinforce, it may be, weaker impulses-that the elimination of caprice depends. An absorbing interest is the psychological condition of unity of purpose, and therefore of consistency of conduct (cf. W. James, *Principles of Psychology*<sup>2</sup>, 1901, vol. i. ch. 11, 'Attention'). The highest application of this principle is in religious experience. 'This one means that diverse actions all tend to a single goal (Ph 313); and the reason why caprice has become impossible is that all other desires have been subordinated to the permanent motive: 'For to me to live is Christ' (Ph 121). For a lucid statement of the reasons why 'unchartered freedom or the introduction of sheer caprice' is not implied in the somewhat misunderstood phrase 'the will to believe,' see art. Belief, ii. 462b.

2. Caprice ascribed to God.—The permissibility

of arguing from human to Divine personality is recognized by Theists generally as a legitimate philosophical procedure. Therefore, the bearing philosophical procedure. of what has been said in the earlier section of this article will be evident. In the single statement 'God is love' the possibility of His acting from caprice is excluded. His will can never be purposeless, inasmuch as it is determined by His nature, and 'His nature and His name is love.' Dorner succinetly states the essential truth involved in the Christian view: 'God can be thought neither as fate nor mere law, neither as absolute indifference nor as caprice' (Syst. of Christian Doctrine, Eng tr. i. 447). Theistic doctrines which do injustice to the revelation of God in Christ are: (1) the Scotist view of the Middle Ages, which represents the Divine will as arbitrary, heeause it finds 'the essence of personality in the power of unrestricted choice'; and (2) the teaching of the earlier Calvinists, who made 'grace a synonym for arbitrary choice.' Theories which hide the Divine Fatherhood leave men in uncertainty as to the Divine purpose, and lead them to regard the Divine action as capricious. But a false dualism is involved in the attempt to assign qualities to the Divine will which are not conceived to be attributes of the Divine nature.

'The ethical in God cannot be exclusively attributed and The efficial in God cannot be exclusively autroduced activated to this Will to the exclusion of His Being. . . Such a will, because undetermined by the Essence and Being of God would be ethically absolutely undetermined—that is to say, it would be mere caprice and absolute power (supremum liberum arbitrum) (Dorner, op. cit. 1, 315).

Primitive conceptions of the Deity as arbitrary and lawless account for the identifying of the miraculous with the mysterious, the inexplicable, and the capricious. But again the thought which climinates caprice from the Divine action is that of a unifying and adequate purpose. The revival of ancient teaching on the immanence of God has altered the aspect of the problem. The unity of Nature is accepted as a more adequate description of the world than the uniformity of Nature. 'Unity is essentially a spiritual conception . . spirit is the only unifying agent that we know'; therefore, according to the Christian view of the world, miracles may be in accord with, and may throw light upon, God's one increasing purpose. Miracles are no longer held to be antecedently impossible, for, 'if nature is sustained only by its intimate union with spirit, it is no wonder that the processes of nature should be modified for an adequate spiritual end' (Illingworth, Divine Immanence, 1898, p. 106).

The comparative study of religion has made us familiar not only with the Science of History, but also with the Philosophy of History. The latter expression cannot imply less than that rational principle, and not exprice, guides the development

of tendencies and the progress of events. choice of Israel, for example, is seen to be no capricious favour, when it is viewed in the light of His redeeming purpose and His love towards all mankind. But to affirm that there is a revelation of God in history is to as ert that the world is the scene of the Divine providence. His purpose conscene of the Dyna provine new tense. His purpose con-cerning individuals may, indeed, at times he difficult to discern. But, conscious that we behold only 'part of His ways,' we may find comfort in the truth, to which Science and Scripture alike bear witness, that

'God's method is a method of law; that is to say, it is not arbitrary or irregular, but consistent, and in its great principles unchanging. God's metiod is a method of propiess. We think of Him as ever at work, forming, training, and perfecting the moral personalities whom He has designed for union with Himself (W. Adams Brown, Christian Theology in Outline, 1997, p. 21747.).

As belief in law does not hinder, but rather helps men to trust in God's providence, because He does not work arbitrarily and capriciously, so belief in law presents no difficulties to those who have a worthy conception of prayer because they have true thoughts of God. Nevertheless, there is a

true thoughts of God. Nevertheless, there is a view of prayer which, as Rufus M. Jones says, 'takes us... into a world of caprice. It introduces a world in which almost anything may happen.... It is a low, crude view of God—a Being cff above the world who makes "laws" like a modern legislator and again changes them to meet a new situation (The boulde Saverh, 1996, p. 801.).

But the Christian view of prayer implies neither ignorance of the facts of science nor expectation of answers to petitions by violation of Nature's laws. True prayer is spiritual communion. It is the child's fellowship with Him who is made known by Christ and in his own experience as 'the Father who seeth in secret'; in Ilis presence all wants and wishes are made known, and according to the intimacy of the communion is the degree of confidence that the blessings asked for are not contrary to the Father's will. Yet, in whatever direction the surface ripples of desires may flow, the deep, strong yearning of the praying spirit is 'Father, Thy will be done.' If that will could be swayed by what men call caprice, true prayer would be impossible. But there is 'no scaling of the lips in the presence of the discovery that all is law.' When this is understood, the Atonement of Christ will be seen as the supreme manifestation of the Love which is law, and as the Father's own drawing near to His children, in order that, when in Christ He has reconciled them unto Himself, they may confidently approach, asking for the forgiveness of their sins in the name of Christ. 'Forgiveness is not a gift which can fall upon us from the skies, in return for a capricious request. . . . The deep cry for forgiveness must rise out of a forgiving spirit' (Rufus M. Jones, op. cit. p. 101).

spirit' (Rufus M. Jones, op. ctt. p. 101).

CARLYLE .- r. Life and writings .- Thomas Carlyle (1795-1881)-essayist, historian, critic, modern prophet-was born on 4th Dec. 1795 at Ecclefechan, Annandale. He was the son of James Carlyle, a mason, born in 1757. James Carlyle's first wife was a cousin, and died after giving birth hrst wife was a cousin, and dec after giving birton to one son, John. Two years after her death (1794) he married Janet Aitken. Thomas was the first child, and was followed by three sons and a daughter. Themas was educated at the Grammar School of Annan, and afterwards at Edinburgh University. This he left in 1814 without taking a

degree, but having distinguished himself in mathematics. At this time he intended to enter the ministry, and went up twice a year to deliver addresses at the Divinity Hall, Edinburgh, while addresses at the Divinity train, namoning, and teaching in the school at Haddington. Divinity and Law having failed to satisfy him, his mind towned in the direction of Literature. His early days were full of the struggles involved in getting a footing in this precarious profession. The salient points of that struggle may be noted.

From 1820 to 1825 he contributed sixteen articles to the *Edinburgh Encyclopedia* under the editorship of Sir David Brewster.

In May or June 1821, Edward Irving introduced Carlyle to Miss Jane Welsh. About the same time the inward illumination took place which is recorded in Sartor Resartus (bk ii. ch. vii.) as the transition from the Everlasting No to the Everlasting Yea. The plain meaning of this was that disbelief in Divine or human justice, freedom, and immortality had been dismissed in favour of a steadfast determination to live in God's world as

a servant of Truth.

The following publications mark his rise into public attention: (a) a Life of Schiller in the London Magazine in 1823-1824, which in 1825 was published separately in book form, and in 1830 translated into German at the suggestion of Goethe: (b) Wilhelm Meister's Apprenticeship, which appeared in 1824-1827, one of the best translations into English of any foreign auther. (c) In 1827 elaborate and extensive criticisms of European literature established Carlyle as the English purveyor and critic of European culture. Among his well-known contributions of this order are an article on Voltaire, a finished and memorable sketch of Novalis, two papers on Jean Paul Richter in the Foreign Review, a review of Schiller in Fraser's Magazine, and of Goethe's works in the Foreign Quarterly.

On 17th Oct. 1826, Jane Welsh and Thomas Carlyle were married. They began married life normally at 2t Comely Bank, Edinburgh, and continued it abnormally (1828) at Craigenputtock, a farm belonging to the Welsh family. Carlyle was by temperament unsuited for domestic life. and his wife was as ambitious and as keen intellectually as himself. At Craigenputtock his life became a monologue on literary and ethical subjects, and hers for six years a bitter experience of househobl drudgery. Among the visitors to Craigenputtock were the Jeffreys (1820-1830), and Ralph Waldo Emerson, who began in this way a life-long friendship with Carlyle. In 1831, Carlyle went to London to negotiate the sale of Sartor Resertus, which was eventually published in Fraser's Magazine. Hardly any one but Emerson recognized that the 'articles by the crazy tailor' were really 'a criticism of the age in which we live, exhibiting in the most just and novel light the present aspect of religion, politics, literature, and social life.

In 1834, Carlyle moved to 24 Cheyne Row, Chelsea, near the Thames. It was a bold venture to attack the metropolis on a reserve fund of from £200 to £300, but it was successful, and Cheyne Row was his home for 47 years. The first eight years were years of severe struggle on narrow means, but they produced the French Recolution, the Lectures on Heroes, Hero-worship, and the Heroic in History, and Chartism. At the end of this time the death of Mrs. Welsh brought pecuniary relief.

The next decade (1842-1853) was a time of vigorous literary production, which gave to the world the Life and Letters of Cronwell, Part and Present, Letter Day Promphets, and Life of John Sterling.

From 1853 to 1866, Carlyle was at the zenith of his fame. He published his monumental History of Frederick the Great, and gratified even his wife's ambition for him by being elected to the Lord Rectorship of Edinburgh University, where he

delivered a notable rectorial address.

In 1866, Mrs. Carlyle died, and after this Carlyle's life went haltingly. The years till 1881 are best regarded as a long eventide. His comments on public questions, such as the recall of Governor Eyre and the Reform Bill of 1867 (Shooting Niagara), show him as a resolute critic of democracy. He dictated a historical sketch of the Early Kings of Norway and an essay on the Por-traits of John Knox. In 1874 he accepted the Prussian 'ordre pour le mérite,' and refused a pension and a distinction offered by Disraeli. Money came freely when he could no longer use it except by bequeathing it, and friends when he could no longer reciprocate friendship. The appointment of James Anthony Froude as his literary executor and Froude's discharge of that trust led to a keen controversy, not yet finished, on the real character of Carlyle and his relations with his wife. At the end he was almost absolutely alone, and died on 4th Dec. 1881.

2. Teaching.-Carlyle's teaching was not sufficiently self-consistent to bear exact analysis as a statement of ethical and religions truth. Letters and conversations are sometimes at variance with judgments expressed in his books. But the general outlines of his teaching may be indicated.

(1) Concerning God .- It may be said of Carlyle, as he said of Frederick of Prussia, 'To him, as to all of us, it was flatly inconceivable that intellect and moral emotion could have been put into him by an entity that had none of its own.' Sartor Resartus is a vigorous and resounding counterblast to materialism. In the discussions of the time, Carlyle's theism was commonly classed as pantheism; but no classification is adequate for an anthor who wrote or spoke as he saw truth, but who saw different aspects of truth in different moods. He teaches that the universe is perpetually formed and renewed by the Spirit of God, not that matter is God, but that it is the 'living garment of God.' The universe is the vesture of God as man's body is the vesture of his spirit. As man claims personality for himself, he may logically assign to the Spirit of God that personality, consciousness, intelligence, which are the highest attributes of the spirit of man.

His belief in the essentials of religion is combined with a distrist of its formulas. In Latter-Day Pamphlets (no. viii.) he makes a protest against what he calls the gospel of Ignatins (i.c. Loyola), that God can be served by believing what is not true. That to please the supreme Fountain of Truth, your readiest method, now and then, was to persist in believing what your whole soul found to be doubtful or incredible. That poor human symbols

found to be doubtful or increduble. That poor human symbols were higher than the God Alanghty's facts they symbolized; that formulas, with or without the facts symbolized by them, were sacred and sultrary; that formulas, well persisted in, Other quotations, more emphatically negative, might be made from writings in later life, when the negative mood grew more marked. Yet he comes very near attributing moral personality to

God in His government of the world.

'No world, or thing, here helow, ever fell into misery without baying first fallen into folly.' 'Nature would not treat reakness as vicious unless weakness were necessarily vicious. weakness as vicious unless weakness were necessarily vicious."
The first principle of moral government is that, where guilt is
deliberate, undomited, and willd, punishment ought to be
deliberate, undomited, and willd, punishment ought to be
rests not upon mere social explication, but upon those authoritative instincts of our spiritual nature in which we hear the
voice of God. "The law of England, in dealing with criminals,
must correspond to the law of the universe' (Latter-Day
Tamphitets, no. vi.). "The moral nature of a man is not a composite factitious concern, but lies in the very heart of his being, as his very self of selves. The first alleviation to irremediable Posite nactitude scontern, but need the case is a sais very self of selves. The first alleviation to irremediable pain is some conviction that it has been merited, that it comes from the All-just—from God' (Froude, Thomas Carlyle: Hist, of First Forty Years of his Life, ii. 86).

'The free man is he who is loyal to the Laws of this Universe; whin in his heart sees and knows, across all contradictions, that injustice cannot betall him here; that except by sloth and cowardly fastisty evil is not possible here. The first symptom of such a man is not that he resists and rebels, but that he obeys (Latter-Day Pamphdets, no. vi.).

(2) Concerning man,—Carlyle's optimism about

the universe is combined with pessimism about human nature. Something of this may be put down to Calvinism, and something to temperament. He believed that 'God's in His heaven,' but not that 'all's right with the world.' At Craigenputtock he wrote:

'What is Hope? a smiling rainbow Children follow through the wet; 'Tis not here, still yender, yonder! Never urchin found it yet.

What is Life? a thawing iceboard On a sea with sunny shore. Gay we sail—it melts beneath us! We are sunk, and seen no more.

What is man? a foolish baby; What is man? a fooish baby; Vainly strives, and fights, and frets; Demanding all—deserving nothing! One small grave is what he gets.' (Froude, op. cit. ii, 420.)

His fundamental scepticism about human nature and the prospects of the race is closely connected with his disbelief in democracy. Democracy depends on and requires an optimistic view of man and his destiny, and implies ultimately that vox populi is vox Dci, which Carlyle emphatically denied. His criticism of democracy rests on the discovery that

'in democracy can lie no finality; that with the completest winning of democracy there is nothing yet won—except emptiness, and the free chance to win! Democracy is, by empumess, and the free chance to wm: Democracy is, by the nature of it, a self-cancelling business; and gives in the long-run a net result of zero. 'In Rome and Athens, as else-where, if we look practically, we shall find that it was not by loud voting and debating of many, but by wise insight and ordering of a few, that the work was done—so it is—so will it

Nevertheless he does not depreciate the real task of politics; 'society is a wonder of wonders, and politics (in the right sense far, very far, from the common one) is the noblest science' (Diary, Froude, op. cit. ii. 86).

(3) Religion. - Carlyle conceived religion as universal and spiritual. It is everywhere an expression of man's relationship to a spiritual God, dimly or vividly realized. Many of his sayings are more in keeping with the results of the modern study of comparative religion than with any order

of thought existing in his own day.

of thought existing in his own day.

'The early Nations of the world, all Nations, so long as they continued simple and in earnest, knew without teaching that their History was an Epic and Bible, the clouded struggling Image of a God's Presence, the action of heroes and God-inspired men. The noble intellect that could disentural such divine image, and present it to them clear, unclouded, in visible coherency comprehensible to human thought, was felt to be a Vates and the chief of intellects. No need to lid him sing it, make a Poem of it. Nature herself compelled him; except in Song or in Psalm, such an insight by human eyes into the divine was not utterable.' divine was not utterable.

divine was not utterable.'

Ferry Nation, I suppose, was made by God, and every man too. Only there are some Nations, like some men, who know it; and some who do not. The great Nations are they that have known it well; the small and contemptible, both of men and Nations, are they that have either never known it, or soon torgotten it and never laid it to beart' (Latter-Day Pamphlets, so even the property of the

To the last, says Froude, the believed as strongly as ever Hebrew prophet did in spiritual religion, and approved of prayer as a 'turning of one's soul to the Highest.'

Carlyle's belief in immortality grew in intensity, but after his wife's death he describes himself as 'bankrupt in hope and heart, as good as without hope and without tear' (Correspondence of Carlyle and K. W. Emerson,

In 1835 he wrote to Emerson on the loss of his brother:

'Sorrow not above measure for him that is gone. He is in very deed and truth with God, where you and I both are' (ib. i. 302). 'What a thin film it is that divides the living from the dead' (ib. i. 37).

On his father's death he wrote (Froude, Carlyle:

First Forty Years, ii. 248-269):

' Man follows man. His life is as a tale that has been told ; and monova man. His me is as a tage that has been told; yet under time does there not lie eternity? . Perhaps my father, all that essentially was my father, is even now near me, with me. Both be and tare with God. Perhaps, if it so please God, we shall in some higher state of being meet one another, . . The possibility, nay (in some way) the certainty, of perennial existence daily grows plainer to me. On the death of Mrs. Welsh he wrote to his wife:
'We shall yet go to her. God is great. God is good.'

In 1869, after the death of his wife, he wrote:

"I occasionally feel able to wish with my whole softened heart—it is my only form of prayer—"Great Father, oh, if Thou canst, have pity on her and on me, and on all such!" In this at least there is no harm '(Froude, Carlyle: Life in London,

Carlyle's most positive contribution to a religious conception of life is to be found in vivid, eloquent, and memorable passages describing the spiritual universe. Nothing shows better than these passages how, to Carlyle, life was shot through with spiritual relationships, and set in a framework of a spiritual cosmos. In the Diary (Froude, Conference of the Conf Carlyle: First Forty Years, ii. 86) he exclaims:

'I have strange glimpses of the power of Spiritual nnion, of association among men of like object. Therein lies the true element of religion. It is a truly supernatural climate; all wondraws things from a Pennenden Heath or Pennya-week Purgatory Society to the foundation of a Christianity or the (now obsolte) exercise of magic take their rise here. Men work (60-like nitracles thereby, and the horridest abonina-

In judging of his attitude to religion, we ought to give weight to his serious work rather than to casual utterances. The lecture on 'The Hero as Prophet,' and his appreciative estimate of Muhammad and the influence of Islam, show how Carlyle understood the nature and function of religion.

Carlyle's positive attitude to religion and his negative attitude to Christianity are among the paradoxes which perplex his readers. He fails to recognize in Christianity, as he finds it, the supreme form of the religious powers which he

reveres elsewhere.

(4) Ethic.—Carlyle's ethic is e-sentially the ethic of Puritanism-that is, his ideal of the conduct of life is an ideal conceived under the overwhelming impression of the righteousness of God. Man is ever in the great Task-master's eye. If men do their duty and faithfully obey the laws of God, living soberly and justly, God will do the best for them in this life. Duty is to him Wordsworth's 'stern daughter of the voice of God.' It involves surrender to the 'vast soul that o'er us plans'-and continually in the present it means work. Do the duty nearest to hand-Laborare est orare. only honourable thing is work, whether with sword or plough or pen. Strength is the crown of toil. Action makes men.

The paradoxical working of Carlyle's mind comes out in his inconsistent acceptance and rejection of parts of mutually related truths. He insisted on the community of the race, and poured scorn on the man who said, 'Am I my brother's keeper? Yet he failed to discover that this solidarity is the key unlocking the mystery of the vicarious sacrifice of Jesus Christ, which he entirely rejected. He believed that good and evil were absolute opposites, yet rejected the only way in which good can overcome evil, i.c. when good is returned for evil. He revered the character of Jesus Christ, yet talked incessantly of the 'Exodus from Houndsditch,' failing to see that the life history of Jesus is only to be understood as the culmination of a national history in which the Spirit of God is manife-tly active, and working to this climax. He believed in God as revealed in that larger Bible-the history of the human race-but did not see that universal revelation was the basis which makes reasonable the special revelation in the history of Israel. believed in no historical Resurrection or Ascension,

yet he vindicates in impressive eloquence the existence of a spiritual universe, and declares that a thousand million ghosts are walking the earth "O Heaven, it is mysterious, openly at noontide. it is awful, to consider that we not only carry each a future ghost within us, but are in very deed ghosts.' He imposed an infinite duty on a finite being, but did not see that the assertion of our weakness and deficiency is the 'fine innuendo by which the soul makes its enormous claims.' It is clear that this mingling of negative and positive teaching has nothing final or conclusive in it. It is a half-way house, where no one would think of stopping but the man who built it.

In spite of his pessimism about human nature in general, Carlyle had an intense belief in the greatness of personality raised to its highest power. Much light is thrown on the development of his mind by comparison with Nietzsche. Just as Nietzsche's reverence for personality led to belief in the superman as the hope of the race, Carlyle's led to Hero-worship. In both cases the belief was accompanied by contempt for those who fail to attain personality, and in both it may be connected with the failure to see that full personality in man is dependent on dealing with God as fully and

effectively personal.

(5) Concerning history. - Carlyle's absorbing concern with personality was partly cause and partly consequence of his historical studies, and it his work the recognized standard for one method of writing history. The supreme interests of history, whether modern or ancient, lie in the biographies of men and women and the history of movements, and for Carlyle the first is more central; for there is no movement which does not enter history through a life. 'Great truths are portions of the souls of men.' Reforms, institutions, cras, and even constitutions are to be interpreted through the men who lived in them, and in whom they lived. The modern school of scientific historians has introduced methods which modify the first impression made by Carlyle's historical work, but its essential truth is not to be shaken, and a reaction in favour of his view of history is to be expected, for 'by-gone ages were actually filled by living men, not by protocols, State papers, controversies, and abstractions of men.

The charge that Carlyle confounded right with might is not true as it stands. Its basis is his conviction that the history of a man or a nation is the Divine judgment of the man or nation. If a man succeeds and prospers, the cause must have been adequate to the effect. History and life alike contain their own laws, and supply their own principles of judgment. Men are powerful in proportion as they build on facts and see truth. The prophet who sees and the hero who acts appear to be a law unto themselves, only because there is no higher human authority. It is the wisdom of the mass of men not to question or judge them, but to follow them and go where they lead. There is truth in all this, but it is a truth which only a history of all time can vindicate. The historian would require omniscience to judge correctly of

success and failure. 3. Influence. - Carlyle's influence was provocative rather than constructive. He challenged the conventions of his time in thought and in act as much as he challenged its literary conventions by his His message worked like a leaven in the style. general culture of two generations. He moved men by antagonism rather than leadership. He threw them back on the saving facts of life. made realities in life and history stand out as greater things than the conventions that commonly conceal them. His influence may be compared with that of a prophet in ancient Israel. His summons to men was to repent and put away the evil of their doings. His words burned and stung rather than healed and helped those he influenced most.

His function, in spite of all his strenuous thinking, was the purification of feeling about life by fear and reverence, scorn, indignation, humour, and tenderness. His books have the sentiment and effect of a Gothic cathedral, expressing, with all the purpose, ingennity, and elaborate care of a mediæval craftsman, the awe of the natural man in the presence of God's universe.

in the presence of God's universe.

LITERATUR.—Literature about the Carlyles is constantly growing. It consists chiefly, however, of fresh estimates of the original material contained in Carlyle's own books, and the original material contained in Carlyle's own books, and the original material contained in Carlyle's own books, and thought of the Carlyle of C

D. MACFADYEN. CARMATIANS. - The Carmatians were a religio-political sect of Shi'ites that took its rise about the middle of the 3rd cent. of the Hijra, and developed a tremendous strength, which, more than anything else, undermined the power of the Khalifate of Baghdad. The name was given to them by their adversaries. They called themselves Fatimids, from Fatima, the daughter of the Prophet and the spouse of 'Alî; or Îsma îlīs, from Ismā'il ibn Ja'far, a descendant of Husain. son of 'Alī and Fāṭima, and, by his great-grandmother, of the last king of Persia, representing thus not only the Prophetic, but also the Kingly right to the Imamate, or Supremacy (cf. Browne, A Literary History of Persia, p. 130).

The religious system of these sectaries, which in its principal features is still that of the Druses (q.v.), seems at first sight very extraordinary. On closer examination we find it composed of elements borrowed from various sources. Guyard, in his art. 'Un grand maître des Assassins' (JA, 1877, i. 327),

said truly:

'In this Orient, where everything has been thought, the atmosphere is, so to speak, impregnated with the most diverse conceptions; none is lost; scattered for a moment, they gather d for a moment, they gather conceptions; hone is lost, scattered for a moment, they gather again around some new germ. Magainsin, Judaisin, Christi-anity, Gnosticism, philosophy thus lent some of their elements to the small seets which each imam of the race of 'Ah saw come to light under his eyes and in his honour.'

The man who originated this system, or rather adapted it for his purposes, was a certain 'Abdallāh ibn Maimūn, of Persian origin and an oculist (quddāh) by profession. He is often spoken of by the name of al-Qaddāh. He lived about the middle of the 3rd cent. of the Hijra in Askar Mukram, a town of Khūzistān, where he had some possessions; and he combined with a great aversion or the Arabs and their religion a boundless ambition. His ultimate aim seems to have been to subvert the Khalifate of Baghdad, to undermine Islam, and to restore the old Persian religion, the religion of light. He himself and his sons were to be the leaders of this campaign, and, after having accomplished its purpose, were to become the rulers of the new State.

The basis of the doctrine is pure Neo-Platonism. From God, the mysterious Deing who is wholly incomprehensible to mankind and cannot be defined by any attributes, emanated by His will (see Goldziher's able study on the amr allāhi in REJ vol. iv. pp. 32-41) the Universal Reason, which

produced the Universal Soul, the creator of Primal Matter, Space, and Time. These are the five constituents of the Universe, and consequently of man, the microcosm. But, as every emanation has a tendency to return to its source, man's object in life is perfect union with the Universal Reason. This, however, would be wholly unattainable by him without heavenly help. Therefore the Universal Reason and the Universal Soul have manifested themselves to the world in human shape, the one as prophet-legislator, the other as his assistant and supporter. So appeared successively Adam and Seth, Noah and Shem, Abraham and Ishmael, Moses and Aaron, Jesus and Peter, Mu-hammad and 'Alī. After the disappearance of the prophet-legislator, the assistant continues his work, and is the imam, or leader, the sole interpreter of the true meaning of the Divine Word. He is followed by six other imams, after the death of the last of whom a new incarnation takes place. 'Ali was succeeded by his son al-Hasan; he by his brother al-Husain; then followed 'Alī the son of al-Ḥusain, Muḥammad the son of Alī, Jafar the son of Muḥammad, and Ismā'īl the son of Ja'far. Muḥammad the son of Ismā'il is the seventh incarnation. His assistant is 'Abdallāh ibn Maimun, who, with his successors, has to preach and promulgate his law, till with the re-appearance of the last of these as the mahdī the end and scope of human life will be reached. All these legislations, though each in succession is better than its predecessor, so that the last is the most perfect, are in reality one, only adapted to the understanding of the men of each period. More-over, it is always the same Being that incarnates itself in different forms; even as the soul of each imam passes into the body of his successor.

The main object of this system, of which the preceding description gives only the outlines, was to place unlimited power in the hands of Abdallah ibn Maimun and his descendants. Isma'il, the son of Ja'far, died in his father's lifetime. Ja'far died in A.H. 148, leaving a son Muhammad, who, according to the Ismā'ilis, fled to India from the persecution of Hārūn ar-Rashīd, and is said to have died there about A.H. 180. In the belief of the Ismā'īlīs he became merely invisible, to remain so till the time of his reappearance as the mahdi should come. In the meantime the imam is invested with the supreme authority, which he exercises by his deputies and missionaries. ever the ultimate designs of 'Abdallah ibn Maimun may have been, his immediate object was to lay hold of the minds of a great many followers, who were bound to unlimited obedience to his orders, and were ready to furnish the means necessary for promoting the cause. Mystery has for most men a great attraction. Therefore, every one who was to be admitted as a member of the sect had to pledge himself by oath never to betray any secret of the community. Nor were they admitted before they had given sufficient proofs of the earnestness of their desires. For the same reason, the imam himself was said to be hidden and to communicate with his followers only by his deputy, who in fact was the *imām* himself or his son, and who, backed by this mysterious authority, could speak with double stress. It was he who chose and instructed the  $d\bar{a}'\bar{i}s$  (lit. 'those who call or invite'),

or missionaries.

Abdallāh ibn Maimūn instituted, we are told, several grades of initiation. The accounts we have of the higher ones are confused, and it is difficult to see what could have been their practical use. It is quite certain, however, that even the chief missionaries did not know them. These were, without question, men of fervent zeal, devoted to what they thought to be the sacred truth. The

missionary established himself by preference in a populous country in the character of a merchant or physician, in order to come into contact with many people, whom he sought, first of all, to impress with admiration for his abstemionsness, the devoutness of his living, his charity, and his irreproachable, if somewhat mysterious, conduct. Aided by his superior knowledge, he could often give good practical advice, by which he gained the confidence of the people; and one or two marvellous tricks procured him the reputation of possessing supernatural powers. The missionaries of the Fatimids were evidently able jugglers, and knew how to perform miracles. By means of carrier-pigeons, for instance, they often received information of an event many days before it could be known in the country by the ordinary means of communication. So they could make a prediction that must certainly turn out to be true. Moreover, they were generally versed in astronomy. But their princi-pal strength lay in the cordial love of all believers for the house of the Prophet, which, since the tragic death of al-Husain, had been everywhere revived and reanimated by the missionaries of the Alids and 'Abbasids. Against these latter, the means which they had employed to undermine and destroy the dominion of the Umayvads were turned with success, when it had become evident that their government had in no wise brought the period of peace, justice, and general prosperity that had been promised. In order to get rid of the Umayyads, the Abbasids had promulgated the principle that the family of the Prophet had incontestable rights to the throne, whence it followed that the Umayyads were usurpers. The 'Alids, descendants of the daughter of the Prophet, while the ancestor of the 'Abbasids was only his uncle, did not fail to turn this principle against the Abbasids who had supplanted them. It was, therefore, easy to inspire the people with the hope that the saviour, the mahdi (the man 'guided' by God, who alone is able to show the right path), would come forth from the house of 'Ali, and to find, by an allegorical interpretation, the announcement of his coming in the sacred book itself. Thereby the way was prepared for the acknowledgment of this mahdi as a superior being whose word is Truth, and to whom is due unlimited obedience. For that end it was not necessary to attack the authority of the Qur'an ; only its literal interpretation was rejected, and with that the dogmas founded on it, and also the religious ceremonies, as having only a symbolical All this was replaced by the doctrinal authority of the true imam, because he knew better than anybody else the veritable religion. One of the first uses he made of that authority was to prescribe to his followers, as their principal duty, to be full of that devotional disinterestedness which enables men spontaneously to make the greatest sacrifices.

The funds needed for the organization of the mission were furnished, in the first instance, by a high-placed Persian officer, who, according to some authors, was a descendant of the old l'ersian kings. But soon the contributions of the new adepts commenced to flow in. The two principal offerings required of them were one for the founding of a kind of house of government, called Dar al-hijra (House of refuge), and a communal treasure out of which the poor could get assistance and the general expenses could be paid; the other, destined for the imam, consisted in a fifth part of all property to be paid once, and a fifth part of all revenues to be paid yearly. By this latter contribution the believers were linked by the strongest bands to the cause of the mahdi, whose triumph could be the only means of bringing a compensation for the

great sacrifices they had made.

But the paying of contributions was not the only act of devotion expected from the believers. Their chief duty was to lead a life of purity and brotherly The morals preached by the Fatimid missionaries have been called evangelical. They explain the charm exercised by the doctrine on many men of high understanding, and the fact that the Carmatian communities and States were, as a rule, excellently organized and administered. Fragment's relatifs à la doctrine des Ismaélis, published by Guyard, contain sufficient proofs to stamp all that has been said about the looseness of their morality as mere slander.

The first  $da^{\dagger}i$  in Traq was Hamdan, surnamed Qarmat, after whom all followers of the new faith were nicknamed Carmatians. Just as each prophet has his assistant, each imam his deputy, so every da'i has a coadjutor. That of Handan Qarmat dā'ī has a coadjutor. That of Hamdan Qarmat was his brother in-law Abdan, who was the author of many of the sacred books of the sect. The district in which they began their preaching was that part of the province of Kufa where Babylon lies, and here the Där al-hijra was built, in A.H. 277 The author of the Fibrist says (p. 187) that Hamdan Qarmat established himself in 261 at Kalwādha, between Baghdad and Madā'in. It is probable that this took place at a later date. But it is certain that even then the Carmatians had attained to significance. For at the time when the rising of the negro slaves in the south of Traq was at its height (i.e. before 267), Handan Qarmat had a meeting with the chief of the slaves, who gave himself out for a descendant of 'Ali, of which he himself gives the following report (Tabarī, iii. 2130\-

'I went to the chief of the negroes and said to him: "I profess Twent to the enter of the negroes and said to limit: "I process a doctrine and have 100,000 swords under my orders. Let us compare our tenets. If they agree, I will join you with all my men. If not, you must give me your word to let me return to my place unmolested." That he promised, and we conversed till my place unmoissted." That he promised, and we conversed till noon, by which time it had become clear to me that we could never agree. He rose then for prayers, and I slipped away from his town and went back to the land of Kūfa.'

As long as the war against the negroes lasted, the government of Baglidad took no notice at all of the Carmatians. After the suppression of that terrible insurrection, the governor of western Iraq contented himself with levying a tax of one dinar on each member of the sect; and, as this procured him a good revenue, he opposed the taking of any It was not till 284 that the hostile measures. government at Baghdad began to have some misgivings about this movement, and discovered that the sect had adherents in the capital itself. This led to a persecution, in which a certain number of their chief men were killed (288), but which was soon stopped, the governor being afraid that it would ruin the land, as they were its farmers and labourers. About the same time the Khalif seems to have found out who was the real head of the sect. In 270 the government had been informed that there lived in 'Askar Mukram in Khūzistān a very dangerous man called 'Abdallāh ibn Maimūn al-Qaddāh; and orders were issued to apprehend him. 'Abdallāh escaped to Başra, where he lived some time in hiding. Thence he went to Salamiya in northern Syria, where a son of his had established himself about 255, and which remained the headquarters of the family till 287, when 'Ubaidallāh, 'Abdallāh ibn Maimūn's grandson, fled from that place to Egypt and thence to the far west of North Africa, whence he reappeared at Kairwan, the African capital, in 297, as the mahdi, the first Khalif of the Fatimids. The mission to Yemen, organized in Traq in 266, began its preaching in 268, and had great success. In 293 news reached Baghdad that the Carmatians The final reduction of San'a, the capital, in 299, made them absolute masters of the country. From Yemen the mission to North Africa was planned. In 280, Abū 'Abdallāh, surnamed al-Muhtasib, because he had been inspector of markets, entered it and within the space of a few years founded the empire of the Fatimids. Far more dangerous for the Khalifate of Baghdad at the time was the rising of another Carmatian State in Bahrain, the northeast province of Arabia, founded between 280 and 290 by Abū Sa'īd al-Jannābī. In 287 this chief routed an army sent against him by the Khalīf, but did not pursue that advantage, as he needed all his energy to make himself master of Central Arabia, of Oman, and of the desert roads. The great disasters that befell the Khalifate at the hands of these Carmatians happened between the years 311 and 320. In 315 a great army, intended to make an end of the dominion of the Carmatians, was utterly defeated by Abu Tähir Sulaiman, the son of Abū Sa'id, and Baghdad itself was seriously threatened. Next year, Mecca was taken and plundered: even the sacred black stone was transported to Labsā, the residence of the Car-matian princes, where it remained till 339, when it was restored to the Kaba.

It is not surprising that the fiction of the Grandmaster of Salamiya about the hidden imam was not always accepted without some distrust. When he had fled for his life, probably without having been able to regulate his affairs, and was for a while cut off from intercourse with the dais, this distrust increased. The ambitious head of the mission in western Trāq and the Syrian desert, Zikrwaih, caused his son to give himself out for the imām. As long as the energetic Khalīf al-Mu'tadid lived, he did not dare to undertake anything. But from 289 till 294 he and his sons did much damage in Syria and the borderland of the Euphrates, and it required the greatest efforts to get the better of them. As for Hamdan Qarmat and 'Abdan, we know for certain that they separated themselves from 'Ubaidallah; but this happened, in all probability, later, when he had proclaimed himself the imam, the expected mahdi. Apostasy, by the laws of the Carmatians as well as by those of Islām, is punished by death. Abū 'Abdallāh, who had conquered the empire for 'Uhaidallāh, was murdered, together with his brother, because, the conduct of this prince not corresponding to their ideal, they doubted whether the man they their ageal, they donoted whether the man they donoted had fought for was really the mahdi. This happened near the end of 298. When the murderer lifted up the weapon, Abu 'Abdallāh said, 'Do not, my child.' He answered, 'He whom thou hast ordered me to obey, and to whom thou has ordered me to obey, and to whom thou has to redered me to obey, and to whom thou has given the empire after having conquered it, has ordered me to kill thee.' Ubaidallah wrote then to his followers in the East: 'Ye know what a to his followers in the East: Ye know what a high place Abū Abdallāh and Abu-l-'Abbās occupied in Islām (i.e. the true religion, that of the Carmatians), but Satan caused them to slip, and I have purified them by the sword. Peace be with you.' About the same time, 'Abdān—and probably also Hamdan Qarmat—was assassinated.

The same thing happened in Yemen. Thu Fadl, the head of the mission, cast off his allegiance to 'Ubaidallah and proclaimed himself imām. In 303 he perished, poisoned by a mysterious stranger. We are not quite sure about Abu Sa'id, the Carnatian ruler of Bahrain, but the fact that he was slain in 301, together with several of his principal officers, combined with the apparently trustworthy information that he was reverenced like a superior being, and the saying of the Yemenite chief that he followed the example of Abū Sa'id (Omāra's History of Vemen, ed. Kay, 1892, p. 202), makes it probable that he also had refused to acknowledge ('Daddallah as the inâm mohd'i. Henceforward,

however, till the conquest of Egypt by the Fāţimids in 358, the Carmaţians of Baḥrain were the firm supporters of 'Ubaidallāh and his successors.

The intercourse between the two parties could take place only very secretly. If the subjects of the Fāṭimid Khalif could have had the least suspicion that all the atrocities that filled the breast of every Muslim with terror and horror, for instance the sack of Meeca by Abū Tāhir the pillage of the temple and the carrying off of the sacred black stone to Lahsā—had been committed in the name of their master, he would not have occupied the throne a single year. On the contrary, it was indispensable in the empire of the Fatimids to condemn openly the proceedings of their Carmatian friends. Thus, for instance, the well-known traveller, Ibn Hanqal, though a fervent partisan of the Fāṭimids, and knowing that the Carmaṭians acknowledged them as imāms, speaks (p. 211) of Abū Tāhir with indignation, and curses him for his crimes; he has not the slightest suspicion that this prince did nothing but execute the rules laid down by his revered chiefs, or rather their formal orders. The author of the Fihrist (p. 189) says that he cannot understand the fact that in Egypt, in the empire of the Fatimids itself, the doctrine preached by the Fatimid missionaries is not practised at all. Lastly, the famons poet and traveller Nāşir ibn Khusrau, who had embraced the faith of the Fatimids with his whole heart, and who spent a long time in Egypt, whence he returned to Persia as head of the propaganda, is entirely ignorant of any relations between them and the Carmatians, whom he knew also, having visited them at Lahsā (Schefer, Sefer Nameh, p. 225 ff.).

But, however necessary this secrecy was for the dynastic interests of the Fāṭinids, it could not fail to have a bad influence on the hatmony between the two parties. There were still people amongst the chiefs of Bahrain who questioned the alleged descent of the Fāṭinid Khalīfs from Muhammad ihn Ismā'il, and who asked themselves whether the rising of this upstart family had done aught for the realization of their ideals. The triumph of this party in 358, though it was overthrown a few years later, broke for a time the admirable union of these Carmațians, and did great harm to their power. They had a short period of revival in the first half of the 5th cent, and it was with their aid that, in 450, the Fāṭimid Khalīf Mistansir was proclaimed Khalīf in Baghdad. But in 474 their dominion came to an end, though the Carmaṭian faith continued to have many adherents for a long time thereafter.

The State of these Carmatians is the ouly one about which we have any trustworthy informa-tion. The government was not strictly monarchi-cal. Abū Sa'īd was assisted by a council composed of his principal supporters and called *al-Iqdānīya*, that is, 'having the power to bind and to loose.' Later, this council consisted of twelve members, six of whom belonged to the reigning house, with the title of Sayyids, and six to the other principal families. In time of war one of the Sayyids was appointed as commander. If, however, this man had a strong personal character, as in the case of Abū Sa'id himself and his son Abū Ţāhir, he had almost the power of an absolute monarch. In the period of the last-named prince, the Carmatian State had large revenues, so that the fifth destined for the *imām* amounted to 300,000 *dīnārs*. It is probable that this fifth replaced that required originally of each individual member of the sect. For Nāṣir ibn Khusrau tells (p. 227) that the citizens had no tribute or tax whatever to pay. On the contrary, if poor or in debt, they got assistance from the State. The tilling of

the land and every kind of mechanical work was done by negro slaves, a great many of whom were the property of the State. The citizens themselves were educated chiefly for military service. Monogamy seems to have been the rule, and women did not wear a yeil. This seems to have given rise to all the accusations of immorality that their enemies invented. The use of wine was strictly forbidden. The religious prescriptions of Islām—daily prayers, Friday-service, fasting, etc.—had been abolished. Even the flesh of animals declared impure by Islam was sold in the market and eaten. Therefore the Muslim proverb says: 'Thinner than the saliva of the bee and the religion of the Carmatians.' It is not easy to say whether they had any religious ceremonies of their own. Certainly, they never performed the fifty daily prayers, said to have been prescribed by Hamdan Qarmat. We know only that they had regular meetings for teaching the fsmā'ilian doctrine. Qur'an had not lost its sacred character with them; but it was to be read according to its spiritual meaning. They dressed in white and had white banners, symbolizing the religion of light which they professed and the purity of life required of its followers.

It is most regrettable that it is impossible not only to paint, but even to sketch, the religious and social life of the Carmatians. From themselves we have nothing but a few dogmatical and para-The accounts that have reached netical tracts. netical tracts. The accounts that have reached us are from their bitter enemies, and are usually full of obvious slander. But the few glimpses we get of their internal life from such less biased authors as Ibn Haugal and Nāşir ibn Khusrau suffice to make us form favourable opinions about They had an ideal, for the realization of which they were ready to make the greatest sacrifices, and which seems to have influenced, if not governed, their whole existence. For purity of life was required of each member of the community. And as for their social state, the abovecited authors attest their admirable union, their excellent administration, and their institutions on behalf of the poor. But there is no chance of ever being able to find the details we want.

Not many years after the final overthrow of the Carmatian empire in Babrain, there rose another branch of the Ismā'ilis, known by the name of the Assassins (q.v.), who during two centuries filled the world with the rumours of their sinister exploits, though they are commonly painted in much blacker colours than they deserved. The first centre of their power was Alamut in the neigh-bourhood of Kazvin, south of the Caspian Sea; a second centre was Masyaf in the Lebanon. Their dominion was annihilated by the Mongol prince Hulagu, the conqueror of Baghdad, and this is perhaps the only feat for which history has to thank him. Since then there has not been another rising of the Isma'ilis. Yet there are adherents of this doctrine in various parts of the East, living as quiet citizens, and known by the name of Khōias. in Syria, Arabia, and Zanzibar, Persia, Kirman, and India. They are also in communication with each other and have an acknowledged chief. was until lately the well-known Agha-Khan in Bombay, a very rich man, whose father and grandfather had been governors of Kirman, and who himself was son-in-law of the Shāh of Persia. His lineage goes back to the princes of Alamut, who themselves pretended to descend from a Fatimid prince. Baron von Oppenheim, who gives some details on the Khojas in a note to his Vom Mitto-meer zum persische n Golf, 1899 (i. 123), told the present writer that still every year an embassy sets out from Salamiya in Syria for Bombey to bring to the imam the contributions of the faithful.

CARNIVAL .- On the Sunday before Ash Wednesday, i.e. at the commencement of the great fast by which the Roman Catholic Church makes preparation for Easter, there is observed in many countries a popular festival which, while exhibiting great variations in the character and order of its celebration, is vet, in every locality where it passes under the name of 'Carnival,' a recognized occasion for exuberant mirth and unrestricted freedom, combined with masquerade, jesting, and burlesque. It is a fact worthy of notice that the name 'Carnival' and the manner of observance referred to have alike come to prevail in the regions which have been most permanently under the domination of Rome, viz. France, Italy, and the Rhenish provinces. In Teutonic countries generally, on the other hand, the festival preceding Lent any, out the other hand, the testival precenting them is called 'Fastnacht,' popularly—and at one time universally—'Fasenacht' or 'Fasnacht.' But the observance of Fasnacht and that of the Carnival, while presenting apparently similar features, show at the same time so many points of contrast in conception and procedure as make it impossible to trace the celebration to a single direct source. Pagan, Tentonic, and Roman elements may all be recognized, though greatly modified by Christianity. In Romance countries and in the neighbourhood of the Rhine, therefore, the Carnival has acquired its present character under Roman influence, and so far shows a decided contrast to the corresponding Teutonic festival.

The name 'Carnival' is of obscure origin, and

admits of various interpretations. A widely received explanation is that which emphasizes the influence of Christianity upon either name, 'Carnival' or 'Fastnacht.' Here 'Carnival' is said to be derived from carne rate, i.e. 'flesh, farewell,' an apt enough appellation for the day on which the unconstrained indulgence of the senses was permitted for the last time before the great Lenten fast. Of similar character is the derivation from the name first applied by Pope Gregory to the last Sunday before Lent, viz. 'dominica ad carnes levandas.' This was shortened to 'carnes levandas, thence passing, it is said, through the forms 'carnelevanen,' 'carnelevale' to 'carneval.' If this etymology be correct, the Teutonic term 'Fastmacht' (Fastens-even, Fastens-even) would signify practically the same thing—the Lenten feast, Lenten-eve, according to the Tentonic practice of commencing the day with the evening. In Germanic lands, and especially in the Rhine district, the term 'Fastelovend' is locally used, Ovend being a vernacular form of Abend. 'Fastnacht' would accordingly apply to the day which, in view of the approaching Lent, was given up to feasting and caronse.

But this explanation, well as it accords with the interpretation of 'Carnival' just indicated, fails to harmonize with the name still given by the people, and in the Middle Ages by all classes, to the Tentonic festival, viz., 'Fasenacht' or 'Fasnacht,' from the root fasen. The dialectic word faseln means' to talk nonsense,' 'to drivel,' word foscial means to tank horsenses, to driver, and 'Fasnacht' would thus denote a feast of folly, revelry, licence. This corresponds well amough with many customary features of the Carnival, but has no other link of connexion with Christianity.

This is also true of a further derivation of 'Carnival'—one which carries us back to the classical ages, first of all, indeed, to Athens. Certain Greek vase-paintings of the 6th cent. B.C. Show a procession of masked figures moving to the strains of music. An Attic vase now in Bologna represents the god Dionysus on the way to his ship. This vessel is furnished with wheels; and, as a matter of fact, we learn from Greek writers that a ship of this kind, dedicated to Dionysus, was driven through the streets of Athens, and that satirical songs were recited from this 'currus mavalis.'

We would here remind the reader that it was from the scurrilous and satirical songs in honour of Dionysus, once they had become venerable by ancient usage, that Greek comedy was at length developed. Aristophanes himself, indeed, is not so very far from this starting-point. It was the opinion of Aristotle that comedy attained its initial form in spontaneous popular merry-making, and later writers state explicitly that it took its rise in the sarcastic songs recited from the chariot. In the later history of Greece we still hear occasionally of 'ship-carts' in connexion with processions in honour of gods and goddesses. We learn that during the closing years of the Roman period a naval procession in honour of the Egyptian Isis was held at the annual re-opening of navigation in spring, a 'ship-car' being used for the occasion. There is evidence to show that a similar custom obtained in ancient Germany. Tacitus (Germania, 40) speaks of the processions of Nerthus, i.c. Hertha, the Teutonic 'Earth-Mother,' and states that her image was carried about the country in a 'vehiculum.' Of this 'vehiculum' he gives no further particulars, but the customs he thereafter refers to seem to indicate that it was a ship-carta theory which finds further support in the fact that the procession of the goddess set out from her sacred grove in an island of the ocean. Sometimes a plough took the place of the image as a symbol of the Earth-goddess. A monk of the Abbey of St. Trond makes mention of a spring festival in the district of Jülich, in Lower Germany. in the year 1133, a ship was constructed in the forest, and then taken upon wheels from Aix-la-Chapelle to Holland, attended by a great procession of men and women. With hair dishevelled, and with a shirt for their only garment, the women danced, says the monk, 'in devilish wantonness' around the ship-cart, and the strange cortège was received everywhere with rejoicing. Our monastic chronicler inveighs passionately against this 'pagan' festival. We find repeated references to the use of such shipwaggons in German towns during the Middle Ages. At that period, moreover, the itinerant waggon often carried a plough. A minute of the town-council of Ulm, dating from the beginning of the 16th cent., contains an injunction against carrying the plough or the ship about the city. Sebastian Brandt, a German satiric poet who lived towards the close of the medieval period, published in 1494 a work entitled Narrenschiff ('Ship of Fools'), and it appears from the book itself that its leading idea was suggested by some standing custom—more especially as the author often speaks of the ship as a 'cart' (Karren). In Styria and Carinthia it was the custom for women and girls to drag a plough across the landmark in spring.

We may therefore infer that, as in Greece and probably Italy as well, so also in Celtic and Teutonic lands, it was the practice in springtime to drive through the country a ship-waggon hearing an image or other symbol of a deity. Promiscuous dances and ma-querades were performed as

acts of worship. Just as in Athens the sarcastic songs recited from the ship-cart developed into comedy, so in Teutonic countries the procession attendant upon the waggon, with its masquerades, and its burlesque and ribald ditties, gave rise to the dramatic representations for which, according to numerous references in mediæval writings, the Carnival waggon formed the stage. From these performances, again, arose real Fastnacht plays, in the composition of which even dignitaries of the Church did not disdain to engage. Hans Sachs, the famous Meistersinger of Nuremberg, wrote numerous pieces of this kind, which in his own day were performed in the market-place. These Fastnacht plays were the forerunners of the drama, and remained in vegue till the 17th century. The ship-cart of the goddess still finds a place in the Carnival as now observed. When the festival was re-constituted at Cologne in 1823, the ship-cart became once more a permanent accessory of the procession. The dancing women, who in their masquerade of scanty clothing formed part of the train accompanying the ship-cart in Lower Germany, have now become the 'fair youths and maidens' of the Carnival of Cologne. Arrayed in antique garb, they lead off the procession with dances.

We are now confronted with the question as to the origin of these processions. It has been very commonly believed that their prototype is to be found in the cult of Isis, and that the ship-waggon of Teutonic and Celtic countries was simply borrowed from the festivals associated therewith. This theory, however, fails to take account of the procession of Dionysus and the 'ship-eart' portanged on Attic vases, as also of the 'vehiculum' mentioned by Tacitus in the passage cited above. It would be more accurate to say that, when the Isis cult, as diffused amongst the Greeks and the Romans, at length reached Gaul and Germany, it found in all quarters not only a form of shipwaggon, but also something analogous to the rodices of the festival. The derivation of the word 'carnival' from currus navael's (Romance car navale)

has thus a good deal in its favour.

As indicated above, the Athenian processions with the ship-cart were held in honour of the god Dionysus. The worship of Dionysus had its Roman counterpart in the Bacchanalia, as also in the Saturnalia and Lupercalia—festivals which in the later Roman period were characterized by wanton raillery and unbridled freedom, and were in a manner a temporary subversion of civil order. This general spirit, together with certain special features, was transmitted to the Carnival in particular, and this explains why that festival has assumed its peculiar character in regions where Roman civilization reigned supreme. We must not infer, however, that the Greeco-Roman festivals were orginally of such a nature. The mysteries of Dionysus, as well as the Bacchanalia and the Saturnalia, had a substratum of religious ideas. It is a well-known fact that, in the 2nd cent. B.C., the Roman Senate resolved upon an extensive persecution of the Bacchanalia. The adherents of these mysteries were currently charged with the grossest offences against morality and against the State. The persecution was particularly ruthless in Southern Italy, and succeeded not only in practically suppressing the cult, but also in completely paralyzing the influence of Hellenism in that region. We have here, in fact, an early precedent of the policy according to which in the Middle Ages the Jews, the Templars, and others were first of all traduced, and then maltreated, on the ground of their assumed guilt. Recent investigations have shown the groundless character of the charges preferred against the Bacchanalia (Salomon

Reinach, Cultes, mythes, et religions, 1905-1908). Alike in the Bacehanalia and in the Saturmalia we can trace a basis of animistic mythology. During the Saturmalia slaves ate with their masters; every householder kept open house, and invited to his table as many guests as he could find; garlands of ivy were donned, and mirth and frolie were indulged in without restraint. Such doings were in the first instance, no doubt, an expression of the inherent human need of occasionally breaking the monotony of use and wont, and as such we find them also in the spring festivals of the Teutons. But all this hardly touches the essential element in the festival

The earliest phase of religious development is doubtless to be found in animistic ideas, which again are closely connected with the cult of the dead, and, in fact, derive their origin therefrom. In course of time the fundamental conceptions of Animism took on an accretion of mythical ideas, The Romans believed in Lares, Larvæ, and Lemures—all originally the spirits of the departed. The lares came at length to be regarded as good-natured, kindly-disposed household gods, the ghosts that terrify and injure human larræ as beings. The latter character was borne also by the lemures, which were worshipped and propitiated in special festivals known as the 'Lemuria.' Now, in the Bacchanalia and Saturnalia, celebrated just after the turn of the year, it was the custom to impersonate the larger. This was regarded as an effective means of conciliating these evil spirits and of warding off their malevolence-an idea which, in its connexion with the cult of the dead and the derivative belief in ghosts, can still be traced in so many surviving customs and practices of all countries. The impersonation, or even the symbol, of a spirit could work with magical results.
The impersonator wore for the time white garments. i.e. dead-clothes, and a mask for the face. From the latter were subsequently derived the masks of actors in the theatre, while the disguise as a whole formed the starting-point of the masquerades in Graco-Roman celebrations. A similar develop-ment is found in Celtie and Teutonic countries. Here, too, the masquerade had a place in the spring festivals. The principal figures in the celebrated Carnival of modern Rome—the Pulcinello and the Pierrot-are dressed in white, as required by the traditions of antiquity. Numerous superstitions specially connecting spirits and ghosts with the Carnival season may be traced without difficulty in usages still maintained. This 'popular belief has not, of course, survived to the same extent in every locality, and it is only by making a mosaiclike combination of all the ideas and practices prevailing in various districts that we can discover the link with the past. Thus, for instance, during the Carnival gifts are collected by children, or in some cases even by adults, who go about singing certain songs; and a common feast is made of the materials thus received. Single families also have their great and merry feasts, and during the Middle Ages such family festivities were famed for their long duration, and are frequently mentioned in books. A special loaf was baked, and a portion thereof set apart for the 'poor souls,' i.e. spirits, on the evening before the Carnival (or at the beginning of the ancient festival). Grimm (Deutsche Mythol., p. 896) gives the following excerpt from a mediceval chronicle: 'To eat flesh on Tuesday in the Fastnacht, or to let other foods stand upon the table during the whole night of the first Sunday in Lent, is a rude, irreverent, heathenish superstition. In some parts the 'poor souls' are spoken of as 'the dear little angels,' and a portion is devoted to them as such. This transformation of spirits into angels took place also among the Slavs. An old Czech weather-adage says that 'the feast of all |

angels' should be celebrated on Carnival Tuesday. In the 'good little angels' we recognize once more the Roman larcy. During the festival, therefore, the spirits take up their abode in the house, and share in the festivities. Hence no work must be done; it was indeed popularly believed in ancient times that, if one sewed at this season, the fowls would not lay; and that, if one knitted, contentions would arise. During the festival days, again, energetic dancing and leaping must be indulged in, so that the flax crop might prosper. The amount of superstition that gathers around all sorts of actions during the Carnival-as recorded by Grimur and other investigators—is simply enormous. In Chemnitz, for example, old wives philosophy declares that any one who takes soup in the Pastnacht will have a dripping at the nose; that, if millet be watered at that season, it swells into money; that a person whose body is then observed to cast no shadow by moonlight is marked for death; and much more of the same kind.

Security against the machinations of ghosts, or evil spirits, again, is to be gained at the Carnival season in particular by various operations of a special kind. Large fires are made, locally called 'Halefeuer.' The materials, straw and wood, are gathered by young men; and a living cat, a doll, or a cross is made fast to the top of the pile, and or a cross is made tast to the top of the pict, and consumed in the flames. In some localities the fire is called 'the witch-lorning.' The moment before lighting the fire is given to silent devotion, and then, when the flame leaps up, there is great shouting and uproar. The young men jump through the flames, and roll fiery wheels—symbols of the sun-down the mountain side. These are either actual wheels, with straw twisted round them and set on fire, or flaming disks of wood, which, having a hole in the centre, are hurled away by means of a The fire and the smoke, according to popustick. lar notions, bring fertility to the fields, and secure them against the ravages of hail, while they also shield the people from all injuries that might otherwise be wrought by evil spirits. In some districts, again, a pair of lovers take their stand in front of the bonfire, and this act is regarded as lending a sanction to their relationship.

To water also, equally with fire, important functions were assigned at the time of the Carnival. The practice of worshipping water in the springtime was universal at an earlier day. In Munich the ceremony called the Metzgersprang ('butcher's leap') took place on Carnival Monday. Those who had newly become members of the craft were required on that day to plunge into the basin of the fountain in the Marienplatz. A similar custom prevailed also in Austria, Switzerland, and even Hungary.

As we might well expect, the various customs referred to, and in particular the making of bonfires and the burning of an animal, a doll, or the like, underwent manifold changes. In the neighbourhood of Düsseldorf, for instance, those who gather the gifts at Fastnacht are splashed with water by little girls. On the Rhine, the children who act as collectors carry a cock-or, as in Holstein, a dead fox-in a basket. These things are but the aftermath of the ancient sacrifices. here and there the custom to carry about a straw doll, which is at length either burned, or buried, or thrust under water-an act which, according to present-day practice, brings the festival to a close. In Essen this is called the burying of Bacchus,' In the famous Carnival of Venice likewise we find a 'burying of Baechus,' which was carried out in the Piazza di San Marco. All these customs are, in the last resort, traceable to the desire of protection against evil spirits. In Cologne, during the Carnival, little brooms, specially made for the occasion, are sold in great numbers. Armed with these, the young people march about the town, brandishing them aloft, and now and again using them to brush the backs of those walking in front. The broom, as is well known, plays a great part in the belief in witchcraft. When witches travel to their secret rendezvous on the Blocksberg, they ride by night upon broomsticks. In this case, as in so many others, the instrument of possible evil becomes a talisman; the broom acts as a protection against witchcraft, or-what according to primitive ideas was the same thing-the machinations of evil spirits. Hence the custom, in some Tentonic countries, of using a broom to sweep the way behind a coffin, so that the spirit may not return to the place where the deceased had lived. Accordingly, the practice of going about with brooms during the Carnival at Cologne had its origin in the notion that the power of evil spirits could in

this way be rendered innocuous.

With the customs of the Carnival, moreover, are intermingled ideas of a mythological character, which find expression in the cult of a particular goddess. This has already been shown in our account of the itinerating 'ship-car' (in which we found the explanation of the term 'Carnival') bearing the image of the goddess, who is, in reality, the Earth-mother, Nerthus, or Hertha, now sometimes called simply 'die Frau,' 'das Weib.' Her cult had its origin in ancient Rome and Germany. In Rome it was represented by the mysteries of the 'Bona Dea,' from which all males were strin-gently excluded. Analogous features are still found among the customs of the Carnival season. In Cologne the Thursday before Fastnacht is known as 'Weiberfastnacht.' It begins at 12 o'clock noon, and formerly the women used to exercise absolute authority for the day. As the custom gave occasion for many excesses, however, it was formally proscribed in the 19th cent., though traces of it still survive. In some parts of Rhine-land the women meet together, hold a court, and then cut down a tree, defraying the expenses of their celebration from the proceeds of the timber. At the Carnival season in the Alpine country is held the Perchta-race-Perchta, or Bertha, being simply the ancient Earth-goddess. Those who take part in the race wear masks of a special kind. take part in the race wear masks of a special kind, called 'Perchtelmasken.' In the Rhine district the youths who collect the Fastnacht gifts are named 'Zimbertsburschen.' The word 'Zimbert' is a corruption of 'Sankt Bertha,' Sankt being pronounced dialectically as Zim or Zim. As 'Saint Bertha' or 'die Fran,' it was an easy matter for the Frank and the the collection of the Sank and the same the Earth-goldess to hold her place in popular thought. In an ancient chorus sung at the time of the Carnival, and containing many reminiscences of primitive ideas, we find the words: 'Morge wolle mer de fru obsetze.' This recalls once more the ship-car with the image of the goddess. It was not without good reason that the Roman Catholic Church appointed a festival of the Virgin Mary for the month of February—the season associated with processions in honour of the Earth-mother. Mary simply took the place of the heathen divinity. At this festival—Marie Lichtmess (Candlemas [q.v.], Feb. 2)—an image of the Mother of God is carried through the church in a solemn procession illuminated with candles, as is to this day the practice at Cologne. Here, accordingly, we have a survival of the primitive Indo-Germanic custom of carrying the Earth-goddess about the country. By way of effecting a desirable change in the character of long-established popular festivals which could not be summarily abolished, the Church adopted the plan of providing them with Chris-tian motives—a procedure which was very largely adopted in the case of the Carnival festivities.

Mention may also be made of a curious article made use of in the Carnival procession at Cologne. This is the so-called 'Streckschere,' or stretchingshears, formed by nine crossed pairs of laths as in a line of trellis-work. The laths are jointed at the ends and the points of intersection by wooden pegs, so that the whole can be easily and quickly stretched to a great length and as readily drawn in again. Nowadays this 'shears' is employed for the purpose of passing bouquets and the like to the ladies, and indeed, even apart from the procession, it is used during the Carnival as an instrument of general trickery. Originally, however, it must have had a different purpose. In the Perchta-race of the Alpine country a leading part is played by the so-called 'tailor,' who, though dressed in ordi-nary garb, is marked out from others by his huge pair of shears. This is likewise a 'stretching-shears,' and by its means the 'tailor' divests the unwary bystander of his head-gear. A counterpart of this article is found among the Hopis of Arizona. It is stated by J. W. Fewkes (21 RBEW [1903], p. 90; cf. Hein, Correspondenzblatt der deutschen anthr. Gesellsch. 1899) that at the summer festivals observed by this tribe their god Püükoñ appears on the scene with a long wooden pair of stretchingshears. The writer named believes that the shears represent the lightning-flash hurled by the god. The summer festival of these Amerinds is regarded as a means of ensuring the fertility of their land-an idea which, as we have seen, had a place in the Teutonic Fastnacht. In connexion with the latter, again, the custom of seizing hats with the shears underwent a further development in most localities, including the Rhine district. Those in the crowd suddenly snatch off each other's head-dress and throw it in the air, or pull each other's hair. This buffoonery is practised on the Thursday before Fastnacht, and accordingly that day is sometimes called 'Mötzefastelovend' (Germ. Mutze, 'cap').

Recapitulating in brief our whole inquiry, we note, first of all, how many sources have contributed to the development of the Carnival. In ancient Greece and Rome, as among the early Celts and Germans, the first approach of spring was heralded by festivals which derived their origin from the cult of the dead, the belief in spirits, and the desire of security against their malevolence, and which, moreover, in course of time, assimilated certain mythological elements. The festivals thus observed in various lands were originally very much alike in their fundamental ideas, and therefore also in the manner of their celebration, as was but natural in the case of peoples belonging to the Indo-Germanic stock. In Greece and Rome they assumed a special form of development as Mysteries, and generated at length a peculiar type of festival. In this distinctive form they were carried across the Alps by the Romans, and spread rapidly on their new ground. This transplanting was rendered all the easier by the fact that there already existed in the Transalpine district festivals of a similar character, though developed in a different way. Within this region, therefore, it is only in Gaul and Rhineland that we find the Carnival with its distinctively Roman features, while in other parts of the Teutonic area the native festivals retain their ancient character with but little change. When Christianity at length penetrated to these lands, it was unable, with all its efforts, to suppress entirely either the indigenous festivals or those which had to a greater or less extent come under Roman influence. In certain cases it succeeded in rendering the festivals innocuous by associating them with Christian ideas; in others, by a rigid arrangement of the Christian year, it strove to take away all opportunity for their celebration. To the season after Christmas, therefore, the Church assigned a when it is needful for him to be fully persuaded in his own mind—when he reverts to his clergyman or lawyer for advice. In them likewise the broader casuistry has an office to perform, even although we do not so designate it. Probabilities and possibilities have to be considered before the fact; after it, unforescen sequels may well raise questions of blameworthiness. Now, lawyer and physician, and, in a different way, the clergy, can refer to a fixed or external body of knowledge, of enstomary writ, whence to set out. The moralist is hardly in the same situation, so casuistry too often comes to possess a different meaning when his advice is required. Jeremy Taylor's definition of conscience shows why: 'Conscience is the Mind of a Man governed by a Rule, and measured by the Proportions of Good and Exil, in Order to Practice; viz. to conduct all our Relations, and all our intercourse between God, our Neighbours, and ourselves: that is, in all noral actions 'Owetor Dubtantium (1609), kk. i. rule i.). The bare terms of this strange definition—Rule, Good, Evil, Relations, God. Neighbours—demand extensive elucidation; whereupon the broader casuistry arises.

(2) In the narrower and more technical sense. casuistry presupposes (a) the existence of external rules, nomistic opinions, or systematic prescriptions (especially the last); and (b) individual cases, peculiar to separate persons at particular times, when the approved sanctions seem doubtful or silent, or require elucidation with a view to the justification of exceptions. It deals here with means of action in relation to ends, and there is no reason why it should confine itself to abnormalities, as many seem to suppose. This procedure man lead readily, however, to that over-subtle discussion of the 'rightness' or 'wrongness' of single acts, with reference to minimum requirements of an ecclesiastical or other code, which has come to be associated with casnistry as its distinguishing (and dangerous or pernicious) feature. The present writer records it as a personal opinion that, owing to the whole nature of the ethical theory approved within the Latin obedience, this tendency can hardly be cradicated; some Roman Catholics lean to this view themselves. Hence Canones near to this view themselves. Hence the sinister implications of the term 'cranistry,' as in the parallel case of 'sophistry.' For, without doubt, these prudent, mechanical analyses or adjustments of pros and cons, with their mental reservations, probabilities, and expectations that order may just in the condensation of the condensation ends may justify means, may descend easily to the level of verbalism or hair-splitting, and result in a relaxation of principle distasteful to the moral standard of an age, and calculated to confuse the sense of right which governs the plain man almost automatically in the ordinary relations of life (cf. 'The Sorbonne Condemnation. in the Corpus Doctrinac, ed. by C. M. Pfaff, 1718). This, in turn, may offer justification of acts in conflict with the conscientions scruples of the community. The reference to the ideal becomes obscured, and, this stage reached, anything may happen. But this is reducing the matter to the level of a practical art. Thus the dubious associations of casuistry, especially for the modern mind, arise: it is held to depend upon an appeal

Taken in this, the narrow ecclesiastico-technical sense, casuistry can be no more than an appendage of ethies, a purely secondary or, at best, supplementary division. It does nothing to elicit or formulate the nature of ethical principles, nothing to clucidate the psychological character of motive, nothing to ground or guarantee the objective validity of norms, nothing to clarify the basis of responsibility and obligation; in a word, it you the supplementary that the supplementary of the supplementary is not supplementary to the supplementary of the

to external sanctions.

presupposes theological ethics, and, this done, confines itself to subjective and individual considerations, in the light of a pre-existent system. Now, ethies, as such, may formulate itself so as to leave little, if any, room for technical casuistry, as has been the fact with the main body of scientific ethics, particularly since Kant. On the other hand, ethics may eventuate into a department of theology, and become a kind of translation into human language of laws regarded as given by an extra-mundanc creator-indee. view maintains itself in the Latin Church, and offers scope for technical casuistry in the sense now under consideration. Here, once more, cireumstances after cases profoundly; for, thanks to the practical needs of the Counter-Reformation, we may trace even a third, and narrowest, acceptation of the term. When the fourth Lateran Council (1215) made confession of sin obligatory upon the faithful at least once a year, the necessity for a 'science' which would adjust cases to 'penance' or to guiltiness became clamant. Hence Moral Theology was developed in the Latin Church, and casuistry took its place as the most important element in what might be termed, without offence, the science and art of the confessional. As a direct consequence, there arose in the 17th cent, the great controversy between 'Rigorists' and 'Laxists,' which brought casnistry into disrepute as a bulwark of tergiversation, and an incentive to, or at least justification of, evildoing. The need to win men back to the bosom of the Church intensified this movement. Obviously enough, an outsider cannot pronounce with decision on the practice of an organization so extensive and complex as the Latin Church, wherein many shades of usage and theory may co-exist. Nevertheless, it is probably true that the present position within the Latin obedience dates from 1803, whill the Latin obscured ones from food, when the Congregation of Rites, confirmed by Pope Pius VII., found the *Theologia Moralis* (1756) of St. Alphonsus (Alfonso Maria de Lignori, 1696– of St. Alphonsus (Anonso Jarra de Ligneri, 1920-1787) free from matter deserving censure, that is, of 'extrinsic' probability. While there is room for divergence—by less or by more—from his equiprobabilism (as by J. H. Xewman; cf. his Alpologia (London, 1882], p. 273 f., and note G), it may be said that, in the Latin obedience, casuistry has proceeded with reference to Lignorian norms. In any event, he was the last writer on Moral Theology to be canonized (1839), and declared a Doctor of the Church (1871).

The objections to the Latin view raised by other Christians, especially outside Anglicanism, may be put very summarily as follows: In its form the Latin conception is held to be external, and legalistic-therefore, necessarily fragmentary, or devoid of unitary inner principle. In its content it is held to be ascetic, or based upon a dualism between the spirit and the flesh. Consequently, it is negative in its attitude towards the world: and equivocal, because it contemplates a twofold standard—one for the average man, another for the 'perfect.' As a result, it is said to entangle in a maze of prescriptions that interpore between the individual will and God's will. Quite obviously, the two conceptions proceed from antagonistic theories of the nature of the Christian religion as a whole. The Latin position affirms that the proper regulation of moral activity lies with an institution designed supernaturally to aid individuals, to be the keeper of their conscience, because the sole depository and interpreter of the only possible, the only Divine, authoritative norms. The Reformation contention is that personal subjection to the will of God bestows that self-devotion from which alone right moral action can proceed. The non-Catholic Christian eannot admit that two contrary actions can be duties equally; nor can be do more than his duty (cf. SUPEREROGATION); nor can he entertain the idea that some actions are unmoral—without moral import (cf. ADAPHORISM). Hence the need

for technical cashistry disappears.

To sum up: whenever men realize their separation from, or conflict with, the operative norms of the social whole, and, in their strait, appeal to 'conscience,' it may be affirmed that 'conscience and cashistry, on a broad scale of ideal reference, become correlative, even although no method of easuistical procedure with reference to particular cases may have emerged on the basis of reflective or dogmatic system. Reference to a moral ideal appears in practice, and this after no merely utilitarian fashion. Accordingly, the narrower interpretations of our term would appear to depend upon a more or less marked collocation of institutional issues in a civilization, rather than upon definite refereuce to an ideal. Means come to throw ends into the shade. In a word, the more self-conscious casuistry grows, the more its dangerous qualities tend to assert themselves. glance at the history of moral effort in this connexion may suffice to illustrate this. Prior to the Christian era, casuistry in the broad sense dominates the field, except in Judaism. After the solidification of the organization of the Church, the broad sense maintains itself still, but with tendencies to the narrower and more technical procedure, which culminate, under the influence of inner movements and of external historical events, in the 17th century. Thereafter, in modern thought, the broad, ideal sense reasserts itself.

2. Historical outlines.—(a) Greek.—Casuistry, in the narrow theologico-moral sense, could not play any distinctive rôle during the characteristic periods of Greece, because the conception of 'conscience' (συνείδησις) did not achieve determinative development before the age of Stoicism. The γνωθι σεαυτόν of Ileraclitus, and even σωφροσύνη, fall short of the self-condemnation integral to 'conscience.' It is true that 'moral consciousness,' in something more than the Aristotelian sense of recognition, may be traced sporadically from time to time; e.g. in Homer (Il. vi. 417, xvii. 254; Od. ii. 138), and in the Orators, especially Antiphon (e.g. Or. ii. γ. 3, iii. δ. 9); but the attitudes are incidental Casnistry (cf. Plato, rather than normative. Euthyd. 7 E), in the broad sense described above, reared its head only when the older polytheistic religion bad sunk with many to the level of superstition, and when, therefore, the search for another ideal began (5th cent. B.C.). Aristophanes, the Sophists, Socrates, Euripides, Plato, and their circles, furnish the illustrative material. The Nomothetæ and the poets (e.g. Simonides) were the traditional authorities (cf. Homer, II. xvi. 386f.; Hesiod, Works and Days, 225f., 275f.; Theognis, 205f.; Pindar, Ol. xiii, 6f.; Xenophon, Symp. iii. 5). By the 5th cent, the force of their teaching abated, because it lacked the pliancy demanded by unprecedented circumstances and situations (cf. Meyer, Gesch. d. Alterthums, 1901, iii. 436 f.). It had been deterrent rather than originative, and its uninspiring utilitarian reference palled (cf. Pindar, Pyth. xi. 52 f.; Plutarch, Solon, 27). Similarly, its intimate relation with, almost dependence upon, written law (cf. Æschines, c. Tim. 6 f.; Aristotle, Eth. Nic. 1137 A, 16; Plutarch, Lyc. 8f.) tended to stereotype it. New developments gave rise inevitably to the idea of a higher, unwritten and ideal, law, which appeared in the dramatists (cf. c.g. Æschylus, Supp. 707; Sophocles, Ajax, 1130, 1343, Ccf. Tyr. 863 f.), and was presented on a large scale in Antigone (cf. Xerophon, Mem. 1v. iv.). Hence, by an easy transition, we

come to the doctrine of the Sophists, that laws, with morals as their appanage, are no more than conventions. And the fountainhead of 'conscience,' in any sense understood by the Greeks, is to be found in the opposition between φύσις (nature as the basis of law) and νόμος (convention as the basis of law). When, with the great philosophers, investigation passed from the cosmos to man, the problem of ultimate sanctions could not but emerge, and the utilitarianism of the old view offered a point of departure by lending colour to the aphorism, 'Justice is the interest of the stronger.' 'Law is the tyrant of mankind, and often forces us to do many things contrary to nature' (Hippias, in Plato, Protag. 337 C; cf. Xenophon, Cyrop. I. vi. 31 f.). The casuistry of opportunism ensued among the Sophists, especially, in all likelihood, the Eristics. Nevertheless, the hints dropped by the greater Sophists about the necessity for system in morals, as about the inner and outer factors of the ideal, occasioned lively discussion, thoroughly casuistical (after the broader sense) in principle. Doubtful issues were eonceived clearly with reference to the basis of the ideal; the fact of opposition in morals became a common-place, as we can see plainly from Euripides (e.g. how reconcile bis statements in Ion, 884 f., frag. 49, frag. 86, and frag. 511? Cf. Bacchæ, SS2). Thus the idea of a φύσις άνθρωπίνη was precipitated. Casnistical questions were ventilated, about the State and the family, friendship, worldly goods, slavery, suicide, lying, oaths, and the like, but, as a rule, with the object of attaining some fresh interpretation of the ideal. It was not a simple case of conflicting rules, each enjoying the same universality. Possibly, Plato's Gorgias indicates a turning-point (cf. Gomperz, Gr. Denker, ii. 277f. [Eng. tr., 1901, ii. 342 f.]). Morality is now illuminated by reason, and man is shown that the origin of ideals lies in his own nature, like their sanc-Thus there is a self-likening to the Divine (cf. Plato, Theat. 176 A). Alcidamas (4th cent.) refers to some such ideal when he says, 'The Deity has made all men free; Nature has enslaved no man' (cf. Gomperz, i. 324 [Eng. tr. i. 403]). Thanks to Plato, the most real has become the most knowable (Rep. 477 A), and so the highest activity of the spirit furnishes the guarantee that casnistical questions can occur only when more explicit development of the ideal is in progress (Plato, Prot. 343 A, Laws, 875 D, 965 D). Life is not tortured by that absolute separation between 'ought' and 'is' which leads to the conception of morality as embodied in a number of rules all equally authoritative and universal. And so, apart from questions (e.g. Aristotle, Eth. Nic., bk. iii.) that seem to us as if they savoured of narrow casuistry (libe the results). casuistry (like the position of women, personal purity, slavery), the absence of dislocation between the ideal spirit and the real career, so evident in the Greek ethos (cf. Aristotle, Met. 982b), restricts casnistry in the main to those larger vital problems that must accompany further definition of the ideal itself (Plato, Rep. 500 Cf.).

(b) Hebrew.—Having regard to the position occupied by the Law in Judaism, it is not surpris-

(b) Hebrew. — Having regard to the position occupied by the Law in Judaism, it is not surprising that casuistry resulted, and wielded extensive influence from time to time. For, in Judaism, the Law may be said to fill a place parallel with that of dogma in Christianity. But the primary sources for the subject are so vast and tortuous, and demand such special linguistic knowledge, that no more than general hints are feasible here. It seems fair to say that, on the whole, Jewish casuistry provides an admirable example, on a large scale, of the possible oscillation between reference to a living, ethical ideal, and minute, often elever, sometimes puerile, interpretations of

traditional rules. At the present time, the leaders of Reformed Judaism represent the former, while Conservative, in many ways reactionary, Rabbinism represents the latter. Similarly, the view of the operation of the Law in l'alestine when Jesus appeared, held by such scholars as Schürer (GJ) 4 ii. §§ 22-30) and Bousset (R. l. des Judent. 2 1906), emphasizes the narrower casuistry; that insisted upon by Jewish investigators, like Schechter (JQR xi. 626 f.) and F. l'erles (Bousset's Die Religion . . kritisch untersucht, 1903), illustrates the higher casnistical principle in the developmental movement always associated with the expression of an ethical ideal (cf. J. Elbogen, Die Religionsanschauungen d. Pharisaer mit besonderer Berücksichtigung d. Begriffe Gott und Mensch, 1904; Chwolson, Das letzte Pussamahl Christi u. d. Tag s. Todes2, 1892, App.; Friedlander, Die relig. Bewegungen innerhalb d. Judenthums im Zeitalter Jesu, 1905). Law, as the embodiment of the ideal, is formulated in many OT passages (e.g. Jer  $3t^{33}$ , Ps  $37^{34}$   $119^{33L}$ ). The central conception is that human insight fails to suffice either for solution of the problems inseparable from life or for the decisive revelation of the Divine will. As a consequence, these recurrent problems must always be re-interpreted in the light of the norm which remains supreme from age to age; and, as a corollary, the ideal itself is the subject of continuous, and more explicit, affirmation. On the other hand, the vicissitudes of the Jewish people, after their deportation to the Euphrates-Tigris region, and, later, after the destruction of the national theocracy by Titus, produced circumstances favourable to minute elaboration of the Law, and to its use as an external framework to preserve the religious and racial unity of the scattered folk. Thus casnistry arose and, according as concomitant events varied. played a greater or a lesser rôle. Provisions, conformable to changed conditions of life, were heaped up endlessly, and experts were needed to render ethieo-judicial decisions. Thus a vast amorphous mass of regulations and decisions grew, by accretion, during centuries. Following Aristotle's ethical principles to a large extent, Maimonides (1135-1204) attempted to call order from this chaos, especially with regard to personal conduct in relations with others; and he may be said to have reinstated the idealistic reference. However successful at the moment, his methods were not destined to full fruitage till Spinoza, Solomon Maimon, Moses Mendelssohn, and the contemporary Reform movement. Indeed, they stimulated porary herorm movement. Indeed, they stimulated the half-opposition of Nachmanides (1194-1270), who paved the way for the domination of the French school, which held casnistical study of the Talmud to be an end in itself. The extreme development of hair-splitting casuistry dates from development of nair-spiriting visious (1) Acob Pollak (1460-1541), the chief originator of the procedure known as  $P\bar{t}dpal$ , or 'spicing' the Law by ingenious disputation. This was essentially a method of dialectical interpretation, fertile in far-fetched analyses and combinations, often productive of pitiful sophistry, and, as a rule, pursued for its own sake, without distinctive reference to moral ends. Although it doubtless arose from that renewed interest in the Law due to the less hopeless condition of European Judaism after the middle of the 15th cent., its theoretical (often anti-cultural) tendencies became stumblingblocks to Jewish development; it can hardly be alleged that they operated to the same practical consequences as Jesuitical casuistry. Yet, in spite of this, the ideal ethico-religious conception of the Law never died out-the intrinsic value of the person asserted itself as superior to external regulations (cf. Travers Herford, Christianity in Talmud and Midrash, 1903, p. 7 f.).

'It was the study as well as the fulfilment of the Law which prevented the Jows from sinking in the scale of manicoed, throughout the middle ages, intellectually and even morally, this covey other ideal, it had its cut side, and was capable of lamentable perversions; ideally, the study of the law is equivalent to the study of perfect truth; practically, it is often the study of purifities; the evolving of juridic hair-splitting-upon the one hand, and fantsstic and disordered imaginings upon the other '(Monteflore, Hibbert Lectures [1892], p. 496; cf. Schechter's Appendix).

From the 18th cent. Aufklarung, where Moses Mendelssohn's influence was pivotal, a return to the higher principle must be traced. And, for Reformed Judaism, the Law is an ideal which, like other ideals, is the subject of progressive interpretation, thus involving the broader principle of casuistry. Reason, in the form of goodness, alone

prefigures the Divine norm.

(c) Muslim.—Like Judaism. Muhammadanism embodies an elaborate system of casuistry applying to all sides of life. This is to be found in the development of Muslim law. Although the Prophet's position as God's representative made any decision of his absolutely valid, local conditions left a wide margin for opportunism, and Muhammad was an eclectic in these matters. Local usage at Medina necessitated certain abatements; so too did the Rabbinical-Roman law observed by the Arabian Jews, the commercial law of Mecca, and so forth. Thus, after his death, when the Muslim law came to be codified, all the conditions productive of accommodation were gathered together. For, if the Qur'an failed, decisions of the Prophet, preserved by his disciples, might avail; if not, then the common law of the community was there; and if none of these availed, then the judge might place his own construction upon the case. Accordingly, interpretation, probable and speculative, of the usage of the Prophet came to be a 'science,' and conflict of 'sayings' formed the basis of casuistical procedure. Later, a broad opposition arose between those who appealed to tradition and those who desired to systematize the law. This in itself prepared the way for familiarity with compromise. And, as Muslim conquest widened, the operation of Roman law had to be taken into account. With the advent of the Umayyad dynasty, the old law of Muhammad came to be more and more a religioethical system, governing the personal lives of good Muslims. Under the Abbäsids the four great schools arose which formulated the norms that still rule the Muhammadan world. The general result has been that there is a casuistical code applicable to private affairs, and, alongside this, the law of the land. The former is sacred, and provides the definite prescriptions from which the necessity for casuistical interpretation proceeds. The situation is not unlike that of mediavalism, where the canon law and the king's law furnished what might be called private and public codes, and the more private application of the former rendered it inevitably more casuistical in the moral sense. That is to say, it governed relations primarily moral rather than legal. Cf. LAW (Muham.).

morat rather than logal. Cf. LAW (Mulaim.).

(A) Cheforica.—Thomps to its Judicial consists.

(d) Christian.—Thanks to its Judaistic origin, we find casuistry in Christianity from the beginning (cf. HJBB )., s.c. \*Conscience'). But the several NT issues (r.g. Mt. 5<sup>245</sup>, 6<sup>45</sup>, Lk. 14<sup>26</sup>, 1 Co 7<sup>26</sup>, 8<sup>364</sup>) presuppose the existence of that higher ideal whose principles St. Paul states (Ro 12<sup>4</sup>). The urgency of casuistical difficulties

admits of little doubt, as we know from the outbreak of Antinomianism (q.v.) in the primitive communities of Asia Minor and Greece, which vexed the Apostle's soul (cf. Jowett, St. Paul's Epp. to the Thess., Komans, Gal., 1894, i, 76 f., ii. 388 i.). As the Epistle of Barnabas says, a little later (c. 78 A.D.), the Lord chose for Apostles those who neglected the Law, and were above all sin (ch. v.)—a view which blossomed in the Gnostic societies (cf. E. von Dobschütz, Christian Life in

the Primitive Church, 1904, ch. xvi.).

societies (cf. E. von Dobschittz, Christian Life in the Primitive Church, 1904, ch. xvi.).

The practical problems of sin and repentance agitate Tertulian (cf. adv. Jud.), an early riporist, whose strong ascetic tendencies were such that his opposition to luxury (cf. de Spectaculis) and laxity (cf. de Pero.) witnesses to an incipient growth of moral-theological decisions. The lives and works of Fathers and saints, like Gregory Thaumaturgus (d. 270), Peter of Alexandria (martyred 311), Basil (d. 359), Gregory of Nyssa (d. c. 366), and especially Angustine (d. 430), exhibit perilential decisions based on the ordering the control of the control o particularly bks. ii. and iii., endeavouring to reconcile the contradictions which Abelard had been content to state. With him the first period closed; casuistry has been sporadic, casual, and without definite system grounded in conscious principle.

The second phase of the development dates from the Fourth Lateran Council (1215) till the Council of Trent (1545-63), and may be called the age of the Summists. The new importance of auricular confession raised the casuist to a position of relative

equality with the older canonist.

equanty with the older canonist.

The type was formulated early in the period (c. 1235) by Raymund de Fennaiorte, general of the Dominican Order (1238), in its Summa de Peon. et Matrimonio. In the same age, the great scholastic systems, especially that of Thomas Aquinas (1227-74), crystallized the attitude in which moral questions were to be approached. 'To teach morality without dogma, its build a house without foundations: to teach it without in is to build a house without foundations: to feach it without an infallible substratum of positive theology, is to build upon the sand' (R. B. Vaughan, *Life and Labours of S. Thomas of Aquin*, 1871-73, ii. 907 n.). The dogmatic and logical basis whence casuistry is to proceed is thus laid down. And this definite 1871-73, ii. 907 n.). The dogmatic and logical basis whence causityr is to proceed is thus laid down. And this definite work is accomplished in the Secunda Secunda of Aquinas' Summa Theologica, which subjects human nature to minute analysis, in the form of a discussion of the theological virtues (faith, hope, charity), and of the cardinal (prudence, justice, fortitude, temperance). The method and primary conton's may be thought of Aquinas' procedure in its theological bearings, as a contribution to ethics it takes rank with Aristotle. Only when this is understood and admitted can its vast influence be appreciated. At the same time, its form is systematic, not practical. So, meanwhile, following the direction taken by Raymand, a Franciscan of Ast in Piedmont published in Summa Astesana (1817); the Dominican, Bartholomew, of San Concordio, his Summa Trisana (c. 1340); and Angelus, of Genoa, his Summa Angelus (1880). Meanwhile, the Noninalist controversy, symptomatic of the decline and fall of Scholusticism, raised doubts concerning the basis of the whole moral-theological controversy, symptomatic of the decline and fall of Scholasticism, raised doubts concerning the basis of the whole moral-theological structure, as may be gathered from the determinist tendencies of Buridan (Rector of the Univ. of Paris, 1327) in the free-will controversy, and from Gerson's (1363-1429) leaning to mysticism. Nevertheless, practical questions in morals continued to receive systematic presentation, as in the Summa Confessionalis and the Summa Confessionalis and its late of the Summa Confessionalis and Summa Confessionalis and the Summa Confessionalis and Summa

The third period originates in the wide-spread displacements connected with the Reformation. A corpus of rules, traditional and authoritative, came into collision with circumstances which demanded a fresh interpretation of the meaning,

and particularly of the limits, of obedience. activity of the Society of Jesus was directed in large measure to the solution of this problem, and the great age of casnistry began, with the result that external rule, modified with exquisite subtlety to suit particular cases, and directed frequently to the practical end of restoring penitents to the Church, took the place of ideal principle, and ran to such lengths that, even within the Latin obedi-ence, strong protests were raised (cf. Jansenism). The famous Letters of Pascal (q.v.), which were translated speedily into the principal European languages, drew the attention of the Western world to the situation; in a word, the controversy over Probabilism had entered its acute stage.

The Moral Theology of which casuistry was an appanage developed chiefly among the Spanish

Luis Molina (1535-1600), whose work, Liberi arbitrii, etc. (1588), seemed to the Dominicans to make human will the medium of Divine action, and to substitute Pelagian for Augustinian doctrines, influenced Suarez (1548-1617), the last Augustuman notetines, innuences source toose 1001, unique nements schoolstic, who produced accept political, the sum of the control of the sum whose de Rege et Regis Institutione (1699) is a classic in political acsuistry; its teaching may be studied comparatively with that of Machiavelli (q.v.). Possibly by inadvertence, he also exhibited the ioner tendencies of Jesuit causistry as early as 1625 (cf. De las Enfermediades de la Compolita de Jesú, which should be considered alongside of Pascal's Provinciates and Antoine Arnauld's Morale pratique des Jesuicales and Antoine Arnauld's Morale pratique des Jesuicales (1551-1610) (deut nor considered alongside of Pascal's Provinciates and Contrast with these speculatival cases of casuistry, though its consideration of the Contrast with the Contrast of the Contrast Contrast (1551-1610) (deut nor contrast visit (cf. de Sacramento Matrimonii, 1599), but the sacrament of Matrimonii, 1590, but the sacrament of Matrimonii, 1590, in the last contrast of the Contrast Contrast (1551-1610) (deut nor contrast contrast (1551-1610) (deut nor contrast contrast (1551-1610) (deut nor contra contrast with these speculative writers, Sanchez (1551-1610) dealt more directly with practical cases of cassistry, though in the same general spirit (ct. de Sacramento Matrimonis, 1509). Another Spanish production, the Institutiones Mor., in quabus universac quaest, ad conscientiam recte aut prace factorium pertinentes, breviete tradeatum (1610-25) of Axor (1533-1633), was used widely, and earned the praise of Clement vini. But earther the observation of the author who became the praise of Clement vini. But earther who became the praise of Clement vini. But earther who became the praise of Clement vini. But earther who became the praise of Clement vini. But earther who became the praise of Clement vini. But earther who became the praise of Clement vini. But earther who became the praise of Clement vini. But earther who became the contents by title, and offer the most representative illustration of the Jesuit moral-theological methods of their period. His Liber Theol. Mor. (1646) onlyed such cycle that forty editions were called for hefore his death. The Moral Theology movement had prominent representatives in France, of whom E. Bamy (1564-1549), an eminent teacher of the Laxist school (Theol. Mor. 1640), ought the Hermann Eusenbaum produced the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645), which became an accepted the Medulla Theol. Mor. (1645) and the Hermann Theology in the 1770, who is sometimes characterized, in the Latin communion, as the subject. Paul Laymann's (1575-1635) Theol. Mor. (1625) was a most authorizative re

Although Luther burned the Summa Angelica, it was not possible for those who repudiated the authority of the Pope to be rid forthwith of casuistical traditions, which maintained themselves for a time in the Lutheran, Calvinist-Puritan, and Anglican communions. In the Lutheran com-numion, after Melanchthon's (1497-1560) mediating Unterricht der Visitatoren, Balduin attempted a purified casuistry (Tractatus de Casibus Conse. 1628), in the shape of a corpus compiled from Roman books. Loose in form, it is thoroughly mediaval in character, and filled with curious superstitions.

Other Latheran exponents of casuistry were J. F. Konig (1619-64), professor at Rostock (Theol., positiva accommation, 1651), Kourad Dambiauer (1693-65), one of Speners brachers at Strassburg (Thod., Concentiativar), John Oleanius (1633-1715), professor at Leipzig (Latrod. ad theol., mor. of establishment, Charles (1633-1716), and theol., mor. of establishment (1633-1716), including the Professor (1633-1716), professor at Leipzig (Latrod. ad theol., mor. of establishment (1633-1716), professor (1633-1716), professor (1633-1716), professor (1634-1716), professor (1634-1

Lutheran casuistry tended to be mild, if not lax; mediated by Pietism, it gave place to Christian ethics in the sense now current. Meanwhile, casaistry of a stricter type, and more penitential in reference, grew up in Calvinistic Puritan circles.

reference, grew up in Calvinistic Puritan circles.

18 first representatives were Lambert Dancau (Haumacus),
of Geneva (18503-95), author of Eth. Christiana (1677), and
William Perkins (1655-1692), of Christ's College, Cambridge,
whose Armilla Aurea (1599) precipitated the Arminian controversy; his causistical writings, A Case of Conscience (1623),
and A Discourse of Conscience (1679), prepared the way for the
daylor free control of the Case of Conscience (1623),
and a Discourse of Conscience (1679), prepared the way for the
favour in the Conscience (1679), prepared the way for the
favour in the Conscience (1679), prepared the way for the
favour in the Conscience (1679), prepared the way for the
favour in the Conscience (1679), prepared to the consciention
in the Consciential Consciential Conscience of Francker, and produced Medulla Theol. de Consciential cins Jure et Casilons (1653),
generally regarded as the best Protestant manual on the subject. To the Reformed decay from the Theol. Christ. (1620);
and J. H. Akstedt (1658-1658), a member of the Synol of Dort
(1618), who wrote Theol. Casuum (1621), and Encycl. septem
tomis distinctant (1639). (1618), who wrote The tomis distincta (1634).

The casuistry of the Reformed Churches passed into New England by a natural sequence, the religious atmosphere of the colleges favouring this kind of ethical instruction till the middle of the 19th cent. (cf. Thomas Clap, The Religions Constitution of Colleges, especially of Yale College, 175t; G. Stanley Hall, in Mind [O.S.], iv. 89f.).

1754; G. Stanley Hall, in Mind (O.S.), iv. 894.).
In 1730 the works of Ames and Wolbel were the established standards of ortholoxy 34 Yale (W. Riley, June, Philosophy, the Early Schoole, 1907, pp. 64, 32; etc. (W. In the Anglican communion, early casuistry is concerned, naturally enough, with political issues. Omitting the divorce literature relative to Henry VIII., a point of departure may be found in Lancelot Andrewes (1555-1626), bishop of Winchester, whose Tartura Tarti, sire ad Matthai Tarti Librum Responsio (1609), written in reply to Cardinal Bellarmine's (1542-1621) attack upon the oath of allegionce imposed upon Roman Catholics after the Gunpowder Plot, embodies juridical rather than ethical cashistry. It is interesting because indicative of the scholastic atmosphere still prevalent in England. It might be characterized as the Anglican counterpart of Mariana's de Rege, the common subject being the papal doctrine of the deposing power.

parparametrine of the acposing power.

The principal writers in the more strictly ethical line are:
Joseph Hall (1574-1550), bishop of Norwich (Resolutions and
Cases of Conscience, 1650); Jereny Taylor (1613-67), bishop of
Down, Conner, and Dromore, whose Haly Living (1650) and tues of Conscience, 1630); deremy Tayun Omeron, 1630 pown, Connect, and Iromore, whose Holy Isring (1630) and public eloquence gave vogue to his extensive cashistical work, Dactor Dublatantum, or the Rule of Conscience in all her General Measures (1690)—an acute treatise, evineing great includental quick ince sand surface treatise, evineing great includental quick ince sand surface principles. Thomas Barlow (1607-91), eventually hishop of thirola, a notorious pelitical trimmer, words several cassistical tracts during his Oxferd career, which were published posthinously as Caese of Conscience (1625); perhaps the most representative is Mr. Cottington's Discover Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he most eniment Angliana Cassis (Oxferd Case, written in 1677 he with the case of Cassis (Oxferd Case) and the case of Cas (1647) is generally regarded as the strongest book on the sub-ject; he wrote also Nine Cases of Conscience occasionally

ject; he wrote a determined (1673).

With the birth of the 18th cent. ethical interest shifts its centre; thanks to the Deistic controversy and the advance of science, the venue changes with Hobbes (1588-1679) and Cudworth (1617-88), whose Treatise on Eternal and Immutable Morality (1731) illustrates the new issues. No doubt, subjective discussion of conscience is maintained, as may be seen from Joseph Butler's (1692-1752) Sermons on Human Nature (1726); but the famous passage on probability as the guide of life, at the beginning of the Analogy (1736), has no specifie cashistical reference.

CRISHIGHM PERFERICE.

Similar subjectivity may be traced in Thomas Rutherforth's (THE-71) An Essay on the Nature and Obligations of Virtue (TS), but, as a reply to Snanuel Clarke (1675-179), its central interest is theoretical. Philip Doddredge (170-519), its central interest is theoretical. Philip Doddredge (170-54) manifests hardered tendencies in the ranks of Dissent not unfriendly to the Church (The Rise and Progress of Religion in the Soul (TR)), finally the stream less their in the could the of Tendencies. the Church (The Rise and Progress of Georgian in the Sout, 1745); finally, the stream loses itself in the prolivities of Tucker (1765-71), a leisured layman (The Light of Nature Pursued, 1765-77), and in the academic, utilitarian prudences of Paley (1743-1805) and Whewell (1794-1805).

In the early years of the Oxford Movement the Bampton Lectures on 'Scholastic Philosophy,' by R. D. Hampden (1793-1868), which refer to cashistry nc. 17. Trainpuen (1730-1505), which telef treasustry incidentally, stirred up a hornets nest (cf. R. W. Church, The Oxford Movement<sup>3</sup>, 1892, p. 152 f.), and led to acrimonious discussion marked by no little intellectual casuistry (cf. Introduction to BL2 [1832]; Edin. Ker. Ixiii.; Dublin Ker. xvii. [1868]; Theol. Rev. viii.), which, moreover, concerned the whole authoritative basis of casuistical guidance as conceived in Moral Theology. The Conscience, Lectures on Casuistry (1868), of J. F. D. Maurice (1805-72), is by no means a profound work. Henceforward the Anglican development may be said to turn upon the accompaniments and results of the 'Anglo-Catholic' movement. While these are a continuation of the tendency within the Church, dating from the 17th cent., to maintain the chief traditions of pre-Reformation teaching, their contemporary manifestation begins with Edward Bouverie Puscy (1800-82). The renewed practice of confession goes back to the publication of his two sermons, The Entire Absolution of the Penitent (1846). Prior to this there should be mentioned The Churchman's Manual (1833), by the Tractarian cotorie at Oxford, and Tracts for the Times (especially No. 80, 'On Reserve in Communicating Religious Knowledge' [1837], by Isaac Williams [1802-65]). Moved by the outery over The Priest in Absolution, Pusey produced Advice for those who exercise the Ministry of Reconciliation through Confession and Absolution (1878). It is based on the Manuel des Confesseurs <sup>10</sup> (1872), by the celebrated French casuist, Abbé Jean Joseph Gaume (1802-79).The historical introduction gives a careful account of opinion in the Anglican Church, while the body of the book has been so revised and worked over as to be practically Pusey's rather than Gaume's (cf. H. P. Liddon, Life of E. B. Pusey, 1893-94, iv. 303 f.).

1803-94, iv. 303 f.).

Among significant works in which the movement has crystallized are: William Gresley, The Ordinance of Confession? (Sc2): The Priest in Absolution: A Manual for such as are called unto the Higher Ministries in the English Church (1865); The Church and the World, edited by Orly Shipley (sep. Art. vii., Frivate Contession and Absolution, 1866-68); Tracts of the Park (1865); Will the Absolution, The Church and the World, with the Absolution and Absolution are discussed in the following: J. Skinner, A Symposis of Moral and Assetted Theology (1882), a work that has received warm commendation from Anglo-Catholics; John J. Elmendorf, Froser at Racine College, Wisconsio, U.S. Elmendorf, Wisconsio, U.S. Elmendorf, Froser at Racine College, Wisconsio, U.S. Elmendorf, Wisconsio, U.S. E

Angle-Catholics would probably admit that, on the whole question of casuistry in morals, they have been too dependent upon Roman sources For, consonant with the English, as contrasted with the Latin, temperament, they incline to deal as simply and plainly as possible with the issues raised, avoiding too curious subtleties. standard of a positive righteousness, rather than the attempt to explain away moral situations, best consorts with the atmosphere where English and American Churchmen are most at home. leaders would contend, doubtless, that the importance of casuistry as an aid to conduct has been minimized unduly, and that the increasing complications of modern life render necessary the guidance of a fixed scheme for the application of general principles to particular cases.

compinations of a fixed scheme for the application of general principles to particular cases.

Literature.—J.E. With reference to the following list, two points must be remembered: (1) Outside Romanism and Anglicanism, cassistical questions involve so many general factors of accommodation that the treatment is usually incl. accommodation, for example, the bistory of Galileo's or Darwin's discoveries affords admirable illustrations. (2) The literature is so vast that this list can be taken only as suggestive, not complete. In addition to the works mentioned in the text above:

CATACOMBS.—The numerous ancient Christian cemeteries, better known by the generic name of 'catacombs,' constitute the most notable monument of primitive Christianity in Rome which has come down to us. Their origin goes back to the 1st cent. A.D., and is directly connected with the preaching and diffusion of Christianity in Rome initiated by the Apostle Peter. Just as the Jewish community in Rome had its places of assembly in the synagogues, and its places of burial in the Jewish cemeteries, so the Christian community in Rome had, even from the end of the 1st cent., its places for liturgical meetings called coclesiae domestice or tituli, and common cemeteries which were in close connexion with and dependence upon these same ancient tituli. Thus, we know that the very ancient cemetery of Priscilla, the oldest in subter-ranean Rome, situated on the Via Salaria Nuova, was dependent upon and connected with the tituli in memory of Pudens in the 'Vico Patricio,' and with those of Aquila and Priscilla on the Aventine. as has been shown by G. B. de Rossi. And, just as the primitive tituli had their origin in the houses of rich Christian patricians who placed at the disposal of the faithful, for their meetings, one or more halls in their palaces, so the first cubicular and galleries of the catacombs were excavated beneath the suburban farms of some of the faithful. who placed at the disposal of their brethren in the faith the area above and below ground of their country properties. Thus, from the very first, the Christian cemeteries were safeguarded under the protection of private possession. That this was the origin of the cemetery excavations is clearly proved by the very names of the Roman cemeteries, which almost always have a double denomination-the first consisting of the personal name of the ancient possessor of the property in which the cemetery was excavated, the second of the name of the martyrs who, in the centuries when peace prevailed. were held in especial reverence there, e.g., conne-terium Pra-textati ad S. Januarium, 'coemeterium Pontiani ad SS. Abdon et Sennen,' 'coemeterium Domitillae ad SS. Nyreum et Achilleum,' etc.

The exeavation of the first nuclei of the Roman entacombs must have been very restricted, and so it remained throughout the whole of the 1st and 2nd cents.; the great system of cemetery excavation which we see to-day belongs almost exclusively to the 4th cent., and the regions belonging to the 1st and 2nd cents, are rare.

At the beginning of the 3rd cent., owing to the extraordinary increase in the number of the Christians, the cemeteries underwent a correspondingly wide extension. It was precisely on this account that the catacombs were considered by the Roman authorities to be the collective property of the corpus Christianorum, that is, of the Christian society; and this exposed the catacombs directly to temporary confiscations by the Imperial govern-This is the heroic period, so to speak, in ment the history of the Roman catacombs. During the storm and continous succession of the terrible persecutions of the 3rd cent., the Christian ceme-teries were twice confiscated, namely, during the persecution of Valerian in the year 258, and during that of Diocletian in the year 303. Of this dangerous period in the history of our cemeteries the echoes and traces remain in the excavations themselves, as well as in the inscriptions in the catacombs. At that time, and particularly in the second half of the 3rd cent., secret and hidden entrances were opened; and de Rossi was able to verify the existence in the cemetery of Callixtus of a mysterious stairway, cut short and hanging as it were in mid-air, which must have been constructed for the purpose of escape from danger in times of persecution and of confiscation of the cemeteries. Further, the Christian epigraphy of the 3rd cent, reflects the very difficult conditions in which the society of the faithful found itself, for this epigraphy is more than ever bound by the restrictions of the areani disciplina (q.r.), which reveals itself in an involved and enigmatic symbolism which escaped the attention of the profanc.

The great persecution of Diocletian, which was the longest, the most sanguinary, and the most terrible of all, for ever ended the cruel struggle which for three centuries Christianity, with the weapons of humility and with the moral and religious force of its new principles, had carried on against a decrepit and corrupt paganism. Con-stantine, after his victory over Maxentius at the Milvian bridge, proclaimed at Milan (A.D. 313), together with his colleague Licinius, the edict which granted a final peace to the Clurch. Christianity triumphed, and its shout of victory found a faithful echo even in the obscure caves of the Roman catacombs. In the 4th cent, the excavation of cemeteries extended in a marvellous way, and subterranean architecture attained an imposing magnificence of form and of style previously unknown, so that, even in its external forms, catacomb excavation demonstrates the security, tranquillity, and peace which characterized that happy century in the history of Christianity.

The cemeteries above ground, or sub divo, which had been formed in modest proportions even from the time of the persecutions, were greatly developed in the Constantinian and post Constantinian periods; they were embellished with basilicas, cells, exedrae, and porticoes, while, with this increase and spread of sepulture above ground, subterranean burial proportionately decreased. The most important and characteristic period is that of the second half of the 4th cent., and in this period stands out the grand figure of Pope Damasus, During the persecution of Diocletian some historical crypts had been concealed by the Christians in order to preserve them from the fury of the pagans. Pope Damasus, in the turbulent period of the schism of Ursinus, had made a vow that, if he were able to bring back the clergy to the wishedfor unity, he would restore and adorn the crypts of the martyrs. After his triumph in that difficult crisis, Damasus kept his promise. He found again the crypts which were hidden beneath the rubbish; he constructed new entrances, wider and more commodious, to fucilitate the pious pilgrims' access to the venerated tombs; and he opened Intervariate to give light and air to the crypts, which he also enlarged and embellished, placing there inscriptions, for the most part in metrical form, in which he related the circumstances of the martyrdom of the saints, and at times referred to the works which he himself had executed. These epigraphs he caused to be engraved in honour of the martyrs, in a special form of calligraphy known to archeologists as 'Damasan,' or 'Filocalan,' because it was invented by Damasus's friend, Farins Dionysius Filocalus. Many were the works carried out by Damasus in the crypts of the Roman catacombs, and these were continued and brought to a conclusion by his immediate successor, Siricins.

These works of restoration and embellishment excited a lively desire among Christians to have their tombs within or near the venerated crypts. In this way there arose the so-called retro-scarcios, that is, regions or galleries in the cemeteries, exeavated near the historical crypts, and in which the faithful strove to obtain sepulture, in order to be materially as near as possible to the tombs of the martyrs. The ardour with which this endeavour was prosecuted caused the grave-diggers to take advantage of it for the purpose of gain; and, at the end of the 4th cent, and at the beginning of the 5th, the buying and selling of subterranear sepulchres remained the almost exclusive privilege of the fossores, who at times sold the sepulchres near the tombs of the martyrs at a very high

price.

Cemetery excavations finally ceased in the first half of the 5th cent., and thenceforward burial took place in cometeries formed sub divo over the catacombs until the middle of the 6th cent., when, these cemeteries being abandoned and the funeral prescriptions of the Laws of the XII Tables for-gotten, centres for burial began to be formed within the city. Thus, after the catacombs had been used for about four centuries as cemeteries, they became exclusively sanctuaries of the martyrs, and consequently the goal of devout pilgrimages. The pilgrims came from all parts of the Roman world, and especially from the northern regions of Europe; and in the so-called Itineraries of the Pilgrims we have vivid and very eloquent evidence of these continued visits, which went on from the 6th to the 9th century. These valuable guides to the historic sanctuaries of the Roman catacombs constitute the fundamental documents for the reconstruction of the topography of subterranean Rome; they were compiled in the 7th and 8th centuries by priests of the Roman Church, for the use of the pilgrims who came to Rome, and not by the pilgrims themselves, as the present writer has recently demonstrated (Nuovo Bullettino d'archeologia cristiana, 1909, p. 79 ff.). During this period many Popes set themselves to adorn the historic tombs with paintings and other ornaments, and to repair them; and we still see the traces of their labours, and sometimes we have a record of them in the biographies of Popes in the Liber Pontificalis.

We thus reach the 9th cent, with which terminates this first long period in the history of the catacombs. Continual invasions and raids, especially those of the Lombards, in the Roman Campagna had rendered them inscente and too much exposed to damage and ruin. The Pepes, in this state of things, saw themselves constrained, however unwillingly, to remove the bodies of the marryrs from the catacombs, and to place them in security in the churches and basilicas of the city. Thus commenced the period of translation, and the translations were carried out in the case of a

great number of the martyrs by Popes Paul I., Stephen III., Paschal I. in the beginning of the 9th century, and finally Leo IV. in the middle of the 9th century. With the translations of this last Pope, the catacombs were almost totally de-prived of their most precious treasures; and, on this account, visits to the suburban sanctuaries gradually ceased, their chief object having come to an end. The crypts gradually came to be abandoned, and the earth, precipitated down the stairways and the lucernaria, slowly filled up the crypts and subterranean galleries, which thus disappeared and became hidden in the course of centuries. The oblivion into which these sanctuaries had fallen hindered a right knowledge of the topography of the Roman eatacombs, and the names of individual cemeteries were confused and identified with those of contiguous cemeteries. this way, in the course of the 10th and 11th centuries, the Roman catacombs were forgotten by every one. There remained only here and there in the Roman Campagna a few names which vaguely recalled the great historic memories of the monuments and of the martyrs of the primitive Church.

From the 10th and 11th centuries down to the first half of the 15th the Roman catacombs lay neglected and forgotten. It is with this century that the dawn of a new period begins. The first visitors to the subterranean ceneteries were the Minor Friars, who, between the years 1433 and 1482, examined a region of the cemetery of Callixtus, on the Appian Way. Only one date is anterior to this period, namely, that of 1432, connected with the name of Johannes Lonck. In 1475 the members of the Roman Academy, with the celebrated humanist, Pomponio Leto, at their head, went through some regions of the cemeteries of Callixtus, Praetxtus, Priscilla, and SS. Peter and Marcellinus, not for the purpose of a pious and religious examination, but out of mere scientific and literary curiosity. The visits of the Roman Academy remained fruitless of scientific results, and found no echo among contemporaries.

At the end of the 16th and beginning of the 17th cent., Antonio Bosio, who may be regarded as the real founder of Christian archeology, descended into the catacombs. He went through many of the Roman cemeteries, and diligently studied, with adequate scientific criteria, their historical records, connecting the notices of the Acts of the Martyrs with the topography of the cemeteries. The fruit of his immense labours appeared in a postlumous work entitled Roma Sotterranea Cristiana (Rome, 1632). Bosio died in the year 1629; but even from the beginning of the 17th cent. a mischievous tendency turned aside those who studied Christian archeology from the system of topographical research so happily instituted by Bosio. At that time began the search for the bodies of the martyrs, based upon criteria scientifically false; and the eatacombs were compelled to undergo a deplorable, however pions, sack. In this work of anxions and feverish search for the bodies of the saints, the canon Marcantonio Boldetti distinguished himself. He had in his possession a very treasure of cemetery monuments, and during the space of forty years he examined numerous regions of the catacombs which up till then had remained intact. In his work entitled Osservazioni sopra i saeri cimiteri dei Santi Martin ed antichi cristiani (Rome, 1720), he gathered together, without any scientific order, a great number of records, without troubling him-self with aught save the distinctive signs and the recognition of the bodies of the martyrs. This false tendency threw discredit upon the study of the Roman entacombs, while Protestantism derided the search for relies, and Montfaucon wrote a

pamphlet to demonstrate the small number of martyrs belonging to the catacombs of Rome. The 18th cent, marks the most deplorable period in the history of the Roman catacombs; they were plundered of their most notworthy treasures, the inscriptions were dispersed, the headi were violated.

and the paintings were removed.

With the commencement of the t9th cent, a new period opened in the study of Christian archae-The names of Adami, Raoul-Rochette, and Settele, with the learned compositions of which they were the authors, mark this notable revival. The learned Jesuit, Padre Giuseppe Marchi, gave a definite impulse to this study, and published in 1844 his important work on the Monumenti delle arti cristiane primitive nella metropoli del cristianesimo. Marchi happily arrived at some data for a scientific system, and he had the great merit of being the master of Giovanni Battista de Rossi, the restorer of the science of Christian archaeology. The young disciple at once perceived the importance of Christian epigraphy and topography. Of the former he laid down the chief canons and the fundamental laws, and, with respect to the latter, he showed for the first time the great importance of the *Hincraries of the Pilgrims*. He created, from its foundations, the science of cemetery topography, which he based upon solid and unshakable criteria, so that during his long scientific career he was able to find again many of the historical crypts of the catacombs. De Rossi published three volumes of the Nuova Roma Sotterranca (1864, 1867, 1877). After his death, study and research were continued by a numerous band of students, among whom the names of his disciples constantly hold the first place, and who constituted the first and true Roman school of Christian archeology. These men were worthy continuators of the work of the great master; and we may record, as a tribute of sincere praise, the names of Henry Stevenson, Mariano Armellini, and Orazio Marucchi: the first two were very soon removed by death, and to the third has now been deservedly assigned by the Commission of Sacred Archaeology the compilation of some volumes of the Nuor Roma Sotterranes, a work which has for its purpose the prosecution of that already begun in so masterly a way by de Rossi (1st fasc. 1909).

The Roman catacombs occupy a long zone of the breadth of three miles around the city of Rome, starting from the walls of Aurelian. They had their primitive entrances upon the margin of the great consular roads, or near the small cross-ways which led off from the principal roads. These entrances were constructed in the full light of day, which proves that the Christians possessed cemeteries wyno jure from the first centuries of Christianity. We have a fine example of this in the monumental ingress to the cemetery of Domitilla, which opens on a cross-way of the Via Ardeatina. The excavation of a Christian cemetery was begun with a stairway which descended from the surface of the ground; directly it reached the level of the granular tufa, the first gallery, with its *enhicula*, was excavated at its foot. Thus the cemeteries arose from very limited hymogea of a domestic character, with stairways; and, later on, by the enlargement of the excavations, they joined one another, thus forming the immense labyrinth of the Roman catacombs. opinion is consequently talse which holds that the catacombs arose from ancient archaria abandoned

by the pagans,

The cometery galleries were excavated, as has been said, almost exclusively in the granular tuia, and have a width of between 75 centimeters and one metre. To right and left, loweli were excavated in the walls, and these were sometimes closed by marble slabs or by tiles, and were capable

of centaining one or more bodies; the arresolia, on the other hand, were formed by a tomb called solium, over which an arch was turned, whence the name arcosolium. Here and there to right and left opened echiculo, or family-chambers, which were sometimes adorned with paintings and marble, and furnished with Numburine. Further, in the pavement of the galleries tombs were made, known by the name of forme, and these were covered with great slabs of marble with inscriptions.

The most precious monuments of the Roman catacombs, with the exception of the tombs of the martyrs, are the inscriptions and paintings, which constitute a monumental treasury of the primitive Roman Church. Christian epigraphy had its rise as early as the 1st cent. A.D., and at first was very simple and laconic in form; the primitive formulæ of acclamation and of invocation reduced themselves to short and affectionate salutations, 'pax,' 'pax tibi,' which later on became more complex— 'pax tibi eum sanctis,' 'vivas, vivas eum tuis,' and the well-known salutation, 'in pace,' etc., which became very frequent, especially after the beginning of the 3rd cent., and continued throughout the 4th and 5th centuries. The primitive inscriptions are generally distinguished by the beautiful form of the character employed, by the sobriety of their wording, by the use of the most ancient symbols, as, for example, an anchor (the sign of hope in Christ), and the sign of the cross, and by the large size of the marble slabs which shut in the loculi, and which, in the regions belonging to the 1st and 2nd cents., are very large indeed. Christian epigraphy was developed and transformed in the 3rd cent., during which the sad conditions of the times induced the Christians to restrict the language of the cemetery inscriptions within the most rigorous limit of the arean disciplina. During this century Christian symbolism attained its most lofty expression both in form and in phraseology. The dove figures the soul of the faithful who longs for the beatitude of Paradise, and holds in its beak an olive branch, which is the symbol of peace. The palm branch and the crown recall to one's thought the victories over human passion obtained during life, and the reward reserved for the faithful in heaven. The mysterious symbol of the fish, represented by the Gr. word IXOTE taken in an acrostic sense, expresses the conception: 'Jesus Christ, the Son of God, the Saviour ( Ἰησοῦς Χριστός, Θεοῦ Υίος, Σωτήρ). Bread, marked with the cross, and a basket, are Eucharistic symbols. In the phrases 'percepit,' 'accepit (gratiam),' allusion is made to baptism and to chrism. With the beginning of the 4th cent, and with the 'peace of Constantine,' Christian epigraphy appears in a triumphal dress. The monogram \$\pi\$, at first employed as a compendium scripture, came to be engraved as a triumphal sign in Christian inscriptions, which became longer and more flowery. Eulogi tic formula, perhaps not always merited, were ascribed to the dead, such as 'totius bouitatis,' 'totius innocentiae. the meantime inscriptions with consular dates, which in the first three centuries were rare, grew more frequent; these form a class of epigraphs very valuable for the study of cemetery chronology, and de Rossi used them in a masterly way in his study and restoration of the Imperial fasti.

In the second half of the 4th cent, the great historical inscriptions of Popes Damasus and Stricius appear, of which we have spoken above. In the 5th cent, cemetery epigraphy ceases; but, on the other hand, the inscriptions of the cemeteries above ground grow frequent, and these are distinguished from the others by the profixity of their wording, by their more decayed style of palacography, and, above all, by the form and dimensions

of the slabs. In these cemeteries above ground, moreover, Christian sculpture makes a show, and this is chiefly represented by sarcophagi of marble. Sareophagi are not common in the galleries and subterranean crypts, though they are found at times in the primitive hypogea, as in that of Acilii Glabriones in Priscilla, and in that called Vestibolo dei Flavii in Domitilla. But these cannot possibly be regarded as Christian sarcophagi, since there are represented upon them scenes from the cosmic and marine cycle, ornamental figures and representations of the vintage and of country and pastoral life—types, in a word, which the Christians had learned in the workshops from the pagans, and of which they took care to select those scenes which did not offend the principles of their faith or of Christian merals. True Christian sarcophagi are met with only in the 3rd and 4th centuries.

Christian art from the 4th to the 6th cent. is very rude. Upon the sarcophagi appear scenes referring to facts in the OT and NT, and these are, moreor less, always repeated in the same way on this class of monuments. The conditions of Christian painting are much the same. In the 1st and 3rd cents. it contents itself for the most part with indifferent and ornamental subjects, drawn from contemporary classic art, to which it closely approaches in the exquisite beauty of its artistic execution; such, for example, are the paintings on the vault of the vestibule of the Flavii in Domitilla, and the paintings in the chambers of the crypts of Lucina in Callixtus. At the same time, we have, even from the 1st and 2nd cents., paintings with subjects and symbols which are really Christian, as, for instance, the very ancient Madonna in the cemetery of Priscilla, the scene of Daniel among the lions in the vestibule of the Flavii, and the Eucharistic symbols and the figure of the Good Shepherd in the crypt of Lucina. The great development of Christian painting took place in the 3rd and 4th The paintings of this age, especially centuries. those which adorn the arcosolia and the crypts, are formed according to the funerary conceptions of the so-called ordo commendationis animae, that is, the prayers which the priest pronounced by the bed of the dying one, in commending his soul to God. These wonderful prayers of the most ancient Roman liturgy are accurately reflected in the arrangement of the scenes depicted on the lunette and on the vault of the arcosolium. The prayers express the thought of the liberation of the soul of the dead, just as Isaac was delivered from the hand of his father Abraham, Daniel from the lions' den, and the Three Children from the fiery furnace; and, in fact, we see in the paintings of the arcosolia the scene of the Three Children in the furnace, that of Isaac, and that of Daniel. With the eessation of cemetery sepulture this first period of Christian art comes to an end, and it is followed by that characterized by paintings in the Byzantine style, executed by the Popes in the historical crypts from the 5th to the 9th century.

It will be useful at this point to make a very brief reference to these historical crypts. By historical crypts are to be understood chambers where martyrs, historically known to us, were buried; for it is certain that great numbers of other martyrs were buried in the Roman catacombs, either alone or in polyandri, i.e. tombs for several bodies, of whom it may be said, to employ a Christian phrase, 'quorum nomina Deus seit,' and to these Damasus at times makes allusion in his inscriptions. In their origin the tombs of the martyrs were in simple cubicula, or in the galleries which, as we have said above, were altered, embellished, and enlarged from the 4th cent. onwards; to this period the Byzantine paintings belong, as we have

already remarked.

From the time when the exploration of the Roman catacombs commenced until the middle of the 19th cent., i.e. during the space of almost three centuries, only three historical crypts were found. Bosio, in 1619, discovered the historical crypt of SS. Abdon and Sennen in the cemetery of Pontianns, on the Via Portuensis; in 1720, Boldetti discovered that of SS. Felix and Adanctus in the cemetery of Commodilla, near the Via Ostiensis; and in 1845, Marchi discovered that of SS. Protus and Ilyacinthus in the cemetery of St. Hermes, on the Via Salaria Vecchia. The attempt was dis-couraging: one historical crypt per century, and

what is more, all discovered by mere chance.

De Rossi addressed himself, by means of a sure system, to the arduous work of discovering the historical crypts in the labyrinths of the cemeteries, making use, in the first place, of the *Hineraries of the Pilgrims*, and then of the data afforded by the monuments, as we shall now show. He searched those parts of the cemeteries where remains of constructions were visible, or where there were heaps of rubbish which had been precipitated from above, for these indicated the presence of some notable monument. It was in this way that he discovered the cemetery basilica of SS. Nerens and Achilleus on the Via Ardeatina. Another very important indication consisted in a number, more or less large, of luminaria arranged in series; for evidence that that region had been this was especially illuminated in order to render it accessible to the pilgrims, and was thus an indication of the existence of an historical crypt. This, in fact, he met with in the historical group of the tombs of the Popes and of St. Cecilia in the cemetery of Callixtus. Another decisive indication was found in the 'Damasan' inscriptions which were placed by Pope Damasus in the historical crypts. Finally, the presence of Byzantine paintings indicated that a crypt had been visited and frequented during the period in which ordinary sepulture there had ceased. By this happy method of divination, de Rossi was able to make numerous important discoveries in the Roman catacombs, leaving as an inheritance to his successors in these studies a wide field of scientific research.

We conclude this general exposition of the history and monuments of the Roman catacombs by expressing the fervent hope that the subter-ranean city of the martyrs will soon be able to hail the day in which all its monuments will come to light; they will thus constitute in their entirety the grandest collection which it is possible to desire

the grandest collection which it is possible to desire of the primitive monuments of Christianity.

1 While by far the most important and the best known catacombs are in or near Rome, there are a considerable number of others, not only in Italy, but also in Egypt (Alexandria), Northern Africa (Arch-Zara), Sicily (Spraeuse, Palermo, Grazia di Carini, Françapani, near dirgenti), Malta (Abbatiatad-Deyr, Tal-Libern), Meles (near Tryutii, in the valley of Keima), Lower Italy (Sorrento, Atripada, Cimitile, Sessa, Naples ia large number of the Carlon Company of the Carlon Carl catacomb of St. Vittorino near Aquila, Monte Leone, Bolsena, Chiusi, Caere, Nepi, Sutri, Sorrino Nova, Viterbo, Vulci, catacomb of St. Entizio near Soriano, Rignano), with which must be reckoned such suburban catacombs as those at Albano, Neni, Velletri, Soils, and Boccano. North of the Alps there are no catacomis, properly speaking (for a full list of catacomis, with considerable description and abundant references to the literature bearing on them, see N. Muller in  $PRF^3$  x. 894–818, \$185–850, \$25–851, \$563–\$560). Many of the extra-tlains catacomis are of relatively early Soul). Many of the extra-Italian catacombs are of relatively early date. though they were formed later than those in or near Rome. The oblest portions of the catacomb of St. Maria di Gest, near Giovanni, near the same city, may be a script as 320. The catacomb of Trypid, in Melos, dates from the 4th cent., and those in Malta mainly from the 4th and 5th centuries.

CATEGO CA

CATECHISMS (Angliean, Roman Catholic, Eastern Churches).—The words 'catechism' and 'catechize' are derived from the Greek κατηγίζων. a factitive of κατηχεῖν (κατά 'down,' ἡχεῖν 'sound'), which means 'to resound,' 'din in.' Το catechize means generally to give oral instruction, as distinct from instruction through the medium of books; and as such instruction is commonly given in the form of questions and answers, the word is especially used in the sense of systematic questioning. ecclesiastical use of the words is very early and continnons, but they are also often used of questioning of any kind. In its ecclesiastical application, the 'catechism' is used in two principal senses: word (I) of a system of oral instruction—a method of teaching; (2) of the contents of the instruction, especially of a document, generally drawn up in the form of questions and answers, either for the guidance of the teacher, or to be learnt by heart by the learners themselves.

I. Methods of teaching .- In the very early days of Christianity many persons must have been admitted to baptism after a very short instruction and examination in Christian doctrine. But it can hardly be supposed that any one can at any time have been admitted into the Church without some sort of profession of faith, and this would imply some previous instruction. It is also quite clear that at a very early period this instruction became systematic and thorough. Its substance can be gathered only indirectly; for all the documents that we possess were written for persons who had already received oral instruction, and it is not likely that they should describe it. The books of the NT were written, without exception, for instructed and baptized Christians, and were intended for their further edification in the faith They everywhere take for granted, but naturally do not describe, the earlier oral instruction that all their readers had received. Incidentally, however, we can gather a good deal as to its nature and extent. See art. CATECHUMENATE.

There are abundant indications that this catechetical instruction was systematically conducted and gradually developed during the first three centuries, though it is not until the 4th cent, that we find it fully described. Some account of it, as far as it could be explained to heathen readers, is given by Justin Martyr (Apol. i. 61). The importance attached to it may be gathered from the way in which the Catechetical School at Alexandria, the great centre of the intellectual life of the Church, is spoken of. The head of this school was

clearly regarded as filling one of the most important offices in the Church (Euseb. HE' v. 10, vi. 3, 14, 15, 26, 29). In the 4th cent, we have abundant information about the catechumenate, and also specimens of the actual instruction given to catechamens. The catechamenate was recognized as a definite status; those who were admitted to it were called 'audientes,' ἀκροώμενοι, and they were already regarded as in a sense Christians, though not as 'fideles,' and were allowed to be present at the preliminary part of the Mass, the Missa Catechumenorum, until after the sermon, Men often remained catechumens for years, and sometimes, as in the case of the Emperor Constantine, until their deathbed, though this was regarded as an abuse. In the normal course those who were to be baptized on Easter Eve gave in their names at the beginning of Lent, and went through a final course of instruction and preparation, which included the delivery of the Gospels and the Creed, performed with great solemnity. The most notable of the actual instructions that are extant are the Catecheses of St. Cyril of Jerusalem (A.D. 348), and St. Augustine, de Catech. Rudibus, de Fide et Symbolo, and Sermo ad Cute-Catechizing was recognized chumenos (c. A.D. 400). as one of the most important functions of the Christian ministry, but there was no special order of Catechists; the name denoted a function, not a class. St. Cyril, e.g., delivered his Catecheses partly as a deacon and partly as a priest. Nor, as a rule, were any special places set apart for the purpose of catechizing, though the Council in Frullo (97) mentions κατηχουμέναια.

As paganism gradually disappeared in Europe, and infant baptism became more general and eventually almost universal, the catechetical system was necessarily modified. The theory, however, did not keep pace with the practice. The instruction which was supposed to be given before baptism was given after it; but the baptismad Offices, even in the 8th cent., still assume that the catechmens are adults. In the course of the Middle Ages the ceremonies which preceded baptism were greatly shortened, and finally condensed into what formed practically a single service, though it was still divided into three parts, the Ordo fraciently Catechament, the Benedictio Lyque, and the Baptism itself. The words 'catechize' and 'catechism' were still applied to the abbreviated interrogations which formed part of the order of making a catechimen.

formed part of the order of making a catechimmen. For instance, Matthew Paris, in the year 1220, says in his account of the hapitsm of Prime Edward, afterwards Edward, if the hishop of Crinice learned bind, the Legate him, the Archbishop of Conterbury confirmed him, and by the king's desire the name of Edward was given him. As the answers were made on the child's behalf by the sponsors, the word 'cratechism' was sometiment used asceptizable to sponsors ship, and it was a question much debated whether the extection" were a lart to marriage (see Joannes de Janna, ap. Du Cange, s.r. 'Catechizar').

Meanwhile the substance of the actual instruction now given after baptism, and not as yet usually called the Catechism, remained much the same as it had always been. The Creed, the Lord's Prayer, and the Ten Commandments formed the nucleus of it; and the parish priest, when the parochial system became general, was the person who was made responsible for imparting it. Numerous injunctions of bishops and Councils insisted upon the performance of this duty. Bede in his letter to Eghert, the first archibishop of York, exhorts him to provide that all the priests in his diocese should most carefully teach the Creed and the Lord's Prayer to all the people, in Latin if they can understand it, and if not, in English (A.D. 734). The Council of Clavesho in A.D. 747 orders (c. 10) that priests should explain in the vulgar tongue the Creed, the Lord's Prayer, the solemn words used in the Mass and in Baptism, and also the

meaning of the Sacraments themselves. In A.D. 1284 the Constitutions of John Peckham, arch-bishop of Canterbury, order that all parish priests shall four times a year, on one or more holy days, explain in the vulgar tongue the Creed, the Ten Commandments, the Evangelical Precepts, the seven works of mercy, the seven deadly sins, and the seven sacraments. These directions are frequently referred to in the following centuries, and insisted upon by hishops and synods, c.g. by Thoresby and Neville, archbishops of York in 135 and 1466, and by Langham and Arundell of Canterbury in 1364 and 1408. These, however, are only a few examples out of many that might be cited both in England and on the Continent.

The regulations of the English Church about catechizing since the 16th cent. have been even more precise and imperative than before. rubrics of the Book of Common Prayer order all parish priests to catechize on the Creed, the Lord's Prayer, and the Ten Commandments, and the rest of the Church Catechism on every Sunday and Holy Day after the second lesson at Evening Prayer; and all persons who have the charge of the young are ordered to send them to church for this purpose. Any minister neglecting this duty is, by Canon 59, to be admonished for the lirst offence, suspended for the second, and excommunicated for the third. Parents and others who neglect to send their children are likewise to be suspended, and, if they persist, to be excommunicated. The exact method of instruction is not prescribed with the same precision or enforced by so severe penalties in other parts of the Western Church, but the responsibility of the parish priest is everywhere the same. The most elaborate of catechetical systems has grown up in France during the last two centuries, and it is commonly known as the Catechism according to the Method of St. Sulvice, from the church in Paris where the system has been specially elaborated. A complete course of instruction is spread over a period of about three years, and the weekly catechism consists of three main parts-the Questioning, which is recapitulatory and intended to exercise the memory; the Instruction, which is reproduced in the course of the week in written analyses; and the Gospel and Homily, which supply the moral and spiritual application of the lessons taught. This Method of the Catechism is being extensively introduced into England (see Dupanloup, Method of St. Sulpice, Eng. tr., Lond. 1890, and Ministry of Catechising, Eng. tr., Lond. 1890; S. Jones, The Clergy and the

Cuterhism, Lond. 1895).

2. Manuals of teaching, —Until the 16th cent, the word 'catechism' meant a system of teaching, and it was most commonly applied to the questions and answers in the Baptismal services which represented the catechetical instruction of the early Church. In the 15th cent, however, the term was also applied to the further instruction of children after their baptism, and then it was an easy step to apply it to the documents used in that instruction. Many manuals of explanation were in use in the

Many manuals of explanation were in use in the later Middle Ages; but, as was natural at a period when reading was not a very common accomplishment, they were more used by the clergy in preparing their instructions than by the people themselves. One of the most popular was the Speculum Christiani, which was one of the first books printed in England (see Gasquet, Old English Bible, London, 1897). Similar manuals are to be found in Continental countries. The production of such works was enormously stimulated by the religious controversies of the 16th cent, which was prolific of confessions of faith. These manuals had all kinds of titles, but the general term 'Catechism' came to be applied to them, and the word quickly

assumed the sense in which it is now most commonly used—that of a manual of religious teaching for the young, especially one in the form of questions and answers. One of the earliest examples of this use of the word was the 'Catechizon' drawn up by John Colet for St. Paul's School.

(1) The Anglican Catechism first made its appearance in the Book of Common Prayer of 1549. The way had been prepared for it by royal injunctions issued in 1536 and 1538, which ordered, as had so often been done before in episcopal and conciliar injunctions, that parish priests should teach their parishioners, sentence by sentence, the Creed, the Lord's Prayer, and the Commandments, and explain the same. Instructions in the form of dialogue also appeared, as in Marsball's Primer in 1534.

The authorship of the Catechism in the Common Prayer Book is quite uncertain. It has been ascribed, on insufficient evidence, to several persons: to Thomas Goodrich, bishop of Ety, because he had the 'Duties' inscribed on tablets in his plance; to John Ponet, bishop of Rochester and afterwards of Winchester, because he wrote another Catechism; and to Alexander Novell, second master at Westminster School and afterwards dean of St. Paul's, because he also wrote Catechisms, and because Izaak Walton (Compl. Anyl. i. 1) definitely states that he 'made that... Catechisme which is printed in our good old service books.' But this was written in 1653, and, as Nowell's catechisms were well known, he might easily have been credited wrongly with the authorship of the Church Catechism also. Walton adds that both Convocation and Parliament commissioned him to make it, which was certainly not the case. And contemporary and intermit evidence is allogable adverse. Obowell's authorship and the mission of the contemporary and the mission of the common Prayer of 1549, except that Cranmer must have taken a principal part in it. Very probably he did almost the whole of the work himself, and, at any rate, it is quite uncertain who helped bin, or how much they contributed. There is some evidence that the book was examined and approved by others, but very few details are known.

The Catechism, as it appeared in 1549, did not contain the concluding section about the Sacra-ments. This was added in 1604 by royal authority, in consequence of a wish expressed by the Puritans at the Hampton Court Conference; and the wbole Catechism, thus enlarged, was sanctioned, with some trifling alterations, by Convocation and Parliament in 1661-62. This is the only authorized Catechism in the English Church. It was intended in the 16th cent to supplement it by more advanced manuals. A 'Short Catechism commended to all Schoolmasters by royal authority was published anonymously in 1553, but was believed to be the work of Ponet (*Orig. Lett.*, Parker Soc. lxxi.). The royal injunction sanction-ing its use states that it had been submitted to certain bishops and others. It is reprinted in Liturgies, etc., of Edw. VI. (Parker Soc.). In 1561 the bishops agreed that two other catechisms should be prepared, one more advanced, and one for schools. In 1563, Nowell sent the MS of his Larger Catechism to Cecil, stating that it had been approved by the clergy in Convocation; but it does not appear to have been published until 1570, when it was also translated into English. Many editions of it appeared, and it must have been very extensively used. It was re-published by W. Jacobson, Oxford, Not long afterwards Nowell published his Middle Catechism, which also passed through many editions, and was translated into Greek and English. A third work, the Catcchismus Parvus, the earliest extant edition of which is dated 1574, closely resembles the Church Catechism, and this is one of the grounds on which Nowell is supposed to have been the author of the latter work. is far more probable that he simply translated the Church Catechism into Latin, with additions of his own. Overall, dean of St. Paul's, who is believed to have prepared the section about the Sacraments in 1604, made use of these earlier works. In the latter half of the 16th cent., Continental Catechisms, such as those of Erasmus, Calvin, and Bullinger,

were also much used in England.

(2) The Catechism which has the highest degree

of authority in the Roman Church is that which is called the Catechism of the Council of Trent, or the Roman Catechism. The Council of Trent met in 1545 and ended in 4563. It passed a great number of decrees on points of doctrine, and towards the end of its sittings it ordered a Catechism to be prepared, which was to be translated into the vulgar tongue and taught by parish priests. After the close of the Council, Pope Pius IV, appointed certain distinguished theologians to prepare such a Catechism. They were Calinius, archbishop of Zara; Foscarari, bishop of Modena; Marinus, archbishop of Lanciano; and Fureiro, a Portuguese. The last three were Dominicans, S. Carlo Borromeo also assisted in the work. The Catechism was finished in 1564, and appeared in 1566, with the title 'Catechismus Romanus ex decreto Concilii Tridentini Pii v. Pont, Max, jussu editus. Romae. in aed. Pop. Rom. ap. Ald. Manutium.' This Catechism has not the authority of the Conneil of Trent, for it was constructed after the close of the Council; but it was intended to embody the results of the deliberations of the Council, and it was published by the authority of the Pope. It is the most authoritative document of the kind in the Roman Church. It is divided into four parts, dealing with Faith, the Means of Grace, the Decalogue, and the Lord's Prayer. It is a large doctrinal treatise, intended to be used by parish priests in preparing their instructions, and not for the use of the children themselves. Innumerable catechisms for the use of learners have been and are in use. As a rule, each diocese, especially in France, has its own catechism, sanctioned by the bishop. This system has obvious disadvantages as well as advantages, and at the Vatican Council of 1870 it was proposed that a single catechism should be prepared and authorized for universal use. It was to be in Latin, and translations were to be made for all countries. The question was delated at considerable length, and there was a good deal of opposition to the proposal on various grounds, especially because of the different needs and circumstances of different dioceses. It was also pointed out that at least three Catechisms of different grades would be required for any complete system of teaching. A considerable majority was in favour of the principle of the scheme, but no final conclusion was arrived at before the end of the Council, and no practical steps have been taken since.

(3) In the Eastern Churches the catechetical systems have not developed to the same extent as in the West. This may be due partly to the fact that it is not usual in the East to defer the Confirmation and first Communion of infants who are baptized, as has come to be the practice in the West. There are, however, many catechetical works in use. In 1721 the synod of the Russian Orthodox Church ordered the composition of three small manuals for the use of the young and ignorant, and there appeared by order of the Czar Peter I. the 'First Instruction of Youth, containing a Primer, and a short exposition of the Decalogue, Lord's Prayer, and Creed.' The best known Eastern catechism is that of Jeromonach Platon, metropolitan of Moscow, which was composed in 1765 for the use of the heir to the throne, the Grand Duke Paul Petrovitch, The 'Complete Christian Catechism of the Orthodox Catholic Eastern Church,' which is now in common use, is founded upon this work of Platon. An English translation may be found in R. W. Blackmore, Doctrine of the Russian Church, 1845.

CATECHISMS (Lutheran). - Long Luther undertook the composition of his Catechisms of 1529, he had been active in the field of catechetical literature and practice. As early as the year 1515 we have from his pen expositions of the Decalogue and the Lord's Prayer. In 1519 he states that he was daily going over the Command-ments with children and laymen ('pueris et rudibus pronuncio'). In 1520 he published a Short Form of meditation on the Ten Commandments, the Creed, and the Lord's Prayer.

Three things, he says, 'a man must needs know to be saved... The Law shows man his disease... the Creed tells him where to find his medicine, the grace... the Lord's Prayer teaches him how to seek and to appropriate it.'

From Luther's letters to Nicol. Hausmann, of 2nd Feb. and 26th March 1525 (see Th. E. L. Enders, Martin Luther's Briefwechsel, y. 115, 144), it appears that the Wittenberg theologians had charged Jonas and Agricola with the preparation of a Catechism for the young. What became of their work is not known. In August 1525, Hausmann, in a letter to Stephan Roth, laments that the Catechism had not yet appeared, and wishes that Jonas may madertake it and bring it out speedily. In October 1525 the 'Little Book for Laymen and Children' appeared ('Das Biedlein für die Lien und die Kinder' [Monnocuta für die Laien und die Kinder [Monumenta. Germania Padagogica, vol. xx. l, which holds ouite a prominent place in the catchetical literature of those times. It contains the five parts of the Catechism—Decalogue, Creed, Lord's Prayer, Baptism, Lord's Supper-almost exactly in the form found in Luther's Enchiridion of 1529. The author is not positively known, but may have been John Bugenhagen. About the same time, Luther had evidently made up his mind to undertake the preparation of a Catechism of his own, though he had not yet the time for it (see letter to Hausmann of 27th Sept. 1525, 'Catechismum differo, vellem enim uno opere simul omnia absolvere' [Enders, v. 2461). In his German Mass (Deutsche Messe und Ordnung Gottesdensts), composed in the autumn of 1525 and published in Wittenberg in 1526, he says:

What we need first of all is a plain, good Catechism . . . for such instruction I know no better form than those three parls which have been preserved in the Christian Church from the beginning—the Ten Commandments, the Creed, and the Lord's regiming—the Pen Communicates, the Creek, and the Lorus Fraver—which contain, in a brief summary, all that a Christian ought to know. To these he adds Raptism and the Sacrament of the Altar, and lay it down that these five parts ought to constitute the catechedical lessons in the matin services on Mondays and Tuesdays.

In compliance with this request of Luther, here and there in the free cities of the German Empire special services were instituted for the young, and various Catechisms were published by men like Johannes Bader, Joh. Brentius, Wolfgang Capito, Conrad Sam, Wenzeslaus Linck, Althammer, Agricola, Occolampadius, Caspar Gracter, and Conrad Sam, Caspar Löner. Most of them found only local and temporary acceptance in the churches of the Reformation. On a larger scale and more systematic are the provisions made for the religious instruction of the young in consequence of the visitations instituted by the authorities of Church and State in the territories of the German Reformation, especially in Saxony (1527, 1528). The impression made upon Luther by these visitations is set forth in his preface to the Small Catechism:

'Alas, what misery I beheld! The people, especially those that live in the villages, seem to have no knowledge whatever of Christian doctrine, and many of the pasters are ignormal and incompetent teachers. . . They all maintain that they are Christians, that they have been baptized, and that they have received the Lord's Supper. Yet they cannot even recite the Lord's Prayer, the Creed, or the Ten Commandments; they live as if they were irrainoual creatures, and now that the Gospel has come to them, they grossly abuse their Christian liberty.'

There could be no further delay in Luther's own work on the Catechism. About the middle of January 1529 we find him engaged on the Large Catechism, which treats the catechetical material in the form of sermons or lectures. He writes to Martin Görlitz in Brunswick; 'Modo in parando Catechismo pro rudibus paganis versor' (Enders, vii. 43). But, while he was engaged in the composition of this larger work, he issued the Small Catechism in two sets in the form of wall charts (tabulæ), according to the custom of the times. The first set was ready by 20th Jan. 1529, as we learn from a letter of Diaconus Rörer in Wittenberg to Stephan Roth in Zwickau: 'Affixas parieti video tabulas complectentes brevissime simul et crasse Catechismum Lutheri pro pueris et familia.'
This first set contained the Ten Commandments. the Creed, and the Lord's Prayer, together with the Benedicite and Gratius. The second set appeared about the middle of the month of March. when people were preparing for the Easter Communion. In a letter of 16th March, Rörer describes this set as 'Tabulae Confessionis, et de Sacramentis Baptismatis et Corporis et Sanguinis Christi' for the more advanced Christians. The contents of both sets of these tabula appeared first in book form in Hamburg, in the early part of April, in the Low German dialect. On 16th May 1529 the Small Catechism appeared in High German, in an edition furnished by Luther himself, and was soon followed by a second edition. No copies of these original Wittenberg editions have thus far been discovered. They are known only from reprints, issued at Erfurt and Marburg. Besides the material of the tabula, these editions contain the Preface, the Morning and Evening Prayers, the Table of Duties, and the Order of the Marriage Service. The third edition adds also the Order of Baptism (June 1529). Additional editions, super-intended by Luther himself, and here and there revised by him, appeared in the years 1531 (containing for the first time the present form of instruction concerning Confession, and the explanation of the introduction to the Lord's Prayer), 1535, 1536, 1539, and 1542.

While Luther's Small Catechism, the Enchiridion, was at first simply one catechism among many, it very soon gained the ascendancy over all other text-books for the instruction of the young. In 1561 the Lüneburg Articles number it for the first time among the Symbolical Books of the Lntheran Church, together with the Augsburg Confession, Apology, and Schmalkald Articles. The fact that the Heidelberg Catechism by Olevianus and Ursinus (1563) was, from the beginning, recognized as one of the confessional standards of the Reformed Church may have helped to establish Luther's Catechisms as official and authoritative documents of the Lutheran Church, Both the Large and the Small Catechism of Luther were formally incorporated into the Book of Con-cord of 1580. Since then Luther's Small Catechism has formed the basis of numerous fuller expositions in questions and answers published in the different territories of the Lutheran Church.

As early as the year 1520 two Latin translations of Inther's Small Catechism appeared, the second of which, by J. Sauermann, Canopicus in Breslau, was received into the *Book of* Concord. John Mylins published a Greek translation (Basel, 1585); John Clajus prepared a polyglot edition—in German, Latin, Greek, and Hebrew—which appeared in 1572. In the

Danish and Norwegian languages it was published in 1522, and officially introduced, with a preface by J. Bugeningen, in 1528. The first Swedish translation was probably prepared by Larrest Swedish translation was probably prepared by Larrest Front in 1548. The carliest priot that has been preserved is from the year 1572. Its official introduction followed in 1595, but not until 1686 do we find its general use in Sweden. In the lomans Willents' Liduanian translation in 1517, in Abel Wills Old Prussian traoslation in 1561, and in J. Rivius's Lettic version in 1568, besides a version in the non-lude-Germanic Esthonian in 1553. In all these four languages the Small Catechism was the first literary monument, and it is practically the sole relic of the extinct Old Prussian dialect.

the sole relic of the extinct Old Prussian dialect.

In the year 1548, Archibishop Cranmer prepared an English translation in his Catachismus, published by Gualterus Lynne, which is in reality an English version of the sermons on the Catechism (Kinderpredipten) attached to the Brandenburg Aurenberg Agenda of 1535, sunning up each sermon with the Catechism (Kinderpredipten) attached to the Brandenburg Aurenberg Agenda of 1535, sunning up each sermon with the Catechism (Kinderpredipten) attached to the Brandenburg Aurenberg Agenda of 1535, sunning up each sermon with the Landace and missionary, John Campanius, who preached the gospel from 1648 to 1648 at Tinicum, near Philadelphia, Pennsylvania, translated the Catechism into the Language of the Delaware Iodians (the 'American-Virginian language'). It was published in Stockholm, at the expense of King Charles M., in the Evangel, Luth. Church in the U.S., p. 82). Count Ziazzmott, the Evangel, Luth. Church in the U.S., p. 82). Count Ziazzmott, and the Charles of the Catechism to be printed by Caristoph Sauer, in German Catechism to be printed by Caristoph Sauer, in Germanown, Philadelphia, in 1744. The first American edition issued with the approval of the Lutheran pastors was prepared by Peter Brunnboltz, and printed by Benjamin Franklim and J. Boehm in 1749. The Erunnboltz, possibly with the assistance of Peter Koch, a prominent Swedish Lutheran in Philadelphia, in 1749. The second was made under the asspices of the Swedish Provost Wrangel, the friead and collaborator of Henry Melchior Milhelberg, the patriarch of the Lutheran Church in America, in 1761. In 1816, Phil. F. Mayer, pastor of the first English Provost Wrangel, the friead and collaborator of Henry Melchior Milhelberg, the patriarch of the Lutheran Church in America, in 1761. In 1816, Phil. F. Mayer, pastor of the first English Provost Wrangel, the German Council of the Extension which, nore than any other, determined the text of the accepted English version in America. It was carefully revised by C. F.

The truly conservative, catholic, and eeclesiastical character of Luther's Reformation stands out most prominently in his catechetical work. builds on the old solid and popular foundations, found in those three principal parts—the Deca-logue, the Creed, and the Lord's Prayer. He shows himself perfectly familiar with the best catechetical tradition of the Church of preceding centuries. In some details of his exposition, especially the treatment of the Lord's Prayer (the third part of the Enchiridion), we recognize almost literal reminiscences of the catechetical literature of the Church, as far back as Tertullian and Cyprian. It may be claimed that the whole catechetical work of the first fifteen hundred years of the Church reaches its climax in Martin Luther's Small Catechism. But, with all the conservative features which characterize Luther's catechetical work, there are some which are original with him, and for which he deserves full credit as the first great restorer of Pauline theology in the Church. Most important and significant in this respect is the order in which he arranged the popular three parts—Commandments, Creed, and Lord's Prayer, giving the first place to the Law, as the schoolmaster to bring men to Christ, and assigning the central and dominating place to the Creed. other Catechisms-Roman, Greek, and Reformed -differ from Luther's arrangement in this respect.

Again, he gave up the traditional division of the Creed into twelve articles, based on the legend of

its Apostolic origin, which is retained to the present day in John Brentins's Württemberg Catechism. Instead of this he divided it, from a Traintarian point of view, into three articles, and by this arrangement the second article, with its confession of Christ, the Redeemer, becomes the very heart

and soul of the whole Catechism.

(a) The first part of Luther's Catechism treats of the Law, under the form of the Decalogue, differing in this respect also from the traditional practice of the medieval Church with reference to the 'Mandata'. The Decalogue, however, is modified by him in the spirit of the New Testament, omitting its transient Israchitie features which belong to the Mosaic dispensation, as in the form of the First, the Third, and the Fourth Commandments, according to the Augustinian numbering of the Ten Commandments. His principal aim in the treatment of the Law is its so-called second use or 'usus elenchthicus,' to lead men to a knowledge of sin.

(b) The second part of the Catechism takes for its text the Apostles' Creed, which, except in the Greek Church, was always used 'ad fidei instructionem' (the Nieene Creed being 'ad fidei explicationem', and the Athensian 'ad tidei defensionem'). Luther's treatment of the Creed combines the objective and the subjective side of faith, the 'fides, quae creditur' and the 'fides, quae creditur'. The great works of God—Creation, Redemption, and Sanctification—are set forth as the fundamental facts of our salvation; not, however, as purely objective, abstract, doctrinal statements, but with all the fervour of personal conviction and appropriation. There is no dogmatism or scholasticism in this presentation of Christian doctrine in the 'Layman's Bible,' as the Enchiriation has frequently been called.

(c) In the third part Luther treats the Lord's Prayer as the fruit of justifying faith, the embodiment and demonstration of the new life, in the spirit of sanctification and adoption. It sets forth the life of the Christian as the life of the child of God, with all its privileges and duties, its needs

and dangers, its hopes and resources.

(d, e) To these three fundamental parts are added the fourth and fifth, on Baptism and the Sacrament of the Altar, with the connecting link, on Confession and Absolution, 'concerning which a Christian must also be properly instructed.' Here the language of the Catechism, otherwise so simply objective and thetical, becomes of necessity more antithetical and controversial, in opposition to various deviations from what Luther held to be sound doctrine on these points. But even here everything culminates in simple living faith. With the requirement of 'truly believing hearts' the fifth and last part of the Catechism Coses.

and last part of the Catchism closes.

catechisms (Heidelberg and Westminstere,—i. The second (next to Luther's) great Catechism of the Protestant Churches is the Heidelberg Catechism. It was prepared by Zacharias Ursinus and Caspar Olevianus, by com-

mand of Frederick III., Elector of the Palatinate. and was published in 1563. Ursinus had prepared a Summa Theologia and a Cato lesis Minor, which were made the basis of the work. The advice and eo-operation of the theological faculty and of the Superintendents and court-preachers were secured, and before publication the Catechism was approved by a Synod of ministers and teachers assembled by the Elector at Heidelberg. It cannot be called a wholly original work, but was the fruit of a long catechetical development. Leo Juda's Christliche klare u. einfalte Zuleitung in den Willen u. in die Gnad Gottes, 1534, his Kurtzer Katechismus, 1535, and his Brevissima Christ, relig. formula of 1538 or 1539; Bullinger's Hausbuck of 1558, and the Summa, Catechesis pro adultioribus scripta of 1559; Calvin's Generan Catrohism of 1545, and the Emden Catechism of 1554—are among the sources. Traces of the influence of Loner, Urbanus Rhegius, and Morbanus have been found in it. Though avowedly written to supplant Luther's teaching, the influence of his Catechism is evident. order of the book is due to Melanchthon's Loci, and Reu has traced much of its arrangement to Eine kurtze ordenliche Summa der rechten waren Lehre, a eatechetical work published by Nikolaus Gallus in 1558. The justly famous first question 'What is thy highest comfort in life and death? is found in previous works of this sort, and the answer may find its original in the Nuremberg Catechism-Sermons of 1533 (translated under Abr. Cranmer as A Short Instruction into Christian Religion, 1548):

And this, my dear children, is our highest comfort, that Christ is our Lord, and we are His own, for therefore will He protect and eliver us, so that, though we be sinners, He will forgive us our sin, for He has made satisfaction for sin, and, though we die, He will make us to live again, for He has overcome death, and even though we came into hell, hell could not hold us, because He has burst the bonds of hell. Therefore, because we have such a mightly Lord, we cannot need anything (Murchall, Kinderpredgen, on Art. 2 of the Creed).

The Heidelberg Catechism probably aimed at being a enhmination of the catechetical development of the Evangelical Church. Its rejection of the Latheran doctrine of the Real Presence of Christ, and of the meaning of His Exaltation, is pronounced; and in the 3rd ed. an 80th question was inserted, it is said at the instance of the Elector, in which 'the popish Mass' is condemned as 'at bottom nothing else than a denial of the one sacrifice and sufferings of Jesus Christ, and an

accursed idolatry.'

This Catechism was translated into many tongues, and is the most widely used of all 'Reformed' Catechisms. The best English version appeared in New York (Seribners) in 1863. It contains 129 questions and answers. Questions 3-11 treet of the Sin and Misery of Man; 12-85 of Redemption by Christ; 86-129 of the Thankful Life of the Christian. In the Second Part the Articles of the Christian. In the Second Part the Articles of the Christian. In the Second Part the Articles of the Christian. Then follow the two Sacraments. The Commandments are explained in the Third Part under the head of Thankfulness; and this is followed by the Lord's Prayer. While the Heidelberg Catechism retains the form of a Confession in its answers are, they are too long and minute for the memory or use of children. On the other hand, it surpasses Luther's Catechism as a systematic presentation of Christian doctrine.

2. Westminster Catechisms. - An English translation of Calvin's Genevan Catechism was used and repeatedly printed in Scotland. John Craig, minister at Aberdeen and afterwards at Edinburgh, prepared a Larger (1581) and a Smaller Catechism (1591). The latter explains the Apostles' Creed, the Commandments, the means of grace, and the way of salvation. It consists of short and simple questions and answers. It was finally superseded by the Shorter Catcehism of the Westminster Assembly (see Schaff, Creeds of Christendom, i. 728 ff.). This is the third of the great Catcehisms of the epoch of the Reformation. The Larger and Shorter Catechisms were finished in 1647, approved by Parliament 15 Sept. 1648, and adopted by the General Assembly at Edinburgh in July of that Schaff says that the Larger Catechism was chiefly the work of Anthony Tuckney, Professor of Divinity and Vice-Chancellor at Cambridge. He adds that it is based on Ussher's catechetical Body of Divinity, and on the Com-pendium Theologia (1626) of Johann Wolleb of Basel (see Schaff, loc. cit., and in PRE2). Shorter Catechism is a condensation of the other; 'its concise and severely logical answers are traced to the Rev. John Wallis, M.A., an eminent mathematician.' It begins with the celebrated question, 'What is the chief end of man? glorify God, and to enjoy Him for ever'; defines God, and states the doctrine of the Trinity; tells of the fall and misery of man; explains the offices and states of the Redeemer; and then analyzes the work of the Holy Ghost, effectual calling, justification, adoption, and sanctification. The Apostles' Creed is not professedly explained, but is printed after the Commandments and the Lord's Prayer, at the end of the Catechism. The Commandments set forth 'the rule which God at first revealed to man for his obedience.' All the Reformed Catechisms agree with the Greek Church (against the Roman and Lutheran) in making know one not make unto thee any graven image, etc., the Second Commandment, and comprising in the Torth both prohibitions of coveting. The 59th the Roman and Lutheran) in making 'Thou shalt and 60th questions assert the Divine appointment of the first day of the week to be 'the Christian Sabbath,' forbid 'all worldly employments and recreations on it,' and command the 'spending the whole time in the public and private exercises of God's worship, except so much as is to be taken up in the works of necessity and mercy.' Under the Eighth Commandment (Q. 74) is required 'the lawful procuring and furthering the wealth and outward estate of ourselves and others.' The proper use of the Word and the Lord's Supper is insisted on. There is a brief explanation of the Lord's Prayer.

The Shorter Catechism is Calvinistic, not only in its formal statements of doctrine, but in every reflexion it contains of the controversies of the time: 'God having out of His mere good pleasure, from all eternity, elected some to everlasting life (Q. 207); and 'The only Redeemer of God's elect' (Q. 21); but it nowhere urges the eternal reprobation of the non-elect. Schaff (op. cit. i. 787)

commends and criticizes it thus:

"Itlar surpasses them [Luther's and the Heidelberg Catechism] in clearness and careful wording, and is better adapted to the Scotch and Anglo-American mind, but it lacks their genial warmth, freshness, and childlike simplicity... It deals in dogmas rather than facts. It addresses the disciple as an interested outsider rather than as a church-member growing up in the murture of the Lord. Its mathematical precision in definitions, some of which are almost perfect, though above the capacity of the child, is a good prevaration for the study of capacity of the child, is a good preparation for the study of theology, 1

LITERATURE.—Besides the literature mentioned throughout the article, see Schaff, Creeds of Christendom, i. 753 f., and the literature at art. Confessions. EDWARD T. HORN.

CATECHUMEN, CATECHUMENATE.-The word 'catechumen' is derived from the Gr. word  $\kappa a \tau \eta_{\chi} \epsilon \bar{\nu}$  ('instruct,' lit. = 'din into the ear'), which occurs 7 times in the NT (Lk 14, Ac 1828  $^{21}$   $^{21.24}$ , Ro  $^{218}$ , 4 Co  $^{14}$ 9, Gal  $^{69}$ ), and whose use in these passages illustrates its very early application to those who were subjected to careful and systematic instruction in Christian doctrine, with a view to being admitted into the body of the Church. This preparation is actually indicated in germ also by the very early insertion of v. 37 into the account of the baptism of the Ethiopian cunuch (Ac 826ff.), and by vv. 31. 32 in the account of the baptism of the jailer and his household at Philippi (Ae 16295.).2

Such systematic instruction in religion would be quite familiar, at least to the converts from Judaism; for not only were there schools attached to most of the synagogues, in which the young were carefully educated by catechetical methods, with the OT Scriptures for text-book, up to the age of twelve or thereabouts, but also there is little doubt that proselytes (i.e. Gentile converts to Judaism) received catechetical instruction certainly before, and perhaps after, their admission

as such,3 As time went on, it would soon be necessary to develop the instruction and prolong the period of preparation, though we have but scanty records remaining to us until we reach the 3rd century. Such as we have, however, are satisfactory so far as they go. The Teaching of the Twelve Apostles provides (in its first six chapters) instruction in practical rather than doctrinal subjects, and then proceeds (ch. 7): ταῦτα πάντα προειπόντες, βαπτίσατε, κ.τ.λ. . . . κελεύσεις δε νηστεύσαι τον βαπτιζόμενον προ μιᾶς η δύο. Here, then, we have (probably in the 2nd cent.) a definite course of instruction laid down for catechumens in that portion of Christendom to which this treatise belongs, and the duty of preliminary fasting enjoined; and there were probably special reasons why the practical rather than the dogmatic side was insisted on. Again, in Justin Martyr's Apology, i. 61, we read as follows : ὅσοι ἄν πεισθῶσι καὶ πιστεύωσιν άληθῆ ταῦτα τὰ ὑφ' ἡμῶν διδασκόμενα καὶ λεγόμενα εἶναι, καὶ βιοῦν ούτως δύνασθαι ύπισχνώνται, εξχεσθαί τε και αίτειν νηστεύοντες παρά τοῦ θεοῦ τῶν προημαρτημένων ἄφεσιν διδάσκονται, ήμων συνευχομένων και συννηστευόντων αὐτοῖς. "Επειτα ἄγονται ὑφ' ἡμῶν ἔνθα ὕδωρ ἐστί. Here similar evidence is afforded, together with the addition of prayer for forgiveness of sins, though this is really implied in fasting.

A little later than this, but early in the 3rd cent., we come upon a considerable body of evidence as to the care that was then taken with the preparation of catechumens. Converts in those days, and for some time to come, were still mostly adults, and a good many of these never proceeded to Baptism itself until they were at the point of Not later than the 2nd cent., since it is quoted by Irenæus

Not later than the 2nd cent, since it is quoted by Ireneus (Herr, III), xii. In each of the cases quoted some preliminary instruction was obviously given, though the special circumstances reduced the period to a minimum. It is to be noted also, as Frac (New Hist. of Be. of Com. Prayer, p. 657) points out, that 'a large proportion at least of the early converts had already had the training of Judaism as their schoolmaster to bring them unto thist. The same author also suggests that 'vhen St. Faul saxs (I Co 1447) that it was not his work to baptize, he . . . has in view a system of teaching and training preparatory to baptism (p. 558 n.).

3 'One might be tempted to find evidence of carly catechetical

5 \* One might be tempted to min evidence or early categories. In struction in such passages as Ps 15. 2937, 313 \*13, 18 334-16 etc., In Harnack's opinion, we have in Διδ. 1 \*8s 2-52, and fragments in chs. 8 and 13, a book of instruction for Jewish proselytes called "The Two Ways" (F. C. Porter, art. ' Proselyte' in HDB 4 Cf. A post, Const. vii. 22.

This is still required of adults in the English Church.

<sup>1</sup> For minor Catechisms of the Reformation and subsequent periods, see art. Convessions.

death (e.g. the Emperors Constantius and Constantine). No doubt, this was in part due to an exaggerated fear of post-baptismal sins and loss of innocence, but it must also be remembered that the state of the heathen world was such as to make it extremely difficult for the ordinary person to conduct himself with consistency as a Christian, and it was therefore most important that catechamens should be as thoroughly grounded as possible in Christian principles.1 There must also have been frequent cases of relapse into sin in the ranks of the catechnmens, which required punishment and postponement of baptism (see Bingham, Ant. x. ii. § 17). An extreme instance of the tendency to Puritanical strictness is found in the history of the early Syrian Church, where, even until the time of Aphraates in the 4th cent., baptism appears to have been 'a privilege reserved for celibates'; or, in other words, it was as a rule postponed till a period in life when men and women felt disposed to live separately.<sup>2</sup> Hence the Christian community consisted of baptized celibates,<sup>3</sup> together with a body of adherents who remained outside, and were not really members of, the body.

But our concern is chiefly with other parts of Christendom, and there by the beginning of the 3rd cent. the writings that are extant give us a clear idea upon the subject. In the first place, modern researches seem to show conclusively that there were only two grades among those who were unbaptized: (i) catechumens pure and simple, i.e. adherents to Christianity who were, however, looked upon as members of the community (e.g. Can. Hipp. 63, 64); (2) catechumens who sought bantism, and were therefore being subjected to a definite course of instruction with a view thereto. These latter were called φωτιζόμενοι, competentes, electi, and the like.4 The proper time for their preparation was the season of Lent, so that they might be ready for the solemn administration of the sacrament of baptism on Easter Eve. But as baptism might, for one reason or another, be postponed till later on in the Easter season, and as Whitsunday was the end of that period, the latter festival was looked upon as the second great annual occasion for admission. In the East the Epiphany, which was always associated with our baptism in the Jordan, was also allowed, and sometimes in the West as well. After that, Christmas and other festivals were added, in spite of Papal disapproval.

The first portion of the preparatory period was occupied with three kinds of preparation: 5 (t) instruction in what they must give up (the renunciation) (see art. ABRENUNTIO); (2) instruction in what they must believe (the faith); (3) a series of exorcisms by which the evil spirits were to be driven out of the candidates.<sup>6</sup> A list of names

1 To the same considerations must be attributed the multiplication of forms and ceremonies which is so noticeable in connexion

with baptism in the medieval rite.

2 See Burkitt, Early Eastern Christianity, 1904, p. 125 ff. The \*See Burkut, Latin Enserin Caristiania, 1884, p. 12-14. 100 whole question is fully discussed by him, the compares similar tendencies among the Marcionites (Tert. adv. Marc. iv. 34), the Manickans, the Albigenses, and the Buddhists.

Asse Duchesne, Orig. A not formed a kind of monastic A See Duchesne, Orig. A new Level. (Enz. t. p. 250), who quotes F. X. Funk, Thou, Uncertactor, 1884, p. 41 ff., as having established that the old idea of their division into four classes is erroneous. It may be added that the case of penitents is, as it were, the case of those who have been reduced to the rank of catechanens, and that the same author (see Duchesne, op. cit. 450 n.) throws doubt on the universality of the four classes in their case even in the East, while in the West it was never 19 The decoups were successful where the control of the control of the control of the case of the case when the case when the case of t

The deacons were specially charged with this work (Can. Hipp. 61), but care had to be taken that they too had been elicitly instructed is a samploures photon earny/ferres κατογείτωσαν ότι περί ψυχής ἀνθρώπων το έργον (ps.-Clem. Ερ. ad Jac. § 13).

<sup>6</sup> The Catechetical School at Alexandria and similar institu-VOL. 111.-17

was carefully drawn up of those who were to be admitted to this course. Then by Thursday in Holy Week those who satisfied the bishop were finally determined upon, and after fasting on Friday presented themselves on Saturday morning for the last act of preparation before baptism itself, which would normally take place that same evening. At this last preliminary service there were three eeremonies: (1) the concluding exorcism, with imposition of hands over the candidates as they knelt facing the east; (2) the exsufflation, or breathing into their faces; (3) the effecta, each person being touched with spittle (or oil) on the mouth, cars, etc., in imitation of our Lord's action in Mk 731-37.

If we pass on one hundred years later, to the beginning of the 4th cent., we reach a period in the history of the Church when peace and the cessation of persecution naturally added large numbers to the Christian body, and produced further developments in the regulations for the catechumenate. The same outlines of preparation in the earlier and the later stages are still observed both in the East and in the West (at Rome and in 'Gallican churches), but the whole system is more systematic and definite.2

During the course of instruction, a kind of examination was held from time to time, often called scrutinium; by the 7th cent. there were as many as seven of these scrutinia, which began in the 3rd week of Lent. The Creed, the Lord's Prayer, and other parts of Christian dectrine (traditio symboli) were learnt by heart. Various portions of the Scriptures were read and explained, especially from the historical and moral books (see Aug. de Cut. Rud.). What are now called the Apocrypha were also used for this purpose (Athan. Fest. Ep. 39; ps.-Athan. Synopsis Script. sucr.), more particularly, it seems, the Book of Sirach (Can. Apost. 85). At Rome there was, at all (Can. Apost. 85).3 At Rome there was, at all events later on, a formal instruction in the four Gospels, called apertio aurium, and a curious ceremony of administering salt to the candidates. They were also universally admitted to Church assemblies and to the first part of the Eucharist (i.e. up to the missa [=missio] catechumenorum), though actual instruction in the doctrine of Holy Communion was mostly withheld till after

It must, however, be remembered that, though these ceremonies continued and were even, as has been said, probably added to in process of time, and though the first part of the baptismal service was still called in the liturgical books ordo ad catechamenum faciendum, the rapid growth of the practice of infant baptism, which followed upon the establishment and spread of Christianity, soon led to the practical decay of the catechumen system, Comparatively few adults were baptized, but the rites and forms that had been elaborated for them were not adapted to the new circumstances, and babes in arms were treated as if they were in full tions elsewhere were, no doubt, in part, though not exclusively, intended for the benefit of catechamens (in the technical

lectures of Cyril of Jerusalem, St. Angustine (for Africa), St. Ambrose (for Milan), etc.

3 Cyril of Jerusalem (Catech. iv.) objects to this use of  $\tau \hat{a}$ 

απόκρυφα and 'whatsoever is not read in churches'; but he must be taken, we think, to refer to hereti al and uncanonical wntings, not to p. 52, ed. Feltoc). to the Apocrypha in our sense (cf. Dion. Alex.

p. 52, 64. Felton).

A This, according to the usage of those days, was often called secondentum (e.g. Aug. de Proc. Mer. ii. 26; Conc. Carth. iii. canno 5). Baronius and others were mistaken in thinking that this referred to edogic (pain benit); see Bingham, Aut. x. ii. 15.

possession of their faculties and capacities.1 At the present day this defect has been more or less completely remedied in the various parts of Christendom, though to a greater extent in the West than in the conservative East; and still more so in the Reformed than in the un-Reformed branches of the Church. Both the modern Rituale Romanum and the Prayer-books of the Anglican Communions provide separate Offices for the Baptism of Infants and of Adults, and in the Offices for the latter provision is still made for the due preparation of the catechumens. The rubric is the Roman Office requires that the adult candidate shall receive adequate instruction in faith and morals, shall receive the sacrament of baptism fasting, and, if possible, at the bishop's hands, and on Easter Eve or at Whitsuntide. The Office for the Public Baptism of 'such as are of riper years and able to answer for themselves' was not added to the English Prayer-book till 1661; the Preface thus accounts for its addition:

thus accounts for its addition:

'Although not so necessary when the former Book was compiled, yet by the growth of Anabaptism, through the licentiousness of the late times crept in amongst us, [it] is now become necessary, and may be always useful for the baptizing of natives in our plantations, and others converted to the Faith.

The reasons here alleged are still, of course, converting the properties of the properties o
